W P WARD

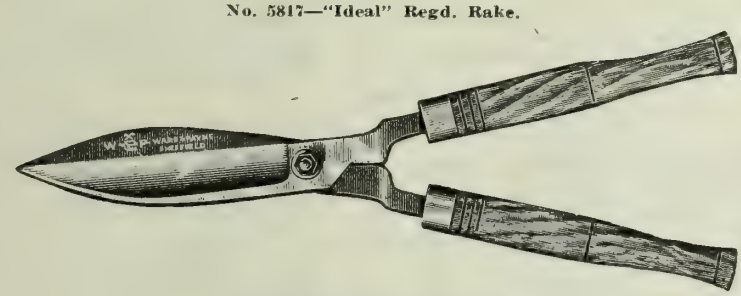
GARDEN TOOLS

Established in 1803

We are one of the largest makers of these goods in England. The quality is of the best and they are beautifully finished. We are putting in hand large stocks for the coming season, and we ask you to give us a trial order. Our Garden Shears are so well known that they need no advertising; our other tools will be found equally satisfactory.

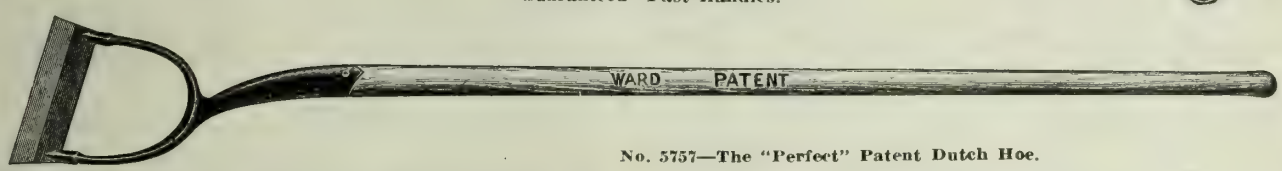
No. 5574—Weed Fork.

No. 5817—"Ideal" Regd. Rake.



No. 5417—Garden Shears.
Guaranteed "Fast Handles."

No. 5552—Trowel.



No. 5757—The "Perfect" Patent Dutch Hoe.

WARD & PAYNE, SHEFFIELD

CABLES: WARD, SHEFFIELD.

SHERMAN F. AINSLIE, Spadina Avenue, Toronto.
ANTHONY FERGUSON, LTD. 1150 Hamilton St., Vancouver, B.C.
ALEXANDER GIBB, 3 St. Nicholas St., Montreal.

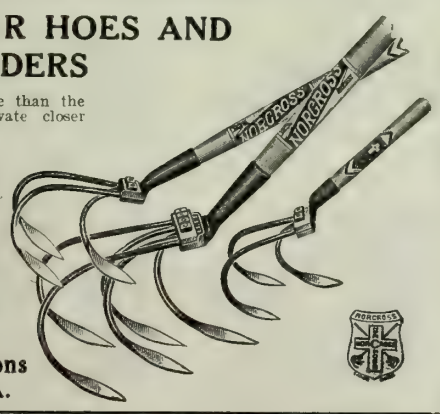
"NORCROSS"

CULTIVATOR HOES AND WEEDERS

Sell for but a little more than the common hoe, and cultivate closer to plants without injuring them than any other kind of implement, leaving the soil level, loose and untrampled.

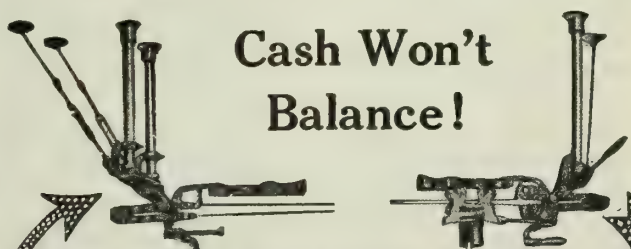
"NORCROSS" TOOLS ARE OF THE HIGHEST QUALITY AND FINISH, AND THEY PAY A HANDSOME PROFIT.

Drop a card for full particulars.



C. S. Norcross & Sons
Bushnell, Ill., U.S.A.

Cash Won't Balance!



You've too much or too little at the end of the day, and it's annoying, indeed it is dangerous, for it is a clear sign that SOMETHING'S WRONG SOMEWHERE, and when things are wrong in your store, be very sure you're getting the worst of it.

Now we can tell you a tried and true way to have your cash and salesslips balance at the end of the day. If you have courage to find out, send for our leaflet—yours for a post card. To-day, please.

BIG

RESULTS
from small investments. Read Hardware & Metal's Want Ad. Page.

More Dollars

You can make "Dollars Grow" out of your *spare time*. Spare-time efforts have made hundreds of dollars for MacLean Representatives. To-day there are in Canada, men and women, who find that our proposition worked for an hour or two daily provides for many of the added luxuries of life. You supply us the time,—we'll supply you the money. Write for full particulars.

Condensed or "Want" Advertisements

There is always someone, somewhere, who is looking for just such a proposition as you have to offer—and it is more than likely that he is a hardwareman and a subscriber to HARDWARE AND METAL. Let an advertisement on this page bring you together.

RATES (payable in advance): 2 cents per word first insertion, 1c per word subsequent insertion. An additional charge of 5 cents for each insertion is made when Box Number is required. Each figure counts as one word.

SITUATION VACTION

WANTED—GOOD WINDOW TRIMMER — must have general knowledge of hardware; good opening for the right man. Apply to Mr. Illsey, care of J. H. Ashdown Hardware Co., Calgary.

BUSINESS CHANCES

LET JOHN NEW, 154 BAY STREET, Toronto. sell your business. (4)

FOR SALE—SPLENDID HARDWARE IN best Western Ontario city. Exceptional opportunity for one or two live men. Business can be doubled in short time. Advanced years only reason for selling. Stock about fourteen thousand. Address Box No. 6, Hardware and Metal.

AGENCIES WANTED

THE SUREST WAY FOR THE MANUFACturers' agent to connect with good live firms, is to tell the manufacturers who read Hardware and Metal, all about his ability to sell their goods. Try an advertisement on the Condensed Ad. Page of Hardware and Metal. under this heading.

STORE EQUIPMENT FOR SALE

HARDWARE STOCK AND FIXTURES FOR sale in Sudbury. For particulars write Box 88, Sudbury, Ont.

YOU MUST HAVE A LOT OF OLD FIXtures around the store which are no longer of any value to you, but would prove very useful to someone else in the hardware business. Find a purchaser for this equipment through an advertisement on Hardware and Metal's Condensed Ad. Page.

FIFTY DOLLARS TIED UP IN OLD FIXtures that you are no longer using would make a lot of money for you if invested in stock and turned over three or four times a year. Get your money out, by selling the fixtures to one of Hardware and Metal's readers who may be looking for exactly what you have to offer.

PAPER BALERS

THERE IS MONEY IN USING AND SELLing the Jewell Paper Baler. It is the only low-priced, efficient baler on the market. Every hardware store should use one. Splendid side line for one line traveller in each territory. General Sales Co., Stair Bldg., Toronto.

SITUATIONS WANTED

A YOUNG MAN, 16 YEARS' EXPERIENCE in hardware, wholesale, and retail in both eastern and western Canada, will be free to take up new position after Feb. 10th, would prefer position as assistant buyer, assistant manager, manager in retail store, or would accept position as traveller in hardware lines. Apply to Box 425, Hardware and Metal.

EXPERIENCED SALES MANAGER wishes similar position or assistant. Eighteen years' experience in paints, oils, glass, varnishes and hardware. Have special training in mercantile credits. Excellent connection in Western Canada, and can get results. Reply Box 421, Hardware and Metal.

THE "CHANGING TIME" IS GETTING near. There are many firms who have vacancies on their sales or office staffs to fill during the next few months. If you want to qualify for some of these vacancies, tell your story briefly in a Condensed Advertisement, and try it out in Hardware and Metal. A twenty-five word advertisement may land you a permanent position with splendid prospects.

ARTICLES FOR SALE

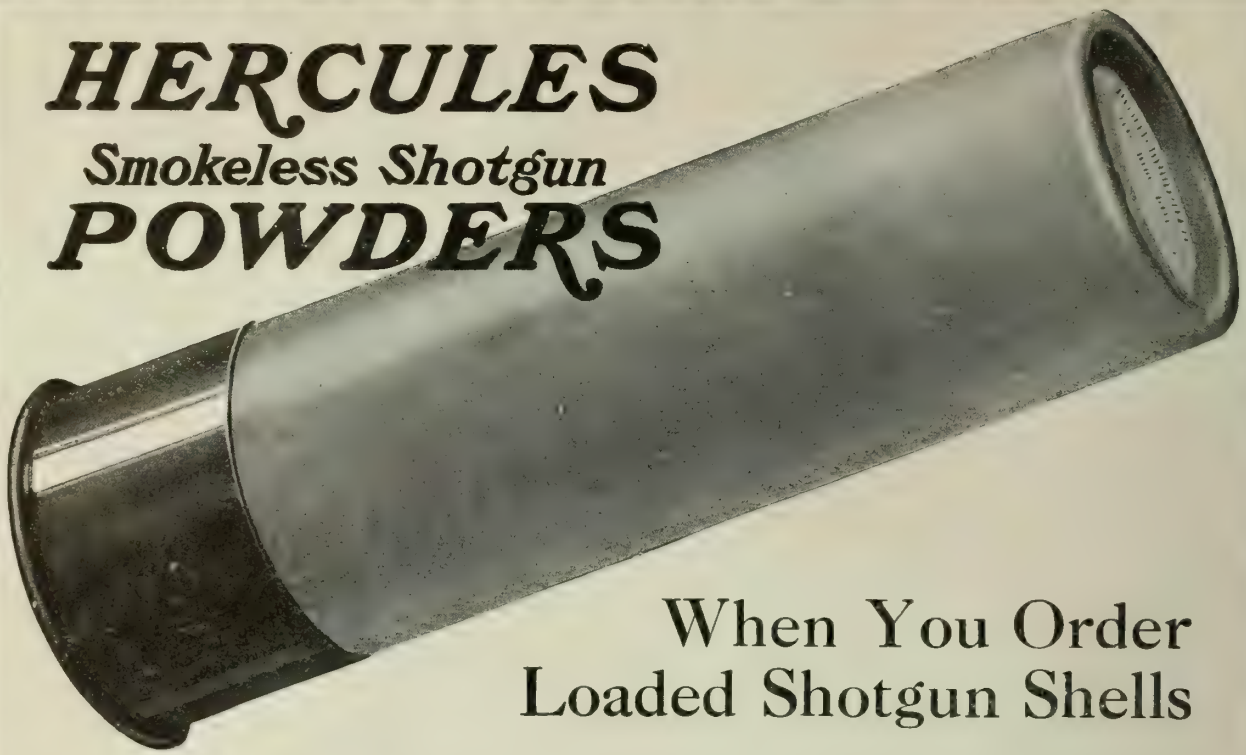
HERCULES
Smokeless Shotgun
POWDERS



When You Order Loaded Shotgun Shells

THE fact that you carry in stock some particular make, or makes, of loaded shotgun shells need in no way prevent you from supplying your customers with the justly popular Infallible Powder, one of the Hercules Smokeless Shotgun Powders.

These splendid powders, which are widely advertised and widely used, may be obtained in any standard make of shell.

Undoubtedly the shells you carry in stock are named in the list at the left. The next time you order, specify a Hercules Powder. The cost of the shells will be the same and you will make sure that you are selling your customers as good powders as can be made, in their favorite brand of shells.

If you are not familiar with the advertising service which we give to retail hardware and sporting goods houses it will pay you to drop us a postal asking about it.

Specify Infallible when ordering any of the following makes of shotgun shells:

PETERS
REMINGTON
SELBY

UNIVERSAL

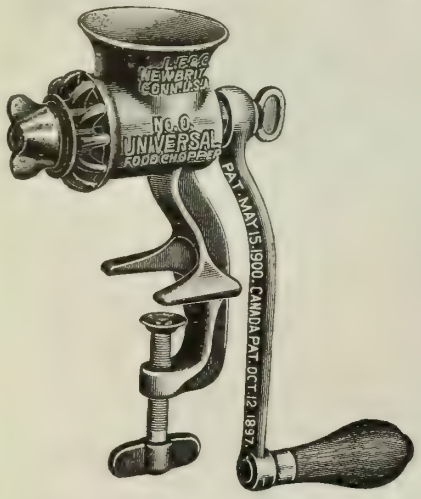
Food Choppers

Are profitable to handle and easy to sell. The constantly increasing demand for the UNIVERSAL is due to its well-known points of superiority—its self-sharpening, self-cutting beveled cutters — its strength and superior construction.

Fifteen years of consistent advertising has made UNIVERSAL Food Choppers known to housekeepers everywhere. It has become the standard chopper.

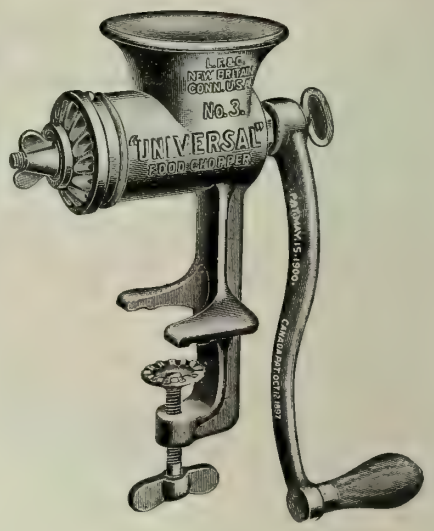
UNIVERSAL Food Choppers are made in four sizes, which allows a choice accommodating any style of housework, from the small family kitchen to the large hotel.

Each chopper is of the highest quality material and is heavily tinned, giving it a bright, clean appearance, which appeals to any purchaser.



No. 0

Smaller than, but capacity equal to, any imitations of No. 1. Tinned. All Parts Interchangeable. Coarse, medium and fine cutters. Capacity, 1½ lbs. per minute. Height over all, 8 in. Diameter of Hopper, 2⅝ x 2¾ in. Diameter of Barrel, 1¾ in.

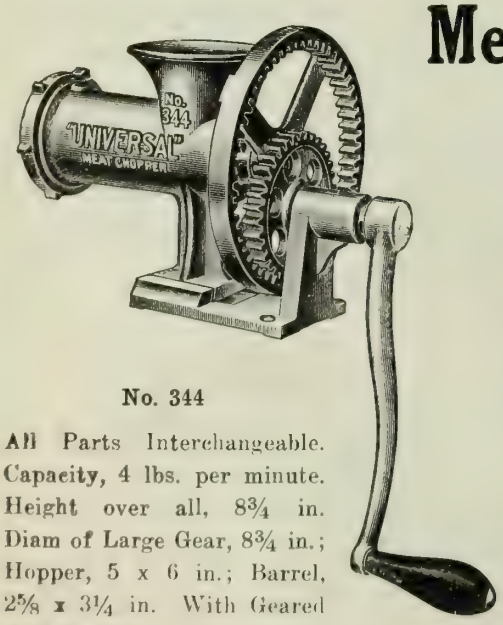


No. 3

Especially adapted for hotel and market use. Tinned. All Parts Interchangeable. Four cutters, very coarse to very fine. Capacity, 3 lbs. per minute. Height over all, 11 in. Diameter of Hopper, 4 x 4⅞ in. Diameter of Barrel, 2½ in. (Stuffing attachment will fit this chopper.)

UNIVERSAL

Meat Choppers



No. 344

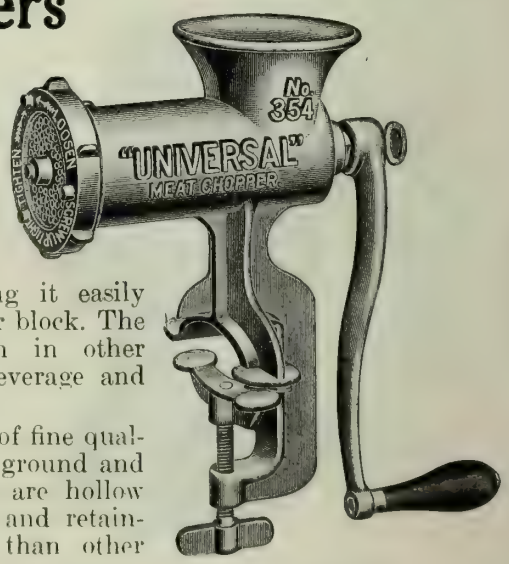
All Parts Interchangeable. Capacity, 4 lbs. per minute. Height over all, 8¾ in. Diam of Large Gear, 8¾ in.; Hopper, 5 x 6 in.; Barrel, 2⅝ x 3¼ in. With Geared Attachment.

We strongly recommend the geared patterns as being the most easily operated Meat Choppers on the market.

Like UNIVERSAL Food Choppers the quality of the castings, knives and plates as well as the machinery and trimming is the best.

Each chopper is made with thumb screw or clamp, making it easily removable from bench or block. The cranks are larger than in other makes, giving greater leverage and requiring less work.

Knives and plates are of fine quality cast steel, uniformly ground and machined. The knives are hollow ground, cutting cleanly and retaining their edge longer than other makes.



No. 354

Largest of the clamp Meat Choppers. All Parts Interchangeable. Capacity, 4 lbs. per minute. Height over all, 15½ in. Diameter of Hopper, 5 x 6 in.; Barrel, 2⅝ x 3¼ in.

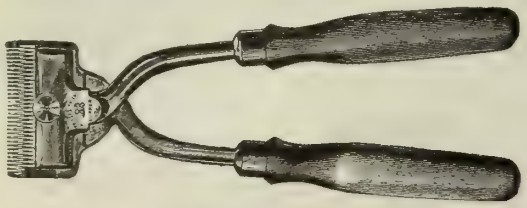
PRIEST'S HORSE and TOILET CLIPPERS

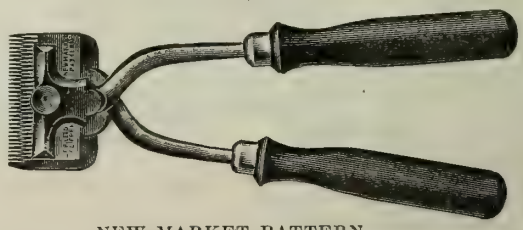
Made by American Shearer Mfg. Co.

present a complete line at a range of prices covering all requirements of the trade. They are all quality goods, and represent best designs and highest standards of workmanship, regardless of price.

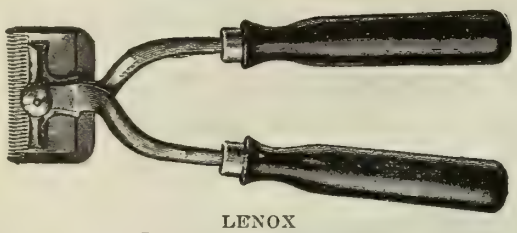
Some styles of hand Horse Clippers are illustrated below. All handles are heavy malleables, with threaded shanks, to keep the wood handles from pulling off. Spring tension on the adjusting nuts insures perfect contact at both ends of the cutting plates. Plates are perfectly ground and designed to cut hair, not break it off by main force.



BALL BEARING
Retailing at about $2.50.



NEW MARKET PATTERN
Retailing at about $1.75.



LENOX
Retailing at about $1.50.

If you are not familiar with these goods, send for samples and compare them with others.

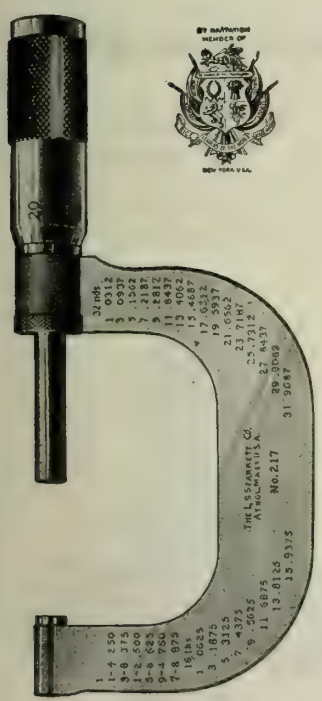
How Long is a "Mike" Accurate ?



All high-grade micrometers are sufficiently accurate when new, but when used for a time wear is bound to show on both anvil and spindle.

A micrometer then is accurate depending upon the frequency of correction for wear. For this reason every micrometer should have an adjustment to compensate for such wear. Some micrometers use the movable anvil method of adjusting but such adjustment takes time and it is often difficult to correct a micrometer exactly because of the varying human element—"feel." With the

Starrett Micrometer

correction may be made in a jiffy and without the use of a test piece and the human element—"feel." No guess work about it. To adjust, simply close the micrometer, insert a little spanner wrench and turn the sleeve until its zero graduation coincides with the zero graduation on the thimble.

The little spanner wrench and the patented sleeve do the trick—no other tools required. With this method the machinist corrects for wear so frequently that there is no question as to how long a **Starrett** Mike is accurate—it is always accurate. All Starrett Micrometers have this simple adjustment.

Write for free catalog No. 21MA, describing this adjusting feature on page 103, and 2,100 styles and sizes of precision measuring instru-ments.

OIL STOVE OVENS

Black Iron Japanned

Glass Paneled Drop Doors

Glass-paneled Oven Doors are very popular on account of the user not having to open oven door when baking is in progress. The Cooking is always in plain sight. This saves the heat and fuel. When light baking is being done, such as cakes, it saves disturbing contents by jarring the oven.

Municipal Pier A, Los Angeles Harbor
Siding, Skylight Frames and Ventilators of Armco Iron

For Modern Commerce and Industry

Architects and engineers are more and more applying foresight to problems of industrial construction. Do you wish to keep down repair bills and maintenance costs,—to insure long life and minimum replacements,—to make the buildings increase the dividends by saving in operating expenses? Then use Armco Iron.

ARMCO IRON
Resists Rust

This embodiment of modern industrial science is an important factor in all classes of buildings. For roofing and siding, for valleys, gutters, down spouting and metal lath, for tanks (water, oil or gasoline), and for all architectural and engineering purposes calling for lasting sheet or plate metal, Armco Iron is rapidly replacing other materials.

The American Rolling Mill Company
Middletown, Ohio.

AMERICAN ARMCO INGOT IRON

The trade mark ARMCO carries the assurance that iron bearing that mark is manufactured by The American Rolling Mill Company with the skill, intelligence and fidelity associated with its products, and hence can be depended upon to possess in the highest degree the merit claimed for it.

Licensed Manufacturers Under Patents Granted to The International Metal Products Co.

Armco Iron Blue Annealed Sheets and Tank Plate, Black, Galvanized, Polished and Special Finish Sheets, Roofing, Pipe and Metal Lath.

PUSH TOOLS
with the Millers Falls Selling Service

Make tools an important part of your Spring drive. They mean a good profit in themselves and lead to big business on other things.

We furnish co-operating dealers with handsome window display fixtures that are as handsome as any that can be bought—with window suggestions that apply to your whole business—with advertising matter that features your whole store and with merchandise selling suggestions that are worth thousands of dollars to any live dealer who takes advantage of them.

Millers Falls tools have a reputation of leadership that makes them a great line to sell even without our Selling Service. Together they make a combination that means a big tool selling success.

Whether you sell few tools or many—buy direct or through a jobber—you ought to know about the Millers Falls Service proposition to dealers.

Send for book describing our Dealer Service that tells in detail just how you can obtain our display fixtures and we will include with it our hand book "How to Sell Tools" and sample copies of our monthly dealer paper the "Star" that is jammed full of selling ideas and suggestions.

MILLERS FALLS COMPANY

"Toolmaker to the Master Mechanic."

MILLERS FALLS, MASS.

N.Y. Office: 28 Warren St.

Hand Drill 980 shown at the top is a big seller because it takes drills up to ⅜ and is practically a hand drill and breast drill combined.

The fixture at the bottom is especially good for the center of a window display. Others not shown are a fixture that will hold any small tool and fixtures for lines of braces, hand drills and bench drills.

MILLERS FALLS TOOLS

Order Yours Now
Be Prepared

Each of the three Freezers, LIGHTNING, GEM or BLIZZARD, has served the housewives of America for thirty years, and, like the cream they create, are in demand in all seasons.

They are built of the very best material and workmanship possible—their ingenious construction makes them easy to operate, quick freezing, and economical to both dealer and user.

The Blizzard, being simpler in construction and cheaper in price, makes it a good running mate with either the Lightning or Gem. They sell themselves and stay sold! No comebacks or complaints.

This means easy, net profits for you. Your jobber will supply you.

Include the Lightning Ice Chipper. It helps the sale of Freezers.

The Metallic Roofing Co., Limited

TORONTO MANUFACTURERS WINNIPEG

Give your other customers the benefit of the mechanics' judgment

DISSTON SAWS

A recent canvass of hardware stores in more than a third of the States in the Union again verified the fact that the vast majority of mechanics demand the Disston Brand when purchasing saws. The conclusion is obvious.

Progressive hardware dealers are making an asset of this unimpeachable endorsement of quality by recommending, when the choice is put up to them by their other customers, the brand accepted as best by the mechanics.

The advantages to the dealer are numerous. Ease and quickness of sale is one which is immediately apparent. "This is the saw most of the carpenters use," is a great deal quicker and cheaper than long technical comparisons with samples of two or three brands on the counter getting thoroughly finger-marked.

The customer's satisfaction in knowing that the tool he uses is the one the "professionals" use is another factor; and so is the success he has in using it. Both of them build up a confidence in the dealer which leads him back to the store when he needs **other** tools or material.

Then, again, the dealer needs Disston Saws for his mechanic trade. If he serves the rest of his trade with Disstons, too, he does not need to carry a limited assortment of several brands, but can have a **much wider variety of one brand.** All dealers are familiar with the diversity of demands regarding teeth, length, etc., and the advantage of the broader assortment will be readily appreciated.

Profit by the mechanics' preference for Disston Saws. Send for our Booklet of Sales Helps, which shows a few of the ways in which we help the dealers in their sales of Disston Saws and Tools.

Profitable Business

There is money in the next crop for you as well as for the farmer. The scarcity of help makes it absolutely necessary for every farmer to have a reliable hay carrier in his barn. Scarcity of help made last year the biggest hay tool season ever known. Dealers who had cars, forks, track, rope, pulleys, etc., in stock made big profits.

Get your stock in now and be prepared for the hay carrier season this summer. Be ready. A farmer will not wait for you to order from the factory when the rush of harvest commences. The dealer who has the stock gets the business.

So order now by mail or through our salesman.

Are You a Progressive Hardware Dealer?

ANSWER: Yes, if you handle Polarine or Gargoyle Mobiloils

The wide-awake hardware dealer to-day buys and sells what yields him the greatest profit and the largest number of pleased and permanent patrons. Motor accessories and particularly automobile lubricants offer you quick turnover and liberal profits.

Polarine and Gargoyle Mobiloils give you a quick turnover and liberal profit with minimum time and effort on your part, because they are lubricants already well-known to the Canadian motoring public. In addition, they are going to be advertised more extensively than ever in 1917.

Thousands of dollars are going to be spent to help you build up a profitable business on these products.

Polarine, which is now supplied in two grades, called Polarine and Polarine Heavy will be advertised more extensively this year than ever before in newspapers, motoring magazines and farm papers from Coast to Coast.

Gargoyle Mobiloils supplied in four grades for engine lubrication, and sold by a Chart of Recommendations to insure the use of the correct grade, have been sold by us in Canada for some years. These oils will be advertised in the Hardware Trade Press, and the Motoring Magazines during 1917.

The Imperial Oil Company, Limited, offers you the co-operation of extensive dealer helps in marketing both Polarine and Gargoyle Mobiloils. Signs, booklets, circulars, window trims, counter cards, etc., are available to you in pushing these excellent products.

This is your opportunity to join with hundreds of other hardware dealers in the profits, and permanent patrons which will result from your co-operation in the handling of these products.

Please address us at 56 Church St., Toronto, for full information. We shall answer by return mail.

Quality

THE leader in every industry, to maintain his lead, must safeguard the quality of his products.—Rigid inspection and careful supervision are important factors.—To products of iron and steel this principle applies with tremendous force.—It means safety, security and stability.—We safeguard the quality of our products, believing quality will be recognized long after the price is forgotten.

Service

OUR customers must be served. One of the dominating factors in any successful business is Service.—We succeed only through the good will and good wish of the people we serve.—This thought permeates our entire Organization, from the President down.—Our employees feel the sense of responsibility this principle implies; and each one directs his efforts to maintain the high standard of service we aim to render.

Ideal Silver Cream

It will clean more silverware in less time, with less expense, than any other preparation made. "Ideal" is not an electro-plating preparation; removes nothing but the dirt, leaving the silverware like new. Put up in eight and eighteen-ounce bottles, packed three dozen in case.

Satin Gloss Harness Dressing

A self-shining dressing of exceptional quality for use in finishing new and old harness, and also the best dressing for general use. It is the blackest and produces a beautiful soft, satin gloss finish, for buggy tops, saddles, fly nets, trappings, etc. Especially adapted for bench work. Put up in cans, kegs and barrels.

Very Best Stove Pipe Enamel

It's a Union Japan and is superior to any stove pipe varnish where quality, quantity and price are taken into consideration. Put up in half-pint and pint bottles, with cop and brush.

RE-NU-AL Wood Polish is not a varnish nor does it leave any coating on the surface, merely removes the dirt and brings the original finish back to the varnish. Removes scratches or burnt spots and will clean any varnished wood-work from the cellar to the attic better and with less labor than other preparation.

When it comes to *Blacking Enamels and Rubber Cement* you cannot make a better step than buying from us. We say this with confidence because our goods have always given the best of satisfaction, and they pay a very substantial profit.

Send us a trial order now.

Klondike Metal Polish

The Monarch of all polishes; imparts a brilliancy to all kinds of metal. It will clean quicker and leave a brighter finish than any other. Made in black and white.

D.S.C.

Bright Light Stove Polish

Bright Light is prepared from the best English lead and Japan which produces a brilliant lasting polish that will not speck nor turn white. Put up only in our patent box to protect the fingers from coming in contact with the paste.

Every box is hermetically sealed, so that the polish will not dry out. Packed in quarter gross cases.

Works wonders in sales for the merchant and satisfaction for the user. Is the best known protection for furs and clothing. Unexcelled for killing odors from garbage cans and repelling flies. Try this quick seller.

K. A. G.

(KILLS ALL GERMS)

DISINFECTANT

Odorless Jet Enamel

for Stove Pipes

Will not burn off. One coat will give a beautiful ebony finish; dries quickly and will preserve stove pipes from rusting. Especially adapted for registers, grates or iron where a high finish is required. Put up in six-ounce bottles, handsomely labelled, with cork neatly dipped makes an attractive package. Packed 3 dozen in a case.

Best Harness Oil Dressing

Is a paste combination of Neatsfoot and Wax so blended as to give a waterproof that will keep the leather soft and pliable. Put up in pound tins, handsomely lithographed. Packed three dozen and one dozen wood cases.

Eagle Rubber Cement

Is recognized by all dealers as being superior to any rubber cement (except our D. R. C. Brand), and is handled by all dealers in such large quantities that we are able to sell it at a price which, considering quality, defies competition. Put up in all styles.

Staon Stove Paste

Is a compound made from pure Ceylon lead, gives an excellent black shine that will stand over eight hundred degrees of heat without burning off. Put up in penny lever tins, straight sided, so that the polish may be removed very easily without waste. Attractive package, three-color lithographed varnish label. Packed 3 dozen in wood case.

CONVENIENCE was the chief consideration when this garage was planned. The interior is well lighted and well equipped, and the car-entrance is made both sightly and satisfactory by the use of

Stanley Garage Hardware

The doors are swung on Stanley Garage Hinges No. 1457 and provided with Stanley Cremone Bolt No. 1052. They open and close easily, lock securely, and are weather-tight. And they do not, like sliding doors, have tracks or other parts that are apt to become clogged with snow or dirt. Stanley Garage Door Holders No. 1774 keep the doors from slamming while the car goes in or out.

YOUR customers who build garages are in the market for Stanley Garage Hardware. The Stanley Works will supply you with everything you need for demonstrating and displaying this profitable line. Write to-day for the Stanley Garage Hardware Catalog R-23, and the booklet, "Selling More Stanley Garage Hardware," which illustrates and describes the selling helps with which we will supply you.

When Retailers Need Revenue Stamps

Ignorance of War Revenue Act Among Merchants Leads to Fines or Needless Use of Stamps—What "Patent Medicine" Really Means—When "Soap" Must be Stamped—Law on "Perfumery"—Talcum Powders, Stock Foods, Extracts, Etc.

Exhaustive Review of the War Revenue Act

IT is almost as annoying, though not so expensive, to affix war revenue stamps when they are not required, as to fail to affix them when the Act says you must.

A hardware merchant has been sticking on a 1-cent inland revenue stamp on every cake of shaving and other soaps he sold over his counter. He was making a complimentary offering to the Dominion treasury.

Another hardware merchant, in ignorance, sold medicated stock foods without affixing the stamps. His contribution afterwards was compulsory,—not complimentary,—$50 and costs.

A third hardware merchant sold some talcum powder without a revenue stamp, and the man who laid the information received one-half the $50 fine.

These three incidents coming before HARDWARE AND METAL this week have called forth the article that appears herewith, explaining in detail the "War Revenue Act," as a safeguard to hardware merchants, all over Canada, who may be making involuntary contributions in the shape of stamps or fines.

The penalty for neglecting to affix a stamp, or neglecting to cancel it, at the same time, is not less than $50, and not exceeding $250.

Thousands of Articles Taxable.

First of all we would explain that an attempt was made by HARDWARE AND METAL to secure from the Inland Revenue Department an itemized list, in alphabetical order, that would be an absolute guide to the retail merchant, but none such has been compiled, the explanation being that this would contain thousands of names.

The Act, taken broadly, requires the stamps to be offixed to the following four classes of goods:

(a) A proprietary or patent medicine.
(b) Perfumery.
(c) Wine of the grape, or non-sparkling; or
(d) Champagne or sparkling wine.

Of these, of course, the first two classes will be of main interest and importance.

One Cent for Every 25c. Value.

The first point to note in connection with these two classes is that a one-cent stamp is to be affixed on goods whose retail price, for each bottle or package, is twenty-five cents or less, and one cent extra for each twenty-five cents or fraction additional. Thus a package selling for 40 cents would call for 2 cents in stamps; a 65 cent line, 3 cents; a $1.35 package, 6 cents, and so on.

What is a "Patent" Medicine?

Next comes a point that has puzzled many merchants—what constitutes class 1, a "proprietary or patent medicine."

Roughly speaking, this phrase includes all medicinal preparations, bottled or packed ready for sale, in the preparation of which the maker claims to have any "formula" or "secret art," or claims any exclusive right to the same, or prepares it under letters patent or designates it by a trade mark, or if prepared in accordance with any formula, is recommended to the public by the makers or vendors as a remedy or specific for any disease or affection of the human or animal body.

A distinction comes in here between goods that are brought out by an individual or under a special name, and general medicines, such as can be prepared by any chemist or doctor or druggist, as the case may be. These are not taxed. As the Act reads: "Proprietary or patent medicines includes pills, powders, tinctures, syrups . . . , but **does not include any medicinal preparation or composition recognized by the British or the United States pharmacopœia or the French codex as officinal.**"

Castor Oil, Cascara, etc., Exempt.

Thus castor oil, cascara, court plasters, seidlitz powders, vaseline, zinc ointment, and similar "general" remedies, as we may term them, are not subject to the war stamp. An itemized list of these is given here.

THE TARIFF.

Article.	Stamp of the Value of
(a) A proprietary or patent medicine, or (b) Perfumery the retail price for each bottle or package thereof being—	
Twenty-five cents or less	One cent
more than twenty-five cents— for each twenty-five cents and in addition for any fractional part of twenty-five cents	One cent
(e) Wine of the grape, non-sparkling, each bottle or package containing—	
one pint or less	Three cents
one quart or less, but more than one pint	Five cents
a quantity greater than one pint— for each quart and in addition for any fractional part of a quart	Five cents
(d) Champaigne and sprakling wine, each bottle or package containing—	
one half pint or less	Thirteen cents
one pint or less, but more than one-half pint	Twenty-five cents
a quantity greater than one pint for each pint and in addition for any fractional part of a pint	Twenty-five cents

A point of explanation is required here. The merchant may remark: "Yes, I know I can sell castor oil or epsom salts, as such, without a tax, but what about Smith's Castor Oil; and Reynold's Epsom Salts?"

When Maker's Name Can be Used.

This has been cleared up since the Act was passed, HARDWARE AND METAL was informed by a leading member of the executive of the drug men, Mr. George E. Gibbard:

"I went down with others on just this question and found that if a certain 'make' of castor oil was put on the market, say 'Smith's,' and there appeared on the label these or similar words, 'In accordance with the British Pharmacopoeia,' the product was not taxable." In other words, it would not be a special remedy, but made under a generally recognized formula, and so would be exempt.

Of course, a patent medicine composed of certain drugs mentioned in the Pharmacopoeia is not thereby exempt, but is taxable.

When Soap is a "Patent Medicine."

Some further particulars as to just what other articles come under the heading of "patent medicines" will be of help here.

"When is a soap a patent medicine?" has been asked.

When it is represented as possessing curative properties; when it is "medicated."

"It depends practically on the label on the soap," explained an Inland Revenue official to HARDWARE AND METAL. "If the soap is for toilet purposes only, an ordinary washing soap it is not taxable. If there are medicinal properties claimed for it, such as in the case of 'Cuticura,' for example, it must pay the tax."

Or as the Act reads: "Medicated soaps when advertised as such become patent medicines under sub-section 4 of sub-section 14."

Other Items in "Patent List."

Other articles coming under the head of patent medicines are:—

Conditions Powders
Veterinary Liniments
Medicated Stock Foods
Cough Drops
Talcum Powders
Animal Poisons
Camphorated Chalk
Styptic Pencils
Headache Powders and Wafers
Carbolic Salves
Liquid Rennet
Eyebrow Pencils
Grease Paints
Green Soap
Anti-Kamnia Tablets

In addition, disinfecting fluids and powders, if used as remedies or specifics for any disease or affection affecting the human body, are subject to the war tax.

Absorbent gauze and cotton, if medicated, must pay the tax.

Medicated wines, such as Wilson's Invalid Port Wine, are taxable.

ARTICLES NOT SUBJECT TO WAR TAX.

Absorba Corn Pad
Acetophen (is equivalent of aspirin)
Acetysalicylic Acid
Aloin
Ammonia Water
Angosture Bitters
Animal Food (unmedicated)
Aspirin
Baby Foods
Beef, Iron and Wine (if sold as defined in Pharmacopoeia)
Belladonna Plasters (sold as such under no special marker's name)
Belladonna Tablets
Bird Seed
Bismuth Tablets (sold as such)
Blaud's Pills
Blue Ointment
Bona Fide Flavoring
Boracic Acid (if of composition defined in Pharmacopoeia)
Borax (if of composition defined in Pharmacopoeia)
Bunion-reducer
Bunion-right
Calomel and Sodium (bicarbonated tablets)
Camphorated Oil
Carbolic Acid
Cascara
Castor Oil
Cements
Charcoal Pepsin
Court Plasters
Cream of Tartar (if of composition defined in Pharmacopoeia)
Dalley's Castor Oil
Dalley's Epsom Salts
Dalley's Sulphur
Dyes
Epsom Salts (as defined in Pharmacopoeia)
Filling, Gold and Silver (not being proprietary medicine used by dentists)
Flavoring Extracts
Fluid Magnetic
Foods, such as:—
Hollick's Malted Milk
Nestle's Food
Saskett's Food
Fruit Syrups
Ginger Tablets
Ginger Wines
Glycerine
Glycerine Suppositories
Grape Juice
Herbageum
Hoof Oil
Hydrogen Peroxide
Imperial Granum
Insect Powders
Italian Castor Oil
Lifebuoy Soap
Lime Juice
Lime Juice Cordial
Liquid Peptenoids
Louse Killers
Lozenges (linseed, licorice, chlorodyne)
Lythia Tablets
Magnesium Sulphate
Malt Extracts
Malzinose
Milk of Sulphur (if complies with Pharmacopoeia)
Moth Balls
Olive Oils
Opaline
Pedico Foot Soap
Petrolatum
Petroleum Jelly
Phenol
Plasters (adhesive, bunion, corn, court)
Precipitated Sulphur
Seidlii Powders
Soda Bicarbonate
Soda Phosphate
Spirits of Nitre
Strychnine
Sugar Milk
Sulphate of Quinine
Sulphur (if of composition defined in Pharmacopoeia)
Tincture of Iodine
Toe Right
Toe Flex
Tooth Soap
Turpentine
Vaseline
Vermouth Wines
Virol
Water Glass
Zinc Ointment

A peculiar distinction is made in regard to doctor's prescriptions—if composed of patent medicines alone they are taxable; if composed of both patent medicines and other ingredients, they are exempt.

Exempt From Taxation.

Among the goods that are exempt are the following:

"Extracts intended solely for culinary purposes."

"Bovril, Oxo, Steero and Virol, if not medicated, and, therefore, used simply as a food."

"Perfumery"

COMING now to the second large class of taxable lines, perfumery, the Act defines it thus:

> "(iii) 'Perfumery' includes alcoholic and non-alcoholic perfumes and perfumed spirits, bay rum, cologne and lavender waters, hair oil, tooth and other powders and washes, pomatums, pastes and all other preparations used for the hair, mouth or skin."

A further clause referring to "creams, etc.," reads:

> "Cold creams, pomatums, tooth paste and powder, massage creams, and all other toilet articles used for the mouth and skin, and also hair dyes, tonics and oils, bay rums, etc., are subject to the war tax."

"Talcum powders" usually included with "toilet articles" and are classed under "patent medicines" in a list given previously.

Reference has been made to "medicated" soaps. All others, "whether in solid, liquid, powder or paste form," coming under the definition of perfumery, are exempt as "toilet articles."

An interesting point crops up in the case of perfumes: "Packages of perfumes taken from a bulk package must be stamped at the time of sale."

Special Clauses in Act.

Some special clauses in the Act should be noted:

RETAILERS are required to affix the stamps themselves. "They may or may not add the amount of the stamp to the price of their goods, as this becomes a business proposition as between themselves and their customers."

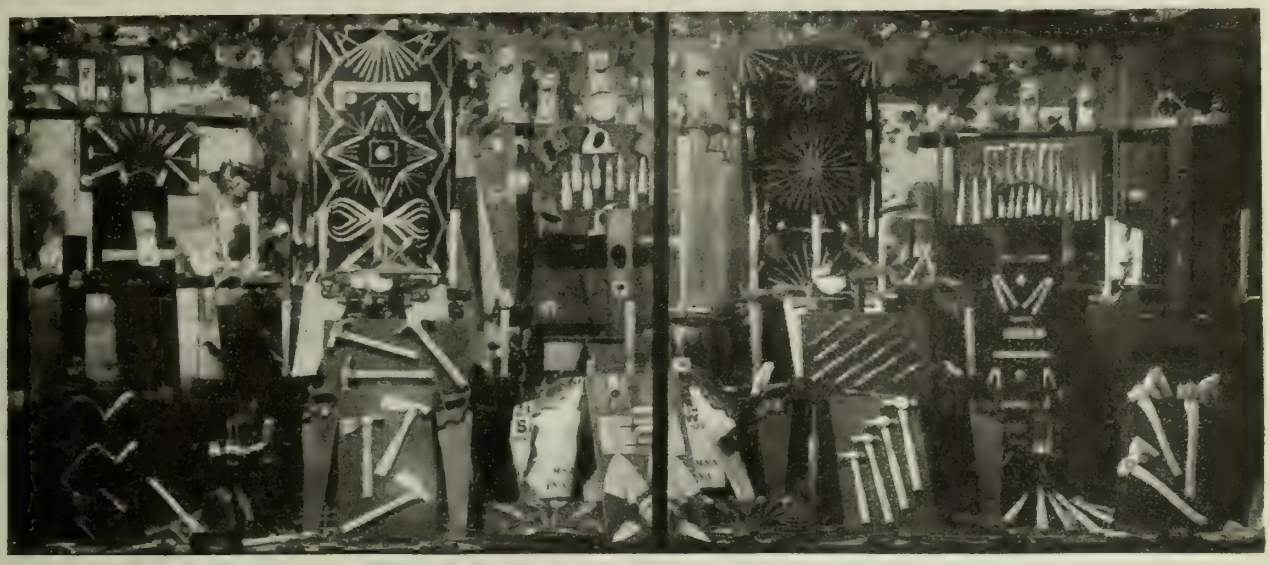
SAMPLES of articles given away without charge are not subject to the war tax.

DENTISTS.—"All proprietary medicines sold to dentists are subject to the war tax, as dentists are consumers within the meaning of the Act."

(Continued on page 49.)

Some Clever Display Methods

Western Firm Have Attractive Interior Arrangements—Device for Showing Tool and Hardware Samples.



THE hardware department of the R. H. Williams Co., Regina, Sask., yields many good ideas to the visitor seeking information. A representative of HARDWARE AND METAL visited the store recently and was impressed, first of all, with the attractiveness of everything. Splendid fixtures and glass show cases, which displayed the goods to the very best advantage, were found on every hand. There were some new points with regard to the display of the goods, the most outstanding being the arrangement of samples behind the glass wall cases. Beneath the glass is a detachable baize-covered board on which the samples are arranged. These boards are taken out easily whenever it is desired to make any change in the samples. Thus it is possible to arrange the articles with special care. Note the attractiveness of the sampling as shown in the view below.

Another advantage that attaches to this is the possibility of using the sample boards for window displays. In the trim shown above the possibilities of this idea are demonstrated. Here we have a fine tool window, arranged quite apparently with a minimum of effort.

A good tool window is always a big trade puller. The average man has a deep-rooted interest in tools, and it is an easy wager that few men passed this Williams window without a thorough "once over." The results demonstrated this clearly.

EDITORIAL COMMENT

SOME members will be missed at the hardware convention this year. But they are doing valuable work elsewhere—in uniform.

* * *

IT MAY be the first convention since the fateful 16th of September, but it is going to be the biggest and best on record just the same.

* * *

PARDON us if we remark that it will come as a wrench to pay that advanced price on Stillsons and Trimos announced last week.

* * *

TALK of taxes on excess profits does not worry many of us. And we would all agree to a tax on excess prophets; there are lots of them nowadays.

* * *

ALL THIS talk about the Freedom of the Seas reminds one that there have been plenty of advocates of the same idea in the past—Capt. Kidd, Capt. Flint, Long John Silver and Billy Bones, just to mention a few.

MAY SEE $50 PIG IRON

THE iron and steel market continues to be affected by the international and the steel trade in Canada is being influenced in sympathy with conditions in the United States. Prior to the severance of diplomatic relations between the United States and Germany, the market was tense and unsettled. However, as soon as the decision was announced the situation cleared and notwithstanding the diplomatic break, the market exhibited considerable activity particularly in pig iron with the result that prices advanced. The advance in prices of pig iron will be reflected in finished materials. The coke situation is serious and deliveries are very bad owing to the shortage of cars and motive power, although every effort is being made to bring about the much desired relief. A large number of United States Steel Corporation furnaces are out of blast. Blast furnaces in Canada and the Buffalo district depending on Connellsville coke, are badly handicapped, some being out of blast. There is consequently a serious shortage of pig iron with little prospect of relief in the meantime. While foundry iron is being quoted around $35 to $36 Valley and Buffalo furnaces, there is practically none to be had. At this price pig iron, laid down at Tor- would be $42.00 to $43.00 per ton. Indications point to a more serious shortage of pig iron than at present exists and should this condition arise $50 pig iron in Toronto may be looked for.

THE MATTER OF CREDITS

A NOTICEABLE development in trade matters has been the shortening of credits. Manufacturers and wholesalers have found it necessary to shorten credit terms and it seems an assured fact that the future, instead of witnessing a return to previous conditions, will see the tendency to stricter terms more and more accentuated. It has become a positive necessity. The more or less free and easy finance of the days of hectic prosperity will never again be possible.

To the retail merchant this means only one thing. He must in turn shorten the terms of credit that he allows his customers. It is quite safe to assert that the average merchant is altogether too lenient or too negligent in the matter of collections. He is inclined to let things slide, probably because he is afraid of offending his customers. In every locality there are well to do farmers, for instance, with comfortable bank balances who let their bills at the hardware store run on until they seem like the brook which "runs on forever." A few customers like this and the hardwareman, in order to keep things going, has perhaps to go to the bank for funds. He is paid over the money which his farmer customers have deposited there—money rightfully his own. He pays six per cent. for it and the farmer only gets three per cent. of that. This is good business for the bank; it is good enough for the farmer; but it is very bad buisness for the merchant and for the wholesaler again behind him.

It is becoming more and more a matter of dire necessity. The merchant must shorten credits with his customers; or, as a possible alternative, charge interest on overdue accounts, sound financing can be built only on a solid foundation of active collection methods.

BANNING THE OFFICIAL ORGAN

THE announcement made last week that the Ontario branch of the R. M. A. had decided to discontinue the arrangement by which a Montreal financial paper was sent to the members, emphasizes a tendency that is becoming recognized—a feeling opposed to organs of a more or less official nature. The official organ of an Association carries just as much weight as is possible in view of the established fact that it's policy is set and immovable. It must always stand by the aims and actions of the body it represents and its advocacy of everything its association

approves is taken as a matter of course. For this reason the opinion of a journal that stands free of such control, even though, as in the case of a trade paper, it represents a class, is much more likely to be heeded and valued.

There is another respect in which the straight out-and-out official organ loses weight with the outside business world. Its circulation is fixed and involuntary. The member gets it whether he wants it or not. He may read it or not but, it comes along regularly just the same. The organ, therefore, suffers in comparison with the independent paper which goes only to the man who pays for it and who, therefore, can be assumed to want it. Nevertheless the status of the official organ is used as a lever to secure advertising. Manufacturers who place advertising with official organs often do so unwillingly as they feel that they are not buying the kind of circulation that is likely to bring them the best results.

This is not intended as a criticism of all official organs. There are some such publications in Canada doing useful work. It is becoming recognized, however, that the status of the official organ is not a sound one on most counts and the tendency is to depend upon them less. The action of the Ontario R.M.A. in deciding to issue bulletins and use the columns of established trade papers for the dissemination of association news will unquestionably be approved by the members as a whole.

A NEW BANKRUPTCY ACT

A PROPAGANDA has been started by the Canadian Credit Men's Trust Association for the "preparation and adoption of an uniform act by the various provinces in Canada" and for the formation of a Federal Bankruptcy Act with all the cumbersome and expensive features of the English and United States Acts eliminated.

The first object is one in which there will be complete concurrence. There is no reason why all provincial laws dealing with insolvency should not be absolutely uniform. Lack of uniformity leads to confusion inevitably and the sooner a satisfactory Federal measure can be drafted the better it will be.

Agreement will also be universal on the score of the elimination of cumbersome and expensive feature. It is important from the standpoint of all concerned, debtor, creditor and trustee, that the proceedings be completed as promptly as possible. The matter of expense is one also where improvement could be effected.

It should be borne in mind, however, that no changes should be made in our bankruptcy laws until it is absolutely assured that the new provisions give promise of fullest justice all around. It is necessary to have the available legal machinery for forcing insolvent debtors into involuntary bankruptcy but the power thus given should not be made arbitrary, and any changes or suggestions in this regard should be very carefully tested. This much is due to the man in business. No merchant asks for measures designed to unduly protect himself. He knows that this would shelter the crook and the weakling. But, in drafting new regulations covering so vital a point as bankruptcy, the utmost caution and foresight must be shown.

THE WEST—AND THE CASH BASIS

THEY are acquiring the habit of discussing live questions, out West. For instance, the Winnipeg Board of Trade will shortly discuss the question: "Can retail merchants put their business upon a cash basis?"

The reason for bringing up this subject is that they are becoming convinced that the credit system has been productive of an enormous aggregate of bad debts, and that retail prices have, as a consequence, had to be loaded, this addition to prices having to be borne by those who do pay. That easy credit of all kinds has been responsible for such buying by farmers in excess of their ability to pay, and that advantage should be taken of the improved condition of farmers as a result of good crops and high prices to at once get on to a cash basis with them at least.

It would pay some of the Western hardwaremen to attend the meeting when this is discussed and tell why it is difficult for merchants to put their businesses on a cash basis. Tell them how the public will often object and take its patronage to the merchant who offers credit. Tell them of the men who would rather leave their bank balances than pay cash for the hardware they buy. It will not hurt to ventilate these practices. It might, perhaps, lead to some measure of reform and bring nearer that glorious day when all business is done on a cash basis.

DEALER INFLUENCE versus NATIONAL ADVERTISING

IN a recent address in Chicago, the Assistant Advertising Manager of Armour & Co., made substantially the following statement: That their greatest difficulty was to "sell" their own sales force on their advertising, because they depend upon their salesmen to convince the dealers of the desirability of handling Armour's advertised goods. That in furtherance of this work, they spend $50,000 annually for cooperative dealer material. He stated that tests have developed the fact that only ten per cent. of orders given to dealers over the telephone are for nationally advertised goods, and that only 35% of the sales over the counter are for nationally advertised or trade-marked goods. Consequently, he said that Armour had to depend upon dealer influence for 55% of the sales of the Armour products.

This is simply another piece of evidence to prove that the dealer and dealer publications cannot be safely overlooked in even the biggest consumer campaign.

Everything Ready for the Convention

Programme Complete for the O.R.H. & S.D.A. at Hamilton Next Week — A Banquet to be Given Members—Membership Larger This Year—A Big Exhibit Arranged.

THE twelfth annual convention of the Ontario Retail Hardware and Stove Dealers' Association opens on Tuesday of next week at the Royal Connaught Hotel, Hamilton. All arrangements have been completed to the last detail and the officers are confident that the convention will be largely attended and of deep interest to the members.

The convention will be noteworthy in one very important respect; it marks the return to the original arrangement by which the association conducted an exhibit of manufacturers' goods. This was done in the early years of the association, but at the convention held in Guelph in 1912, the manufacturers decided that they would prefer to handle the exhibition themselves, and the Canadian Hardware Manufacturers' Exhibitors' Association was formed for that purpose. During the next two years the convention and exhibition were held jointly, at Hamilton and Ottawa. The breaking out of the war, however, and other causes led to the dropping of the exhibition feature.

This year the officers of the O. R. H. & S. D. A. decided that the time was ripe to revive the exhibit plan and they have accordingly done so on the original basis. Secretary Macpherson has organized an exhibition of hardware goods, made up of exhibits from manufacturers that will prove a most interesting adjunct to the association meetings. It will perhaps not be quite as large as when things were at the apex, but, as will be seen from the list of exhibitors published elsewhere, it is a good start and gives every promise of a quick return to the big exhibitions of earlier years.

Membership is Large

Another noteworthy feature is that the membership has during the past year been built up to a much more satisfactory figure. The last report from the secretary was to the effect that the roll now numbered 245 members and 95 associate members. It is hoped that this enrolment promises a large attendance at Hamilton. There is no disguising the fact that the membership had dwindled during the past five or six years and the improvement made this year has been due to the more energetic measures adopted by the present officers.

Railway Arrangements

All arrangements have been made for the reduced fares to all attending at Hamilton. Instructions have been issued as follows:—

Purchase a one-way ordinary first-class adult fare ticket (fare not to be less than 50c) to Hamilton, and obtain from ticket agent a Standard Convention Certificate (Form 24).

At first meeting you attend hand your certificate to the secretary of the association for endorsement, and for validation by the special agent of the railway lines.

After validation, the certificate will be returned to you on payment of fee of 25c, and must be presented to ticket agent to obtain return ticket at least thirty minutes before the train leaves.

After paying 25c validation fee, the return fares will be as follows:

If certified attendance is 99 or less—Two-thirds one way ordinary first-class adult fare.

100 to 299.—One-third one way ordinary first-class adult fare.

300 or more.—Return trip ticket without further charge.

Going.—Tickets may be purchased Feb. 16 to 22.

Returning.—Tickets may be purchased up to Feb. 26.

A Banquet to Members

A change has been made necessary in the programme by the receipt of word that Wood, Vallance & Co. will tender a complimentary banquet to the members on Wednesday evening. The programme called for a smoker on Wednesday evening, but this will now be held on Thursday evening.

An interesting new feature of the programme, arranged at the last minute, is a visit to the plant of the Canadian Cartridge Co. The plant is given over to munition work largely and the visit promises to be full of interest for the members.

The Official Programme

Otherwise the programme stands as previously arranged, as follows:—

TUESDAY, FEB. 20th.

Morning Session.

Reception and Registration of Members.

10.30 a.m.—Meeting of Executive Committee and appointment of Convention Committees.

Afternoon Session.

2 p.m.—Opening session of Convention in Banquet Hall, Royal Connaught Hotel. Open to Members, Exhibitors and Associate Members.

Reception of Visitors to Convention. Address by Mayor Booker. Addresses from Trade representatives.

President's Address.

Secretary's Report.

Address by Col. J. B. MacLean, of "Hardware and Metal." Consideration of President's address and Secretary's report.

Visit to Exhibits.

Evening Session.

(Members Only)

Report of Treasurer and Auditors.

Report of Executive Committee and Advisory Committee.

The better way to price 1917 Inventory, introduced by 2nd Vice-President McNab. Discussion by Members. Opening of Question Box.

WEDNESDAY, FEB. 21st.

Morning Session.

(Members and Associate Members)

8.30 a.m.—Starting from Royal Connaught. visit to manufacturing plants, including Atkins Saw Co. and Frost Wire Fence Co. Street car ride around city in charge of local committee of retail hardware men.

Afternoon Session.

(Members Only)

2 p.m.—Discussion re making kitchenware department more profitable. Unfair competition in graniteware, etc. Introduced by Vice-President J. N. McGregor, Oakville.

Problems of the tinshop under present war conditions. How to make workshop pay. Open discussion. Introduced by H. Occomore, Guelph.

Co-operative delivery of goods, cutting down overhead costs. Introduced by President Carter.

Question Box.

Visit to Exhibitors' display.

Evening Session.

Complimentary banquet to Members by Wood, Vallance & Co.

THURSDAY, FEB. 22nd.

Morning Session.

9.30 a.m.—Receiving reports of committees. How to move unsaleable goods. By Secretary Macpherson.

The Retailers' Problem. How to get profit on present high values of merchandise. Open discussion.

Question Box.

Visit to Exhibits.

Afternoon Session.

2 p.m.—Election of Officers.

Unfinished business.

New business.

Visit to Exhibits.

Evening Session.

Smoker and entertainment in Royal Connaught. A first-class programme with special talent has been provided; a sample of Hamilton's Hearty Hospitality.

The Exhibition

The following firms have announced their intention of holding exhibits or at least having representatives present at the convention.

Auto Strop Safety Razor Co., Toronto; Benjamin Moore & Co., Toronto; Banwell, Hoxie Wire Fence Co., Hamilton; Allith Mfg. Co., Hamilton; S. F. Bowser & Co., Toronto; McArthur, Irwin, Ltd., Montreal; Henry Disston & Son, Ltd., Toronto; Gillette Safety Razor Co., Montreal; Kir-Ben, Ltd., Almonte; Imperial Varnish & Color Co., Toronto; National Electric Heating Co., Toronto; Goodyear Tire & Rubber Co., Toronto; Gendron Mfg. Co., Toronto; Canada Cement Co., Montreal; A. Ramsay & Son, Montreal; Canada Brush Co., Montreal.

Four Advances in Year on U.S. Stoves

Increased Costs of Materials and Labor Responsible for Steady Advances—Higher Production Costs for 1917.

FROM Jan. 1, 1916, to Jan. 1, 1917, American stove manufacturers made four advances in prices of stoves. The first advance of an average of 5 per cent., went into effect Jan. 1, 1916; the second of 5 per cent. in May; the third of 5 per cent. in September, and a 17 per cent. advance applicable to stoves shipped after Jan. 1, 1917.

According to Lazard Kahn, president Estate Stove Co., writing in the *Metal Worker, Plumber and Steamfitter*, the average increase in the cost of stove manufacture during the year 1916 over the cost of 1915 was at least 30 per cent. It is altogether likely that further advances of from 15 to 20 per cent. will be added to cost of production during 1917.

It is evident, therefore, that Canadian manufacturers will also have to advance prices further during 1917. Advances in prices in the United States have been greater than in Canada, although the increase in cost of production in Canada has been as great, or even greater than in the United States. Furthermore, the labor problem in Canada has been even more serious than in the United States. Owing to heavy enlistments from Canada, the supply of skilled labor has been greatly depleted, and likewise production.

Conditions regarding raw materials in the United States have a direct bearing on the situation in Canada. Mr. Kahn, referring to the stove situation during 1916, and the increased costs of materials from Jan. 1, 1916, to Jan. 1, 1917, stated as follows:—

Wise Buyers Protected Themselves and Profited

The outlook for the stove trade in the early part of the year 1916 was not uncompromising. It will be remembered that materials of all kinds began to advance early. Wide-awake merchants, therefore, found no difficulty in persuading themselves that it was wisdom to cover their needs for the year without delay.

Pig iron within the period mentioned and to date, has advanced 126 per cent.

Foundry coke within the period mentioned and to date, has advanced 155 per cent.

Black steel within the period mentioned and to date has advanced 165 per cent.

Polished steel within the period mentioned and to date has advanced 50 per cent.

Stove bolts within the period mentioned and to date have advanced 184 per cent.

Sheet copper within the period mentioned and to date has advanced 150 per cent.

Mica within the period mentioned and to date has advanced 75 per cent.

Foundry supplies within the period mentioned and to date has advanced 30 per cent.

Wrapping paper within the period mentioned and to date has advanced 150 per cent.

Emery within the period mentioned and to date has advanced 135 per cent. Belding within the period mentioned and to date has advanced 50 per cent.

Chemicals (used in enameling) within the period mentioned and to date have advanced 300 per cent.

Labor of all kinds employed in stove shops easily averages 15 to 50 per cent.

The volume of stove sales by manufacturers and dealers in 1916 shows certainly a substantial increase over 1915. It is thought that stocks in manufacturers' warehouses at this time are below the average, although this may not be true of manufacturers who were not prevented by lack of raw and semi-finished materials, from operating their shops to capacity, up until the holidays.

Retailers in all lines of business were brought into such close and violent touch with increased costs of all classes of merchandise and materials that it is hoped and believed advances in retail prices were also generally made in like proportion and that 1916 was a banner year for them. Retailers who carried into 1916 a goodly supply of stoves purchased in 1915, and advanced retail prices in proportion to current wholesale prices, must have fared especially well. If they failed they alone are to blame. Carrying stoves in stock, from one season to another; having their funds invested therein, and faced by the certainty that stoves could not again be procured except at advanced prices, it seems the veriest tyro would have been impelled to fix retail prices on the basis of the new and not the old cost.

Cutlery Plant to Start in Canada

Have Secured Lease of Plant at Westport, Ont. — Will Make Jack Knives, Scissors, Coffin Trimmings, Knives, Forks and Spoons, Drop Forgings.

THE Dominion Cutlery Co., Ltd., head office Montreal, Que., has leased a plant at Westport, Ont., to manufacture cutlery, coffin trimmings and some lines of hardware. The property at Westport, which is located on the C.N.R. a short distance from Ottawa, consists of two buildings, three stories each, containing 2200 square feet of floor space, a machine shop, plating plant and water power equipment. Machinery is now being installed, and officers of the company state that unless something unforeseen develops certain cutlery lines will be turned out in the near future. The authorized capital of the company is $100,000, the value of shares $100 each.

According to the company's prospectus the business for the first year's operation is estimated as follows:

Jack Knives	$25,000
Scissors	20,000
Coffin Trimmings	30,000
Knives, Forks and Spoons	75,000
Drop Forgings	50,000
Total	$200,000

The company's prospects also contains the following announcement:

"According to Blue Book figures, Canada imported from England, United States, Germany, etc., one million four hundred thousand dollars ($1,400,000) worth of cutlery during the year ending March, 1914.

For these reasons the Dominion Cutlery Co. will probably control the cutlery situation in Canada for some time at least and as a result develop a demand for our goods among Canadians as a "Made in Canada" product.

A fully equipped cutlery plant requires machinery and tools which are suitable for the manufacture of drop forgings and coffin trimmings, consequently this company intends to take advantage of the splendid opening for these lines.

Drop forgings are continually being introduced into new fields of work, and their sphere of usefulness is practically unlimited. Manufacturers find that they can use them in place of expensive machined parts and heavy castings, where strength, lightness and durability are necessary. Their use is almost universal. Advanced ideas and improved methods have made it possible to produce the most difficult and irregular shapes from drop forgings.

This company will specialize in engineers' and machinists' wrenches, tool post rings and tool post wedges, golf irons, commutator segments, automobile and gas engine forgings, etc.

This company will also make a specialty of coffin trimmings on which there is a good manufacturing profit.

Are Jobbers Killing the Toy Industry in Canada?

By Fred. G. Holden, Buyer and Manager, Toy Department, Henry Morgan & Co., Montreal.

EDITORIAL NOTE.—HARDWARE AND METAL *feels that it is doing a service to the young toy industry of Canada to publish the statement made to it at the Toy Fair by Mr. Fred G. Holden, one of the best known buyers in Canada, Manager for the Toys and Sporting Goods Sections of Henry Morgan & Company, a big departmental store of Montreal. This toy department is one of the most successful in Canada and is in active running order throughout the whole year. The biggest business in toys, of course, is done during the Christmas season, but Mr. Holden says that toys sell well during all seasons of the year. Dolls are a staple selling line and other kinds of toys as well. Of course, in seasonable times carriages for babies as well as for dolls, and other wheeled vehicles are given the greatest prominence.*

Mr. Holden after covering the Toy Fair in Toronto will go on to the British Industries Fair, and then take in the Exhibition at Lyons, France. . . . The dissatisfaction of the big retail toy buyers referred to by Mr. Holden is coming to a head and the subject, we learn, is likely to be threshed out at a meeting of toy manufacturers this week.

IN the year that has passed since the first exhibit of the toy makers of Canada was held in Toronto I notice an improvement in many respects in the toys that are being turned out by Canadian manufacturers. This applies both to the style of the goods and also to the variety. At the same time I, to speak frankly, am disappointed in the lack of development that I had expected when the movement to encourage toy making was inaugurated twelve months ago. The most noticeable defect is still in the dolls. We still miss the finished products that we secured before the war. The lines of beauty in the faces and the graceful dresses that we get now on the French dolls have not been tried out in this country. There is a disappointing uniformity too about the dolls that leads one to infer that one maker has followed almost exactly the models of another, as if he had picked up the discarded mould and fashioned his products upon it. Allowance must of course be made by the fact that doll making is a skilled industry. But I am afraid that the real trouble is that our toy makers in Canada are fixing too low a standard of prices to make possible any satisfactory development.

This, to my mind, is the kernel of the whole matter, the cause of the slow progress that the past two years have shown.

Keeping Toys Too Small and Too Cheap

You find metal toys of finished design very attractive in themselves, but they are too small to suit the average child. He wants something two or three times as big. Bigger horses, bigger railway trains, bigger automobiles, bigger fire trucks and so on. But they all seem working to a price and the price is far too low.

Best Goods Sold First For Christmas

What class of goods sold first in our Toy Departments last Christmas? What I am saying is the experienc of everyone to whom I have spoken, and, that is that it was the best class of goods sold first and the cheap remained to the last and then very often had to be sold at a reduction in order to clear them out. People wanted a good class of toy, just as they wanted a good class of merchandise in nearly every department and they were willing to pay the price.

Making Good Class in England

For a great many of my toys for next Christmas I will have to go out of Canada. I am going over to the British Fair now and will go on to Lyons. My information is that the British toy makers are going after a higher class of toy and are not attempting to any extent to turn out this cheap stuff that is unsatisfactory to the manufacturer, the retailer and the customer alike.

Numbing Influence of the Jobber

To my mind the real trouble lies in the fact that the toy trade in Canada has come under the control of the jobber. It is the jobber that is killing it to-day, and until it gets out of the hands of the jobber there will be no real development in this new industry. As soon as a man, working perhaps with small resources and in a small factory, turns out a good class of toy the jobber gets after him and persuades him to give him control of his whole output. The argument, of course, that he advances is that the individual maker cannot afford the expense of pushing his article by itself among the retail trade, while he with a large number of lines, is able to keep travelers out and bring the expense for handling the one line down to a minimum. The toy maker falls for this and is satisfied if he gets a market from the one source for his output.

Can Job Cheap Goods More Easily

There is another point that comes in here. The jobber finds as a rule that he can job far more easily lines of cheap goods than the more expensive and the margin of profit on the cheaper lines is far higher than on the dearer ones. Very often the difference between a first-class and medium toy lies in the unwillingness of the jobber to allow the five cents more expenditure required to bring it up to a high standard.

The buyers of toys in Canada are numerous and have large appropriations each year for securing stock, and if the individual toy maker would submit samples to a number of the largest toy departments in the stores from Victoria and Vancouver in the West right through Calgary, Regina, Winnipeg down through Toronto, Ottawa, Montreal, Quebec and on to the Maritime Provinces, he would secure sufficient orders to keep him going all the time. In dealing directly with the toy buyers he would be able to meet their wishes more than through the medium of a jobber and could make to their order a toy that they know would meet with the approval of the public. Until something like this is done I do not think the toy industry of Canada will reach any great proportion nor will be anything of which we have reason to be proud.

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

TORONTO MARKETS

TORONTO, Feb. 15.—Hollow back scoops have registered an advance during the week. Riveted back scoops and spring point riveted miners' shovels have also been priced at higher levels. For polished spades and shovels the price has been increased 25 cents per dozen. Tarred and dry building paper and carpet felt have registered advances. Lamp chimneys and lantern globes have been increased. Whisks and half brooms are higher in price. Some other lines that have been marked higher in price are skinning knives, mouse traps, expansive bits, post hole augers, crosscut saws, claw hatchets, lath hatchets, tie weights, track spikes, putz, cream, ash sifters, rat traps, lamp wicks, heater wicks, repair parts on all stoves, ovens, heaters, wrought pipe. Embargoes continue to be a serious handicap to trade. But in spite of this business has been good during the week.

Spades and Shovels Go Higher in Price

SPADES, SHOVELS. — Advances have been recorded in some lines of scoops and shovels. Hollow back scoops are now quoted at a discount of 30 per cent. off list for the first grade and 20 and 5 per cent. off list for the fourth grade. The former discount for the first grade was 30 and 5 per cent. and for the fourth grade 20 and 10 per cent. On riveted back scoops for first, second and fourth grade the discounts in each instance is now 25 and 5 per cent. as compared with the former discount of 30 and 2½ per cent. For the Jones' spring point riveted shovels the discount now is 25 and 5 per cent. as compared with the former discounts of 30 and 2½ per cent. On shovels, draining tools and hollow back sand shovels and coal shovels there has been no change. On polished goods the extras have been increased to 75c per dozen net for the full polished and 50c per dozen net on the half-polished. This represents an increase of 25c in each instance. New discounts, together with the black list prices, will be found in the current quotations.

Building Paper and Carpet Felt Higher

BUILDING PAPER, CARPET FELT.—Advances have been made effective in the price of dry and tarred fibre building papers. No. 2 tarred fibre is now quoted at 75c per roll as compared with the former price of 70c, or an advance of 5c per roll. On No. 2 dry fibre the increase has been 2c per roll, the selling price now being 62c per roll. There has been an advance in the price of carpet felt in the 16-oz. weight, the price now quoted being $4.50 per 100 pounds.

Lamp Chimneys and Lantern Globes Up 10%

LAMP CHIMNEYS, LANTERN GLOBES.—With the firmness in the market for glass on account of the difficulties attached to the manufacture in the way of securing raw materials and labor there has been made effective an advance in the price of lamp chimneys and lantern globes, the amount of which is approximately ten to fifteen per cent.

Whisk and Toy Brooms Up 10 to 25 Per Cent.

WHISKS, BROOMS. — Advances in whisks have been made during the week which approximate 10 to 15 per cent. over recent quotations. One style that formerly sold for $1.50 per dozen is now quoted at $1.65 while another line formerly quoted at $1.75 is now priced at $2 per dozen. Toy half brooms have been increased in price 25 per cent. For the two-string eight-inch style that formerly sold for $1.10 the price is now $1.40 per dozen while for size that formerly sold for $1.35 the price is now $1.50. The firmness in this market has been caused through the higher prices commanded by broom corn in the Western United States where a shortage exists.

Many Lines of Shelf Hardware Marked Up

CUTLERY, AUGERS, BITS, HATCHETS, PUTZ CREAM, TRAPS.—Advances have taken place in a number of lines of shelf hardware during the past week. New lists and discounts are out for Taylor-Forbes lines which provide for an increase of approximately 25 per cent. Rodgers table cutlery has all been advanced in the neighborhood of 6 per cent. Some lines of skinning knives have also been marked higher. For the 5-inch size the new price is $3.65 per dozen and for the 5½-inch size the price is $4.10 per dozen. Delusion mouse traps have been re-priced and the quotation is now $1.35 per dozen. Clark's expansive bits have been increased in price, the small size now selling at 85c and the large size at $1.20. Stephenson's post hole augers have been advanced to $2.65 each. Arrowhead crosscut saws are now selling at $2.90 each for the 5-foot size. Passaic claw hatchets are quoted at $9.80 per dozen and Passaic lath hatchets at $8.70 per doz. Tie weights are quoted higher at 5c per pound. Meyers putz cream in the one-sixth pint tins has been advanced to 70c per dozen. New lists and discounts have been issued on all Hot point goods which provide for an increase approximately of 10 per cent. The discount remains the same of 25 per cent. off list, but the new list is in the neighborhood of 10 per cent. higher than the former list. Samuel ash sifters have been advanced to $5.40 each. Hold 'Em rat traps have also been increased in price, No. 1 size now being quoted at $5.45 per dozen and No. 2 at $6.35 per dozen.

Lamp Wicks Make Advance of 30%

LAMP WICKS.—There has been an advance of approximately 30 per cent. in the line of lamp wicks handled by the Imperial Oil Company. For the Rayo lamp the wicks that formerly sold for 50c per dozen are now quoted at 65c and for the smaller size for the same lamp the price has been increased from 44c to 55c per dozen. Wicks for heater oil stoves have been advanced from $1.20 to $1.70 per dozen.

Repair Parts of Oil Stoves Advance 20%

REPAIR PARTS.—Following the advance that recently became effective in the price of Puritan and Perfection oil stoves and heaters there has now been made effective an advance in the repair parts which amounts to 20 per cent. This advance applies to parts for all oil stoves, ovens and heaters for both the Puritan and Perfection brands.

Wrought Steel Pipe Goes Up $4 Per Ton

WROUGHT PIPE.—An advance has been made effective in the price of wrought steel pipe which amounts to $4 per ton for both lapweld and buttweld. The increase amounts to two points on all sizes. Demand for pipe has been good and manufacturers are kept busy in the face of the difficulties attached to manufacture. The volume of business is hardly as large as in normal years but the difficulties attached to manufacture have increased the activities of the makers. New net prices have not yet been issued.

Wire Products and Nails Hold Firm

WIRE, NAILS, ETC.—The market for wire of all kinds continues in a firm position. No advances have been recorded during the week. Wire nails also continue in a strong position in sympathy with the position of wire. Standard steel wire nails are quoted at $4.70 base and cut nails at $4.50 base sizes.

Binder Twine Prices Not Yet Announced

ROPE, TWINE.—The manufacturers have not yet announced their prices on binder twine although they are expected to be given out within the near future. It is anticipated that new records will be established when they are announced. Deliveries are now being made on some of the goods that were ordered before the recent advances took place. There has also been some business going on with those who had not made their bookings prior to the recent advances. In the United States there continues a good business for all cordage lines which prevents the possibility of accumulating stocks against the big demand that usually takes place in the spring and summer. It is expected there will be increasing difficulty to get required supplies by the time the heavy demand sets in.

Oil Stoves and Gas Heaters Having Big Run

STOVES, HEATERS.—With the shortage of coal there has been a big run on oil stoves and gas heaters. Manufacturers report the demand has been exceptionally good. But along with this there has also been a good demand for coal stoves for the country districts even in the face of the difficulty that is being experienced in getting supplies of coal in some districts. The demand for gas ranges has become somewhat easier and it is expected to be somewhat light for perhaps a month. Prices of enamelware are firm and the demand has been good.

Corrugated Sheets Higher in Some Quarters

SHEETS, PLATES.—There has been a firmness in the market for black sheets owing to the shortage of supplies. Some of the dealers are cleaned up on their stocks, and until additional supplies arrive there will be small chance of an easier tone to the market. Corrugated sheets in the smaller gauges have been advanced to the higher levels by other dealers, and the price of $6.50 for 28-gauge and $7 for 26-gauge is now more general. Galvanized sheets have held steady in price during the week. Galvanized shingles have advanced 25c per square, and are now selling at $7.

Old Metals Have Made Higher Levels

OLD MATERIALS.—An advance of 1c per pound is being paid for red brass this week. Old heavy zinc has also increased 1½c per pound. Heavy copper is quoted up 1¾c per pound, and old cast iron is firm at $16 per ton. Stove plate is very scarce, and a ready market could be secured for available supplies at $13 per ton, which represents an advance of $1.25. Old automobile tires have increased ¼c per pound.

	Per lb.	
Tea lead	$ 0 06	......
Heavy lead pipe	0 08	......
Yellow brass	0 15¾	......
Red brass	0 20½	......
Light brass	0 10½	......
Heavy zinc	0 09½	......
Heavy copper	0 24	0 24½
Old cast iron, per ton	16 00	......
Stove plate, per ton	13 00	......
Old rubbers, boots & shoes	0 08¾	......
Overshoes, lumbermen's rubber boots	0 06½	......
Auto tires	0 05¾	......
Bicycle tires	0 02½	......

Pig-Iron Production Still on Decline

Production of pig iron continues to decline owing to the coke shortage, which is getting more acute. The cold weather at the ovens has curtailed operations and the production of coke has been practically cut in half. Railway conditions are no better, seriously restricting the movement of coke to the furnaces and thereby curtailing output. Many foundries are working at reduced capacity and in some cases have shut down until the situation improves. Some pig iron is being imported from the United States, although not nearly as much as is required. Price continues high, being about $35 Buffalo or Valley furnace, which would be around $43 laid down in Toronto. Canadian pig iron continues off the market, and no quotations are being issued.

Ingot Metal Prices Firm

The possibility of the breach widening between the U. S. and Germany has been reflected in the metal markets during the week. The likelihood of increased demand for war metals has had a tendency to hold prices firm, but they are in many cases entirely nominal.

TIN.—The New York market is somewhat easier as a result of recent arrivals. The recent big advance was duc largely to fear of losses by submarine attack. The market locally is firm and unchanged at 57½c.

ALUMINUM.—The market is unchanged at 68c. War munitions has restricted its use in many other ways. Copper to-day is quoted at $32.50 New York, as against $28 a year ago, and 15c average for a year prior to the outbreak of the war. Quotations are nominal at 38c lb.

SPELTER.—The market is unchanged from last week. Prices range from 13½c to 15c lb.

LEAD.—Following the advance to $8.50 New York by the Trust prices of pig lead and lead products have advanced further. Prices locally advanced another ½c lb., and the price now quoted is 11c.

COPPER.—Supplies of copper are still scarce.

ANTIMONY.—The price of antimony still ranges around 35c, almost double the price quoted a few weeks ago.

Lead Sheets Are Up 1c Per Pound

LEAD AND ZINC PRODUCTS.—The firmness in the pig lead market during the week has sent the price of lead sheets up 1c per pound. For the 3-lb. and 3½-lb. the price is now 14¾c per pound, and for the 4 to 6 lbs. the price is 14¼c per pound. Lead pipe and lead waste pipe held steady during the week. Solder also maintained its firmness, some of the wholesalers advancing their prices on strictly and commercial. Following are the quotations:

Lead pipe, lb.	$0 14	....
Lead waste pipe, lb.	0 15	....
Lead traps and bends	Net list	....
Lead wool, lb.	0 12	....
Lead sheets, 3 lbs. sq. ft.	0 14¾	....
Lead sheets, 3½ lbs. sq. ft.	0 14¾	....
Lead sheets, 4 to 6 lbs. sq. ft.	0 14¼	....
Cut sheets, ¾c lb. extra and cut sheets to size, 1c lb. extra.		
Solder, guaranteed, lb.	0 34	....
Solder, strictly, lb.	0 32¼	0 38
Solder, commercial, lb.	0 31¾	0 35
Solder, wiping, lb.	0 31½	0 32
Solder, wire, lb.	0 35	....
Zinc sheets, per lb.	0 25	....

Iron and Steel in Continued Firm Market

IRON AND STEEL.—There is a continued firmness in the market for all iron and steel products. There has been a grading upward quite generally to the $4 base for bar iron. There is a con-

tinued good demand, and higher levels seem within possibility in the not distant future. Following are the quotations:

	Per 100 Lbs.	
Common bar iron	$	$ 4 00
Common bar steel	....	4 25
Refined iron	....	4 25
Angles, base	....	4 75
Horseshoe iron	....	4 25
Norway iron	7 50	8 00
Mild steel	....	4 25
Tire steel	....	4 45
Toe calk steel	....	6 00
Sleigh shoe steel	....	4 50
Band steel	4 50	4 75
Spring steel	....	6 00
Mining tool steel	14 00	22 00
Sheet cast steel	23 00	29 00

Tarred Felt Higher, Owing to Rag Embargo

BUILDING PAPER, TARRED FELT.—An advance in the price of tarred felt paper has become effective during the week, and it is now quoted at $3.35 per cwt. Manufacturers state the reason for the higher prices is due to the embargo that the British Government has placed on rags. Dry fibre building paper No. 2 is quoted from 62c to 65c per roll, which represents an advance of 2c. to 5c. Tarred fibre No. 2 is quoted at 75c, which is an advance of 5c per roll. Carpet felt is quoted from 25c to 50c per 100 pounds higher at $4.25 to $4.50.

Gasoline Holds in Very Firm Market

GASOLINE, OIL.—There is a firmness in the market for all oil products owing to the continued heavy consumption and the high price of the crude oil. Gasoline is still quoted at 28½c and 29c per gallon, and benzine 1c per gallon below these prices. Coal oil held in firm market during the week. Higher prices for gasoline are anticipated in the not distant future. Oil companies are greatly restricted in their deliveries of fuel oil and other products owing to the railway situation. One company reported that their deliveries up to the present time were 210 carloads behind the amount their contracts called for.

LONDON MARKETS

LONDON, Feb. 15.—Business has been somewhat quiet during the past week on account of the extremely cold weather. Customers apparently prefer to stay in where it is warm rather than venture out to do any shopping. A number of lines have advanced in price, and further advances can be expected. Collections during the past week have been quite satisfactory.

Malleable Fittings And Sisal Bed Cords Up

MALLEABLE FITTINGS, SISAL BED CORDS.—By the changing of the discount on malleable fittings an increase has been made effective of approximately 10 per cent. Classes B and C are now quoted at net list. Sisal bed cords have also moved upward, following the advance recently made in all sisal products. New prices for the three-ply, 48-foot, is $1.35 per dozen, and $1.65 per dozen for the 60-foot, three-ply.

Window Glass Advances Approximately 6 Per Cent.

GLASS.—By the change of the discount on window glass to 15 per cent. on single and double diamond there has been an increase in price of approximately 6 per cent. Cut lights are quoted at a discount of 50 and 5 per cent. off list. Figured on the basis of 15 per cent. off list, following are the net case prices:

	Single 100 ft. case	Double case
Up to 25 inch	$6 63	$10 11
26 to 34 inch	6 93	10 93
35 to 40 inch	7 22	11 56
41 to 50 inch	10 00	13 17
51 to 60 inch	10 42	13 48
61 to 70 inch	11 13	14 28
71 to 80 inch	....	15 60
81 to 84 inch	....	19 35
85 to 90 inch	....	20 70
91 to 94 inch	....	21 25
95 to 100 inch	....	24 65
101 to 105 inch	....	27 20
106 to 110 inch	....	3- 45

Table Cutlery and Butcher Knives Up

CUTLERY, BUTCHER KNIVES.—An advance of 6 per cent. has been made effective in the price of the James Rodgers table cutlery and butcher knives. This advance follows the firmness in the steel market, and the difficulties attached to the labor situation. Following are the new prices that have been made effective on the butcher knives for the No. 1707: 5½-inch, $3.90 doz.; 6-inch, $4.10 doz.; 6½-inch, $4.45 doz.; 7-inch, $5.10 doz.; 8-inch, $6.15 doz.; 9-inch, $6.60 doz.; 10-inch, $8.75 doz.; 12-inch, $13.95 doz.; 14-inch, $21.25 doz.

Tackle Blocks Are Up

New prices that have been made effective on wood and steel tackle blocks provide for an increase of 15 per cent.

Wire Nails Very Firm

Steel wire nails are in very firm market, and an advance in the near future would not come as a surprise. Standard wire nails are quoted at $4.70 base and cut nails at $4.50 per hundred pounds base.

Linseed Oil Firm

The market for linseed oil held firm at $1.35 for raw and $1.38 for boiled per gallon, in one to two-barrel lots. In three to five-barrel lots the price is $1.34 for raw and $1.37 for boiled, while for six to nine barrels the price is $1.32 for raw and $1.35 for boiled.

Turpentine Held Steady

Prices in turpentine have remained unchanged here during the week, and are still quoted at 81c per Imperial gallon in one-barrel lots and 80c in two to four-barrel lots. For 5-gallon lots the price is 88c per gallon.

Rope Prices Are Firm

Quotations on rope remained unchanged and firm at the recent advances. Pure Manila is quoted at 29½c per per pound base, British Manila at 25c per pound, and New Zealand hemp at 25c.

Sash Weights Are Higher

New prices that have been made effective on sash weights provide for an advance. Solid are quoted at $3.50 per 100 pounds, while one-pound sectional are selling at $4 per hundred, and for the half-pound weights $4.25 per hundred.

Spades, Shovels And Scoops Advance

Spades and shovels have again advanced. This will not come as a surprise to the trade, as the trend of the market has been referred to several times during the past few weeks.

The advance for full polishing has been advanced to 75c per dozen. The advance for half-polishing has been advanced to 50c dozen.

New net prices on shovels and spades are now as follows:—1sts—Jones Bulldog, $11.87 doz.; 2nds, Burns, $11.48 doz.; 4ths, Olds Fox, $10.35 doz.; Light Black Cat, socket star, $9.15 doz.

Scoop shovels have advanced 5 per cent., and the new discount is now as follows:—

Hollow back, first grade, 30 per cent.

Hollow back, fourth grade, 20-5 per cent.

Riveted back, 25-5 per cent.

Washing Machines

New list prices issued on washing machines are from 50c to $1 each higher than formerly. The discount remains unchanged at 50 per cent.

Taylor-Forbes hardware lines have advanced in price. New lists and discounts have been issued, and the advances run about 25 per cent.

McKinnon, Dash Co. hardware lines have again advanced, and include advances of approximately 10 per cent. on whiffletree irons, neck yoke irons, clevises, snaps, harness rings, etc.

White Lead and Putty Advance in Price

White lead has advanced 50c per 100 lbs., and pure is now quoted at $15 per

Kyanize VARNISH

Here's Another Kyanize KY-AN-IZE Business Getter

What! another? You said it, Mr. Man. But your surprise is pardonable.

Even the Boston Varnish Company can't live on its reputation.

When an outfit earns a name for being the "livest" in the industry it's got to live up to it.

That's what we're doing. This time, as you see, it's a wonderful new window trim—in colors.

Free to Kyanize KY-AN-IZE Agents

Note the bold swash of color in the wake of the big paint brush. Imagine the hundreds of pairs of eyes it will turn to your window. No doubt about it—it's got the attractiveness and punch that turn looks into sales.

It's the sort of sales help every live Kyanize Dealer is looking for. Yours will be sent on request. Use the convenient coupon herewith.

TO LIVE VARNISH AND ENAMEL DEALERS EVERYWHERE: If there is no Kyanize Agent in your locality we invite you to write for a copy of the new, big "Dealers' Mint of Selling Hints" and full particulars about the Kyanize Exclusive Agency Plan.

100 lbs. in ton lots, and $15.30 per 100 lbs. in less than ton lots.

Putty has advanced 30c per 100 lbs., and is now quoted as follows:—Standard—100-lb. drums, $3.85; 25-lb. drums $3.95. Pure—100-lb. drums, $4.65; 25-lb. drums, $4.75.

Building Paper Advances in Price

Some lines of building paper have advanced to the following prices:—

Dry paper, No. 2, 62c roll.
Tarred paper, No. 2, 75c roll.
Surprise paper, 67c roll.
Tarred felt, $3.35 per 100 lbs.
Carpet felt, $4.50 per 100 lbs.

this week with another small advance in price. New prices now available are:

Per 100 lbs.; Decorator's pure, ton lots, $15.55, less, $16.20; decorator's special, ton lots, $14.55, less, $15.20.

No further change has been made in the price of linseed oil or turpentine as yet. From reliable sources expectations of a further rise in prices of linseed oil are strong and it would appear that to-day's quotations will seem good buying in view of what is to come. To-day's quotations are:

Per gal., bbl. lots: Raw linseed oil, $1.35; boiled linseed oil, $1.38. Turpentine, 85c. per gal., bbl. lots; 88c., per gal., ½ bbl. lots, and 90c., per gal., 5 gal. and 1 gal. lots.

Wood alcohol also goes to a higher figure as follows:

Per gal., 5 gals., $1.73; 1 gal., $1.90. Cans included.

WINNIPEG MARKETS

WINNIPEG, Feb. 15.—During the week great things have been happening with curling stone and broom and as a result of the Bonspiel attraction many hardwaremen throughout the West have come into town—some making it a business trip, but most of them forgetting business worries for a few days.

There has been no let-up in the amount of business being handled by the jobbers and the rush of orders keeps everyone on the move. Figures for the first half of the month are very satisfactory, and although this is a short month, jobbers expect a very favorable report when totals are available for the whole month.

Numerous Revisions In Prices

During the week the revisions in prices have been fairly numerous again, with the usual upward trend noticeable all the way through. Changes in bolts and nuts, rope, white lead and stove pipe feature. Linseed oil remains firm at prices prevailing for the past couple of weeks.

Rope Prices Soar Clothes Line Higher

Following the situation in regard to rope it remains extremely interesting and the predictions made in HARDWARE AND METAL from time to time are being upheld. An article published a week or two ago dealt with conditions in this market at great length and that advances may continue for some time, seems a probability. New levels as regards prices were again reached in this week's revisions and the following quotations are the best available.

Pure Manila	30c	lb. basis
Sisal	24c	"
Lath yarn	24c	"
British Manila	25c	"

Other lines to be revised in sympathy with these advances are as noted below:

Cotton Clothes Lines	Doz.
48 ft.	$2 20
60 ft.	2 75
Sisal Clothes Lines	
48 ft.	1 35
60 ft.	1 65
72 ft.	2 00
Candle Wick Packing	45c lb.
Chalk Lines—	Gross
18 ft.	$3 25
21 ft.	4 00
24 ft.	4 20
30 ft.	4 75
Masons Lines	Doz.
White	1 25
Yellow	1 50

Bolts and Nuts Follow Advance in East

The latest advance in bolts shows some lines and sizes now selling at net list—most certainly very high figures for these lines. During the past two years advances in bolts have been steady and the present prices come as no great surprise. The situation in regard to steel and iron is by no means improved and with the impending crisis in the States no relief can be looked for from that source. Small rods are still almost at a premium and this explains the situation as regards bolts pretty thoroughly. The new discounts are as follows:

Carriage Bolts—
⅜ and smaller, 15%.
7-16 and larger, net list.
Machine Bolts—
⅜ and smaller, 15%.
7-16 and larger, 5%.
Sleigh Shoe Bolts—
⅜ and smaller, 5%.
7-16 and larger, net list.
Coach screws, 25%.
Plow bolts, 5%.
Shaft bolts, 5%.

The latest prices issued on square and hexagon nuts are based on an advance over list of $2 per 100 lbs. in full case lots and $3 per 100 lbs. in less than full cases. Net prices on this basis are as follows:

	Per 100 lbs. Less than case	cases
Square Tapped Nuts—		
¼	$18 00	$17 00
5-16	16 00	15 00
⅜	14 10	13 10
½	12 80	11 80
⅝	12 30	11 30
¾	12 00	11 00
1	11 90	10 90
Hexagon Tapped Nuts—		
5-16	21 00	20 00
⅜	17 60	16 60
½	15 35	14 35
⅝	14 30	13 30
¾	13 75	12 75

Washers, Canada Plate, White Lead Higher

Wrought washers have also been revised with the following prices now ruling:

Full cases, 10% discount + 75c 100 lbs.
Less than case, 5% discount + 75c 100 lbs.

Following the advance in Canada plate recorded last week, comes advice of revisions in the price of stove pipe. Quotations are now being made on this basis:

Per 100 lens., riveted stove pipe, 6 in., $14.75; 7 in., $15.85; ready to rivet stove pipe, 6 in., $14.75; 7 in., $15.85.

White lead again is in the foreground

Wrenches and Auger Bits Advance

Important changes are also recorded for the week in the advanced prices on Stillson and Trimo pipe wrenches and Irwin auger bits. The new discounts, with net prices, are given herewith:

Stillson pipe wrenches, discounts 55%.

Each: 6 in., 90c.; 9 in., 90c.; 10 in., $1; 14 in., $1.35; 18 in., $1.80; 24 in., $2.70; 36 in,, $5.40.

Stillson wrench parts now take a discount of 50%.

Trimo pipe wrenches, discount 47½%.

Each: 14 in., $1.55; 18 in., $2.10; 24 in., $3.15.

Trimo wrench parts now take a discount of 40%.

Irwin auger bits are now quoted at 30% and Irwin car bits at 35%.

WHAT OTHERS SAY

Knows the Paper

Tara, Ont."

MONTREAL MARKETS

THE MARKETS AT A GLANCE

Thirty-one towns served by the Grand Trunk Railway in Ontario are shut off entirely for freight shipments, through the operation of the embargo to points east of Toronto. In these towns there is service by only the one railway. The freight situation continues to be a perplexing one to wholesalers and merchants. Wrought pipe has advanced $4 per ton during the week and spades and shovels have been increased in price. White lead in oil, putty and linseed oil have all been increased in price. Other lines that have advanced include tarred and dry building paper, carpet felt, lamp chimneys and lantern globes, whisks and toy brooms, table cutlery, skinning knives, butcher knives, expansive bits, posthole augers, cross-cut saws, claw hatchets, lath hatchets, putz cream, ash sifters, rat and mouse traps, lamp wicks, heater wicks, repair parts for oil stoves, ovens and heaters. In spite of the handicaps, business has been fairly good during the week.

MONTREAL, Feb. 14.—The markets for hardware and the metals in Montreal this week are full of firmness of tone, though reports are rather to the effect that there is a quietness in business, and a hesitancy as regards heavy buying owing to the high prices prevailing. Deliveries also are extremely seriously hampered by railway congestion and embargoes. This applies to outgoing and incoming freights. Retailers in the country will appreciate the troubles and make allowances for wholesalers trying hard to send them supplies. One large firm of metal merchants in Montreal reported that a carload of plates consigned and on the rails at Cleveland in November, has not yet reached Montreal. The advances of various lines of goods are recorded in the matter following:—

Shelf Goods Again Show Advances Prices

SHELF GOODS.—Certain important lines of shelf goods have shown advances this week, and the market is watching other lines with care though conditions are not quite as "jumpy" as within a few months back.

Steel Squares Advance

Last week, HARDWARE AND METAL advised a possibility of advance in steel squares. These have gone up as predicted, and by about 25 per cent.

Cap and Set Screws

Cap screws are now 20 per cent. off for both square and hexagon head patterns. Set screws are 27½ off. Finish and semi-finish square nuts up to 1 inch are 27½ off. Over 1 in. they are 20 off.

Plain Grindstone Fixtures

Following are prices quoted by one large firm in Montreal on plain grindstone fixtures: No. 1 x 15 in., $5.25; No. 2 x 17 in., $5.60; No. 3 x 19 in., $6.60.

Riding Whips Advance

All lines of riding whips are reported up in price by fifty cents per dozen.

Wrought staples have advanced from a former discount of 62½ per cent. off to a discount of 60 per cent. off.

Scoops Show Advance

Coal, locomotive, and Jones' scoops show advances this week, the discount quoted being 30 off. Crescent brand quotes 20 and 5 off. All rivetted scoops, including Jones', are 25 and 5 off now.

New Extras on Scoops

New extras on black shovels and quoted this week also as follows: Full polish, add 75 cents (formerly 50 cents). Half polish, add 50 cents (formerly 25 cents).

Woodscrews Very Scarce

Woodscrews are reported very scarce in the lines used in munition work (1¾ in., 1 in., ¾ in., and 2 in. mostly, in various gauges, mostly 11 and 12), and there may be price advances in these.

Arrow Shades Cancelled

"Arrow" window shades (the lower priced quality) have been cancelled, according to report of a leading firm in Montreal, and the Dominion, higher priced shades, remain. This means a difference of 20 cents per dozen on window shades, but not on one line of window shades; it is only the cancellation of the cheaper line that raises the cost, as it were.

Rogers' Cutlery Up

There is a general advance in Rogers' cutlery lines, which will work out to about 5 to 10 per cent., according to opinions in Montreal, and Nevada silverware is advanced also by about ten or twenty per cent. Calculations were still to make on these numerous lines, but the advance is certainly there.

American Padlocks

A well-known line of American padlocks is subject to a further 5 per cent. advance, according to one wholesaler in Montreal. No new prices have as yet been issued.

Roofing Papers Up And Very Firm Too

ROOFING PAPERS.—Advances are made in roofing papers in Montreal this week, and the prediction is even made that prices as now quoted may advance again a hundred per cent. owing to the extreme difficulty of getting raw materials for roofing papers. No. 2 Dry is now 62 cents; No. 2 (tarred), 75 cents; Surprise sheeting, 67 cents; Ready Roofing, 2-ply, $1.10; Ready Roofing, 3-ply, $1.35; Heavy tarred and dry 100 lbs., and tarred felt, $1.36 per hundred pounds.

Trimo Wrenches Show Advance as Stillson's

WRENCHES AND PARTS. — Last week, Stillson wrenches advanced in Montreal as elsewhere, and this week Montreal wholesalers note advances in Trimo wrenches also. The same list as applies to Stillsons applies to Trimos. It was given last week. The discount mentioned by one large firm is 50 per cent. off. Following is the Trimo list as regards parts:—

Trimo	Nuts	Jaws	Frames	Spgs.
6-in.	$ .12	$ .75	$ .38	3c.
8-in.	.15	.80	.42	3c.
10-in.	.20	.85	.50	3c.
14-in.	.30	1.15	.60	3c.
18-in.	.35	1.75	.75	4c.
24-in.	.55	2.25	.95	4c.
36-in.	1.10	4.35	1.90	4c.

The parts list is also subject to 50 per cent. off, according to one large firm in Montreal.

Predicted That Wire Nails Will Reach $5

WIRE NAILS, ETC.—It is being quite freely predicted in an off-hand way, but with some seriousness of tone, too, that wire nails will perhaps reach $5 base for spring this year. No one looking into the iron and steel situation could doubt the possibility. Already wire nails are at $4.75 base, and there is a marked scarcity, the small sizes in fact not being delivered at present at all. Cut nails at $4.50 base are not in such important demand, but these, too may advance. So far no changes have been reported in wire in Montreal, but the market for all these products is very firm, and the situation is at the mercy of the steel and iron kings, and the manufacturers of the products made from these most valuable metals.

Serious Shortages of Sheets and Plates

SHEETS, PLATES, ETC.—Nothing more encouraging than was printed last week can be written this week as regards sheets and plates. The demand for tinplate is strong, and there is a distinct suggestion that this line might come in for sharp advances should the United States go to war in earnest. The market is very firm for this line. There are few

if any Canada plates left in Montreal, and prices quoted are merely nominal. To get any of these from England at present is practically out of the question. To secure any from American mills is almost as hard, and there is no one making them to help the market in Canada, nor can there be for some time, it is thought. Ten to sixteen gauge black sheets show some advances in price this week, as will be noted from current quotations. Bright cokes are also advanced a shade or two. Gorbals Canada Plates (galvanized) are also adjusted upwards in price. It is doubtful if any double coated tissue can be found in Montreal, and the same is true of charcoal tin plates at present.

Iron and Steel Situation "Worse"

IRON AND STEEL. — "Worse than ever" is the word of a leading metal merchant in Montreal as regards the situation affecting iron and steel supplies. Few mills are even considering orders at present, being filled up with orders already far in arrears. Domestic pig iron is quoted only nominally as last week at $40 to $45, and it is doubtful if any one could fill any large order for iron in a hurry, as delivery difficulties were never so pronouncedly bad. By paying the price, it is always possible to get goods, though not always in the quantity desired, but in the case of iron at present, even the price may not master the delivery difficulty. One line of tool steel quoted last week will be found shaded higher in price this week.

	Basis.
Common bar iron, per 100 lbs.	$ 3.40
Refined iron, per 100 lbs.	3.65
Horseshoe iron, per 100 lbs.	3.65
Norway iron	10.25
Mild steel	4.30
Band steel	4.30
Sleigh shoe steel	4.30
Tire Steel	4.50
Toe calk steel	5.20
Mining tool steel, per lb.	0.13½
Black Diamond tool steel, per lb.	0.14½
Spring steel	6.00

Stoves and Ranges And Coal Shortage

STOVES AND RANGES.—For the time being the market is rather dull as regards stoves and ranges. More activity is anticipated in the course of the next couple of months, but meantime there have been no changes in price to note though conditions in the iron trade all point to the great likelihood of further advances in articles made of wrought and cast iron, and steel. The coal shortage is causing grave anxiety and difficulty to manufacturers of stoves and ranges, as well as the iron and steel situation.

Lead and Zinc Goods Keep in Firm Market

LEAD, ZINC, ETC.—Just for the time being only, perhaps, lead products have not followed the upward rush of prices for the metal itself, that is to say, the prices of the principal articles manufactured from sheet lead and used in the plumbing and other trades remain for the most part as last week's quotations. The only alteration made is in fact an adjustment to easier figures for lead pipe to 14 cents per pound for coil lead pipe, and 15 cents for cut lengths and for lead waste pipe. The very low priced wire solder quoted last week is eliminated this week as wire solders generally are much costlier than other solders owing to difficulties of manufacture. Zinc shets remain as quoted last week. The market in all thes lines is firm.

Lead pipe, lb.	$0.14	0.14
Lead waste pipe, lb.	0.15	0.15
Lead traps and bends	Net list	....
Lead wool, lb.	0.15	....
Lead sheets, 3 lbs. sq. ft.	0.14	....
Lead sheets, 3½ lbs. sq. ft.	0.14	....
Lead sheets, 4 to 6 lbs. sq. ft.	0.14	....
Cut sheets, ¾c lb. extra and cut sheets to size 1c lb. extra.		
Solder, guaranteed, lb.	0.37	....
Solder, strictly, lb.	0.35	....
Solder, commercial, lb.	0.33	....
Solder, wiping, lb.	0.33	....
Solder, wire, lb.		0.52
Zinc sheets, per lb.	0.33	....

Advancing Market For Old Metals

OLD METALS.—Responding inevitably to the conditions as regards the ingot metals, the markte for old metals shows several price advances this week in Montreal. Heavy lead pie is up to 8½ cents, an advance of a quarter of a cent, and may go higher. Yellow brass has advanced a quarter of a cent; red brass has advanced a full cent. Light brass remains at last week's price. Heavy zinc is up by a cent and a half, and heavy copper by the same amount. The market for old metals is fairly firm, but there is some hesitancy in demand on the part of merchants while the present high scales of price maintain. There is scarcity of supplies which is partly attributed to the effect of railway congestion preventing shipments from moving freely from country points, and partly to the fact that manufacture of new goods has been retarded much by the war.

Tea lead	0. 6½	.....
Heavy lead pipe	0. 8½	.....
Yellow brass	0.16	.....
Red brass	0.20½	.....
Light brass	0.10½	.....
Heavy zinc	0.10	.....
Heavy copper	0.27	.....
Old cast iron, per gross ton	18.00	19.00
Stove plate, per ton	11.75	.....
Old rubbers, boots and shoes	0. 8¾	.....
Overshoes, lumbermen's rubber boots	0. 6½	.....
Auto tires	0. 5½	.....
Bicycle tires	0. 2½	.....

In Market For Metals Lead Takes the Lead

INGOT METALS.—Not quite so disturbed and excited in market as during the past week, the metals are this week still very firm, with lead occupying the prominent place, and causing comments in every lead using line of industry from painter to plumber. Antimony is also showing a stronger tendency. Tin is uncertain, and copper steady in price though scarce in supply.

Lead Advances Strongly

LEAD.—Quoted at as high as $9.75 per 100 lbs. in New York this week lead is in very excited market, and in Montreal transactions in this metal took place early in the week at $11.00 per hundred lbs., while for smaller quantities as high as $12.75 to $13.00 per hundred pounds was being quoted up to the middle of the week. Present prices of lead are said to constitute a new high record. Some Trail (B.C.) lead changed hands at $11.00 per 100 lbs. in Montreal. Supplies are very hard to secure owing to railway difficulties.

Antimony Leaps With Lead

ANTIMONY.—Although there was only light buying of antimony in Montreal this week, the market for this metal was in full sympathy with conditions in New York, and kept pace with lead in firming tendency. Prices per 100 lbs. varied from $32 to $33 for large quantities, to $35, $37.50 and even quotations of $38.50 for smaller quantities.

Copper Keeps More Steady

COPPER.—Perhaps because there is very little copper available in Montreal, and transactions are exceedingly difficult owing to the impossibility of giving guarantees as to delivery of future orders, copper was in steady market this week with prices ranging from $36 to $37 per 100 lbs.

Spelter Uncertain in Tone

SPELTER.—Varying prices were found on the Montreal market this week for spelter, and while some found the tone of market stronger, others inclined to quote easier prices than last week's. For small quantities $17 per 100 lbs. was quoted; and prices of from $14.75 to $15.00 per hundred also prevailed on the market.

Tin Showed Variations

TIN.—While some metal merchants found tin inclined to ease off a shade in price this week after the prominence assumed by this metal last week, others found the market still firm as ever for tin. In small quantities prices of from $56.00 to $57.00 were quoted. For larger orders $50 to $52 were the prices quoted. The market contains hints of firmness still, but is uncertain.

Aluminum Keeps Steady

ALUMINUM.—There is steadiness in the tone of the market for aluminum at present in Montreal. This metal is quoted at $18.00 per hundred pounds during the present week, and at the time of writing showed no untoward tendencies.

EVENTS IN THE TRADE

White's, Ltd., Acquire More Warehouse Space

Collingwood, Ont. — Whites, Ltd., wholesale merchants, have found it necessary to enlarge their warehouse facilities, and have acquired another building 30 x 65 ft., three storeys in height. To further facilitate the handling of business, the firm is making alterations in the present offices and salesrooms.

Fire in Summerside Store

Fire was discovered in the office of Brace & McKay's store, Summerside, P.E.I. The firm had been busy stock-taking, and at six o'clock the office was closed, it being the intention of the staff to return and continue their work, after tea. The papers were left spread out around the desk, and many were destroyed.

New Paper Board Mill

A new paper board mill, which will be erected in Winnipeg by J. D. McArthur, will be a sixty-ton board mill in which will be installed a 136-inch cylinder machine. Chip board and all kinds made from waste papers will be produced. It is expected that construction on the plant will soon start and that it will be in operation before the summer is over.

Northern Bolt to Enlarge Plant

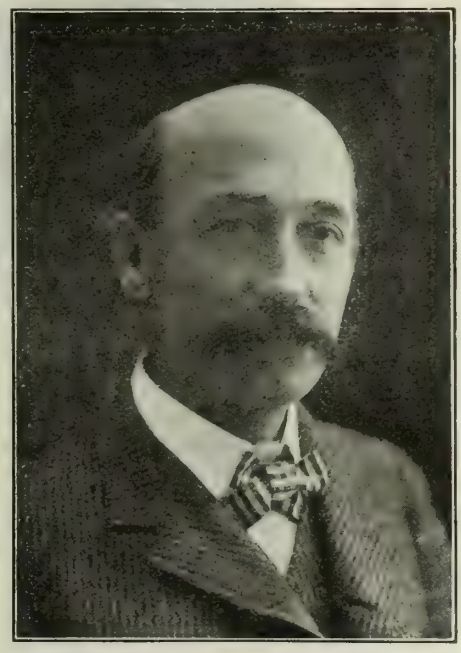
The Northern Bolt Screw & Wire Co., Owen Sound, has been incorporated with a capital stock of $500,000, to manufacture and deal in nails, bolts, screws, nuts, rivets, tacks, etc., tools, machines etc. The company proposes to build several additions to the present plant, including a new muffler furnace, concrete stock, additional nut-making machinery, steam crane, new hot galvanizing plant. Other additions will be a new clearing house about 30 x 50 ft., and a keg and case mill about 50 x 100 ft.

Harvie Pipe Mayor of Amherst

Amherst, N.S.—By one of the largest majorities ever given a candidate for Mayor, Harvie Pipe, of Dunlap Bros. & Co., wholesale and retail hardware was elected mayor. This is Mr. Pipe's first entry into the civic arena and it was only within the past two weeks that he acceded to the request of leading ratepayers to allow his name to be placed in nomination.

Col. Gartshore President of Fair

London, Ont.—Lieut.-Col. W. M. Gartshore, general manager of the McClary Manufacturing Co., was elected president of the Western Fair Association at the annual meeting held on Wednesday. He succeeds Capt. W. J. Reid, who died last year. As Acting President, Lieut.-Col. Gartshore presented the annual report to-day, in which he pointed out that this year the Western Fair would mark its semi-centennial, and he proposed a special celebration.



LIEUT.-COL. W. M. GARTSHORE, Who has been elected President of the Western Fair Association.

Lieut. Col. Gartshore has been taking an active part in public affairs and, among other important offices, he is chairman of the Hospital Board.

Business Changes

Windsor, Ont.—J. N. Richards, hardware merchant, has sold to J. A. Prieur.

Sinclair, Man.—W. H. Smith, hardware merchant, has sold out.

School Lake, Man.—Fishman & Robinson, hardware merchants, have discontinued.

Prussia, Sask.—Gryde & Marshall, hardware merchants, have dissolved, S K. Gryde continues.

Admiral, Sask.—The J. A. McGillivray Co., hardware merchants, have been succeeded by The Bird Hardware Co.

Medicine Hat, Alta.—Petitt-Bell hardware Co., Ltd., has dissolved, and the business will be continued under the name of the Bell Hardware Co.

Bladworth, Sask.—P. H. Robertson has sold out his hardware stock and fixtures to F. R. Robertson, formerly manager of J. H. Millard's hardware at Star City, Sask.

British Fair, Feb. 26—March 9

The British Industries Fair, 1917, will be held in the Victoria and Albert Museums and in the Imperial Institute, London, England. The trades which will exhibit in London are—Toys and games; earthenware and china; glass, fancy goods, stationery and printing.

New Incorporations

The Gladstone Brush Mfg. Co., has been incorporated at Ottawa, with a capital of $50,000, to manufacture brushes of all kinds at Toronto. The incorporators are: Eldon Moir, Donald L. McDonald and Oral N. Birchard, all of Toronto.

T. F. Shurly Co., have been incorporated at Ottawa with a capital of $200,000 to manufacture knives, axes and edged tools of all kinds at St. Catherines, Ont. The incorporators are: Theodore F. Shurley, George B. Burson and Harry Short, all of St. Catharines, Ont.

Industrial Notes

St. Catharines, Ont.—The St. Catharines Brass Works, Ltd., are building a foundry.

London, Ont.—The Hobbs Mfg. Co., contemplate building a large extension to their local art glass etc., manufacturing plant.

London, Ont.—Work on the new foundry of Beatty Bros, Limited will be started immediately and will cost approximately $30,000

Hamilton, Ont.—Construction work has been started on the erection of an addition to the plant of the Canadian Shovel & Tool Co.

Sarnia, Ont.—Large additions will be made to the plant of the Mueller Mfg. Co., and a considerable quantity of new machinery will be installed.

Montreal, Que.—The Canadian Consolidated Rubber Co., will occupy the factory on Inspector Street to be shortly vacated by the Ames-Holden-McCready Co.

Title for Hardware Manufacturer.

The list of New Year's honors contains the name of Hon. A. E. Kemp, who is raised to knighthood.

Honors and responsibilities have been crowding upon him recently. The conferring of knighthood follows fast upon his appointment to succeed Sir Sam Hughes as Minister of Militia and is well deserved in view of the high responsibility of his cabinet post.

Sir Albert Kemp's connection with the hardware industry is too well known to require mention. As president of the Sheet Metal Products Co., his name is familiar to every hardwareman in the country, and his latest honor will be heartily seconded in the trade.

St. John, N.B. News

Philip Grannan, retail stoves and hardware, who has been a member of the legislature from St. John, will be up for re-election at the coming general elections on February 24.

The hardware and electrical fittings store of A. P. Belliveau, Moncton, was destroyed by fire on February 7, when fire which started in his premises demolished the Minto hotel building in which his store was located. His loss was estimated at $5,000 with $2,000 insurance.

The contract for the sub-structure of the combination railway and passenger bridge across the Nerepis River on the St. John & Quebec Railway has been awarded to Powers & Brewer, St. John, N.B. The price for the sub-structure is between $50,000 and $60,000.

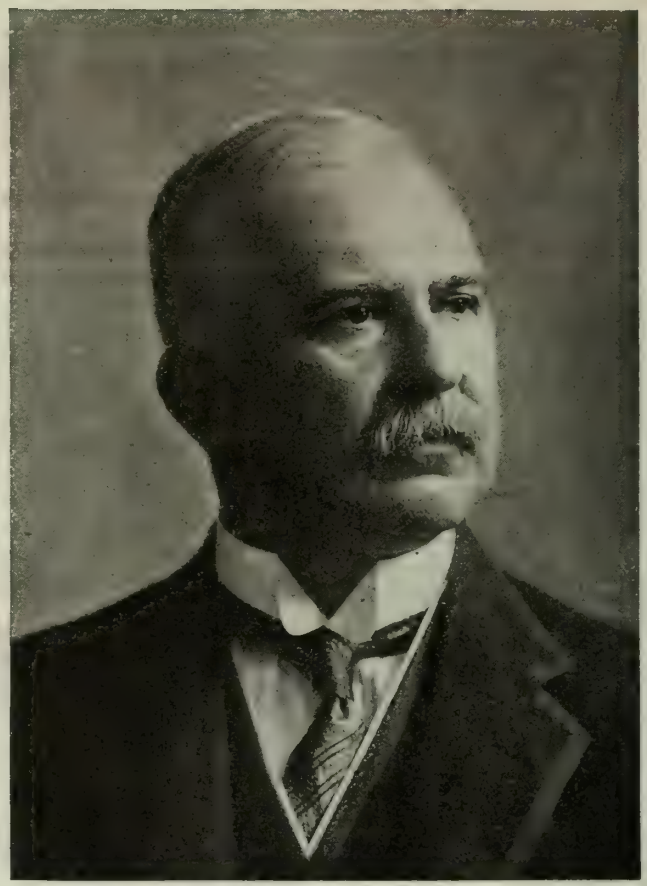
The hardware trade, which took a leading part in the introduction of the daylight saving plan in St. John last summer again is looking forward to the adoption of the scheme this year. With the co-operation of the various Boards of Trade it is expected that the plan will be put into effect more generally throughout the maritime provinces.

New Toronto Manager.

R. D. Fleming, for the past two years manager of the Toronto office of Wood-Vallance & Co., wholesale hardware, has been promoted to a position at the head office of the company in Hamilton. The Toronto business of the company will be managed by E.B.Ryan, who was formerly with McLennan & Feeley, in Vancouver and latterly with the hardware department of Robert Simpson Co., Toronto. Mr. Fleming will go to Hamilton next week and the duties connected with the Toronto office will be taken over by Mr. Ryan on Monday next.

Western Canada Notes

L. A. Ostrum is contemplating leaving Lomond, Alta. He is one of the pioneer citizens, his store being the second erected in Lomond



SIR ALBERT E. KEMP.
—Courtesy of International Press Service, Ltd.

Friends of Charles Wood, sec.-treas. of the Prairie City Oil Co. will regret to learn that he has been in a Cleveland hospital for nearly a month. His recovery is expected, however, and Mr. Wood should be back at work in a week or so.

The trade will learn with regret that Harry Cunningham, recently appointed manager in Winnipeg for Brandram-Henderson Ltd., paint manufacturers, was taken to the hospital on Tuesday last week. Mr. Cunningham has been ill for several weeks.

Personal

A Latham, of Latham's Hardware, Moose Jaw, Sask., left on Feb. 15 for a trip to Boston, Mass.

G. S. Pope, of the Utica Drop Forge Co., Utica N.Y., has started on a trip from Winnipeg to Vancouver, calling on the hardware trade.

G. H. Mahee, of Latham's Hardware, Moose Jaw, Sask., was a visitor at HARDWARE AND METAL'S office during the week.

L. Ross, representing H. S. Howland Sons & Co., Toronto, on the north shore, and who has been ill for some weeks with typhoid fever, has returned to his territory.

F. C. Carman, representing the Canada Dry Cells, Ltd., Winnipeg, and Interstate Electric Novelty Co., is back in the West on his semi-annual trip.

L. W. Simms, of St. John, N.B., president and managing-director of T. S. Simms & Co., brush manufacturers, was in Toronto during the week to give testimony on labor conditions in New Brunswick before the commission presided over by Justice Meredith. He was accompanied by A. O. Patriquen, foreman of the solid back department, and together they are making a trip through the Western United States, where the company is having some special machinery built for their brush factory.

Canadian Credit Men Have Retained Barrister to Draft Act

The Canadian Credit Men's Trust Association, Ltd., have retained H. P. Grundy, barrister, of Pitblado, Hoskin & Grundy, Winnipeg, to draft a Bankruptcy Act for submission to Association members, the wholesale trade of Canada.

Mr. Grundy claims that he can overcome the very serious difficulties exist-

ing in bankruptcy Acts in other countries, such as the establishment of bankruptcy courts, the appointment of expensive referees, the excessive legal charges, the delays and the one hundred-and-one other things that are the bugbear of other countries.

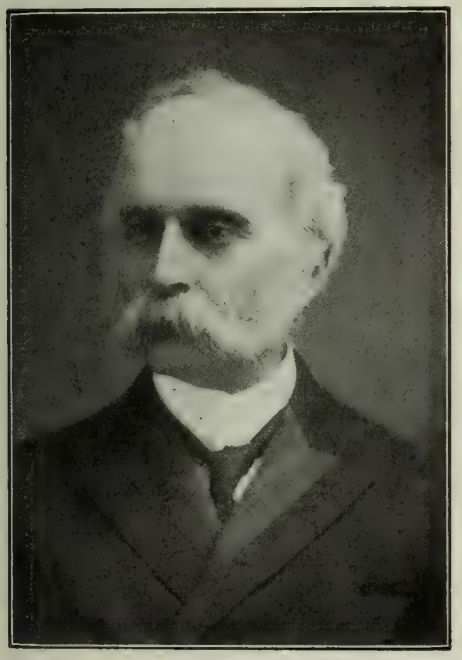
Two of the outstanding features of the Act will be compulsory liquidation of an insolvent debtor and the discharge of an honest debtor who has turned over his assets to his creditors.

Death of L. J. A. Surveyer.

Montreal, Que.—One of the pioneers of the hardware trade has passed away in the person of L. J. A. Surveyer. The death occurred on Friday at his residence, 357 Lagauchetiere Street, after a brief illness. He was 75 years old. The funeral took place on Monday.

The late Mr. Surveyor was born at Beauharnois, Que., his father being a medical practitioner there. He came to Montreal on completing his education and entered the hardware field with the late Thomas Davidson, of the Thomas Davidson Mfg. Co. In 1866 he started in business himself, opening a hardware store on Craig Street within a stone's throw of the stand now occupied by L. J. A. Surveyor Limited. Later he moved to Notre Dame Street, just across from the Court House. That was, at that time, near the heart of the city. Over thirty years ago he moved to St. Lawrence and Craig Streets and there the store has stood ever since.

Of recent years he had not undertaken much of the active supervision of the



The Late L. J. A. SURVEYER.

work, but his interest in the business remained keen to the end.

He married Miss Hectorine Fabre, a sister of the late Archbishop Fabre, of Montreal, and of the Hon. Hector Fabre, Canadian Commissioner in France. His wife predeceased him many years ago.

He is survived by four sons and three daughters: Edouard-Fabre Surveyer, K. C.; Arthur, civil engineer; Paul, advocate, and Gustave, merchant; Mrs. N. K. Laflamme (Eugenie), Mrs. Jules Fournier (Therese) and Miss Marie Surveyer.

CATALOGUES AND BOOKLETS

British Aluminum Calendar

The British Aluminum Co., London, Eng., with Canadian head office 60 Front St. W., Toronto, has issued an attractive 1917 calendar, showing The Dam, Kinlochleven. On the reverse side of the calendar is shown, a roll of honor of the staff and employees of the company. Close to 1000 employees of the company have given their services to the Empire.

"The Man Behind the Counter"

"The Man Behind the Counter" just published by The Stanley Works, is a thirty-six page booklet written to give clerks and salesmen some of the valuable selling points of Stanley Garage Hardware. These selling talks have been worked into a story which is built around a store meeting at which the buyer and the boss tell the boys about their Stanley Garage Hardware line.

Occasionally one of the clerks interrupt the buyer's talk with questions about the goods. The buyer or the boss answer with valuable selling ideas.

"The Man Behind the Counter" is illustrated with pictures of garages in various sections of the country which have been equipped with Stanley Garage Hardware.

A copy of this booklet will be sent free upon request to hardware dealers, clerks, or salesmen.

All requests for "The Man Behind the Counter" should be sent to the Stanley Works, New Britain, Conn., marked for the attention of the Service Department.

Auto Supply Catalogue

The Canadian Fairbanks-Morse Co., Montreal, have issued an attractively gotten-up dealers' catalogue of auto accessaries and motor boat supplies, etc. The catalogue is splendidly illustrated, many illustrations being in colors. Prices are shown for all articles listed in the catalogue. Copies of the catalogue No. 57 will be mailed on request.

Chicago Spring Butts

An attractively illustrated catalogue consisting of 40 pages, has been issued by the Chicago Spring Butt Co., Chicago, Ill., featuring the many lines of spring hinges made by the company. Copies of the catalogue, No. 32, will be supplied upon request.

WHEN RETAILERS NEED REVENUE STAMPS

(Continued from page 32.)

HOSPITALS.—"Hospitals are consumers when they purchase patent medicines to be used for their patients; but when they sell patent medicines to their patients, they are retailers, and the stamp must be imposed at the time of sale."

CANCEL STAMPS.—The person selling, the importer, and the manufacturer or producer whose duty it is to affix a stamp under this section, shall at the time the stamp is affixed cancel the same by writing on or across the stamp initials or other marks of identification, together with the date of such writing, or otherwise cancel the stamp in accordance with regulations made by the Minister.

The Sale of Wines.

The adoption of prohibition in the majority of the provinces has made the clauses respecting wines of little importance.

It should be noted, however, that "unfermented grape juice is exempt," and "all wines made from other fruits than the grape," are exempt also.

When a bottle of wine is opened to sell by the glass, a stamp must be affixed and cancelled, with date and initials of proprietor.

PRACTICAL SHEET METAL WORK

(Continued from page 50.)

drawing a solid line through the points of intersection.

This will give a one-half pattern up to point K.

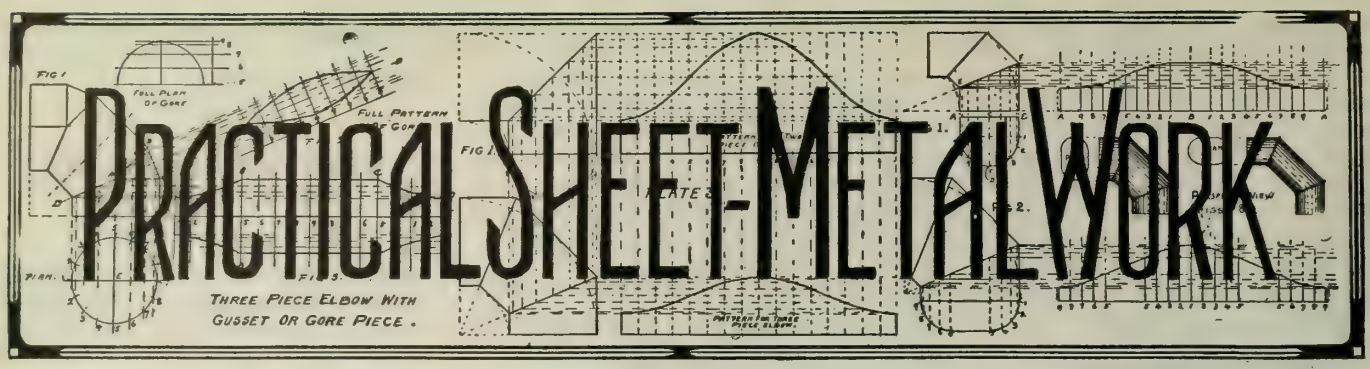
Fig. 4 shows how the top piece A, B, K, is developed, which is really a repetition of the course followed when drawing the half pattern, except that the full pattern of this piece is shown, by simply placing the compass on the stretchout line C, D, at the different points 1, 2, 3, 4, 5, 6, 7, and 8, and, dividing the vertical lines into equal portions below the stretchout line.

(Continued in next issue.)

PAPER A MONEY-MAKER

"Your paper has been a money-maker for me by following the markets in each number. I would not like to be without it.

"E. E. JOHNSTON,
Lansdowne, Ont."



BY THOMAS STANFIELD

IN the last issue we dealt with the inside round piece in connection with an extension chimney top, the accompanying plate shows the top part of the chimney cap, and how to develop the pattern for it.

A full elevation of the whole extension is shown in Fig. 1, along with plan of cap. First draw the tap as shown at AA, BB, CC, DD, and EE, this to be same size as the octagon piece shown in plate 40 which appeared in last issue. Next draw the plan, with line intersecting any two sections and the centre E. Now draw a vertical line as in Fig. 2, A, D, E, B, and with compasses measure off the various distances between line E in plan and points AB, AB, DE, DE to the vertical line in Fig. 2. To procure the true length of material required for the pattern, transfer the measurements from one side of the elevation B to E, E to D and D to A, to the vertical line in Fig. 2, by joining the various points of intersection. The pattern for one side of the octagon piece is now complete. This is all that will be needed, as all the eight sides are the same. Allow as shown a small piece of sheet metal for joints which is generally riveted.

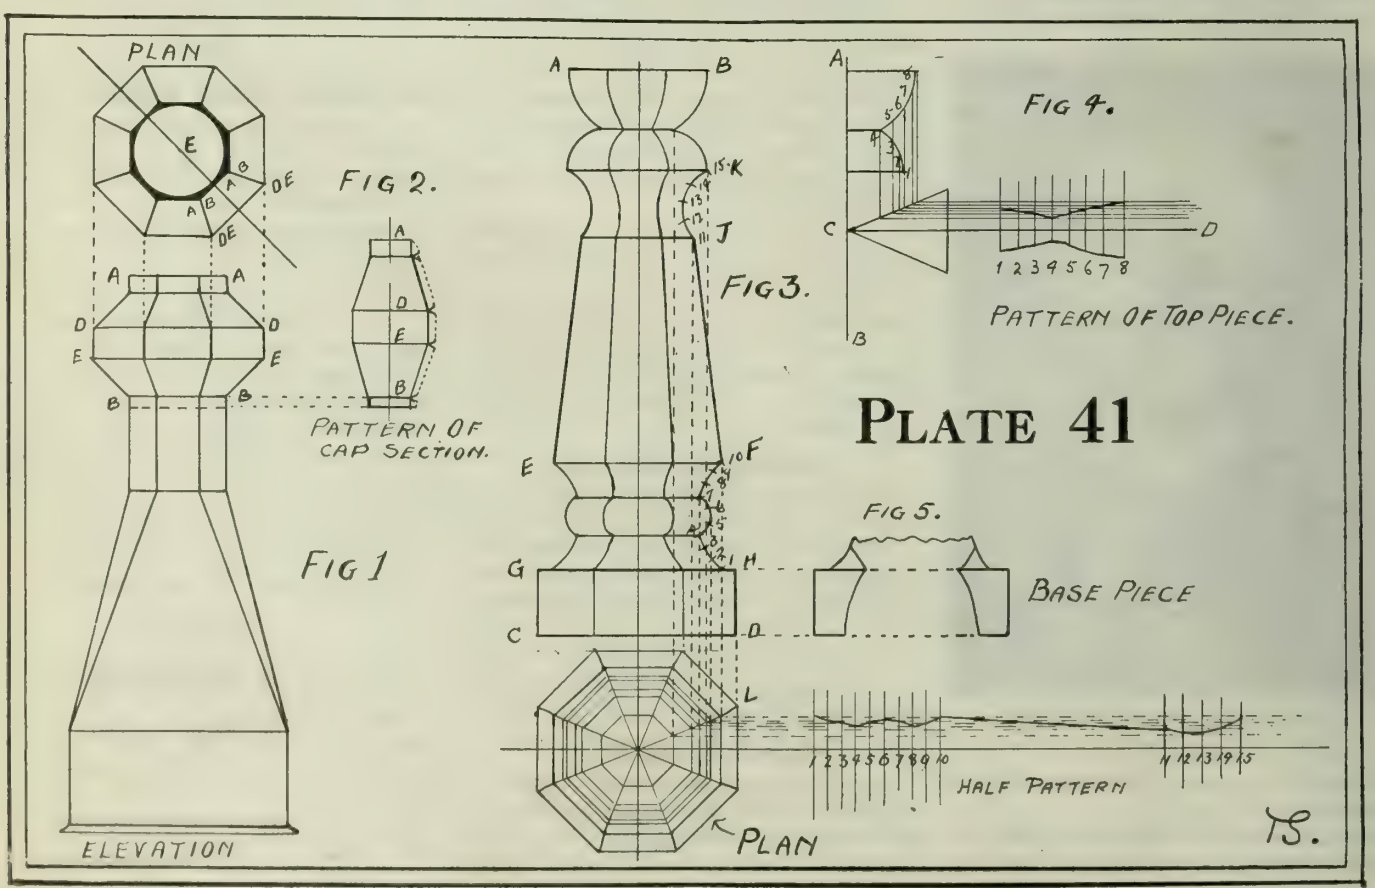
Fig 3 shows the plan and elevation of an octagon stand or newel post. While there are not very many of such articles made these days, the developing of the patterns will prove very interesting practice. First draw the outline shape as shown at A, B, C, D, E, F, next the plan, dividing same with eight equal parts from the centre. The outer corners will show the student how to arrive at the proper way to design the proportions on the post equally, by drawing lines from the moulded parts to the mitre lines on the plan. The base CD, is merely an octagon box with hole in top of same, which will, when complete, be covered over by the post. Fig. 5 shows shape of braces that may be fitted inside the base piece to stiffen it.

Now draw a stretchout line in line with centre of plan and measure the side of post from points H, F. J, K, as follows H, 1, 2, 3, 4, 5 and so on to 10, then the true length between F and J in one measurement. Next from J to K into smaller parts, transfer these measurements to the stretchout line.

From these points on side of elevation draw a number of vertical dotted lines down to the mitre line L, and again from points developed on mitre line L draw a number of lines parallel with the stretchout line.

After drawing vertical lines across these parallel lines at the various points 1, 2, 3, 4, etc., till 15 is reached, only one more operation is required, viz., that of

(Continued on page 49.)

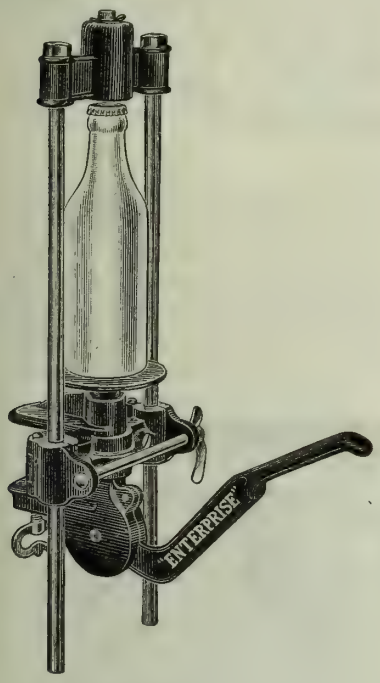


NEW HARDWARE GOODS

OFFERED TO CANADIAN HARDWAREMEN

BOTTLE CAPPER

The Enterprise Mfg. Co., Philadelphia, offers to the trade a new product called the "Enterprise" bottle capper, here illustrated. The makers state that any size bottle, from 3 in. to 14 in. high, can be capped with this machine. The adjustment for height is accomplished by loosening the clamping cross bar by means of the thumb nut. This will allow the sliding up or down of the side rods. The makers claim that two dozen bottles can be capped in the same time required

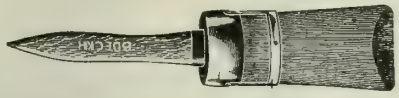


Enterprise Bottle Capper.

to cork, tie and seal one bottle in the old-fashioned way, besides relieving the labor necessary to press corks tightly. The capper is said to be especially adapted for use in bottling establishments of all kinds, drug stores, canning clubs, for citrate magnesia, and the home for bottling grape juice, catsup, etc. The height of the capper over all is 23 in.; height above table, 16 inches; width, 7 inches; weight, 8½ lbs.

STEEL GRIP RUBBER SET BRUSHES

The Boeckh Bros., Co., Toronto, announce a new line of "Steel Grip" rubber set paint, varnish, stencil, glue and shaving brushes. The makers state that the combination of a steel grip and rubber setting gives such a secure grip that each bristle is held firmly and cannot come out. The bristles are set in thoroughly hardened, best quality rubber, reinforced and protected by Boeckh's steel



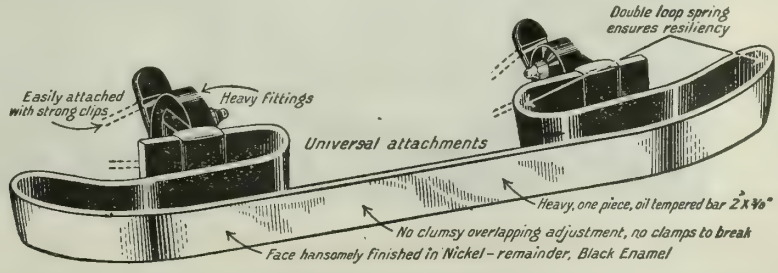
Boeckh Bros. "Steel Grip" Rubber-set Brushes.

grip, or compressed steel ferrule. There are several designs in the new brushes, and a special catalogue covering same is being prepared. Copies and complete information regarding the new line will be mailed on request.

NIAGARA BAR BUMPER

Kinzinger, Bruce & Co., Niagara Falls, N.Y., are marketing the Niagara resilient spring bar bumper. The makers state that it is a fact that in most cases of collision with another car or the garage door frame, or a tree or pole, the blow is taken near the end of the bumper bar, and not in the middle. The "Niagara" universal spring bar, therefore, is made with a double spring loop at both ends, so as to afford the greatest amount of resiliency at that part of the bumper which most often takes the shock. The oil-tempered bar is made of somewhat stouter stock than is generally used, and this, it is said, will stand up under severe usage, and protect the car from strain, and the lamps and radiators from damage.

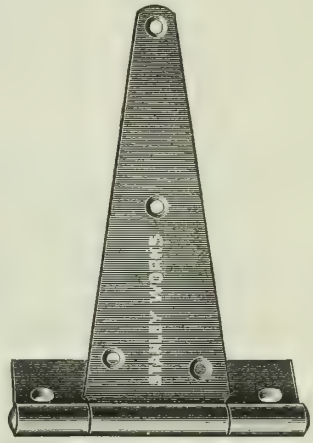
The universal attachments fit most of the popular cars in use in Canada today, and are adjustable, so that bars can always be fitted in proper position for appearance and efficiency. Prices and descriptive matter can be secured by writing to the manufacturers.



Niagara Bar Bumper.

STANLEY HEAVY T-HINGE

The Stanley Works, New Britain, Conn., has placed on the market a heavy T-hinge, with reverse pad. Very little time and labor, it is claimed, is used in applying this hinge, as the jamb of the door only is mortised, the door put in place and the surface leaf applied to the surface of the door. These SC963 JI hinges are packed with screws, one pair in a box, and also in complete sets of hardware for the garage door. These



Stanley Heavy Tee Hinge.

sets consist of hinges, bolts, latches, hasps, door holders and handles. These reverse pad T-hinges can be furnished in 10-12-14 and 16-inch sizes, and are finished in dead black japanned. For further information, prices, etc., write to the Stanley Works, New Britain, Conn.

Flight Sub-Lieut. G. Reginald Marshall, R.N.S.A., son of Geo. A. Marshall, manufacturers' agent, Toronto, who is now in France, has secured his pilot's certificate and will shortly return to England, from whence he will probably be ordered on active service.

WEEKLY PAINT DEPARTMENT

Get Started on Spring Plans

The Big Selling Season for Paint is Coming Closer — In Spring the True Hardwareman Gets the Paint Fever—HaveYou Got It?

IN three weeks' time the winter will be losing hold. The hardest season in the paint department is, therefore, getting near its end and the biggest and busiest season is close at hand.

This means that the hardware dealer who aims to make his paint profits big must be planning and preparing for the big spring campaign. The comparative stagnation of the late winter must be made to give way to the impending rush and skurry.

The first step is to get the stock sorted up and ready, and it is not too early to get started on this preliminary step. Paint tins have a tendency to get dusty and dingy during their winter sequestration. A dull afternoon might be selected for a cleaning up bee in the department. Have all the tins dusted and brushed up, the labels adjusted, the stock properly sorted—and then bring it forward to the part of the store where it is intended to lodge the department for the "spring drive." It is not too early to do this. In fact, it will soon be too late, because the trade will soon be starting.

Once said a hardwareman who had been out of the active retail field for a few years: "The first sign of spring almost make me restless. I feel as though I wanted to get back behind the counter in the paint and brush department." Early spring arouses different longings in different men. Some want to get away with a fishing rod, some want a gun. This man true to his long training, felt the tug of the old spring race for the dollars and cents that are to be collected in the paint business.

As these lines are written the sun is shining brightly and Old Sol is busy undermining the constitutions of the snowdrifts. Tomorrow it may be as cold as Greenland again; but, forgetting the possible vagaries of weather man, the fact remains that to-day there is a feeling of spring in the air. If those who read this article have the real hardware spirit—the spirit of the ex-hardwareman quoted above—they will be feeling the desire for a start on the spring paint campaign.

Obey that impulse! Get started on your preparations at once.

It is time to think of displays of paint and accessories. Herewith is shown a neat and practical suggestion.

B. T. Brochure, No. 33

Beatty Bros., Ltd., Fergus, Ont., have just issued Brochure No. 33, a treatise on barn construction, printed in French. Copies will be mailed on request.

Boeck's "Steel Grip" Rubber Set Brushes

The Mark that Guarantees the Perfect Brush

The Boeckh Trade-Mark has long been recognized by the trade as synonymous with the Highest Standard of Brush-making.

This Mark is also coupled with "Steel Grip" reputation, which has won recognition from merit, and the "**Bristles Can't Come Out**" feature. Added to this Steel Grip we have coupled the Rubber Set feature, which ensures not only a firm, but a lasting grip—consequently Boeckh's Brushes have won the good-will of practical men who were quick to see the advantages of "Steel Grip" Rubber Set Paint and Varnish Brushes over ordinary makes.

Our Catalogue should have a place near your order desk ready for service.

The Boeckh Bros. Co., Ltd.

Toronto, Canada

JAMIESON'S
Pure Prepared Paints

The quality of Jamieson's Paints gives them a long life after application.

This feature and the ease with which Jamieson's are applied without fuss or muss has kept Jamieson's Paints on the market for over fifty years, and what interests you—the dealer—is our liberal profit.

Have you looked into ur proposition? Let us tell you about it.

WEEKLY PAINT MARKETS

TORONTO

TORONTO, Feb. 16.—There have been some important changes in paint lines during the week. White lead has advanced 50c per hundred, and putty has also been moved upward. Turpentine in some quarters is quoted down, and there is an easier tone to this market. Shellac has been moved up from the lower levels, and there is a firmness in the market that to some wholesalers clearly points to higher prices in this commodity. Linseed oil held in a firm market at the prices quoted last week, with a continued tightness in the matter of getting flax seed. Stocks are comparatively light, and the oil is hard to obtain. Glass manufacturers in the United States have withdrawn their prices, which is taken as a precursor that higher prices are inevitable in the producing centres. Wholesalers have not yet started to make shipments on spring orders on account of the freight situation, as is their custom about this time of year in normal times. Some concerns report a heavy forward booking on paint, which to some seems to indicate that merchants are stocking up in anticipation of still higher prices.

Linseed Oil Supplies Are Somewhat Meagre

LINSEED OIL.—Owing to the curtailed operations of the crushers through their inability to get flax seed from the Canadian West, supplies of oil are rapidly dwindling. There is considerable inquiry for oil, but very little to be had. Prices have advanced 5c per gallon during the week, and a firm position is maintained. Cash flax seed at Winnipeg has been sagging toward lower levels. The price on Wednesday of this week was $2.50 per bushel while the closing price on Wednesday of last week was $2.55 per bushel. On the previous day, Tuesday of last week, seed was at $2.50¾ per bushel. There continues to arrive at Winnipeg a stream of cars of flax seed for inspection, although the number is not large. For the six days ending with Wednesday of this week the number totalled 68 cars, which is slightly over 11 cars per day. But, as pointed out in these columns heretofore, the price of seed is not the dominating factor in the market at present. If seed were being given away at Winnipeg, and the embargo on the transportation of seed held as firmly, there would still be the acute situation with respect to linseed oil in the Eastern consuming centres. When the relief will come will depend entirely on the freight situation. Following are the quotations :

	Raw Per gal.	Boiled Per gal.
1 to 2 barrels	$1.40	$1.43
3 to 5 barrels	1.39	1.42
6 to 9 barrels	1.37	1.40

Turpentine Quoted Lower in Some Cases

TURPENTINE.—In the primary market there was a decline of 2c per gallon in turpentine quotations during the week, but at the decline there is now evident a firmness owing to the fact that a heavy frost is reported to have burst many of the cups that are attached to the long-leafed pine to catch the sap or gum. It is stated that this may have the effect of delaying the March and April movement of turpentine and rosin. Lessened receipts as a result of this condition may have the effect of putting a firmness in the market for delivery during February, March and April. Locally the demand for turpentine has been light. For the most part prices held steady, but in some instances they were quoted down 2c below the lowest quotation of last week.

	Per Imp. gallon.
1 barrel lots	$0.75-0.81
2 to 4 barrels	0.74-0.80
5-gallon lots	0.80-0.88

White Lead in Oil Has Advanced 50 Cents

WHITE LEAD IN OIL.—The firmness that was noted in the white lead in oil market for several weeks past has developed into higher prices and an advance of 50c. per hundred pounds has become effective quite generally. In less than ton lots the price is now $15.30 per hundred pounds and in ton lots $15. There has been an excitable market in pig lead during the week at the primary points and advances of 75c. to $1.25 per hundred pounds have been made. In the New York market pig lead was quoted up as high as $9.25 and $9.75 during the week as compared with $8.50 a week ago. In the face of the linseed oil situation which makes it impossible for the crushers to get seed from the Canadian West as long as the embargo holds tight, and also in the face of the position in pig lead, there is a continued firmness in pig lead at the recent advance.

Firmness in Paint Due to Oil and Lead

MIXED PAINTS.—There is a continued firmness in the price of ready-mixed paints due to the situation in linseed oil and the higher price for white lead. Furthermore, with white lead in oil in a strong position and higher prices anticipated in that quarter there is every indication that mixed paints are in a strong position. Some of the manufacturers report their bookings for forward delivery have been heavier than at any season in the past. They give it as their opinion that merchants have been stocking up to some extent, at least the size of their orders would seem to indicate this trend in the business. Wholesalers have not yet started shipments of their spring orders, being dubious about the freight situation. It is usual at this time of the year to begin deliveries.

Putty Has Advanced 20c Per Hundred Pounds

PUTTY.—An advance of 20c. per hundred pounds has been made effective in price of putty during the week. Bulk putty in casks is now quoted at $3.40 per hundred in less than ton lots, $3.85 per hundred pounds for 100-lb. drums, $3.95 for 25-lb. drums, $4.20 for 12½-lb. irons, and $4.10 for bladders in barrels. In some quarters quotations are made 10c. below these figures in each instance. The scarcity of whiting and the high price of linseed oil are accountable for the increase in price.

Glass Manufacturers Have Withdrawn Prices

GLASS.—Dealers have been notified by the manufacturers in the United States that recent quotations on glass have been withdrawn pending the issuance of new ones. This is taken as a strong indication that there will be higher prices at the producing centres in the near future. One of the manufacturers

Follow the Line of Least Resistance

Paint widely advertised and favourably known is half-sold.

If you stock it, your turnover is more frequent. You do not have to try so hard to sell it, and can devote more time to promoting the sale of other merchandise.

Follow the line of least resistance and sell

B-H "English" Paint

because it is advertised so much, and known so well that it moves frequently and profitably.

Its reputation, based on satisfactory performance, is being brought home to your customers daily in the newspapers, magazines and bill-boards.

If we are not represented in your town, we will be glad to hear from you.

BRANDRAM-HENDERSON LIMITED

Montreal Halifax St. John Toronto Winnipeg

If interested, tear out this page and keep with letters to be answered.

has already advanced their prices 16 per cent. and this is taken as a probable basis to anticipate the amount that other manufacturers will increase. Manufacturers assert they are having great difficulty to get sufficient supplies of natural gas for the operation of their plants, and this coupled with inability to get raw materials in sufficient quantity has caused the firmness. Locally glass is being quoted at 15 per cent. off list for the most part. Stocks are fairly heavy in this district.

Shellac Moves to Still Higher Levels

SHELLAC.—Continued firmness in the shellac market has caused some of the dealers to move their prices upward from the lower levels quoted last week. Pure white is now being quoted from $3 to $3.25 per gallon, and pure orange as high as $3 per gallon. There are intimations from well-informed sources that prices in this commodity will in all probability be higher. Gum shellac has also been quoted up at higher levels, the range being given in the current quotations.

Question of Price of Glue is Not a Factor

GLUE.—There is an excited market for glue and dealers who have supplies have little trouble in disposing of their holdings. Their one concern apparently is to limit the sales in order that they may be able to take care of their customers' needs. Larger users of the commodity are eager purchasers and are buyers regardless of what price may be asked. Glue stocks are very light at present and further supplies seem difficult to obtain. Prices quite generally have been moved upward during the week for any stocks that remain. English common sheet glue is quoted at 30c. to 35c., English prima at 38c., cake bone at 30c., hide glue at 35c. to 38c., and ground glue at 30c. to 33c. Quotations are merely nominal as dealers are conserving their supplies.

MONTREAL

MONTREAL, Feb. 15. — White lead in oil is the most firmly advancing feature of a market which is firm generally this week, and prices have altered upwards, as predicted in HARDWARE AND METAL last week. Putty is also advanced this week. Linseed oil is in seriously complicated condition, and whiting is harder than ever to secure. Turpentine is in a market with every indication of advancing prices, though primary markets show fluctuating symptoms. Glass looks like advances before long, though still marketed at prices which have maintained until they are coming close to actual cost and even less than cost. Shellac is showing signs of distress following notice of a British embargo against further supplies from India. The market for brushes is still firmer than ever, and likely to remain so.

White Lead in Oil Advances in Price

WHITE LEAD IN OIL.—As indicated very plainly in HARDWARE AND METAL last week, white lead in oil was simply bound to advance in price, owing to the tremendous advances in the metal, and the stringent situation as regards the oil. An advance of fifty cents per 100 lbs. in white lead in oil went into effect on Friday of last week as predicted, and the new prices are as follows:—

White Lead in Oil	Per 100 lbs.
In 1 ton lots	$14.80
In 5 ton lots	14.50
Less than 1 ton	15.10

As the metal has since last week continued to advance heavily in price, and there is no relief as regards the oil, while any relief will probably affect supply rather than price scales, very marked tendency to firmness still exists as regards white lead in oil and there might be a further advance before long.

Linseed Oil Still Very, Very Scarce

LINSEED OIL.—There is this week no relief as regards the unprecedented difficulties which beset linseed oil. Crushers are doing their best to take care of customers' requirements, but there is not much oil even in reserve, and consequently the large users of linseed oil are not parting with any to the retail trade if they can possibly help it. The nominal quotations for linseed oil, as given last week were advanced this week by firms willing to quote a price, though not in the market to sell linseed oil, the lowest quotation for raw linseed oil being put at $1.25 a gallon. Hope of better things as regards supply was held out in the shape of assurance that the present trouble is more on account of railway congestion, and that there is a good supply of flax seed in the Northwest, which will mean sufficient oil for requirements when the railway difficulties show some improvement. Prospects, however, are not for much lower prices in linseed oil for the immediate future. There is every indication of firmness in the matter of price for some time. Following are the nominal quotations this week:—

Linseed Oil	Raw	Boiled
1 to 4 bbls.	$1.25	$1.28

Turpentine Found in Firmer Market

TURPENTINE.—While hints were heard of passing easing of markets for turpentine in the South, no change could possibly be made in Montreal turpentine conditions by so transient a factor, and some firms indeed found the market for turpentine going towards greater firmness in Montreal, with turpentine quoted as high as 80 cents a gallon in carload lots. The higher quotations in the range of prices last week were advanced by one firm fully five cents on account of this firmness of tone detected in the market locally, and said to be due to the great difficulty of getting supplies into Montreal, owing to railway congestion and embargoes. Other firms shaded the lower quotation up by a cent to 80 cents per Imp. gal., the range of prices being:—

Turpentine	Per Imp. gal.
1 bbl. lots	80—87c.
2-4 bbls.	79—86c.
5-10 bbls.	78—85c.

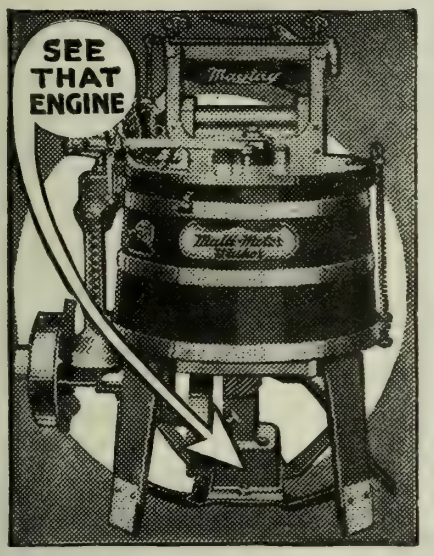
Mixed Paints Still Steady in Price

MIXED PAINTS.—The situation as regards mixed paints is much as described last week without any change except in the direction of rather intensifying the difficulties of the paint makers. Ray materials are more difficult to get just at present, in spite of improvements in production since the early days of the war, and the railway situation has a serious effect upon imports of goods that are required. Still with spring trade just at its height there will probably not be any advance in paints just at present, however justifiable the markets for raw materials go beyond all bounds. This might happen should the United States get actively into the war, and it is not very safe to make predictions at present as regards mixed paints.

Glass Very Firm Putty Avances 20c.

GLASS AND PUTTY.—Glass prices have not advanced, but are very likely to advance in the near future, because supplies are so very difficult to secure, and the effect of fuel shortages is exercising a firming influence upon the sources of supply. Only the presence of large stocks of glass in Montreal purchased at formerly prevailing prices keeps prices at the present reasonable levels considering state of the market. Glass is actually being sold in some instances in Montreal at prices below cost to replace, and advances are therefore certain to come sooner or later. Putty has advanced 20 cents in price per 100 lbs. due to the shortage of whiting, and price of linseed oil. It is impossible to secure whiting now from Britain without assumming all war risks which are heavy, and this has helped advance the market for putty. Prices now are for bulk in barrels per 100 lbs. $3.10 for five-ton lots in 100 lbs. irons $3.55 per 100 lbs.; in badders in barrels $3.80 per 100 lbs., and in 100 lb. kegs $3.90 per 100 lbs.

We Are Coming To Ontario and Quebec. For Particulars, see below



We have about completed arrangements to have our entire line of washing machines handled by the wholesale trade in both Ontario and Quebec.

Our policy is to give an exclusive contract to one dealer in a town. Applications for agencies will be considered in the order they are received.

There's a Maytag washer of every type—hand, power-driven, electric, and multi-motor—all built to the enviable Maytag standard, and guaranteed for life against mechanical defects.

If interested, write us for full particulars.

The Trade in Alberta should address their inquiries to the Merchants Hardware Specialties, Limited, Calgary.

THE MAYTAG CO., LTD.

Logan and Arlington, WINNIPEG, MAN.

The Berry Wagon is as popular as ever.

You should always have one in your show window, it is a never failing source of attraction. No more striking advertisement was ever devised for the dealer, and you can use it in many profitable ways to influence business. The wagons cost you nothing when ordering our Architectural Finishes

All Berry Brothers' products are staples of the varnish supply trade and our label is accepted without question as a mark of quality.

Berry Brothers' line is a sure basis for a growing varnish trade.

Our price list and dealers' proposition will interest you. Write for them.

The S-W Agency is an Asset to any Business

THE merchant who is fortunate enough to be the exclusive agent in his district for Sherwin-Williams Paint Products has an asset that means more than just selling paint.

Every possible user of paint knows the high quality that has made the S-W trade-mark famous throughout the world.

The S-W Agency Sign

on any store will prove its biggest business asset, for it indicates the same reliability for the merchant as is contained in S-W Products.

It expresses a comfortable confidence that increases sales and profits and helps to sell to paint users practically every other line of goods that the merchant carries.

Let us tell you about the "S-W Full Line Agency" and how it acts as a trade-magnet.

Re Gauges and Prices of Sheets.

Prices which follow on black and galvanized sheets are purely nominal. The market has reached a state where prices are quoted only on application and for immediate acceptance.

On account of it being practically impossible to secure galvanized sheets from England, owing to the war, American mills have decided that they will no longer roll the English gauges to meet this competition. However, they will continue to roll at 10¾ oz., which will be known as such or a 30 gauge, and will take the place of the former English 28 gauge.

SHEETS (BLACK)

	Montreal 100 lbs.	Toronto 100 lbs
10 gauge	6 00	5.60-6.00
12 gauge	6 00	5.60-6.00

To the Hardware Merchants who Intend to Visit the Hamilton Convention

We want you to consider this a personal invitation to visit Room 304, The Royal Connaught Hotel.

You will find it to your advantage to meet our Mr. Clarke, who will be there to explain to you personally the details of our most unusual and remarkably generous plan for helping the CROWN DIAMOND paint dealers to SELL paint.

This plan is the result of serious consideration of your problem, and is carried out along the lines you would follow if you were paying the bills yourself.

CROWN DIAMOND paints not only allow you a generous margin of profit and relief from the prevailing high prices, but they are old-established products, having been on the Canadian market since 1842.

MACLEAN'S MAGAZINE *for* March

Sir Gilbert Parker
Robert W. Service
Stephen Leacock
Alan Sullivan
Agnes C. Laut
H. F. Gadsby
Erman J. Ridgeway
Madge MacBeth
L. M. Montgomery
Norman Lambert
Hopkins Moorhouse
H. M. Tandy
Robson Black
Adam Barnhart Brown
Arthur William Brown
Peter McArthur

BE thankful that Canada has a magazine of BIG calibre. A magazine fit to be placed alongside the best British and American magazines—by the test of those who contribute to it regularly and of ideals.

MACLEAN'S MAGAZINE carries world-famous names in its list of contributors—writers who have an open sesame to any magazine, yet writers that some magazines cannot get, because they fail to measure up to a standard set. Not every or any magazine can have the work of Sir Gilbert Parker, Miss Laut, Stephen Leacock, Arthur Stringer, Arthur E. McFarlane, L. M. Montgomery, Nellie McClung, Robert W. Service, Alan Sullivan, and others whose names are familiar to readers of MACLEAN'S MAGAZINE.

MACLEAN'S MAGAZINE is favored by these fine and high-priced writers because they are Canadian-born or bred and because they are genuinely interested in seeing the land of their birth or adoption have a magazine worthy of the land of their love and of their work and fame. *And they have found this magazine in MACLEAN'S.* MacLean's gives them access to the readership they desire to reach—the man and women of culture and position, of real love for Canada and in earnest to see its nationality enlarge and its destiny advanced.

And so we feel that we have a right to ask you to give MACLEAN'S MAGAZINE a first place in your favor. *It is truly Canadian,* doing a needed service for Canada, and doing this worthily. Doing all that it is doing at a heavy present cost, looking to the future for its larger reward.

You can show your appreciation of what the publishers of MACLEAN'S MAGAZINE are doing by making MACLEAN'S an elect magazine among all magazines enjoying your favor, and by making it better known to others who have your spirit—your sense of Canadian nationality, your purpose to advance Canada in all right and high ways.

Contents of MARCH MACLEAN'S
(CONDENSED)

Jordan is a Hard Road. Serial by Sir Gilbert Parker.

The Guile of Ulysses. By Peter McArthur.

Face Up. By Hopkins Moorhouse.

The Rabbit Revolution. By Adam Barnhart Brown, with illustrations by his brother, Arthur William Brown.

The Above are Stories

Ten Million for the Asking. By Stephen Leacock—a serious contribution on a phase of national finance.

National Policies—How they are formulated and exploited by Parties and Cabinets. By H. F. Gadsby.

Prospects for Peace and Peace's Problems. By Agnes C. Laut. A stirring and thought-provoking article by this wonderful woman writer with a statesman's mind.

The Above are Special Articles

Mrs. Hayter Reed—the woman who is responsible for the decorative schemes of the big C.P.R. hotels. By Madge MacBeth.

H. C. Brewster—Premier of British Columbia. By Norman Lambert. A timely sketch of a man of interest to all Canadians.
These are brief biographies of interesting Canadians—a feature of every issue of MACLEAN'S MAGAZINE.

The Review of Reviews Department condenses for busy readers the cream of the best things appearing in the current magazines of the world. So MACLEAN'S becomes many magazines in one.

The Business Outlook and **Information for Investors** are two features of MACLEAN'S greatly liked and esteemed by many of its readers.

These are Department Features found in every issue

Paints, Oils, Varnishes, Glass, Etc.

HOUSE PAINT

Stephens House Paint is made by experts for the use of both the Painter and Consumer.

The professional painter, as well as the amateur, is a steady user of "Stephens House Paint" because it saves him time and money, and always gives satisfaction. Stephens House Paint has wonderful weather-resisting qualities and no superior as a surface coverer.

If not already represented in your town we will be glad to explain our exclusive agency proposition. Write us about it.

Want Ads.

If you want a buyer for your business, or have a situation to fill or want a situation, send us a Condensed Advertisement. There is someone who is looking for a proposition such as yours. For two cents a word you can speak across the continent with a condensed advertisement in this paper.

Try it out.

We have some striking new paint-service ideas

You and your paint department staff can't afford to ignore the intensive, 50-year-old study we have made of "High Standard" paint-making, advertising and selling.

We have learned enough to build up one of the largest, cleanest and most progressive paint businesses in the country, and — our knowledge is at your disposal TO-DAY.

A CONVENTION of your store's "selling force"—that's what we suggest, and let the Lowe Brothers' man tell you what we know. Let us hear from you to-day.

A Straight Talk from the Manager

No. 57

Some Train Service!

On Tuesday morning of this week, a C.P.R. train from Buffalo, pulled into Toronto Union Station at 7.40, which was due at 9.35 Monday night.

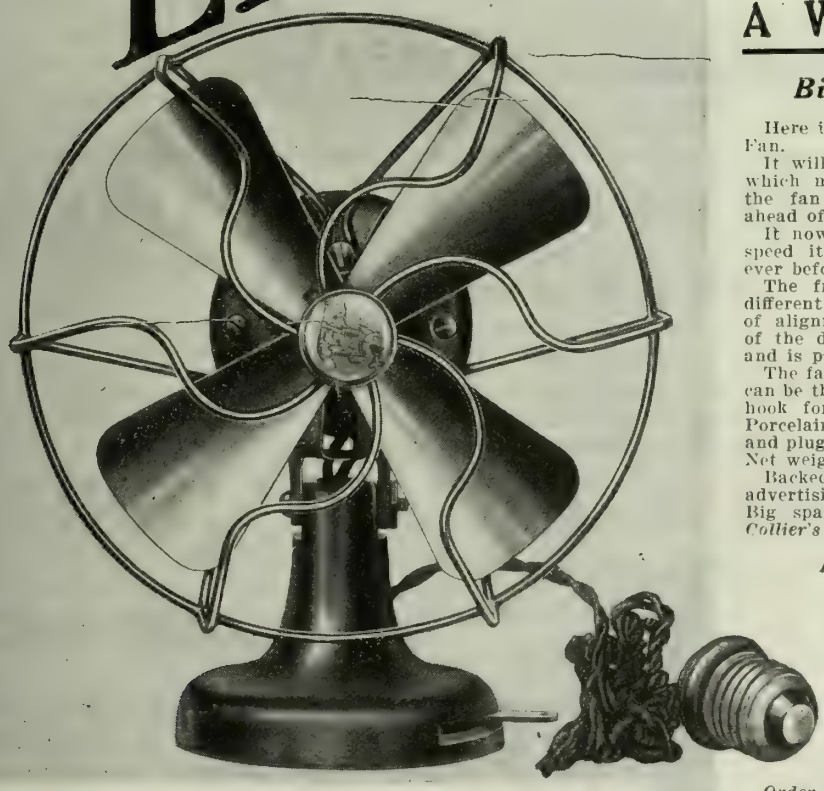
This is probably the worst case yet recorded, since the recent curtailment of passenger service. But it will give you some idea of the troubles being encountered by your friends the travelling salesmen.

It is no longer merely difficult for travellers to cover their routes on schedule. It is simply impossible.

So, you must depend more than ever upon the advertising pages of Hardware and Metal, to give you information of vital importance to you, in your buying.

The advertisements in this week's issue are particularly interesting.

J. G. L.



A Whirlwind Seller!

Bigger Value Than Ever

Here is the new Model C Polar Cub Electric Fan.

It will still retail for the low price of $7.50 which made the Polar Cub the sensation of the fan industry. But in value it is far ahead of previous years.

It now has two speeds and stop. At high speed it gives a much stronger breeze than ever before.

The frame is die-cast, thus eliminating 57 different parts. It cannot possibly get out of alignment. Bearings are an integral part of the die-casting. The guard is spot-welded and is positively unbreakable.

The fan is adjustable to any angle—the breeze can be thrown in any direction. The base has a hook for attaching to the wall if desired. Porcelain insulated. Equipped with 8-foot cord and plug. Blade diameter 6". Height of fan 8". Net weight 3 lb. 5 oz.

Backed by a powerful campaign of national advertising throughout the selling season. Big space in *The Saturday Evening Post*, *Collier's* and other magazines.

ATTRACTIVE PROFIT ON EVERY FAN

Trade discounts as follows:

Less than 6 Fans .....$5.00 each
Six Fans and Over ..... 3.75 "

Terms: 2/10/30, f.o.b. New Haven. Full freight allowed.

Fans packed 6 and 12 to the package. Upon request we furnish free striking, sales-making store display material.

Order Early.—We have largely increased our production facilities, but, despite this, the demand will probably exceed the supply.

So place your order now. If further information is wanted, write us.

HAMILTON, ONT.

In Demand There is a good demand for a reliable, inexpensive Sprayer. Meet this demand and give your customers that come-back satisfaction. You can do this with the

EUREKA GLASS TANK SPRAYER

The receptacle of this Sprayer is an ordinary Crown Fruit Jar (one quart size), equipped with a heavy zinc cover.
The pump cylinder is made from L. X. tin, and is considerably longer than the ordinary glass tank Sprayer. The solution comes into contact with zinc and brass only, which will not easily corrode, thus giving longer service. This Sprayer is strongly made and attractively finished, and is excellent for spraying potatoes, small shrubs and all disinfectants in poultry houses and on live stock.
Our prices are in your favor and our quality pleases customers. Let us send you our descriptive catalogue. Write—

Condensed or "Want" Advertisements

There is always someone, somewhere, who is looking for just such a proposition as you have to offer—and it is more than likely that he is a hardwareman and a subscriber to HARDWARE AND METAL. Let an advertisement on this page bring you together.

RATES (payable in advance): 2 cents per word first insertion, 1c per word subsequent insertion. An additional charge of 5 cents for each insertion is made when Box Number is required. Each figure counts as one word.

SITUATION VACANT

WANTED—GOOD WINDOW TRIMMER — must have general knowledge of hardware; good opening for the right man. Apply to Mr. Illsey, care of J. H. Ashdown Hardware Co., Calgary.

WANTED—AN ALERT TRAVELLER TO call on the hardware and furniture trade in Ontario. Give full references, age and experience in first letter. Apply to The Stratford Manfg. Co., Ltd.

A TRAVELLER FOR WHOLESALE CARriage hardware and iron company. One with city experience preferred. Apply Edward Halloran, General Manager, C. Kloepfer, Ltd., 44 Wellington St. East, Toronto.

AGENCIES WANTED

THE SUREST WAY FOR THE MANUFACturers' agent to connect with good live firms, is to tell the manufacturers who read Hardware and Metal, all about his ability to sell their goods. Try an advertisement on the Condensed Ad. Page of Hardware and Metal, under this heading.

STORE EQUIPMENT FOR SALE

HARDWARE STOCK AND FIXTURES FOR sale in Sudbury. For particulars write Box 88, Sudbury, Ont.

YOU MUST HAVE A LOT OF OLD FIXtures around the store which are no longer of any value to you, but would prove very useful to someone else in the hardware business. Find a purchaser for this equipment through an advertisement on Hardware and Metal's Condensed Ad. Page.

FIFTY DOLLARS TIED UP IN OLD FIXtures that you are no longer using would make a lot of money for you if invested in stock and turned over three or four times a year. Get your money out, by selling the fixtures to one of Hardware and Metal's readers who may be looking for exactly what you have to offer.

PAPER BALERS

THERE IS MONEY IN USING AND SELLing the Jewell Paper Baler. It is the only low-priced, efficient baler on the market. Every hardware store should use one. Splendid side line for one line traveller in each territory. General Sales Co., Stair Bldg., Toronto.

SITUATIONS WANTED

EXPERIENCED RETAIL HARDWARE manager is open for position with first-class firm, retail or wholesale. Wide experience. Address Box 427, Hardware and Metal.

THE "CHANGING TIME" IS GETTING near. There are many firms who have vacancies on their sales or office staffs to fill during the next few months. If you want to qualify for some of these vacancies, tell your story briefly in a Condensed Advertisement, and try it out in Hardware and Metal. A twenty-five word advertisement may land you a permanent position with splendid prospects.

FOR SALE

HARDWARE BUSINESS IN HAMILTON for sale, including stock, fixtures and dwelling. Cash deposit required, security for balance. Best reason for selling. Box 426, Hardware and Metal, Toronto.

MISCELLANEOUS

GOOD STENOGRAPHERS ARE WHAT every employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

ADDING TYPEWRITERS WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited. Room 314, Stair Building, Toronto.

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Ltd. Supplied by the trade throughout Canada.-(tf)

DOUBLE YOUR FLOOR SPACE — BY INstalling an Otis-Fenson hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B." Otis-Fenson Elevator Co., Toronto.

PARTICULARS OF PROFITABLE SIDEline for anyone calling on hardware or butcher trade in certain parts of Canada. No samples. Eureka Refrigerator Co., 27-21 Brock Ave., Toronto.

SIGNS AND SHOW CARDS

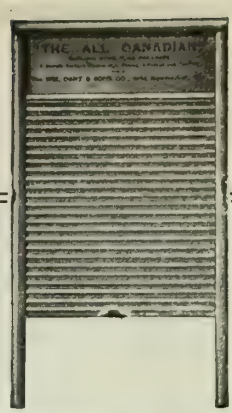
"WE MADE SIGNS BEFORE WE COULD talk." W. H. Stevenson, Stevenson Building, Toronto.

DON'T STOP ADVERTISING.

Keep your name to the front, so that you are in the market for the business that is going and for the new business that is coming. Do not let the world think that you have "gone under."

Want Ads.

There is someone who is looking for just such a proposition as you have to offer. For two cents a word you can speak across the continent with a condensed advertisement in this paper.



COSTS LESS

than aluminum and zinc wash boards, is just as good and is more serviceable.

The All-Canadian
All-Wooden
Wash Boards

are the result of great scarcity and high price of zinc and aluminum—a price that has greatly handicapped washboard sales.

All-Canadian grown wood, Canadian-made nails, and by Canadian workmen—that's why it's all-Canadian.

The finest grained hardwood is used for rubbing surface.

Retails at 20c and leaves a **BETTER** profit.

Standard zinc, glass and enamel wash boards always on hand for prompt delivery, until notice to the contrary.

The Wm. Cane & Sons Co., Limited

Makers of the New Wooden Wash Board
NEWMARKET, ONT.

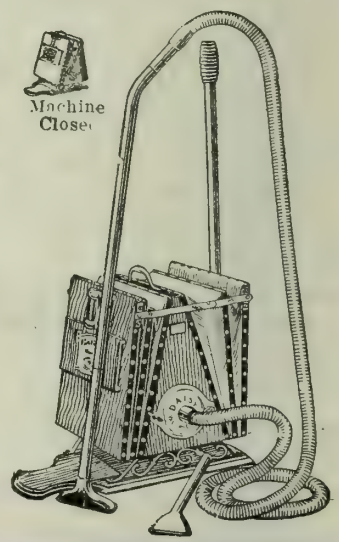
Kindly Mention This Paper When Writing Advertisers

In the Old Country

And in almost every part of the world there are Hardwaremen doing great business with the Daisy Vacuum Cleaner. Has it occurred to you that you might be doing equally good business? Let us tell you about it.

THE DAISY VACUUM CLEANER is acknowledged the best British Vacuum Cleaner. It s made of the finest materials obtainable and embodies all the best ideas ever invented for Vacuum Cleaners. Being portable, it is particularly suitable for small houses, bungalows, etc., and it is so simple in construction that there is nothing likely to get out of order. The machine is guaranteed for 2 years.

THE DAISY VACUUM CLEANER



Get into touch with your shipper and ask him about the Daisy, or write direct to us for full particulars, trade terms, booklet, etc.

A complete range of Hand and Electric Machines from $7.30 to $92.00

Sole Makers:

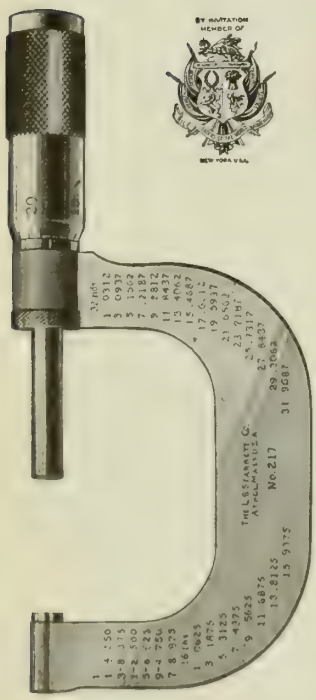
How Long is a "Mike" Accurate ?



All high-grade micrometers are sufficiently accurate when new, but when used for a time wear is bound to show on both anvil and spindle.

A micrometer then is accurate depending upon the frequency of correction for wear. For this reason every micrometer should have an adjustment to compensate for such wear. Some micrometers use the movable anvil method of adjusting but such adjustment takes time and it is often difficult to correct a micrometer exactly because of the varying human element—"feel." With the

Starrett Micrometer

correction may be made in a jiffy and without the use of a test piece and the human element—"feel." No guess work about it. To adjust, simply close the micrometer, insert a little spanner wrench and turn the sleeve until its zero graduation coincides with the zero graduation on the thimble.

The little spanner wrench and the patented sleeve do the trick—no other tools required. With this method the machinist corrects for wear so frequently that there is no question as to how long a **Starrett** Mike is accurate—it is always accurate. All Starrett Micrometers have this simple adjustment.

Write for free catalog No. 21MA, describing this adjusting feature on page 103, and 2,100 styles and sizes of precision measuring instru-ments.

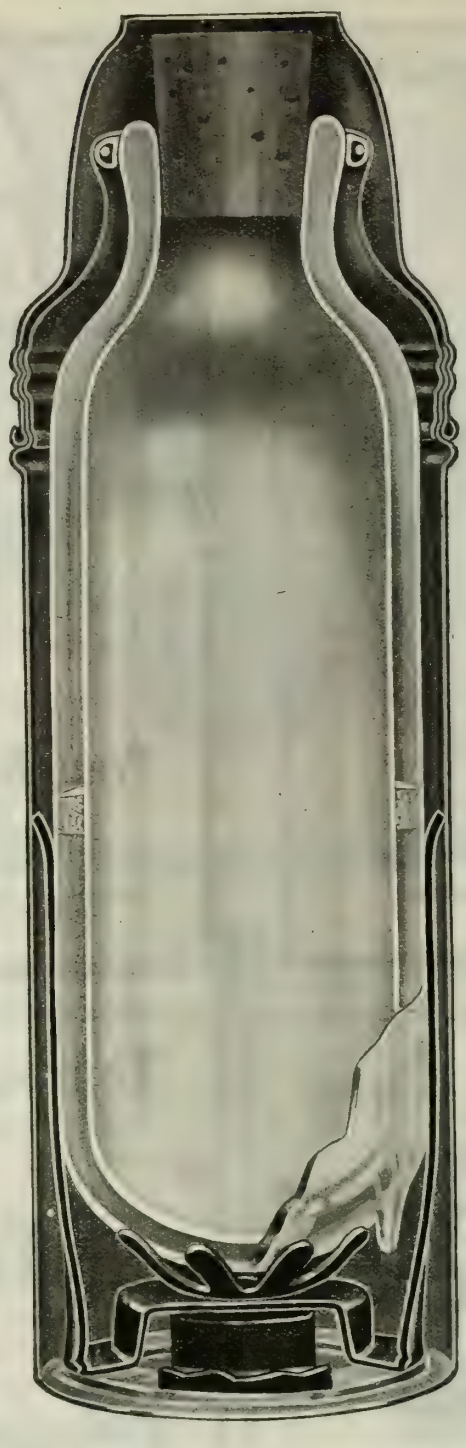
The UNIVERSAL Vacuum Bottle



Its Many Points of Superiority

By test and comparison shows the highest efficiency in the maintenance of temperature.

The filler is made from the best glass that can be obtained for the purpose and in actual tests shows the greatest resistance to breakage.

The support between the walls of the filler is the best thing yet devised for preventing vibration of the inner bottle.

The filler is supported in the case by a patented spring steel retainer and shock absorber which not only protects the sealing tip and base of the bottle, but by holding the bottle firmly in the outer case, protects the sides as well.

All models are of separable type with interchangeable parts and may easily be taken apart for cleaning or repairing.

In the nickel-plated bottles the seamless, drawn brass case is of a heavier grade than is generally used. It receives a coating of copper before being nickel-plated, which gives it a superior appearance and more lasting finish.

The cases used in the lower-priced bottles are of extra strong material, finely finished.

UNIVERSAL Vacuum Bottles are the most sanitary in the world, as rubber or felt pads, cork rings and cement fastenenings form no part of their construction.

Sectional View showing correct principles of construction

NOTE—The support between glass walls preventing vibration of the inner bottle.
NOTE—The location of sealing tip at point where nothing can touch it when bottle is in case.
NOTE—The rust-resisting spring shock absorber which supports bottle in case, protecting both bottom and sides.
NOTE—The close-fitting gasket at neck of bottle which positively prevents entrance of liquids at this point.

Extreme simplicity of construction, unusual strength, absolute cleanliness and unequalled efficiency are combined in the line of UNIVERSAL Vacuum Bottles and Accessories.

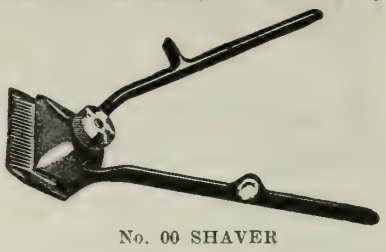
Made by American Shearer Mfg. Co.

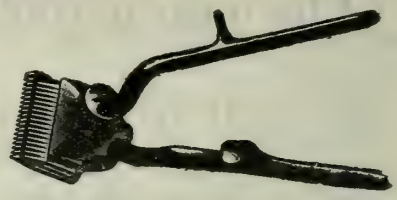
present a complete line at a range of prices covering all requirements of the trade. They are all quality goods, and represent best designs and highest standards of workmanship, regardless of price.

Some styles of Toilet Clippers are illustrated below. All are heavily copper plated and polished before nickeling, thus giving a higher finish, which lasts much longer than ordinary plating. The utmost care is used in grinding and tempering the cutting plates, giving cutting qualities whose superiority may be readily demonstrated by comparison. No. 00 and No. 000 Shaver for beard and neck trimming, are clippers of the utmost lightness and refinement, not paralleled by any other American manufacturer.

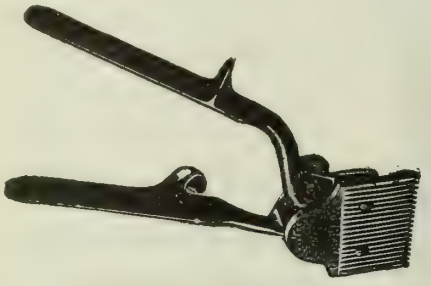
STANDARD No. 0, No. 1 and No. 2.
Retailing at about $2.50. High-class barber's clipper.



No. 00 SHAVER
A light and elegant Clipper for beard and neck trimming. Retailing at about $2.25.



SPEED
Best low-priced Clipper made. Retailing at about $1.00.



IMPROVED COLUMBIAN
with grooved bottom plate, retailing at about $1.50.

If you are not familiar with these goods, send for samples and compare them with others.

OIL STOVE OVENS

Black Iron Japanned

Glass Paneled Drop Doors

Glass-paneled Oven Doors are very popular on account of the user not having to open oven door when baking is in progress. The Cooking is always in plain sight. This saves the heat and fuel. When light baking is being done, such as cakes, it saves disturbing contents by jarring the oven.

A Sure Way To Increase Sales

SELL Ferry's Seeds. Or, rather, let Ferry's Seeds sell themselves. There is a good, substantial profit in it for you, but that isn't all.

Once you sell a customer *good* seeds that will result in a good garden, he is at once in line for garden hardware. You sell rakes, hoes, cultivators and all kinds of garden implements. On the other hand, your regular customers for garden implements will buy their seeds from you.

The man or woman who comes into your store for a saucepan, a hammer or a paper of tacks is a possible customer for garden seeds. Selling

FERRY'S SEEDS

is good business. The display case takes up little room and is its own salesman. Besides, you have the full assurance of giving your customers seeds of superior quality, scientifically tested varieties that are true-to-type descendants of long lines of ancestors—pedigreed seeds that produce the highest-average yields.

You will be interested in our special dealer proposition. Write for it.

more sales—larger profit—less effort

Here's the way Plymouth Rope is now sold by the foot in hundreds of progressive stores.

The buyer enters and inquires the price of the length of rope he wants.

The dealer turns to his price-by-the-foot schedule card and at once quotes the exact cost. No weighing of rope as in the old days.

The figure quoted is less than that demanded elsewhere for cheap ropes sold by the pound. (Plymouth's greater yardage is the reason). The buyer says, "All right."

The dealer measures the rope, cuts off the proper length and the buyer departs with his purchase—satisfied.

The dealer is satisfied too. He has made an easier and more profitable sale than he would have under the old price-per-pound plan. And he makes more Plymouth sales than formerly.

Are *you* profiting by this new plan?

Spring Ushers in a Big Demand for Dry Cells

Activity bursts forth all over the Dominion at the first sign of Spring. With this activity comes a heavy demand for Dry Cells—heavier than ever this year because of the greater use of Machinery to replace man power.

Be ready with a good supply of the No. 6 "**NORTH STAR**" Battery—the Dry Cell that is safe to sell. Always dependable—full-powered—long-lived—the battery that creates good-will. Be safe—serve your customers with the "**No. 6 North Star.**"

Reputation behind the goods. Long service ahead of them.

CANADA DRY CELLS, LIMITED, WINNIPEG, CANADA

Quality

THE leader in every industry, to maintain his lead, must safeguard the quality of his products.—Rigid inspection and careful supervision are important factors.—To products of iron and steel this principle applies with tremendous force.—It means safety, security and stability.—We safeguard the quality of our products, believing quality will be recognized long after the price is forgotten.

Service

OUR customers must be served. One of the dominating factors in any successful business is Service.—We succeed only through the good will and good wish of the people we serve.—This thought permeates our entire Organization, from the President down.—Our employees feel the sense of responsibility this principle implies; and each one directs his efforts to maintain the high standard of service we aim to render.

DESIGNING AND BUILDING THE PERFECT HOME

Who knows it all when it comes to planning a new home? Do you? Does your neighbor? Does your architect? Does your builder? What perfect home do you know of?

Now perfection may be impossible to obtain, but one can approach perfection by educating oneself concerning

the site, the plan, the style, the decoration, and other related matters.

Experience teaches. Therefore use the experience of others and their good counsel, born of errors and of successes, as found in the book.

BUILDING A HOME

By Desmond and Frohne, the editors of **The Architectural Record**, America's leading paper in its field.
(Price, $1.50, with 15c extra for postage.)

In this book are gathered together the counsels and experiences and suggestions of men who have had an exceptional opportunity to acquire wisdom in relation to the building of homes. The book is a beautiful one as a piece of book-making, and is richly illustrated. It is no economy to save $1.50 when you are considering the building of a home.

Send for the book now, and have it ready against the day when you will build the home of your dreams.

Get the Beaver Board Story from a Dealer You Know Personally

If not in your own city, in some neighboring town there is an enthusiastic Beaver Board dealer—a man you know personally—a successful merchant whose word is as good as gold.

Get the Beaver Board Story from him—We'll give you his name.

Then you can ask him any questions you like. You can find out how his trade has increased from year to year, and how his profits have climbed up in proportion. He'll tell you how the uses of Beaver Board have multiplied, how the old wallboard objections have been overcome, how Beaver Board is now surface sealed and sized by the **Sealtite** process to prevent warping or bulging.

He'll tell you a lot of other good things about Beaver Board that will come better from him than they would from us. It's an interesting story and a profitable one for the merchant who acts quickly.

Some one in your town will sell Beaver Board. Why not get this profit yourself?

Write us for the names of dealers you know.

Big Ben

A *Westclox* Alarm

In Canada $3.50

A sky high material market, increased duty and war tax, have made it necessary to raise Big Ben's Canadian price to $3.50.

Big Ben set himself a big task. When material prices began to climb, he decided to absorb the increase as long as possible. Everything he used advanced, but the economy of larger output, and shop savings here and there enabled him to hold his price and maintain his quality.

He couldn't overcome added duty and war tax. His loyal friends in Canada could not absorb a greater increase in cost, so he raised his price fifty cents.

In every Big Ben advertisement appearing in Canada and the States, the $3.50 price is quoted.

Since November tenth all Big Ben shipped from the factory have been fitted with $3.50 tags.

Dealers who have Big Ben in stock may secure $3.50 tags from our Toronto Office, 58-64 Wellington St. W.

Big Ben has done his share. He's notified the public, he's changed his price ticket, he's made it easy for you to standardize the new price.

Big Ben is oversold. Deliveries are slow. The new price is easy to get.

Speakers Predict Still Higher Prices

Wire Nails to Go $6 Basis Stated One Speaker — Freight Embargoes Causing Endless Trouble—Urge Retailers to Take Legitimate Profits Now.

SEVERAL short, but very informative addresses were delivered at the opening meeting of the twelfth annual convention of the Ontario Retail Hardware and Stove Dealers' Association, held at the Royal Connaught Hotel, Hamilton, Ont., at 2 p.m., Tuesday afternoon.

Mayor Booker, welcomed the delegates on behalf of the city of Hamilton, and extended the freedom of the city. He referred to the importance of Hamilton as an industrial centre, and in addition pointed out that Hamilton had many beauty spot. He urged that every man do his part in assisting the Empire during the present struggle. He referred to the necessity for exercising thrift, and eliminating as far as possible all waste.

H. P. Hubbard, of Atkins Saw Co., welcomed the delegates, on behalf of the Canadian Manufacturers' Association. The speaker referred to the suitability of Hamilton as a convention city, and suggested that Hamilton be selected as permanent convention headquarters. Mr. Hubbard stated that American hardware wholesalers and manufacturers had found it to their advantage to always hold their meetings in Atlantic City. On behalf of the hardware manufacturers of Hamilton, Mr. Hubbard extended an invitation to the delegates to be the guests of the manufacturers at a luncheon and entertainment on Thursday.

Manufacturers Up Against Difficulties.

Adam Taylor, President Canadian Hardware Manufacturers' Exhibitors' Association, explained that owing to war conditions the Exhibitors' Association had found it impossible to put on an exhibition this year. He was glad, however, to see that some manufacturers had arranged for exhibits. Mr. Taylor outlined the difficulty the manufacturers were having in securing coal, coke and raw materials. The retailers, he stated, are urging Canadian manufacturers to make new lines, but we cannot fill our orders for staple lines. His company in June, 1915, placed an order for 50,000 lbs. of steel for making thumb latches. One-half of the order was delivered a year later in June, 1916, and the balance will not be delivered before the second half of 1917.

Mr. Taylor urged the retailers to follow the market reports in the trade papers, and mark up their prices to conform with new costs. Many retailers are selling goods on the basis of old and low costs, and in so doing are jeopardizing their businesses. Prices are bound to come down, though not in the immediate future. Retailers should take legitimate profits now, based on present costs, and prepare for the future. Mr. Taylor pointed out that the trade paper market reports are an excellent guide for the retailer at the present time, in fact the only guide, because the travellers have not got time to go through their catalogues and notify retailers of the many price changes taking place from day to day. Mr. Taylor stated that most manufacturers to-day are selling goods at lower prices than those warranted by present costs of material and labor. Still higher prices are bound to come before lower prices. The war is not nearly over, and when the reaction comes it will be gradual.

W. J. CARTER,
Retiring President O.R.H. & S.D.A.

Urges Co-operation.

C. A. Whitwam, Hobbs Hardware Co., London, Ont., was glad to see the retailers getting together. The retailers, stated Mr. Whitwam, are a power together, singly they are not. There is great danger of an attempt being made in the near future to secure legislation which will place almost every manufacturer, jobber and retailer in a precarious position. The "high cost of living," is being blamed upon the wholesaler, manufacturer and retailer. The speaker would not suggest what form the dangerous legislation might take, but warned his hearers that the machinery is now at work. For their own protection the retailers should work closely together. Mr. Whitwam told how the retail hardware merchants of London, are working together. He referred to the recent London retailers' banquet as the best he had ever attended.

Mr. Whitwam also urged the retailers to watch the markets closely and take the profits to which they are entitled.

Jobbers Have Difficulties.

In welcoming the visitors, H. S. Alexander, of Wood, Vallance Co., Hamilton, stated that he would be glad to see the retailers adopt Hamilton as permanent convention headquarters. He referred to the city as an ideal place for holding conventions, both from the standpoint of railway facilities and hotel accommodation. Mr. Alexander related some of the difficulties confronting the jobber to-day. Railway embargoes are holding up shipments both coming and going. The situation is a serious one, and about all we can do is take the advice of the parrot as follows:—

"A certain man had two sons, one a preacher, the other a sailor. Both possessed parrots. After a long period of absence the sailor and his parrot returned to reside with the preacher. The parrots

A PANORAMIC PHOTOGRAPH OF THE CONVENTION TAKEN IN FRONT

were placed in the same room and in a short time struck up conversation as follows:—

Preacher's Parrot: "What shall we do to be saved?"

Sailor's Parrot: "Pump like hell and keep the ship afloating!"

Predicts $6 Nails.

T. B. Williamson, of H. S. Howland Sons & Co., jocularly complained that the previous speakers had stolen his thunder. The jobbers had held a meeting in the morning to decide on what they would say to the retailers, and the two previous speakers had delivered his part as well as his own. Mr. Williamson referred to Hamilton as being a splendid convention city, better in fact than Toronto, owing to the size of the latter place. Mr. Williamson pointed out the necessity of retailers following the markets, and basing their selling prices on to-day's cost. The chief difficulty confronting the jobber at present, stated Mr. Williamson, is that of securing goods. The congestion on the railways is a serious situation for the wholesaler. His company had invoices for four cars of goods, one dated Nov. 10, the others in December and January, and there is no trace whatever of the goods — they are lost completely. Mr. Williamson gave an interesting sidelight on the wire nail situation. He had predicted in 1915 that we would see wire nails at $4 base. They are now $4.70. Mr. Williamson now predicts wire nails at $6 base and wire rods at $100 ton. He concluded by advising all retailers to take all legitimate profits, based on present costs.

No Profit for Jobber.

James Hardy, Toronto, secretary Canadian Wholesale Hardware Association, advised the retailers to look out for themselves. As secretary of many associations he felt that he was in sufficiently close touch with conditions to properly size up the situation. He felt that still higher prices are coming on many lines. Nails for instance, at present prices are not allowing the jobber a profit. Rods to-day, stated Mr. Hardy, are $75 per long ton at Pittsburg, or $67 for 2,000 lbs.. Add duty and freight and the cost in Canada for rods alone is $3.95 per 100 lbs. If you buy nails to-day from the jobber at $4.70 base, assuming of course that you are paying the fixed association price, the jobber is not securing a profit. The price of nails must go up because the present cost to make and market them is $4.70 without an allowance for the profit. The jobber, stated Mr. Hardy, has to get something out of it. How is it going to be done? Mr. Hardy urged the retailers to co-operate and work in harmony. They could accomplish a great deal of good by co-operating in the same manner as the wholesalers. He suggested that retailers work together as they are working together in London, Ont. The travellers, stated Mr. Hardy, could also be of great assistance in creating harmony among the retailers. When competitors get together they generally find that the other fellow is a pretty decent fellow after all. Mr. Hardy also urged the retailers to base their selling prices on to-day's costs.

Duration of the War

Colonel MacLean, publisher of HARDWARE AND METAL, said that the editor had suggested that the topic before all others the trade would like him to speak upon was the length of the war; the probable course of trade and values until then and after; and, based on this, to give his advice as to their buying policy in the meantime.

Because of the accuracy with which they had forecasted leading events, during the last four years, many readers of the MacLean publications had come to regard them as an infallible guide on the bigger political and business problems.

Colonel MacLean said this was giving him and his organization credit for an almost supernatural insight into affairs they did not deserve. They were simply specialists in news that affected Canada's business and finance. They were not influenced by prejudices and preconceived ideas. They searched the world for news, and published, for the benefit of their readers, what they gathered. Often results based on this news were so very definite that they were able to offer very safe advice to their readers.

Often this advice and policy were so contrary to the prejudices and preconceived ideas that he was abused for publishing or advocating them. A number of bankers and financiers were bitter in their abuse of him, when in 1912 he had made a careful investigation in Europe, and found a very serious situation underlying the unprecedented prosperity then prevailing, particularly in Canada, and they had warned their readers of the coming trouble. Some said even if it were true, the information should not be published. With this he did not agree. He felt there was too much secrecy in politics and business for the public good. It was often used to cover official incompetence or corporation crookedness.

He had been called anti-British for publishing in 1914 that war would last perhaps five or six years, and that Canada must at once get an army of 250,000, not the 25,000 that had been decided upon. He based this opinion mainly on what he knew of German preparations, and British indifference. One English Cabinet Minister, for example, had said they were quite safe in England—the war was to be a great source of profit to them and "business as usual" should be their national motto.

These, and many other less important problems were quite easy to deal with by unprejudiced investigation and writers, but the question of how long the war may now last, was one which, no one among the Allies can answer. The Germans might be able to give us some indication. If, as some argue the offensive is not with them, the defensive certainly is.

How much we are governed by our prejudices and predilections one can realize when he recalled that July of last year, a friend of his—one of the most successful of the younger generation of industrial financiers—came to him and asked his definite opinion on how soon the war would end. He, Colonel MacLean, had answered that it depended upon the Germans. This industrial chief was most indignant and said the Allies had them in their power and the war would be over sooner than most people expected.—as Premier Asquith had used almost the same words in October, 1914.

The war might end, at the earliest, in six months, or it might go on for years. Experience in the United States civil war, South Africa and the Balkans, showed that nations can go on living and fighting for years after they were, really, defeated. We have to remember, he said, the whole German people, believe they were attacked. It was hinted in 1912 in diplomatic circles, and was common talk in Europe in 1913, that they were to be attacked by Russia and France. Now they are being told that defeat means extermination. The natural deduction is that a nation living under such beliefs will fight a defensive war to the last man. He had learned from neutrals who had recently been there, that the Germans were most anxious for peace, but are well supplied with munitions and with the

OF THE ROYAL CONNAUGHT HOTEL ON WEDNESDAY AFTERNOON.

President Advises Taking Profits

President W. J. Carter Urges Members of O.R.H. & S.D.A. to Take Profits Now and Prepare for Decline—

TO our Guests, Associate Members and my fellow hardwaremen here assembled I extend hearty greetings to this our 12th Annual Convention.

It certainly does us great good to meet together in this manner from year to year, both from a social and business standpoint. The renewing of old acquaintanceships, the new friendships formed, the interchange of ideas regarding business make "Convention Days," days of pleasure and profit combined; and surely no hardwareman who attends with the intention of benefiting himself can depart without doing so. On the other hand, if he simply drifts to the city with the intention of having a good time, does not attend the meetings regularly, takes no part in the discussions, how in the name of common sense can he expect to take profit from a gathering that means much if you come with the determination to take much out of it.

The year just past and gone has been a most remarkable one in regard to hardware and all other branches of trade. Who is there amongst us who could have foreseen the unprecedented rise in prices that has taken place on all lines of hardware, paints, and oils during that period? When we hark back to 1914, the days of $2.00 nails, and to-day see nails at $4.70 and other lines as a proportionate advance, surely it behooves us to sit up and think and our buying in the future must be done with unreserved caution, for now is a time of caution as well as precaution. In regard to selling I would strongly urge our members to not fritter away their stock by selling at prices inconsistent with market prices prevailing. We know that we must stand the declines when they are reported, and we should get the advances while they are available.

In regard to standing of our Association we certainly have cause to congratulate ourselves on the steady increase of membership during the past year, which has been mainly due to the activity of our worthy Secretary, W. F. Macpherson, the man who does things. The issuance of the net cost price cards compiled by him entailed untold work, but have proved of untold value to our Association in the matter of increasing membership and placing same in a strong position. I doubt if any of our Sister Associations across the border gives this service—a service that our Secretary deserves all the credit for, as it was thought out by him, and was at his suggestion adopted by your Executive.

In referring to the Executive I cannot refrain from expressing the great loss that body has sustained in the passing away of one of its members in the person of the late W. W. Bennet of Gananoque. W. W. Bennet was a man of sterling qualities and splendid business ability, and one who always took an active interest in our Association, and his passing away leaves a gap in our ranks hard to fill. That one so useful should be called on to cross the Great Divide while in the full prime of life is sorrowful in the extreme, and I am sure that his widow and daughter have the deepest sympathy of every member of our organization in the hour of their terrible bereavement.

In conclusion I wish to thank the exhibitors and associate members for the splendid support they have given our Convention. I also wish all our members a full measure of prosperity and happiness during 1917, and trust ere we meet again that the most terrible war in the world's history will have ended, and that Germany, the foulest, cruellest, most infamous and barbarous nation that has ever existed will by Britain and her Allies have been humbled to the dust."

W. J. CARTER,

President, O. R. H. and S. D A.

Secretary Reports Increased Membership

IN presenting you this, my second annual report as your Secretary, I take considerable pleasure from the fact that I am able to advise you of a considerable growth in the membership of your Association, a growth which I believe to be healthy, representing as it does the better class of the retail hardware trade of Ontario and who have, without exception, approved of the service which your Association is giving to its members.

Membership Increased

A further evidence of this is seen in the small number of lapses of the 1915 class who did not renew for 1916, only 12 in all, of whom, to my personal knowledge, one has died and one gone out of business, leaving only 10 and probably business changes have occurred in some of these.

To this date, I have now on my records:

Members renewable from 1916—160
Members now paid for 1917.... 107
Making our total membership.. 267

Showing an increase of 40 members since 1916 Convention and 156 since the inception of the "Service to Members" plan at the 1915 Convention.

This is exclusive of associate members.

Preparing for Drop in Prices

The issuance of cost sheets in net figures from time to time during the year has met with the approval of the mem-

bers and I have very many letters on file expressive of appreciation of this service. In view of the steady increase of values during the past year, I have, in mailing out price changes strongly advised our members to base their selling figures on up-to-date cost, which advice, to many wideawake dealers, may appear gratuitous. Still, evidences of timidity in making advances have come to my attention and it was to strengthen this class of dealer that I emphasized the necessity of reaping profits, which will be needed for the rainy day when drops begin to come, some, no doubt, like a coldburst, but in the main, I believe, in moderation, it being my honest belief, that the manufacturers (with possible exceptions) have not taken advantage of war conditions to in-ordinate advance prices, but that the main increases have been caused by economic conditions directly due to the world's conflict in which we are taking a direct and glorious part.

Insufficient Merchandising

At a Convention of this kind, we all look forward to learning something which will be of material advantage to us in our business. We must all frankly admit that we are not equally efficient in the various departments of merchandising, Some of us are good salesmen, some good buyers, a few good collectors, and it is to be hoped that those of us who are

J. N. McGREGOR
Newly-elected President of the Association

efficient in any one elsas will be generous enough to give others the benefit. In this exchange of ideas, we get the greatest good from coming together.

Need More Members

I would like to make the point clear that we still need more growth in our membership to attain the full objects for which we are associated, and I firmly believe that every member of our Association could, by a single half hour's work, add one new member to our roll. This would mean a membership of over 500 and would further mean that extended service could be given and a direct personal benefit would be received through your efforts. I trust that every member will make a firm resolution that this will be his first duty to his Association on his return home.'''

Collection Form Effective

During the year, I have received many remittances and promises of settlement from delinquent debtors to some of our members, who are using successfully our Collection Forms. I would urge our members to use these forms more freely and they will surely get results.

Your officers, as always, have given of their time to the work of the Association and have responded promptly to all requests for assistance and advice and have made the work of the Secretary a pleasure and I wish to thank them for their able assistance.

In conclusion, let me express the hope that every member will attend all the sessions during the Convention and enter freely into the discussion of matters brought before the meetings. Give us of your knowledge and experience, but don't forget to take home all you can use of the other fellow's.''

W. F. MACPHERSON,
Secretary O.R.H. and S.D.A.

Proper Methods of Taking Stock

Lengthy Discussion on Relative Merits of Invoice Cost and Present Value Methods—Question Box Opens—Auto Accessories Found Profitable—Protest Against Eaton Name in School Books

THE Tuesday evening session was marked by a number of discussions on practical subjects. Regular business was first taken up, consisting of the report of the treasurer and of the Advisory Committee.

Mr. Caslor's statement showed a balance on Jan. 1, 1916, of $752.83, with receipts during the year of $545.74, making a total of $1,298.57, against which were disbursements of $1,077.05, leaving a balance at the first of the year of $221.52. Stock on hand was valued at $226.45. The treasurer's statement had been audited by Geo. Mathewson and J. W. Peacock, and found correct.

A number of letters were received expressing regret of the writers at not being able to attend the convention. Letters were read from the following; J. W. Dowling, Caverhill, Learmont & Co.; A. A. Bettues, Gillette Safety Razor Co., Montreal; Fred C. Lariviere, Lariviere Incorporee, Montreal; Luther W. Smith, Wells Bros., of Canada, Galt, Ont.; T. D. McFarlane, McFarlane, Douglas Co., Ottawa, Ont.; Geo. B. Dowswell, Cummer, Dowswell Co., Hamilton, Ont.

Taking the Inventory

The main discussion of the evening was on the proper method of taking the inventory in view of current conditions. D. A. McNab, of Orillia, opened the debate, pointing out that the matter of stock taking had become of unusual importance owing to the fact that the past year had not been normal, prices having been very much inflated. He believed that any dealer who was under the 80 per cent. co-insurance clause was placed in a dangerous position as a result of price inflation. Unless a dealer in this position watched his stock closely he would soon find that he was not keeping his insurance up to the agreement.

"What do you take stock for?'' asked Mr. McNab. "For your own personal satisfaction. It is not for the public. Therefore, you should take stock in such a way that you get the information you want yourself.'' He went on to explain that, from this viewpoint, he favored taking stock at the actual cost of the goods. If prices drop later, the merchant is not disappointed, as he would be if he had figured on the present high prices and thus placed his assets on an inflated basis. "If you have actually paid $20,000 for your stock,'' he declared, "put the stock in at that figure. In your own mind you can reckon that the stock is worth, say, $25,000, and if you feel it advisable you can put on more insurance. If the high prices continue for another year, you can figure what is left of present stock at the higher level then. But, don't fool yourself into thinking that your stock now represents the exact value of present prices to you. Those who take stock on the present value of their goods—and

I know some who have done it — are fooling themselves into thinking they are richer than they really are."

He went on to point out that, if a merchant took a statement to the bank based on the present value of stock, he would cut a sorry figure if he had to go back next year with the stock marked away down again. The banker would claim that his business had been falling off.

The Co-insurance Clause

Ed. Wanless, of Chatham, agreed with Mr. McNabb. He expressed the opinion that he would not go in on the co-insurance clause under any circumstances. It was necessary to watch insurance matters very closely. He instanced his own case where their fire some years before had caught them unprepared and they had realized only about 35 per cent. of their loss.

President Carter stated that he was not operating under the clause. Had he been under the clause, he would have realized about $2,000 less insurance after his recent fire.

The Matter of Fixtures

Mr. Wanless asked how fixtures should be figured in the inventory.

Mr. McNab argued that allowance should not be made for depreciation in fixtures. They were worth as much in the store in ten years as when they were bought. They had in their store a cash register which was bought 17 years before and it was just as satisfactory as ever. If a merchant kept taking ten per cent. off each year, before long he was putting practically no value on the fixtures. If a fire came along, would he be prepared to let the insurance companies value the fixtures on his own book valuation? Not much!

Selling Out Value

Enlarging further on his argument in favor of taking the stock on the actual invoice value, Mr. MacNab declared that there wasn't a hardwareman in the room foolish enough to buy out his stock and give 100 per cent. on present prices.

Present Prices on Heavy Goods

Mr. Wideman, of Markham, declared that he had marked up certain heavy lines at present prices — nails, white lead, linseed oil. This stock turns quickly and can be sold at figures based on present wholesale prices.

Mr. Wanless raised the point that it should be possible to do the same on shelf goods. Care should be taken to keep the prices on shelf goods marked up in accordance with wholesale advances. Shelf goods turn rapidly enough and, if sold at figures justified by market prices, they might be figured in the inventory at present valuation also.

Mark at Present Value

James McGregor, Oakville:—"The man who takes his stock at present prices has a surer knowledge of his present position." Mr. McGregor argued strongly for this method, taking the ground that the merchant wanted to know what his stock represented. His plan was to follow the market up; if a slump care, he followed it down. His books always showed the present value of the stock and in that way the real object of the inventory was attained.

A. J. Wright, of Hamilton, stated that he had always taken stock at what the goods had cost him, but that he was beginning to have serious doubts in the matter. For instance, he had nails in stock that he had bought all the way from $2 up. His plan had been to strike an average and put them all in at $3.50. He had just completed his inventory, taking the invoice cost price, but he thought he would have to add a percentage to some lines in order to find out just where he was at.

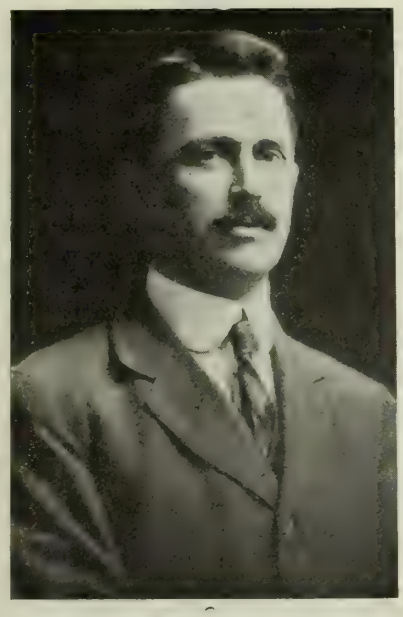
At Present Value

Secretary Macpherson stated that he had taken stock on the present value of the goods, but in putting the figures through his books he would put on a discount. His rule had always been to reckon on present price. Sometimes he had to put goods in at less than he had paid. In that way he took his loss right there.

Mr. MacNab claimed that there was no advantage in taking stock at present prices and taking off a discount over inventorying goods at cost price and adding a percentage. The latter plan, he claimed, was safer and sounder.

Double Inventory Suggested

On request, Geo. D. Davis, editor of HARDWARE AND METAL, gave a statement of what he had found in his investigation of this subject. The lar-largest hardware firms in Hamilton, had taken stock at present cost of goods and then taken off 20 per cent. One of the largest hardwaremen in Hamilton had followed the same plan, taking off 15 per cent. Some dealers, he had found, took stock at invoice cost and added a percentage. Perhaps the safest method of all—although it entailed more work—was to take a double inventory. Thus, a merchant would know exactly what his stock had cost him and what it would bring if sold at prices based on present market value. This gave him the most complete information. An important point brought out by Mr. Davis was that the Finance Department at Ottawa had advised HARDWARE AND METAL that, for the purposes of estimating taxes on profits, they expected, merchants to figure only on the invoice cost of goods.



W. F. MACPHERSON,
Prescott, Ont., Secy., O. R. H. & S. D. A.

The Question Box Starts

President Carter then opened the Question Box. Some of the queries brought forward started interesting discussion in which nearly all present took part.

Question.—Would you consider changing your paint stock from a well-known manufacturer's brand to a personally branded line that could be sold at lower price?

The meeting was unanimous against this, as it was contended that, by so doing, a retailer would lose all the value of the national advertising of the manufacturer. This view was put forward concisely by Mr. Conn and Mr. Wright.

Buying from Wholesaler

Question.—Which is the better policy, to buy from one wholesale house, or divide your orders between three or four?

Mr. Mistele, of Rodney, declared he could get better service by giving the bulk of his business to one house than by splitting it up.

Mr. Wright stated that he concentrated his business with one house, but dealt to some extent with several others. He could improve his assortment this way and also keep closer to market conditions. Mr. Bottum, of Bobcaygean, had found his experience the same.

Carrying Portland Cement

Question.—Do you recommend carrying Portland cement? Does the profit warrant the time and work necessary?

S. B. McClung, of Trenton, thought it best to leave cement alone, if possible, and Mr. Bernhart, of Preston, agreed. The latter handled from 18 to 20 cars a year, but found it very difficult to handle.

Mr. Macpherson, however, took the opposite view, that a good profit could be obtained and the president backed him up, declaring that he had found cement a lever to get other trade, and profitable in itself. Mr. Oldham, of Weston, took the same view that handling cement brought other business.

Value of Auto Accessories

Question.—Have auto accessories proven a valuable line? Is it profitable to operate a garage?

A large number testified to the splendid results they have obtained from handling auto accessories. Mr. Macpherson stated that he had just put in a sidewalk tank and had made a good profit on the sale of gasoline. He likewise had worked up a nice business in accessories.

Mr. Mistele had done a good business during the last year in accessories considered and found it paid him well.

Mr. McGregor had handled an automobile agency as well as accessory business. He was a strong advocate of the wisdom of handling accessories, but he was not so sure of the garage proposition.

No Association Prices

Question.—Have you ever taken up the question of fixing the retail prices on bolts, wire, etc.?

The secretary explained that he had often received letters similar to this, asking if the association had fixed selling prices on certain lines. His answer invariably was that it was impossible for a provincial association to fix prices and that such matters could only be looked after by local bodies.

Charging Country Merchants More

Question.—Why are country merchants charged more than city dealers?

The question was not debated at any length, but a new viewpoint was introduced by Mr. McGregor. He pointed out that country merchants are inclined to complain because the city dealer has goods delivered at his door, while he (the country dealer) had to pay freight cartage and everything else; but the country dealer has most of his customers drive to the store and take their goods away, while the city dealer has the expense of delivery; so things even up in that way.

Object to Eaton School Books

Question.—Is it fair to retail merchants that the T. Eaton name should be on the school books?

Morris Phillips, of Toronto, contended that the ad. which Eatons got through having their name in the school books was worth millions to them. The merchants should get legislation to stop it.

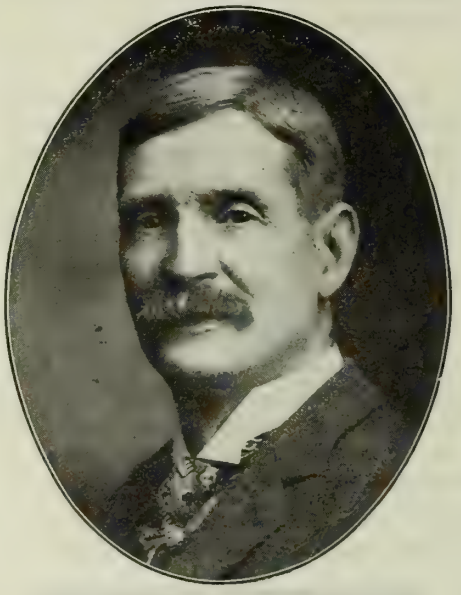
It was moved by F. R. Jackson, seconded by Mr. Phillips, that a resolution be forwarded to the Ontario Government, protesting against the appearance of advertising matters in the school books.

This was carried.

Executive Urges Larger Membership

Also Recommends Change in Election of Officers—Only Two Meetings of Executive During Year Owing to Increased Service to Members

IN the report of the Executive Committee was pointed out the necessity for steps being taken to increase the membership of the association. A recommendation was also made to the effect that the election of officers and executive be left to the convention without any previous recommendations from a nominating committee. The report follows:—



JOHN CASLOR,
Toronto, Treasurer O. R. H. & S. D. A.

"Your Executive and Advisory Committees jointly beg to report as follows:

Owing to the cost of administering the service to members' plan, as adopted by your association, and of which so many have expressed their appreciation, frequent meetings of these committees have been avoided, there being only two meetings of the executive during the year, one during the 1916 convention and one during the present session, matters requiring attention during the interim being dealt with by the Advisory Committee or by correspondence.

"Acting on your instructions, your Advisory Committee took steps with the Eaton paint case, which came up during last convention. Action was entered as per an agreement with the Retail Merchants' Association, and while not successful, we feel has been beneficial in many ways."

A report was read from Morris Phillips, of Toronto, regarding his action in the Eaton paint case, particulars of which appeared in HARDWARE AND METAL some time ago.

"We feel that Mr. Phillips' interest in the paint matter deserves commendation. The Canadian Hardware Manufacturers' exhibitors not being able to put on an exhibition at the present time, owing to conditions which we all understand, your Advisory Committee, with the approval of the Executive, decided to intimate to manufacturers who desired to make an exhibit during our convention, that on payment of a small fee, same would be approved by the association.

"We have now in the hotel a considerable number of very creditable exhibits, and urge the members attending the convention to visit same frequently and do all business possible with them.

"During the past week one of the executive visited a town, at the request of the local dealers, with the object of forming a local association and promote more harmony and better business ethics than formerly existed. The attempt looks promising and your Executive would encourage such movements and will do all in their power to assist in the formation of such associations for the objects above stated.

"Your Executive would further urge the members to act on the suggestion of the secretary to increase our membership, and ask each and every member to use every endeavor to secure one new member for the association on their return home.

"Your committee further recommend that the election of officers and Executive be left to the convention without any previous recommendation from a nominating committee.

"All of which is respectfully submitted."

Meeting Mail Order Prices

Discussion at Wednesday Afternoon Session on the Problems Arising Out of Enamelware Distribution—Making the Tinshop Pay—The Advantages of Co-operative Delivery

THE afternoon session on Wednesday, was taken up largely with discussions of practical questions. J. N. McGregor introduced a discussion of enamelware problems; Mr. Reddick, of M S. Madole Co., Napanee, started an interesting debate on tinshop problems; and President Carter started a discussion of co-operative delivery.

"The mail order houses are our greatest competitors in the enamelware line," said J. N. McGregor, in introducing the discussion on this subject. He went on to say that on certain lines the Eaton Co. sold at prices that precluded a profit, but that on the better lines they often got a better price than the retail hardwareman. He had spent some time looking over their stock and had convinced himself on that score. The mail order descriptions and pictures gave an entirely erroneous idea of the goods offered. The retailers could not offer "leaders" as the catalogue people did but, after all, they need not be feared as much as some merchants feared them.

Morris Philips told of an experience in buying tea kettles from the T. Eaton Co., at a lower price than was quoted to him by the manufacturers. He had taken the matter up with the manufacturers and had been told that they "often bought the kettles from the Eaton Co., when they run short." In other words, the manufacturer bought the goods back from Eaton's at a lower price than they had sold them to Eaton's in the first place.

C. W. Conn contended that hardwaremen should not attempt to meet the Eaton prices on cheaper lines—which they could not do profitably—but should handle the better quality goods and win the confidence of the public in that way.

It was pointed out that there was a special ten per cent. discount in Toronto to all dealers on all kitchen ware.

F. R. Jackson said that he had been assured by the manufacturers that the particular brand of kettle referred to by Mr. Phillips, was not sold any cheaper to the T. Eaton Co. than to the retailer. On this point Mr. Phillips said he had heard that the only concession the Eaton's got was an extra five per cent.

Mr. Jackson did not see how dealers in the country could meet the opposition of the mail order houses on kitchen ware when they had to buck parcels post and the 10 per cent. advantage to Toronto buyers as well.

D. Cinnamon, Lindsay, was convinced that the mail order houses bought at much lower prices than the trade. There were articles in the graniteware line sold by the mail order houses at 15 cents that he could not buy at less than 50 cents! He contended that the 10 per cent. allowed to Toronto buyers was an injustice. The only way to straighten these evils out was to buy jointly or else stop buying from these particular manufacturers.

"Here's the solution," said A. J. Wright. "Get every hardwareman in Ontario into our association. Then we can see that these things are stopped."

A member: "We are strong enough to do that now."

Mr. Wright: "No, we are not strong enough yet."

Tinshop Management.

M. Reddick, of M. S. Madole & Co., Napanee, dealt with the problem of making the tinshop pay during war times. He laid down as a first principle that an absolutely correct idea of costs must be secured. He had investigated the matter of time closely. His men would report to him that they could do so much work in a certain time. "No doubt you can," he would reply, "but do you?" By close questioning he had managed to find out exactly what work they did and in this way he had been able to find out exactly what to charge for time. In the matter of costs of material they had found that the reports in Hardware and Metal were a sure guide in "buying right."

"The principal way to make the tinshop pay is to get the price,' said Mr. Wanless. Close supervision was needed. His brother was a good tinsmith and spent much time overseeing the work. They made no effort to get any of the cheap work and had found this a good principle. They had plumbing, heating and electrical departments, but they kept their tinshop entirely separate.

C. W. Conn believed that success in the tinshop could be secured by applying to it the same business ideas that were used in other branches. A man who did this, even if he knew nothing of the practical side of it, could do better than the average mechanic. Personally, he had kept cost and time sheets on every job and he could look up to-day and find out the exact cost of every contract handled years before. He had insisted on separate records being kept of every job. This enabled him to make comparisons and see that work done now did not exceed the records of similar work. He believed in having only good men and in paying them a good wage.

There was considerable difference between the work in the country shop and in the city shop. In the smaller places it was necessary to have men who could do all classes of work. He favored getting apprentices and training them so that help of the right kind would always be available. To Mr. Wanless' motto of "get the price," he added, "and keep complete records of it."

In answer to a question he explained that his men made out time sheets sach day, marking in records for every fifteen minutes. These were transferred every night to the job sheets.

Mr. Smith, of Belleville, suggested that at the next convention each member should bring the forms that he uses. These could then be discussed and compared so that a perfect form could be evolved.

Mr. McGregor contended emphatically that the tinshop could be kept absolutely distinct from the hardware store if it was desired to find out if in the course of a year the tinshop paid. There were times when the men were not engaged on any particular job and this time had to be covered in such a way that it was taken care of properly on charges made.

Ed. Wanless pointed out some of the difficulties met in keeping the departments separate. Customers would sometimes come in for small items supplied from the tinshop. The money would be rung up in the usual way and credited to the store. He recommended Mr. Conn's system and thought the latter would be glad to explain it fully to any member who cared to consult him.

"Don't allow waste. See that your men work up the material properly," said Mr. Mistele. He told of instances of waste in the material in the shop.

"All our mitres are made on the job," said Ed. Wanless, taking up the question of waste. "We have eliminated the loss from short ends."

The question was asked as to prices secured for eavetroughing. Some quoted 12 cents for 10-inch girth and 14 cents for 12-inch. These were considered to be fair prices.

Co-operative Delivery

President Carter opened the discussion on this point. Parcel express makes two deliveries in the morning and two in the afternoon. In hardware lines he handles the deliveries of at least three hardware firms. He also hadles deli-

veries for grocers and other firms. He charges us $2.25 per week. If in between his calls we have a rush order, we send a boy on a bicycle. The cost is low in our case, because the service is a good one. He will deliver anything up to 2 or 3 sacks of cement. Of course, for heavy loads we have to hire a dray.

A. J. Wright stated that a parcel delivery is within two blocks the delivery The Service Co. will take everything up to half a full load. They handle my C.O.D.'s, make three deliveries a day and give excellent service. The cost to us is $4 per week. Prior to the establishment of this service, we tried out the system under other management, but it was not satisfactory. Under the new system the service is very satisfactory. Mr. Wright stated that he had about two specials each week, and in these cases he hired special drays.

Another member stated that in his town he had a system where if the delivery is within two blocks the delivery service charge is 5c per delivery. Beyond this limit the charge is 15c. The average cost to me is $3 per week. We have three deliveries each day. On Saturday there is one evening delivery at 7.30 o'clock. We find it satisfactory.

C. W. Conn stated that in Tillsonburg they have four deliveries each day with two on Saturday evening. The Delivery Service Co. gives a good service and makes calls regularly. The cost is a great deal cheaper than hiring a man and horse. We deliver small parcels by boy on a bicycle.

Mr. Phillips placed a motion before the meeting, thanking Hardware and Metal for publicity in the matter of the recent paint case. The publicity given in Hardware and Metal had been of inestimable value to the trade.

Mr. McGregor seconded the motion, which was carried unanimously.

Not Called For

The Question Box was then renewed, the first one being:—

Question.—How do you keep down your "not called for" stove repairs?

Mr. Wanless explained that the tags attached to parts delivered to them had the firm name and the name of the customer as well. This made it possible to keep track of every part.

F. B. Smith, Belleville, explained that he supplied the customer with a slip to be filled in. He uses regular order forms to be sent to the manufacturer, keeping duplicates. The duplicate is attached to the slip filled out by the customer and filed away. When the part comes in he looks up the duplicate in the file. Despite these precautions, he still finds that parts not called for pile up on him.

O. S. Reddick explained a system of shelving by which he had certain compartments for all parts kept in stock for certain makes of stoves.

D. Cinnamon reported that he had found the stove repair department as profitable as any. He kept a book for all repair parts ordered. With customers who seem uncertain, he insists on a small deposit before ordering repairs.

C. W. Conn recommended strongly that all dealers selling stoves keep a record book, giving sales, name, address, number of stove, etc. He has done this for 17 years and can order repairs for any customer who has bought stoves from him in that time.

Change the Name?

Question.—Why not change the name of our association to Ontario Retail Hardware Association?

Mr. Conn opposed this idea. The membership now included men who were not in the hardware business, but handled only stoves and tinware.

This seemed to be the unanimous opinion.

Handling Paint

Question.—Does it pay to handle two lines of paint, a low-priced line and a higher priced one? What percentage of profit should be secured on paint?

John Caslor believed it did not pay to handle more than one line. Mr. Smith, Belleville, handled one line only, a high priced grade. He had thought at one time of putting in a cheaper line as well, but had decided not to do so.

A. E. Bottum had put in a cheap line and had featured it in the window, but had not sold it—although the mail order paint sold in the neighborhood just the same. Mr. Oldham thought it did not pay him to handle a cheap paint. Mr. Caslor explained that at one time he handled three lines and when he decided to concentrate on one line, he took all that was left of the other two and sold them as a job lot to a master painter.

The Better Glass Cutter

Question.—What kind of glass cutter gives the best results—diamond or wheel?

Opinions differed on this point. Some spoke for the diamond, others, with equal force, for the wheel. Mr. Smith explained that two members of his staff only were allowed to cut glass. They had become expert and made few mistakes. They used the diamond. It was brought out that only one man should handle a diamond cutter.

The Motor and the Horse

Question.—How does auto delivery compare with horse delivery as to cost and efficiency?

Mr. McGregor had supplanted horse delivery for an auto and his only regret was that he had not done it sooner.

Mr. Wanless had supplianted eight or ten horses by two cars and had found that the motor delivery "beat the horse to pieces." They were through with horse delivery.

Percentage of Profit

Question.—What percentage of profit do you put on granite and tinware?

"It should be possible to get a good price to-day," was the opinion of J. N. McGregor. The concensus of opinion, however, was that it was not possible to charge perecntage. The best way was to judge each article as to what could be obtained fairly for it.

Complimentary Banquet to Members

Wood, Vallance & Co., Entertain the Association—A Few Good Speeches and a Splendid Musical Program —A Social Event That Will be Long Remembered

ON Wednesday evening the members of the Association were tendered a complimentary banquet at the Royal Connaught Hotel by Wood, Vallance & Co. Unquestionably this entertainment will stand out as one of the most enjoyable functions that has ever featured a convention of the Association. It had been admirably planned to give the greatest degree of sociability. Instead of the usual long tables, the members were grouped around small tables for six or eight. The menu had been selected with rare discrimination as a glance at the list appended below will confirm. Finally the programme was made up of just the right ingredients and was just exactly the right length.

The dinner began about a quarter to seven and ran through the following courses:—

Grape Fruit Cocktail; Essence of Tomato Palermitaine; Celery; Dug Olives; Aignuillette of White Fish Galere; Potato Hollandaise; Broiled Milk Fed Chicken on Toast; Cauliflower au Gratin; Potato Chateau; Heart of Lettuce; Russian Dressing; Biscuit Glace Cyrona; Fancy Cakes; Demi Tasse.

The Programme

The programme consisted for the most part of musical numbers supplied by the

best Hamilton talent. Only three toasts were offered. The first was to the King. The second was to "Canada" with a response by Prof. Macpherson, of the Normal College, and brother of W. F. Macpherson. He made the keynote of his address the new patriotism that the war has aroused. The need is now felt, he contended, for the individual Canadian to think less about his rights and more about his responsibilities. The toast to "The Ontario Retail Hardware and Stove Dealers' Association" was coupled with the names of First Vice-President J. N. McGregor and Secretary W. F. Macpherson. Mr. McGregor referred to the fact that, as President Carter had delegated the task of replying to him, he felt that he had had honors thrust upon him. He acquitted himself in a remarkably able manner, turning a neat story or two and concluding with a strong tribute to the generosity and business methods of Wood, Vallance & Co. Mr. Macpherson also spoke with good effect and seconded the hearty thanks of the members to the hosts of the evening.

Wm. Wood acted as chairman, with H. S. Alexander assisting in the capacity of Master of Ceremonies.

Members to Exchange Goods

A Plan Adopted to Get Rid of Slow Movers—Election of Officers for the Coming Year —Report of the Resolutions Committee—Kind Words for Retiring Officers

THE Thursday morning session brought the business of the convention to a conclusion. The resolutions Committee introduced a Report covering matters of interest and the election of officers was proceeded with. Perhaps the most interesting feature was the decision to start an exchange bureau through which members could exchange, buy or sell goods.

It was unfortunate that the attendance was not large at this important session.

An Exchange Method

A practical talk on the question of moving unsalable goods was given by Secretary Macpherson. He outlined a plan whereby members should go through their stock and make a list of lines that they were not moving but which were still salable. This list could be sent to the secretary and duplicate lists could be sent out to all members. In this way, members could pick up lines that they knew they could use by selecting same from the lists.

The president thought such a plan would result in moving dead stock and would be of benefit to all members.

A. J. Wright stated that he had been thinking of just such a plan and was convinced that it would prove a success. When taking stock he had run across some lines, such as whips, that he was not moving, but which could easily be sold by dealers in the country. The exchange plan would provide an easy method of getting rid of such lines to the mutual benefit of both parties to the transaction. Mr. Wright believed that the plan should be proceeded with at once and the necessary forms secured.

He made a motion endorsing the proposition and authorizing the officers to proceed with it. Mr. Bernhart seconded the motion, which carried.

Election of Officers

The new plan of electing officers, by nominations received in open meeting, was proceeded with. The elections resulted as follows:

President—J. N. McGregor, Oakville.

First Vice-President—D. A. MacNab, Orillia.

Second Vice-President—Ed. Wanless, Chatham.

Secretary—W. F. Macpherson, Prescott.

Treasurer—John Caslor, Toronto.

Executive—A. J. Wright, Hamilton; F. B. Smith, Belleville; Jas. McGregor, Caledonia; A. E. Bottum, Bobcaygeon; A. H. Wideman, Markham; A. R. Bernhart, Preston.

A report of the luncheon tendered on Thursday to the members of the Association by the Hamilton manufacturers, is held out through lack of space, and will appear next week. At this luncheon it was give out that in all probability the convention would be held in Hamilton next year. On Thursday evening, the retail hardware merchants of Hamilton gave a smoker for the visitors.

Auditors—J. W. Peacock, Geo. Mathewson, Toronto.

The New President

"I will endeavor during my regime as president to make myself worthy of the trust you have placed in me," said Mr. McGregor, in taking the chair. He expressed his great appreciation of the honor that had been done him in electing him to the presidency.

Report of Resolutions Committee

D. A. MacNab submitted the report of the Resolutions Committee as follows:

"That this committee strongly recommend:

"That a greater effort be taken to secure a larger membership in the cities of Toronto, Hamilton and London, which we think vital to our Association in that the greater number secured from these centres, the greater our influence with, not only the general public, but also with the numbers of our country and town membership."

"That our Secretary and A. J. Wright (Hamilton), be a special committee to visit Hamilton and London to secure larger membership."

"That our Secretary and John Caslor (Toronto), be a special committee to visit Toronto to secure larger membership."

"That after securing the above, a special effort be made to have these members as well as old, to attend our annual convention."

"That the opportune time for this effort be immediately before our next annual meeting."

"We recommend that the hearty thanks of this Association be tendered the trade papers: Hardware and Metal Canadian Hardware Journal for the able assistance they have given this Association during the past year, and especially to Mr. Davis, Editor of Hardware and Metal, for his untiring in our behalf."

"We recommend that we extend our thanks to The Wood, Vallance Co. for the kind hospitality extended to us at their banquet, That we endeavor to appreciate their courtesy and trust they will permit us to enjoy our response to their efforts. The pleasure will remain an ever present factor during the coming year."

"We recommend the necessity of having all or most of the travelers with us. Their presence makes a pleasant time for us all. They are the medium of increasing membership."

"That our Association extend our hearty thanks to the manufacturers of Hamilton for the courtesies extended to our members, in making our visit to Hamilton so very pleasant."

"While reporting on our President's address, we feel we cannot add anything, but would strongly recommend the carrying out of any suggestions he has made."

"On our Secretary's report we cannot

lay too much stress and cannot give too much credit to him for the great work he has done in the past year, and the sound reasoning and able report.

His price lists have been of very great help and benefit to a large number of members, and should be taken advantage of by a larger number of members."

"We recommend that the thanks of this Association be tendered to Mr. Morris Phillips for the great endeavor he put forth in prosecuting the recent paint investigation."

"We also suggest a unanimous vote of thanks to our Secretary for his very energetic and vigorous campaign during the past year."

On the motion of D. A. MacNab and S. B. McClung, the report was adopted in full.

In addition a motion of thanks was tendered to the hotel management.

Good Words for Retiring "Chief"

A word of praise of Mr. Carter's work as president was voiced by Mr. Wanless. He had been an ideal president. Mr. McGregor added his quota of appreciation. They all admired the retiring president—more, they loved him.

In replying, Mr. Carter stated that the past year had been a bitter disappointment. He had formulated plans which he believed would have made the year a big one in the history of the association. Unfortunately, he had not been able to put them into effect. His son had enlisted during the year, and this had made it impossible for him to undertake plans involving so much work. He spoke warmly of the hard work of Secretary Macpherson.

Weston Wrigley spoke of the earlier days of the association. He praised the work of Secretary Macpherson, stating that in no American association had such practical work been undertaken.

President McGregor referred to the excellent work Hardware and Metal has done for the retail trade during the past year, both in taking up matters of importance to retailers and furnishing the retailers with a complete market service. He stated that the market service had made thousands of dollars for the retailers. He heartily endorsed the action of the Resolutions Committee in recommending a vote of thanks to Hardware and Metal, and invited G. D. Davis, editor of that paper, to address the meeting. Mr. Davis thanked the members of the association for their words of appreciation. He stated that Hardware and Metal is published in the interests of the retailers, and the fact that over 90 per cent. of the retailers from coast to coast, as well as all wholesalers, and many manufacturers, are subscribers, is evidence, he believed, that the paper is performing a useful service. He assured the members that Hardware and Metal is always ready and willing to take part in any legitimate movement to bring the retailers closer together and assist them in solving the many perplexing problems which arise from time to time. He referred to the difficulties and opposition which often confront a trade paper that takes an independent stand on editorial matters pertaining to the hardware trade. He regretted very much that only 28 members of the Hardware Association were present at the election of officers. He hoped the retailers would take steps to increase their membership.

"That this, the Ontario Retail Hardware & Stove Dealers' Association now assembled, extend to Canada's fighting forces beyond the seas, an expression of profound admiration of their conspicuous bravery and distinguished services, and their heroic efforts to attain that which Canada has always enjoyed, "Freedom and Peace," and trust that the day is not far off when victory will be complete.

A Trip Through the Factories

A very instructive feature of the convention proceedings was the trip through several Hamilton factories. The trip was organized by the local retailers' committee, under Chairman A. J. Wright and the arrangements with the manufacturers were made by H. P. Hubbard, manager of E. C. Atkins & Co.

One of the largest cars of the Hamilton Street Railway Co. was placed at the disposal of the delegates, and when it pulled away from convention headquarters at 9 o'clock Wednesday morning, even straps were at a premium.

The first stop was made at the plant of E. T. Wright Co., where H. G. Wright and a corps of assistants conducted the party throughout the large factory and explained the interesting operations required to make the hundreds of articles which comprise the "Wrico" line.

Dealers who had sold tinware over the counter for years, expressed amazement at the ponderous machinery with which the E. T. Wright Co. turn out so many of their products, which retailers have been in the habit of taking as a matter of course, without considering the manufacturing processes.

For instance, the manufacture of dish pans was a revelation. How the blanks are stamped in one huge press after another, each one drawing it a little deeper, and how the wrinkles are finally taken out by a process of "spinning," excited the keen interest of all delegates. The spraying of japan on tinware was another very interesting process.

After making a complete tour of the factory, the delegates were conducted to the office, where they were served with tempting sandwiches, coffee and cigars. It was announced that the sandwiches were made of bread produced by the Canuck Bread Mixer. The refreshments were appreciated all the more, from the fact that Mrs. H. G. Wright herself presided over this function. In acknowledgment of the courtesies extended, the delegates gave three hearty cheers and a tiger for Mr. and Mrs. Wright before leaving the factory.

Again boarding the car, the party proceeded east to the plant of the Frost Steel & Wire Co., where Messrs. Page, Morin and Smith took charge and piloted them through the entire works. A description of the processes employed in this plant will appear in next issue.

SPEAKERS PREDICT STILL HIGHER PRICES

(Continued from page 26).

actual necessities if not all the luxuries; and notwithstanding the peace proposals, did not themselves anticipate the termination of hostilities for another year.

This was the situation and he would have to leave it to his hearers to draw their own deductions. Personally, he felt the business situation was complex, but with these facts before him he could not see a peace or a new condition that would seriously affect business or prices of metals for many months to come.

There was a weakening tendency in some commodities—even war supplies—owing to less consumption, due to iron and steel prices and to large accumulations of stock, but this was not the case in the leading metals.

He then pointed out that the greatest lesson this war taught was the necessity of having an entirely different type of men in our Government, diplomatic and consular service—men preferably who began their careers as boys on the farm, at the mechanic's bench, or the retail counter—where they learned to know the world and the real things of life—and who rose by their own strenuous exertion to be great executives. There would have been no trouble if men of this stamp had been directing the affairs of the warring nations. Look over the men prominent in the public life when war broke out. He was quite sure that there was but one among the entire lot whose whole career had shown that they had a capacity to run a small business. Running a nation was simply running business on a big scale.

MEMBERS AND VISITORS AT CONVENTION.

Among the members and visitors who registered at the Convention were the following:—C. R. Hubbard and H. P. Hubbard, E. C. Atkins & Co., Hamilton; W. F. Macpherson, Prescott, Ont.; D. K. Clarke, Hamilton; B. D. Blackwell, Glidden Varnish Co., Toronto; R. Chadwick, Gendron Mfg. Co., Toronto; A. R. Bernhardt, Preston, Ont.; A. Wideman, Markham, Ont.; Jas. N. McGregor, Oakville, Ont.; F. F. Bush, Bird & Son, Hamilton; Fred. N. Culp, Canadian Steel & Wire Co., Hamilton; C. W. Stryker, Standard Paint Co., London; C. E. Glover, Canadian Steel & Wire Co., Hamilton; A. E. Bottum, Bobcaygeon; W. A. Hanna, Pt. Carling, Ont.; Robt. Quelock, Everett &

(Continued on page 51.)

EDITORIAL COMMENT

COLLECT, is the password to retail prosperity nowdays.

* * *

BUSINESS is good unquestionably but it can be made better by any merchant who takes the trouble to apply the proper methods.

* * *

ONTARIO hardware conventions have generally brought blizzards and Arctic weather, generally. A welcome change?

* * *

MATT HORTON is a great digger after business. If every town and village had a Matt Horton, the receivers would soon gird in the bones of every mail order house.

* * *

THE National Service Department in Britain has been devoting a great deal of attention to the waste of energy in the retail trade. In order to eliminate waste the department has suggested, the cash system; suspension of canvassing for trade; and suspension of delivery of purchases under fourteen pounds.

THE ONTARIO CONVENTION

IT IS an established fact that the gathering together of men engaged in any one line of business for the purpose of discussing matters of mutual interest, is bound to be productive of good. It may be only a few local men collected in the rotunda of a hotel or a district picnic or the convention of an organized association. In any event, men meet their competitors, discuss problems of current interest, swap experiences and ideas; and go away better fitted to cope with the details of their individual affairs.

It follows that a convention of retailers is productive of a wide measure of good indeed. The annual gatherings of the Ontario hardwaremen have unquestionably been well worth the efforts put forward to keep the Association running. The benefits derived from the intimate discussions of trade problems have accrued to all members and there has been in addition, the advantage that has been offered to each member to make an extensive acquaintance in the trade. Disappointing though the attendance has often been, the measure of good accomplished has been great.

With full cognizance of this, however, it must be pointed out that the conventions have fallen short of what they might have been. From the thousand odd hardwaremen in Ontario it should be possible to recruit three or four hundred of the livest and most prosperous to get together and thresh out the most pressing problems of the hardware world. The officers of the Association have worked hard each year to achieve this result and the failure to do so can be attributed in some degree to the fact that most hardwaremen have yet to be "sold" on the benefits of retail associations. The newly appointed officers should look this fact squarely in the face—and devote the next year to overcoming it. It is not necessary for the Association to justify its existence but it is necessary to prove that it can measure up to the great opportunity that offers.

GOOD ROADS—AND MATT HORTON

MATT HORTON has done a lot of things any one of which considered singly would help the average merchant to increase his turnover and strengthen the hold he has on his community; but Matthew never took a wiser or more progressive step than when he inaugurated a good roads movement.

The demand for good roads is a matter of comparatively recent date in Canada but the great value of well kept highways is now very apparent to every thinking man. To the merchant who depends in any degree upon farm trade, the problem of good roads is one almost of life and death. If a town has better roads than a neighboring town it waxes and flourishes mightily while the other wanes and stagnates. The farmer follows the lines of least resistance; he takes himself and his trade to the town where the "going" is easiest and most comfortable.

Matt's success in the matter of good roads was easily, because vicariously, gained. Perhaps no reader of this column could find the solution so easily to hand. To get a community stirred to action in the matter of good roads is generally no easy task. It requires perseverance, eloquence, patience and driving power. But it is well worth while. A merchant finds that the results to himself in plain dollars and cents from good roads more than compensate for any effort that may have been made, to get them.

Some counties have good roads now, but all could do with Better Roads. So the opportunity to improve *your* position by fostering the desire for Better Roads is one that offers to every merchant.

Matt Horton's Salesmanship Methods

Starts an Athletic Club and Gymnasium to Sell Sporting Goods—Initiates a Good Roads Movement—Buys Waste Paper — Has Exhibitions in His Store—Matt Makes His Store a Big Fact in Hurston and Community

By John C. Kirkwood

This is the fifth chapter of the story of how Matt Horton built up his hardware business.

Matt uses unusual methods and plans to create a market for his wares and to advertise his business; and he wins out in consequence.

The sixth installment of Matt's story will appear in an early issue of HARDWARE AND METAL.

I HAVE told you of the special sales I hold—of the deliberated and organized preparation for them, and of how I train my men to carry through these special pre-season sales. Now I want to tell you of some of the things I have done, and do, to make me a few more honest dollars—this to set you thinking, it may be.

What I have in mind here and now is how I have developed new business for my store, and created demand for new classes of goods.

The Hurston Athletic Club

Let me speak first of all of the local athletic club I was instrumental in organizing. Hurston is like a good many other towns in Canada of 3,000 population: it has a good many young fellows in their teens and early twenties, full of animal spirits, which require physical exercise for an outlet.

Some years ago, before we had our athletic club and gymnasium, not a few young fellows acquired the habit of hanging about the streets, with nothing to do. As a consequence they developed a string of bad practices: they indulged in horse play, they told smutty stories, they learned to smoke, they swore vilely, they began to bet and gamble. In short, they coarsened visibly, became unruly, and were a disgrace to themselves and to our town.

Two or three of us older ones got together and considered ways and means by which we could correct the bad state of affairs of which I have spoken. In the end we decided that athletics in their several forms was the corrective; and so we set wheels in motion to form an athletic club.

I am not going to tell you all the story of how we got the club going, or have kept it going. Let it suffice to say that we bought a good-sized field inside the town limits—one big enough for lacrosse, football, tennis, and lawn bowling. We built a club house, with baths; a club house with plenty of light. The gymnasium I have referred to was a separate enterprise, and was located in the heart of the town. But it was related in intention to the athletic club idea.

A Recreation Field

This recreation field attracted our youths in summer and autumn, and there they worked off a good deal of their animalism. In winter there was an open-air rink. The town had another rink elsewhere—a covered one.

An Annual Field Day

We organized an annual field day, with good prizes, the money for which we collected in very large measure from the parents of boys. So we introduced the spirit of emulation into our club.

But this is not to be a story of a reform or social movement; rather it's my purpose to tell you how I worked up a very good local demand for lacrosse sticks, baseball outfits, tennis goods, lawn bowls, skates, hockey sticks, and so on. I was able to corral most of this business, and I am able, also, to produce some exceedingly attractive window displays of a sporting character.

While I had an honest desire to see Hurston's youths get off the streets, and keep themselves clean and decent, I had it always in the back of my head that I would make money out of the sale of sporting goods, if only I could get started a good, healthy, well-managed athletic club.

The Gymnasium

The gymnasium appealed to many who didn't go in much for those sports that required running or a field for their exercise. Some chaps go in for muscular development—by gymnasium work. I would like to take time to tell you how we worked up an interest in gymnasium work, how we financed its equipment, how we kept it from becoming a rendezvous for undesirables. But this is apart from my purpose. I may say, however, that by great care and wise supervision we made the gymnasium a very estimable and popular place—where young girls played basket-ball on certain days, at certain hours, and where young women and young men received regular instruction in physical training. Also, we permitted boxing under direction and control, had wrestling bouts, and other sports calling for more or less violence.

Where Matt Comes In

My own part in these activities was not too conspicuous. I made myself useful and valuable as an adviser and committee man—getting others to do the work. But it all worked out as I had hoped: we took up the slack in a boy's free time, and consumed some of his superabundant energy by exercises that did him good; and my store sold the implements and accessories of play.

Matt Starts a Good Roads Movement

Now I speak of another thing, that I think I may safely claim to have initiated: a good roads programme for our county.

Among my friends is a young lawyer—Arnold Dunbar. He has ability and ambition. One day, in conversation, he said to me: "Matt, I'd like to go to Parliament some day. How can I get there?" I said to him: "Arnold, you can go to either Toronto or Ottawa just as surely as you are sitting there—if you are willing to pay the price." "And what is the price?" Dunbar asked.

"You must render the people of this county—both Grit and Tory—a genuine service, one that all will recognize, and one that all will give you credit for; and you mustn't be in too great haste to 'get there.'"

"Well," said Dunbar, "what is the particular service you have in mind?"

"Good roads for our county," I told him. "You inaugurate a good roads movement in this county, and we'll all be your debtors; and when you are ready to go to Parliament, and seek election, the people will elect you. Politics will be forgotten, and only your great and real service remembered."

The story of the good roads movement in our county is a thing by itself; so, too, is the story of young Dunbar. The thing that matters in this record of my business and methods is the fact that we have in our county a fine and extensive system of good roads.

With good roads leading from the four points of the compass to Hurston, our town is a better business centre. We all do more business; and, in particular, I do more business. Good roads mean a good many hundred dollars a year in extra turnover for me; and in

every dollar of turnover there is something for me in the way of profit.

You will have seen that all I had to do was to start someone else along a line of endeavor and progress that could not do otherwise than help my business.

Matt Paves the Way for Motor car Sales

And I add this: When good roads came, motor cars came and multiplied; and I am the local agent for two makes of cars. The cars were bound to come in any event, but they came the earlier and in larger numbers, among townspeople and farmers, because the good roads were made.

Matt Buys Waste Paper

I tell you of another thing—a little thing, but big enough to make money for me and to advertise me. It is my paper baler.

For some years I have had a paper baler. Latterly, since prices have gone skyward, I have been making a tidy sum.

It seemed to me to be a crying shame to see so much paper in my own business going to waste. I felt that if paper in my business was being wasted with prodigality, it must be the same in the case of other businesses, and likewise in people's homes. I speak of wrapping paper and old newspapers, and of cardboard boxes.

Matt Buys a Paper Baler

So I bought a baler—first, for my own waste; then, after I got going, I advertised that I would buy waste paper. This paper had to be delivered to my warehouse (I have one, and a man in charge of it). I can't give much for paper, because I have to ship it to Toronto in carload lots (a car holds 15 tons), and pay the freight. Also, the handling of the paper, the risk I take, the length of time it takes to accumulate a car load—these are factors that must be taken into consideration. Just now I am getting in the neighborhood of $12.00 a ton, f.o.b. Hurston—about $180.00 a carload. There is a very nice profit for me in the transaction; and, besides, I am rendering my community a real service, and teaching the lesson and wisdom of thrift—this is a minor way. I need not tell you all the plans I use to get families and shops to save their waste paper and to sell it to me. To some, I may say, I supply common jute sacks. I have children interested in saving paper, and also the public schools.

My baler cost me something under $40. But it long ago paid for itself, and has paid gold mine dividends ever since. The other day a man was round with a very good baler for less than $20. He sold one to the *Star*, so I will have some opposition, I suppose, but not a great deal; and, anyway, I am glad that there are two of us at the work of collecting waste paper. Two will collect more than one, and the *Star* and I will join our lots to make carload shipments; and so I'll get my lot sold the quicker.

The Paper Baler Advertises Matt

Just here I want to say this: the possession of this paper baler and the knowledge that I am ready to buy waste paper advertise me and my business. The baler puts me into the mouths of the people, so to speak; meaning that I am talked about a little more. One of the things I aim at all the time is to have my store and business talked about. I want my business in Hurston to be as big a community fact as Eaton's is in its larger community. Some of the things I do are not done for themselves so much as to get my business talked about a little more. I don't have to pay for talk; but I do for newspaper space and printed matter. And the talk done at social afternoons, in gossip fests, at gatherings of all sorts, and when and where the twos and threes meet, is first-class advertising.

Matt's Ways of Advertising

Once a golden eagle was shot near Hurston, and was mounted very excellently by a local taxidermist—wings with a six-foot spread, in a swooping position, and a rabbit in its claws. I secured this eagle for display in my store for a period of a fortnight, and had a photograph taken of it, and a half-tone made therefrom. Also, I had half-tone portraits made of the man who shot the eagle, and of the taxidermist who mounted the bird. Then I had a leaflet prepared—a thousand of them—telling the story of it all—a very interesting story; and these leaflets were given to callers. Also, I mailed a few to certain people. The *Star* gave the whole affair additional publicity. Indeed, it reproduced in its columns the entire story, with the illustrations, and so I got extra publicity free.

Now the showing of this eagle—a bird rarely seen, and more rarely shot, in Hurston vicinity—did not directly sell for me any merchandise; but it is a fact that my sales during the fortnight of the bird's showing did go up. We had many more people in during this period than common; and since we always aim to have certain lines attractively and appealingly displayed, it followed as a matter of course that we sold more goods.

Matt's Exhibition of Pioneer Relics

Another time I had an exhibition of pioneer relics in my store. These were collected (loaned) from the good people who live in Hurston and round about. I advertised in our local papers that I wanted to hold such an exhibition, and invited families and individuals with old things and things of age with interesting history attached to them, to let me know about them. Also, I kept asking questions, and used other means to ascertain what was available, and who had things of the sort wanted by me.

The end of it all was that Hurston had a mightly interesting and unusual exhibition, attended by hundreds and hundreds of people. We had school classes attend in a body; farmers and their families came; the townspeople were there, of course; and the County Historical Society, which helped me to prepare my exhibition, was godfather to it. We had a catalogue of it, listing and describing each article exhibited, saying from whom it was received, and giving any historical or interesting particulars.

That the exhibition was a success goes without saying. But the main thing, so far as I was concerned, that it put Matt Horton and his hardware business into the limelight afresh, and held them there.

Matt's Back Room

At the rear of my store is a good-sized room, with skylight lighting. The exhibition was held in this room. I may say that this room is a sort of permanent exhibition room. It is fitted up fairly decently—with Beaver-board wall treatment, and the floor is tiled. (I sell this sort of flooring.) There is a pretty good fireplace in it—one that will work and that does work on occasion—with real cord wood. This fireplace I can screen over when its visibility would be out of tune with my purpose.

Matt's Model Kitchen

For example, from time to time, I turn this room into a model kitchen—to show a range (gas, electric, coal or wood), a kitchen cabinet, and various utensils, all of which I sell. This equipped kitchen is a fine help in selling. It is a citified idea, pleasing, impressive, persuasive. I recommend this idea to any brother hardware dealer who has space in his store for such a room.

Another time this room is made to show lighting fixtures. I have had it fitted up as a drawing room—with a piano in it and rugs willingly loaned by local dealers for the sake of advertisement. The music dealer also loans me from time to time a Victrola—for the advertisement of it I give him and it—this when this exhibition room seems to call for the presence of a Victrola and when the music this instrument gives promotes some special object of mine.

An Exhibition of China Painting

I have loaned this room at times for certain purposes. For example, I sell paints for China painting and for other classes of art painting. I carry scarcely any stock of these paints, because the demand is so small and irregular. But I have catalogues, and they suffice.

we have several women in Hurston who "go in" for china painting, and one of them is a teacher; and so I loaned my room to this teacher for a week for an exhibition of her work and of her pupils' work.

Why Matt Does Extraordinary Things

My idea in all these extraordinary things is to advertise my business, to make by business talked about, thought about, and interesting. Everything helps directly or indirectly to sell goods. My aim is to make my business a Big Fact in Hurston.

I am putting a certain buying pressure on my community and territory all the time. The one thing I cannot endure is the waiting habit so common among retailers—the mere store-keeping idea. I cannot afford to just wait for people to come to me when they discover wants and needs. As a matter of fact, I can't afford to just wait. I have too many salesmen and too big an investment in stock to let things just wait. Also, by nature I am energetic, and the one thing that oppresses me, and gives me the blues, is inaction—common, stupid waiting, without a particle of endeavor on my part or on the part of my staff to make buyers come to my store. I and they must speed things up. We must create business, must make sales to those who never think of buying until we set them a-desiring. Also, there is this: The people of Hurston and round about are always prone to buy in Toronto—from the department stores there. I must fight this disposition and tendency, and this practice; and so I must keep my store and my business dominant in the minds of my constituency, and must pursue the same ideas the department stores use. And I am winning.

Why Canadian Merchants Fail in Business

Lack of Capital Continues to be Chief Cause, Covering Over 38 Per Cent. — "War" Responsible for 30.1 Per Cent.—Incompetence Blamed for Nearly 14 Per Cent.—Best Relative Year Since 1912 — Business Life Grows Safer—Some Graphic Charts.

IT is gratifying for every Canadian to learn, although not unexpected in view of the wonderful improvement in business conditions in this country, that the total failures for the past year showed a decrease as compared with the year 1915 of 32.5 per cent., and a decrease of 38 per cent. when compared with 1914. More encouraging even than this, and unexpected to most of us, is the fact that the year 1916 makes a better showing than 1913, by 3 per cent.

That this country from the point of view of failures, has reached a sounder condition than in 1913, in spite of the war, becomes all the more significant when we compare the figures of the United States. There, with war conditions that never dropped to the level that they did in Canada in the first few months, the decrease in failures for 1916 over 1915 was 13.3 per cent., and of 1916 over 1914, 1.6 per cent. As compared with 1913, however, the United States had an increase in failures of 13.3 per cent., while Canada's decreased.

Slightly Less Than 1 in Every 100 Fail

From another standpoint the figures are interesting. According to Bradstreet's, to whom we are indebted for the statistics in this article, the Business Death Rate fell to 92/100 of 1 per cent. last year, compared with 1.07 per cent. in 1915, and 95/100 in 1914. That is, out of every 10,000 in business in Canada last year, 92 failed, compared with 107 in 1915 and 95 in 1914. This is a heavy toll, however, the highest of any year since 1908, the "panic" year, and we have to go back ten years more to equal it. Still, the worst record was 1.5 per cent., a fact which proves that the ancient tradition that the larger number entering business life are doomed to failure ultimately, lacks a well-founded statistical basis. It should be pointed out that the statistics used in these conclusions define a failure as one that involves loss to creditors, and does not include many cases involving physicians, actors, real estate men, etc., where others were not concerned.

Personal Shortcomings a Fruitful Cause

While there is abundant reason for congratulations from a comparative point of view, there are many elements involved in these "mortuary" statistics that call for grave consideration. Personal shortcomings bulk so largely that one is tempted to suggest that there be exercised some sort of a Government supervision that will eliminate a percentage of those who at the outset through ignorance or incompetence, or a dangerous lack of capital seem to be foreordained to failure, a suggestion that would be met by an outcry that any restrictions would be in the nature of restraint of trade. For all that, we believe the time will come when the law will require a minimum in the matter of

competence and experience and perhaps of capital—certainly the former two elements being the best asset—as a means of defence for the rest of the business community.

Why do men fail? Bradstreet's have made a double grouping of causes, the first dealing with the faults of the men who fail, and the other, external reasons. These two classes are divided as follows:—

A.—FAULTS OF THOSE FAILING—
- Incompetence,
- Inexperience,
- Lack of capital,
- Unwise credits,
- Speculation (outside regular business),
- Neglect of business (due to doubtful habits),
- Personal extravagance,
- Fraudulent disposition of property.

B.—NOT DUE TO FAULTS OF THOSE FAILING—
- Specific conditions (disaster, war, floods),
- Failures of others (of apparently solvent debtors),
- Competition.

Lack of Capital Leads in Canada—Incompetence in States

As between Canada and the United States in the matter of causes of failure, there is a curious difference. In the former case, Lack of Capital is by far the most fruitful of the personal reasons; in the States, Incompetence stands at the top. Lack of Capital in Canada was responsible for 38.8 per cent. of the failures in 1916, as against 30.3 per cent. in 1915. Incompetence was the cause of 13.4 last year and 17.9 in 1915. In the United States, Incompetence claimed 33.2 per cent. of the total in 1916, and 29 per cent. in 1915, while Lack of Capital was only 30.3 in 1916 and 27.5 in 1915. However, this is not the old record across the border. In 1914 and 1913, Lack of Capital stood first, as it had every year before except in 1912. Indeed, it rose as high as 39.2 per cent. in one year.

War Conditions Caused 30 Per Cent.

While Lack of Capital was the leading cause of failure in Canada last year, as might have been expected, the war itself was the leader in the preceding year. In 1915, Lack of Capital was only 30.3 per cent., while "specific conditions" rose to 35.9 per cent. In 1916 the latter had fallen again to 30.1, as compared with 24.4 in 1914.

Inexperience, which ranks close to Incompetence, was responsible for 3.4 per cent. in 1916, while in the United States it was the cause of 6 per cent. The only other fruitful cause of failure in either country is Fraud, on the part of others, which caused 7.5 per cent. in Canada, and 6.6 across the border. Competition stands surprisingly low in Canada, .2 per cent., of 1/500, compared with 4.2 per cent. in the States. Neglect is credited with 1.9 per cent. in Canada, as against 1.4 per cent. the year before, and 2.4 and 1.9 per cent. in the United States for the two years.

SUMMARY—UNITED STATES

Competition	4.2	5.7	2.5	3.3	.2	.1	.1	.02
Specific conditions	13.4	18.9	19.3	24.7	30.1	35.9	23.3	34.6
Speculation	.4	.4	3.9	2.2	2.0	1.2	13.7	4.9
Fraud	6.7	6.3	7.4	7.0	7.5	5.7	5.2	6.8

These tables from Bradstreet's provide interesting records as to Why Merchants Fail.

Individual Cause of 71 Per Cent.

To sum up the causes of failure: In Canada, the individual was charged with 71 per cent. of the responsibility compared with 64.7 per cent. the previous year, but 73.4 in 1914, a much smaller record than in the States, where the percentages were 79.5 and 74.4 respectively, for 1916 and 1915.

95 Per Cent. With Less Than $5,000 Capital

Lack of Capital as a cause is worth a closer study. No separate figures are available at the moment for Canada, but as Bradstreet's remarks, "If any confirmation were needed of the idea that the small trader's path was a dangerous one in 1916, it would be afforded by the returns of capital employed by those who failed. Of 18,268 failures in the two countries in that year, 17,372, or exactly 95 per cent., had a capital of $5,000 or less. Search through the record of twenty-six past years fails to reveal so high a percentage as this, the nearest approach to it being in 1900, when the proportion was 94.2 per cent. The proportions failing with larger capital naturally showed a shrinkage from 1915 and all preceding periods.

97 Per Cent. With Poor Credit Ratings

As regards credit ratings, it is shown that 17,843, or 97.7 per cent. of the 18,268 failing in the United States and Canada, had Very Moderate or No Credit ratings, as against 96.4 per cent. in 1915, the latter being the highest percentage recorded up to that year. Of those failing in the two countries, 63.1 per cent. had less than $5,000 of liabili-

(Continued on page 45)

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

The freight situation has not improved during the week, as the number of points on which embargoes prevail have been added to. Complaints are coming in from retailers in small centres that the railway officials appear indifferent and do not seem to be exerting themselves to better conditions. Freight shipments have begun to accumulate in wholesalers' warehouses.

There have been a number of price changes during the week, all of which are in an upward direction. Wire nails have reached the $5 base price in certain sections. Lead shot and lead products are all higher in price, owing to the situation in pig lead market. Paris green prices have been announced, which are higher than the opening prices of last season. New prices on next season's skates, hockey sticks, sleighs and kindred lines are out and advances up to 25 per cent. have been recorded in some lines. Other lines that have advanced during the week include soldering coppers, cabinet locks, glue, glaziers' points, plumbers' and painters' torches, aluminum ware. There is a firmness in the market for all Canadian makes of builders' hardware, owing to the recent advance that has been put into effect by American manufacturers. Axes and cross-cut saws are also in firm market. In spite of the handicaps to business there has been a good trade during the week.

MONTREAL MARKETS

MONTREAL, Feb. 21.—The hardware market this week is still marked by great firmness of tone, and several important changes of price will be noticed. Iron pipe has altered in price upwards. There are some significant warnings sounded as regards various articles of iron and steel, and some shelf goods changes will be noted. It is expected that Canadian made builders' hardware will advance in line with the products from across the border. The business of the week has been hampered a little by railway difficulties, but there is some improvement noted in this direction, and better things are hoped for.

Shelf Goods Show Changes and Hints

SHELF GOODS—While there have not been many alterations in price in shelf hardware lines during the current week, there have still been several important matters dealt with, and some hints are circulating which are well worth attention of the hardware trade generally. All price changes are upwards needless to say, and though there is a feeling on the part of some well experienced wholesalers that the top should surely be in sight now, yet others equally well versed in the market are still figuring on further advances.

Lead Shot Advances

With the market for ingot lead at its record price levels as will be seen from our metal reports, there need be no surprise to find lead shot, all grades and sizes advanced. The price quoted in Montreal now is $16 net. Some firms are considering allowing a discount of 5% off, but it is very unlikely that this will be found to prevail for long if allowed at all.

Glue Has Again Advanced

Glue still refuses to stick at old price levels no matter how well it will do its ordinary work in the world, and this week records a price advance in glue of five cents a pound. Glues range in price from 20 to 35 cents a pound now to the retailer. There is no guarantee that under present conditions of shortage the prices may not advance further and suddenly.

Glazier Points Are Up

As will be noted in paint market reports glass promises to rise in price, and glaziers will find their supplies of "points" zinc coated, up in price now to 18 cents a pound, or 9 cents in papers. The price of these used to be 15 cents a pound.

Stanley Works Price Withdrawn

Prices on the Stanley Works builders' hardware, bolts, hinges, etc., have been withdrawn with a view no doubt to advances. The new prices are to be made known as soon as possible according to the firm's circular letter to the wholesale trade.

Goodell-Pratt Tools New Catalogue.

A new catalogue, which may mean also alterations in prices is being mentioned as forthcoming from the Goodell-Pratt Co. makers of mechanics' tools of many kinds. The possibility of advance in these lines is easily accounted for by the state of the markets generally.

Painters Torches Advance

There has been a ten per cent. advance in prices of all plumbers and painters blow torches owing to cost of materials and manufacture.

Builders Hardware Up

Yale and Towne hardware has been subject to a ten per cent. advance, put in effect first across the border, and there is no doubt but that the Canadian lines of builders' hardware will be advanced before long.

Aluminum Ware Advances

A ten per cent. advance in all kinds of aluminum ware is recorded in Montreal this week, the reason being attributed to the requisitioning by the Government of Canadian aluminum making it necessary for the trade to import American manufactured aluminum at the advanced cost brought about by duty, etc.

Chaudrons Going Higher

A warning is sounded that chaudrons which advanced quite recently are likely to go still higher.

Axes and Cross-Cut Saws Also

Axes and cross-cut saws are believed to be in for a further advance before very long.

Gasoline and Coal Oil

Gasoline, in rather slower demand, is unchanged in price this week at 29½ cents per gallon. Coal oil at 14 and 17 cents according to grade is also unchanged and in better demand.

New Prices Are Out On Iron Pipe Again

IRON PIPE.—New prices are out again on iron pipe, both lap-weld and butt-weld. These prices show important advances

due to the generally firm and difficult conditions affecting the manufacture of all iron products. The prices are as follows per 100 feet for standard buttweld pipe:—

Size—	Black	Galvanized
⅛ inch	$ 4 50	$ 6 00
¼ inch	3 66	5 79
⅜ inch	3 66	5 79
½ inch	4 76	6 33
¾ inch	5 87	7 99
1 inch	8 67	11 82
1¼ inch	11 73	15 99
1½ inch	14 03	19 11
2 inch	18 87	25 72

Wire Nails Reach Five Dollars Base

NAILS, WIRE, ETC.—Naturally the conditions prevailing in the iron and steel market are felt in respect to nails and to wire. Last week HARDWARE AND METAL recorded the prediction that wire nails were to go up to $5 base for spring. The prediction was fulfilled with startling suddenness. Wire nails are to-day at $5 base f.o.b. Montreal, Gananoque, Collingwood, and Owen Sound. They are $4.95 base f.o.b. Toronto, Hamilton, London and Milton. The $5 price base applies also to wire nails f.o.b. St. John, N.B., and Sydney, N.S. Cut nails are now at $4.70 base, and all prices have been withdrawn on all wire, annealed, galvanized, etc., with no indication when new prices may be announced. It is hoped that some announcement may be possible next week. The market is very firm, and wire rods are affected by the withdrawal of prices as well as the ordinary range of wires.

Sheets and Plates Keeping Scarce

SHEETS, PLATES, ETC.—Firmness persists in the market for sheets and plates, and the British products in the way of galvanized plates are practically off the market now. In connection with tin-plate mills are booking orders, but will not book for future delivery, and the market is very firm indeed. The shortages of various lines are most marked, some firms being practically bare to the boards of plates which formerly were stacked in immense quantities to meet steady demand. Demand is not probably as great as it was formerly for plates of the metals used in the building and constructive trades, as, for instance, zinc and galvanized sheet iron, but it is still strong, and very strong in proportion to the stocks available. Current quotations show prices which are representative of a market in which prices are in many cases merely nominal.

NEW PRICES ON WROUGHT PIPE.

Following are the net prices of wrought iron pipe, according to the schedule of prices adopted Feb. 14, 1917, and which advance was recorded in last week's Hardware and Metal. The increase amounts to two points, or $4 per ton.

Buttweld.

Size—	Net Per 100 Feet. Black	Galvanized
⅛ in.	$ 4 50	$ 6 00
¼ in.	3 66	5 79
⅜ in.	3 66	5 79
½ in.	4 76	6 33

Prices Ontario, Quebec and Maritime Provinces.

Norway Iron Has Advanced in Price

IRON AND STEEL.—The situation regarding iron and steel in the widest market sense is still leaning towards greater firmness and greater difficulty rather than less. Prices of iron and steel products on the large scale are high and likely to be higher before they come down. Norway or Swedish iron will be found higher this week, quoting at $11 base. So far the prices quoted last week for other iron and steel products remain steady, but the firming tendency is very marked, and under presently prevailing conditions there may be advances again before long.

	Basis.
Common bar iron, per 100 lbs.	$ 3.40
Refined iron, per 100 lbs.	3.65
Horseshoe iron, per 100 lbs.	3.65
Norway iron	11.00
Mild steel	4.30
Band steel	4.30
Sleigh shoe steel	4.30
Tire Steel	4.50
Toe calk steel	5.20
Mining tool steel, per lb.	0.13½
Black Diamond tool steel, per lb.	0.14½
Spring steel	6.00

Stoves and Ranges May Go Higher Yet

STOVES, ENAMELLED WARE.—The market for stoves, ranges, and enamelled ware is very firm and steady at present, but beyond rumors of price advances in the future should present conditions prevail there is nothing eventful to record. Ominous hints are made, however, which might indicate price advances for stoves and ranges for next period of activity in these lines. Indeed, it seems almost inevitable that prices should advance quite sharply in these lines considering the tremendously firm state of the metal market, and the coal and other material difficulties which beset the manufacturers. In stoves and ranges for the present demand is normal, inclining rather to dullness. In enamelled ware, galvanized hollow ware, etc., there is firm market and improving demand.

Lead Pipe Has a Two-Cent Advance

LEAD, ZINC, ETC.—The market for lead products is firmer than ever owing to the condition of the market for the ingot metal, also owing to delivery difficulties due to congestion of railway traffic. Lead pipe will be found advanced. The market for this was very strong and climbing hard at the time of writing, but the prices for lead pipe and lead waste pipe represent the levels of marketing. Lead sheets also advanced sharply, and the solders are in firm market, though at unchanged prices. Zinc sheets and products are priced as last week, but are in firm market still.

Lead pipe, lb.	$0 16	....
Lead waste pipe, lb.	0 17	....
Lead traps and bends	Net list	....
Lead wool, lb.	0 15	....
Lead sheets, 3 lbs. sq. ft.	0 16	....

Cut sheets, ¾c lb. extra and cut sheets to size, 1c lb. extra.

Solder, guaranteed, lb.	0 37	....
Solder, strictly, lb.	0 35	....
Solder, commercial, lb.	0 33	....
Solder, wiping, lb.	0 33	....
Solder, wire, lb.	....	0 52
Zinc sheets, per lb.	0 33	....

Market For Old Metals Firm Still

OLD METALS.—There is very little change in the market for old metals in Montreal this week, but a marked firmness of tone is apparent, and the delivery difficulties maintain as mentioned previously. Lead and old materials containing lead are firmer though market opinion is to the effect that prices quoted for lead materials in the old metal market are fairly near the limit buyers of this material are likely to pay. In view of the extremely firm market for ingot lead, however, and altered prices upwards of new lead products, the prices of old materials may be found still below the limit to which they can climb. Old rubbers are shaded down half a cent a pound this week to 8¼ cents.

Tea lead	0. 6½	......
Heavy lead pipe	0. 8½	......
Yellow brass	0.16	......
Red brass	0.20½	......
Light brass	0.10½	......
Heavy zinc	0.10	......
Heavy copper	0.27	......
Old cast iron, per gross ton	18.00	19.00
Stove plate, per ton	11.75	......
Old rubbers, boots and shoes	0. 8¼	......

Overshoes, lumbermen's rubber boots	0. 6½	.....
Auto tires	0. 5½	.....
Bicycle tires	0. 2½	.....

Lead Holds the Lead in Metals

INGOT METALS. — There is uncertainty present besides the firm tone in the metal markets generally. Lead is the metal subject to the most marked advance for the week at the time of writing. Copper is very firm. Spelter rather uncertain. Tin is a little uncertain also, but with steadying tone. Aluminum is firm, and a Government requisitioning of all aluminum supplies in Canada is mentioned. The iron market is still tremendously strong and firm.

Lead Reaches Records

LEAD.—Rapidly approaching the dignity of place amongst the precious metals, lead is this week reported to be at its record price-level in Canada, if not on the entire continent. Prices quoted in Montreal range from $11 to $12 per hundred lbs. at least for large quantities $12 for carload lots according to one quotation), and up to $14 and $14.25 per hundred pounds for small quantities. Deliveries are extremely problematical, and to get carload lots would require all the prestige and skill of a considerable concern's purchasing department.

Antimony Quieter

ANTIMONY.—Steadiness and rather quieter tone characterize antimony at the time of writing. Quotations for large quantities are shaded slightly downwards according to one considerable firm, the figures being $31 to $33 per hundred lbs. for large orders, and $37.50 to $38.50 for smaller orders. Demand is light for antimony at present. .....

Copper Strong in Tone

COPPER.—Stronger in tone than last week's market condition, copper is quoted this week at from $36 to $39 per hundred pounds according to quantity ordered. Copper is swinging back towards the recent records established in price, which were rather over the quotations given for small quantities.

Spelter Easier but Scarce.

SPELTER.—Although the prices quoted for spelter in Montreal this week are shaded downwards a little as compared with last week's figures, the metal is scarcer on the market. Demand has, however, been quieter of late. The price range is $13 to $14 per hundred with some quotations up to $16.

Tin Also Eased Off.

TIN.—There was a tendency to ease off in price as regards tin this week. The metal was easier in market both at London, England, and in New York, the recent excitement around it having cooled off a good deal. Quotations in Montreal were from $49 to $51 for large orders up to $56 and $57 for smaller quantities.

Aluminum Worth $65 per Hundred

ALUMINUM. — Last week aluminum was quoted in this column at "$18" per hundred pounds. This was an obvious error. The price should have read $68 as in the Toronto report. This week finds aluminum a little easier, and $65 is quoted in Montreal for considerable orders. There is a hint of a Government requisitioning of the supplies of this metal in Canada.

TORONTO MARKETS

TORONTO, Feb. 23.—The freight situation continues to be the outstanding factor at the present. Conditions have not improved, in fact they have grown worse with the steady addition of other towns to the embargo list. With the wholesalers the situation is becoming more acute because their advices from manufacturers in the United States are to the effect that embargoes are becoming more numerous there also. Merchants in the small towns are getting impatient at the situation because they maintain the railroads are not trying to combat the situation. With freight shipments accumulating in wholesaler's hands there are serious questions being asked as to what the outcome of the situation is going to be. Business has been good, although price changes are less numerous than in some other recent weeks.

Soldering Coppers Advance 2c Pound

SOLDERING COPPERS.—In sympathy with the high market prices for copper, soldering irons have been advanced 2c per pound during the week and are now quoted at 63c per pound base, the former base price being 61c. In the ingot form copper is now being quoted at 38c per pound and there is a shortage of the material. During the week old scrap copper advanced as much as 2½c per pound. The market for all copper products is one of firmness.

New Prices on Skates and Hockey Sticks 25% Up

SKATES, HOCKEY STICKS, SLEIGHS.—Wholesalers have announced their new prices on skates, hockey sticks, sleighs and kindred lines for the winter trade of next season. These prices represent advances up to 25 per cent. over the prices for the past season. During the past season there has been a scarcity of these goods to meet the requirements of the trade and prices have been steadily advancing. Manufacturers have had difficulty in meeting the demands put upon them during the past season for these lines. Raw materials are hard to get and prices are correspondingly high.

Cabinet Locks Are Higher 7½ Per Cent.

LOCKS.—Another advance of 7½ per cent. has been made on all classes of cabinet locks of American make. This will include locks for cupboards, chest locks, till locks, drawer locks and similar lines. The market for these lines has been one of great firmness for some time past and advances in kindred lines of hardware have been numerous. With embargoes interfering with shipments no idea can be entertained as yet that the top of the market has been reached.

Gasoline Very Firm; Export Trade Uncertain

GASOLINE.—There is a continued firmness in the market for gasoline, although prices have remained unchanged locally at 28½c and 29c. Owing to the submarine campaign there has been some uncertainty developed owing to the export trade as shipments have been held up. As an evidence of the way the export market has been affected by the submarine warfare the export trade from New York last week was little more than half the weekly average of shipments since the beginning of the year. Since the first of the present year 43,884,525 gallons of gasoline have been cleared for export from the port of New York as compared with 32,282,525 gallons for the same period last year. As will be noted the exports are much heavier so far this year. Crude oil in the Mid-Continent field held steady at $1.70 per barrel. Fuel oil also held steady price with great difficulty being experienced by the oil companies in getting delivevies because of the freight situation. Coal oil held in steady market during the week.

Canadian Government After Soles For Military

BELTING, TAP SOLES.—The Canadian Government is in the market for 35,000 pairs of tap soles and 25,000 pairs of top which it is understood are to be used in repair work on soldier's boots. Tenders have been called for but the contract has not been let, at the time of writing. This is considered a good-sized order for tap soles and top lifts.

By the commandeering of all supplies of leather in the British Isles by the military authorities an additional firmness has been put into the market for leather belting and lace leather. Prices have held steady locally during the week and the demand has continued very heavy.

Cut Nails Have Gone Up 25c Per Hundred

NAILS, WIRE.—The market for wire nails and wire products of all kinds continues in a very firm tone. The market in the United States is in great strength and the situation is naturally reflected in the Canadian field. In wire nails in particular it is anticipated there will be advances in the very new future. Wire nails are still quoted at a base price of $4.70 per hundred pounds for standard.

An advance of 25c per hundred pounds has been recorded in the price of cut nails during the week, making the sell-price $4.75 f.o.b. Toronto, Hamilton and London with no equalization of freights.

Supplies of Galvanized Sheets Are Very Low

SHEETS, PLATES.—Owing to the railway situation dealers have been unable to replenish their supplies of galvanized sheets and stocks are consequently low at present. High prices have also had a tendency to restrict the demand. Some firms have good orders placed with the manufacturers but until such time as freight distribution becomes better there will be small chance of getting these stocks. There is also a scarcity of corrugated sheets. There is a firmness also in the market for galvanized shingles, some dealers stating that a famine may result if embargoes are not soon lifted. Black sheets are in firm market and in good demand, with a range of prices still being quoted for the 10 and 12 gauges.

Mining Tool Steel Moved to Higher Levels

IRON AND STEEL.—There was a continued firmness in iron and steel products during the week which gives promise of continuing as long as there is no better prospect of peace between the warring nations. Mining tool steel was moved upward 1c per pound from the lower level and is now quoted at 15c. Norway iron is in firm market with a scarcity of this commodity. The range of prices in this commodity is from $7.50 to $12 per hundred pounds. Demand for iron and steel still keeps up.

		Per 100 Lbs.
Common bar iron	$	$ 4 00
Common bar steel	....	4 25
Refined iron	....	4 25
Angles, base	....	4 75
Horseshoe iron	....	4 25
Norway iron	7 50	12 00
Mild steel	....	4 25
Tire steel	....	4 45
Toe calk steel	....	6 00
Sleigh shoe steel	....	4 50
Band steel	4 50	4 75
Spring steel	....	6 00
Mining tool steel	14 00	25 00
Sheet cast steel	25 00	35 00
Spring steel	....	6 00

Pig-Iron Shortage Affecting Steel Mills

PIG IRON.—There is no improvement in the pig iron situation, and the market is upset. The coke shortage in the U.S. due to lack of cars and motive power has resulted in many furnaces being banked. There is therefore a shortage of pig iron which is seriously affecting the steel mills. Foundries are also severely handicapped and in some cases have practically closed down. Canadian foundry pig iron continues off the market owing to the shortage of coke and no prices are being quoted.

Prices on all old materials are very firm. Quotations on copper and brass scrap are about 2 cents higher in sympathy with the increased cost of ingot metals. All steel scraps are very firm, but unchanged with the exception of low phosphorous steel which has advanced 4 cents, although this price is really nominal as this material is practically off the market for the meantime. Scrap leads have advanced, and zinc is also a shade higher.

Higher Prices Paid For Old Materials

OLD MATERIALS.—There was a generally upward tendency in the prices being paid for old materials during the week. Tea lead advanced ¼c per pound, heavy lead pipe went up ¾c, yellow brass advanced 1¼c, red brass increased 1½c, heavy copper took a jump of 2½c and stove plate was quoted up $1.50 per ton. Old automobile tires advanced ¼c per pound and bicycle tires 1c per pound. Dealers anticipate prices will go higher so long as there is no word of peace but expect the market to break sharply as soon as there is the first ray of light from the black welter of war. Following are the prices being paid by dealers:

	Per lb.	
Tea lead	$ 0 06¼	......
Heavy lead pipe	0 08¾	......
Yellow brass	0 17	......
Red brass	0 21	......
Light brass	....	......
Heavy zinc	0 09½	......
Heavy copper	0 28	......
Old cast iron, per ton	16 00	......
Stove plate, per ton	14 50	......
Old rubbers, boots & shoes	0 08¾	......
Overshoes, lumbermen's rubber boots	0 06½	......
Auto tires	0 06	......
Bicycle tires	0 03½	......

Submarine Situation Affecting Ingot Metals

The international situation continues to affect the metal markets and is tending to make prices firmer in anticipation of increased demand. The submarine situation is also affecting the markets, but not to any material extent as the opinion is generally held that the submarine operations will not interfere with shipments of metals to an extent sufficient to cause any serious delay or loss of cargoes.

COPPER.—Quotations on copper continue nominal, there being very little spot metal for sale to form a basis for prices Producers are falling behind in shipments while some consumers are suffering from a shortage of copper and are compelled to pay very high prices. Copper is unchanged locally at 38 cents per pound.

TIN.—The market is easier due to arrivals in New York of large amounts of tin, and prices are a shade lower. There is also less fear of metal being lost through submarine operations. Tin has declined 2 cents locally, but is entirely nominal at 50 cents per pound.

SPELTER.—The market is quiet and unchanged, but there is a firm undertone. Production is being seriously interfered with owing to the cold weather and another strengthening feature is the high cost of ore. Local price unchanged at 13½ cents per pound.

LEAD.—A tight situation has developed in the market due to the scarcity of lead as a result of the freight congestion. The "Trust" is still quoting 8.50c, but independents have jumped the price up to 10c and 10.25c, New York, for spot metal. Lead has advanced 1¼c locally, and is now quoted at 12¼c per pound.

ANTIMONY.—The market is firmer, but quotations are unchanged in the meantime. Considerable interest has been aroused by the refusal of leading sellers of antimony to issue quotations on future shipments from China. It is understood that most of the producers there are sold up completely until April and unless they could obtain assurances of freight space they would not offer any further tonnages. Local price 35c per pound.

ALUMINUM.—The market continues firm and unchanged at 68c per pound.

Lead Products Have All Been Moved Up

LEAD AND ZINC PRODUCTS.—Following the firmness in the primary market for pig lead there has been a general movement upward in the price of all lead products. Lead pipe and lead waste pipe have been advanced 1c per pound. Lead traps and bends are now quoted 10 per cent. advance on list as compared with net list previously. Lead wool has increased 2c per pound and lead sheets have advanced 1c per pound. Following are the quotations:

Lead pipe, lb.	$ 0 16	....
Lead waste pipe, lb.	0 17	....
Lead traps and bends	10% on list	
Lead wool, lb.	0 15	....
Lead sheets, 3½ lbs. sq. ft.	0 15¾	....
Lead sheets, 4 to 6 lbs. sq. ft.	0 15¼	....

Cut sheets, ¾c lb. extra and cut sheets to size, 1c lb. extra.

Solder, guaranteed, lb.	0 34	....
Solder, strictly, lb.	0 32¼	0 38
Solder, commercial, lb.	0 31¾	0 35
Solder, wiping, lb.	0 31½	0 32
Solder, wire, lb.	0 35	....
Zinc sheets, per lb.	0 25	....

Cordage and Twines Are in Steady Market

CORDAGE AND TWINE.—Cordage of various kinds is going into consumptive channels in fairly good quantities even in the face of present record prices. Much of the goods now being delivered were purchased before the recent big advances took place. Cordage men anticipate there will be a difficulty to get sufficient supplies to meet the demand as the season advances. During the past week the fibre situation has held steady and the manufactured rope has in consequence been in sympathy. Binder twine still remains an enigma as to what the prices will be. Cordage men are only certain of one fact and that is that there will be higher prices than have ever prevailed before. They cannot speak with absolute knowledge but they have a lurking feeling in their bones that farmers will have to pay higher prices than at any season in the past.

Enamelware Goods Are in Firm Market

STOVES, ENAMELWARE.—Manufacturers report a continued good demand for oil heaters and oil stoves. The shortage of coal in many districts has apparently driven the head of the household to seek warmth in oil heaters. Oil heaters at the present time are going into consumption faster than they can be made. There is a continued good trade in oil stoves as well. Coal ranges are having a good sale at present and gas ranges have been very popular sellers throughout the winter season. Enamelware of all kinds is in firm market owing to the cost of raw materials. High prices are looked for in certain quarters.

List Prices on Ammunition

In our issue of January 20, 1917, the new list prices on Winchester ammunition for the .303 Savage and .32 Winchester Special were inadvertently quoted incorrectly. The list price on ammunition for both these sizes is $72.25 per thousand with a discount of 2½ per cent.

Putty Holds Firm

There is a firmness in the market for putty at the advance recorded last week. Standard 100-lb. drums are quoted at $3.85 per 100 pounds and pure putty in 100-lb. drums at $4.65 per 100 pounds.

Escutcheon Pins Higher

An advance of approximately 15 per cent. has been made in brass and steel escutcheon pins. New prices on the brass pins average from 80c to 90c per pound, while the steel pins average from 28c to 33c per pound.

Wrought Pipe Goes Up

Higher prices have been announced on wrought iron pipe which provide for an increase of $4 per ton. The net prices will be found in a panel elsewhere in this issue.

Snow Shovels Register Advance of 10 Per Cent.

SNOW SHOVELS.—New prices that have been announced on snow shovels provide for an increase of 10 per cent. in this class of goods. The long-handled socket shovel Prince is now quoted at $6 per dozen, the heavy long-handled socket Queen is quoted at $6.75. King is quoted at $8.25, Moose at $10.50, long-handled socket furnace scoops are quoted at $6.75.

Thumb Latch Prices

Net prices for some of the steel thumb latches and barn door latches figured at the new discount are as follows: Thumb latches, No. 2, $1.55 per dozen; No. 3, $2.10 per dozen; No. 4, $3.70 per dozen. Barn door latches: No. 5, $2.10 per dozen; No. 9, $3.20 per dozen.

Floor Wax Higher

New prices on floor wax provide for an increase in price. Old English is now quoted at 48c per pound and Johnson's also at 48c per pound.

Glass in Firm Market

The market for glass has developed firmness on the receipt of news from the United States manufacturers that higher prices in that quarter seem inevitable. Locally double and single diamond are still being quoted at 15 per cent. off list with cut lights at 50 and 5 per cent. off list.

LONDON MARKETS

LONDON, Feb. 22.—The past week has brought another heavy budget of price changes, all of which are in the upward direction. Both jobbers and retailers are now busy handling goods for spring trade and getting ready for the opening of business in these lines. Business in this centre has been seasonably good during the week. Retail merchants are anticipating a good spring trade and are conseqently buying in preparation. There are goodly quantities of goods being shipped from this centre to nearby points and indications point to an optimistic feeling among retailers so far as the spring trade goes.

Shellac Records Advance During Week

SHELLAC.—The firmness noted in the shellac market for some time past has developed into a change of prices upward. Following are the prices now being quoted for this commodity:

Orange—Per gal.: 1 gal. containers, $2.70; ½ gal. containers, $2.80; ¼ gal. containers, $2.90.

Per doz.; 1 pint, $4.85; ½ pint, $2.85; ¼ pint, $1.60; ⅛ pint, 95c.

White — Per gal.: 1 gal. containers, $2.95; ½ gal. containers, $3.05; ¼ gal. containers, $3.15.

Per doz.; 1 pint, $5.40; ½ pint, $3.10; ¼ pint, $1.80; ⅛ pint, $1.05.

Linseed Oil Advances 5c

Another advance has been recorded in the price of linseed oil, amounting to 5c. per gallon. Higher prices are occasioned by the acute situation on freight shipments that prevents crushers from getting flaxseed from the Canadian West. Raw in 1 to 2 barrel lots is quoted at $1.40 per gallon and boiled at $1.43 per gallon. In 3 to 5 barrel lots the price is $1.39 for raw and $1.42 for boiled. In 6 to 9 barrel lots the price is $1.37 for raw and $1.40 for boiled.

Turpentine Unchanged

Although there has been easier prices in the primary turpentine market in the South prices locally remained unchanged during the week at 81c per gallon in single barrel lots, 80c in 2 to 4 barrel lots and 88c in 5-gallon lots.

White Lead in Oil Steady.

Prices for white lead in oil held steady during the week at the advance recorded last week. There is a light sale of this commodity. Pure white lead in oil is quoted at $15 per 100 pounds in ton lots and $15.30 in less than ton lots.

Price on Butcher Knives

In last week's isuse the No. 1707 nine-inch Rodger butcher knife was quoted at $6.60 per dozen. It should have been $7.60 per dozen.

Glazier Points Advance

An advance of 2c per pound has been recorded in the price of coated glazier points in one-half pound packages. The new price is now 20c. per pound.

Fence and Barb Wire Up 5c to 15c Per Hundred

WIRE.—Advances have been recorded in some gauges of fence wire during the week. Barb wire has advanced 15c per hundred pounds and is now quoted at 4.65. No. 9 galvanized remains unchanged at $4.25. No. 12 is quoted 5c higher at $4.45. No. 13 is also quoted 5c higher at $4.55 per hundred pounds. In No. 9 coil spring there has been no change, the price being $4.30.

Lamp Chimneys and Lantern Globes Higher

CHIMNEYS, LANTERN GLOBES. — Advances have been made effective in the price of lamp chimneys and lantern globes during the past week. In the lamp chimneys No. 0 is now quoted at $4.60 per case of 6 dozen, No. A at $6 per case of 8 dozen, and No. B at $5.35 per case of 6 dozen. Cold blast lantern globes in one dozen cases are quoted at 75c per dozen, in three-dozen cases at 65c per dozen, and in six dozen cases at 60c per dozen. Squat lantern globes in one dozen lots are quoted at 75c. per dozen, and in three-dozen cases at 65c per dozen.

Paris Green Prices Out

New prices for the present season have been announced on Paris Green as follows for the Canada Paint Company's line: ½ lb. packages, $49.25 per 100 lbs.; 1 lb. packages, $47.25 per 100 lbs.; 25-lb. drums, $45.25 per 100 lbs.; 50-lb. drums, $45 per 100 lbs.

WINNIPEG MARKETS

WINNIPEG, Feb. 22.—Reports on the amount of business being handled are most encouraging, and jobbers report that every day witnesses an increased amount of orders to despatch, with the result that previous figures for February will be greatly exceeded and the prospects for March are extremely bright.

There is a good deal of worry in connection with the embargo which prevails in the States on export shipments, and this is being felt already in a decided shortage of barb wire. Scarcely a jobber but is holding several cars of hardware for enclosures of barb wire, and this may develop into a very serious matter unless relief comes quickly. Every day now that shipments of barb wire are held back tends towards congestion in the various warehouses, and a week or two now means a great deal both to retailer and wholesaler.

Reports from the United States are anything but encouraging. All large shipping centres report all available trackage crowded with cars for the East, and nothing is being transported but coal and perishable goods. This is bound to have some effect on shipments to Canada as well, and may result in an unusual amount of "back ordering" being done. However, strenuous efforts are being put forth to relieve matters, and another week may see conditions on the way to normal again.

The various markets show some activity for the week, the most important changes being reported in black steel sheets and wrought iron pipe.

Wrought Iron Pipe Advances 3 Per Cent.

It is nearly a month since any change has been recorded in the price of wrought iron pipe, but following the tendency of all the markets, this revision shows an upward tendency, and approximates about a three per cent. increase. From reliable sources, the information comes that further advances may be expected in the near future. To-day's prices are as follows:

	Per 100 Feet Black	Galvanized
¼ inch	$ 4 41	$ 6 84
⅜ inch	4 50	6 93
½ inch	5 85	7 65
¾ inch	7 20	9 67
1 inch	10 71	14 31
1¼ inch	14 50	19 35
1½ inch	17 33	23 13
2 inch	23 30	31 14
2½ inch	36 90	49 28
3 inch	48 24	64 35
3½ inch	60 17	....
4 inch	71 28	....
4½ inch	89 10	....
6 inch	134 55	....
5 inch	102 50	....

Black Steel Sheets Up 25c Per Hundred

The advance recorded in black steel sheets is a general one of 25c per 100 lbs. for all gauges, and sets a new high level for this line. Present indications are such that further advances may be put into effect before long, but in the meantime prices quoted will be as follows:—28 gauge (per 100 lbs.), $6.50; 26, $6.40; 24-22, $6.35; 20-18, $6.30; 16-14, $6.50; 12-10, $6.75.

Galvanized pump rod has shown a tendency to follow the usual trend of advanced prices, and new quotations are being made at $7.75 per 100 lbs.

Firm Market For Galvanized Sheets

The market has remained steady on galvanized sheets for a couple of weeks now, but further revisions are looked for in the near future. Present prices for Premier, Apollo and Fleur de Lis brands are:—10¾ oz., $8.75 (per 100 lbs.); 28, $8.45; 26, $8.15; 24, $8; 22, $8; 18 and 20, $7.85; 16, $7.70.

Washing Machines Are Moved Upward

During the week another change has gone into effect on washing machines. Deliveries on these lines are still somewhat slow, as the manufacturers are experiencing considerable difficulty in securing necessary castings. The new prices on three well-known lines are:—Dowswell Improved, each, $4.25; New Century B, $9.25: New Idea, $10.15.

Mild Steel Prices Are Quoted Higher

New prices issued on mild steel are as follows:—3-16-inch, ¼-inch, and 5-16-in., $6 per 100 lbs. base; other sizes, $4.50 per 100 lbs. base.

Conditions in the steel markets are such that nearly all lines are coming in for revision. This is shown even in the small hasps, wrought steel butts and hinges, on which new prices are issued quite regularly, the new prices in all cases representing an advance.

Spades and Shovels Firm

Other lines which have come in for several revisions are shovels, spades and scoops. From reliable sources comes the information that present prices are likely to be revised at any time, and new quotations based on higher levels. Present prices are as follows:

Shovels—Fox and Olds, D.H., Sqr. Pt., $10.10 per doz.; D.H., Rd. Pt., $10.10; L.H., Sqr. Pt., $10.10; D.H., Rd. Pt., $10.10; Bulldog and Jones, D.H., Rd. Pt., $11.10; D.H., Sqr. Pt., $11.10; L.H., Rd. Pt., $11.10; L.H., Sqr. Pt., $11.10; Black Cat and Crescent Scoops—No. 4, $10.65 doz.; No. 6, $11.40; No. 8, $12.10; No. 10, $12.80; Moose and Jones Scoops, No. 4, $11.85; No. 6, $12.50; No. 8, $13.25; No. 10, $13.85 per dozen.

Conditions in Glass Are Becoming Firmer

Latest advices from manufacturers of window glass in the States convey the information that conditions are growing worse daily. It is extremely hard to get the necessary material, and the question of labor is causing considerable anxiety. Everything points to an early advance in price, but the question of getting deliveries will probably be the more serious feature. To-day's quotations are on the following basis:

	Single	Double
Up to 25 in.	$ 8 00	$11 75
26 to 40	9 00	13 75
41 to 50	11 50	15 25
51 to 60	12 00	16 00
61 to 70	12 00	17 25

WHY CANADIAN MERCHANTS FAIL

(Continued from page 39)

ties, the highest percentage recorded since 1905, when it was 65.2, and comparing with 58.4 per cent. in 1915 and 55.2 in 1914, the latter the lowest proportion in twenty-five years.

In respect to liabilities, those in Canada were less than one-half the total of 1915, being $15,767,175, compared with $32,380,501. In the United States the liabilities for 1916 showed a drop of 38.3 per cent. from 1915, and were less than half those of 1914, and indeed the smallest of any years since 1909.

Four tables are reproduced here which will repay a close study.

Business Life Becoming Safer

Bradstreet's concludes that "business life is safer to-day than it ever has been," that credit granting based upon more careful credit reporting is more discriminating, that other important improvements have been made in crop and business reporting, as well as in commercial communication and in transportation, and that more care is exercised to prevent solvent debtors from entering bankruptcy."

Relief From the Present Abnormal High Prices

The fact that we offer you CROWN DIAMOND PAINTS at a price which allows you a more generous and satisfactory margin of profit than the average—a price which gives you a little relief from the prevailing high prices—is due to our position as manufacturers of heavy chemicals, the manufacture of our own dry colors, and particularly to the low selling cost due to having the one sales organization for chemicals, aniline dyes and paint.

In these days of ever advancing prices, you as a merchant have a problem.

When it comes to buying—as a business proposition it is necessary for you to consider not only the question of quality, but you must also consider the question of profits.

The CROWN DIAMOND advertising is planned along the same lines you would figure out for yourself, and with the *free newspaper advertising* feature and unique selling helps is a wonderful aid to the rapid moving of your paint stock.

Write for details of selling plan and profits on CROWN DIAMOND PAINTS.

EVENTS IN THE TRADE

Business Changes

Cayley, Alta.—Elves Bros., hardware merchants, have discontinued, J. S. Elves continuing.

Cartwright, Man.—H. Phillips is removing the stock of his hardware store to Alberta.

Dauntless, Alta.—The Dauntless Supply Co. are discontinuing their hardware business.

Moose Park, Man.—J. H. Creighton, hardware merchant, has sold to Home Lumber Yards.

Delisle, Sask.—Delisle Hardware & Implement Co.'s business has been sold to L. E. Jones.

Sidewood, Sask.—E. W. Salmon, hardware and grocery dealer, has sold out to Walter S. Pearce.

Mather, Man.—Hunter & Newton, hardware merchants, are opening a branch at Cartwright.

Tugaski, Sask.—German Bros., hardware merchants, have been succeeded by R. C. McLaren & Son.

Retlan, Alta.—Devereaux Hardware Company has been succeeded by Rutherford Hardware Company.

Prussia, Sask.—Gryde & Marshall, hardware merchants, have dissolved partnership, and S. K. Gryde continues.

Personal

W. J. Sarvis, Hanover, Ont., was a recent visitor in Toronto.

H. A. Murphy of the Sternau Co., New York, spent last week in Montreal.

Tom McCrae, of the American Lead Pencil Co., was in Montreal this week.

F. O. Barber of the P. & F. Corbin Co., New Britain, was in Montreal last week.

E. S. Meekle, of Sterling, Illinois, paid a business visit to Montreal this week.

F. P. Hall of the Carborundum Co., Niagara Falls, U.S.A., visited Montreal last week.

F. C. Dannenberg, of J. Wiss & Sons Co., Newark, paid a visit last week to Montreal.

A. J. Shay, of the Goodell Pratt Co., was in Montreal this week from Greenfield, Mass.

Carl M. Frankel, of Toronto, was a visitor to Montreal friends in the hardware trade this week.

Mr. Buckley, export manager of the Beaver Board Co., Buffalo, U.S.A., was in Montreal last week on business.

J. G. Near, sales manager of the Drummond, McCall & Co., metal merchants, was in Buffalo during the week endeavoring to have some of their cars released and sent to Toronto.

On Tuesday morning there passed away in Montreal, W. H. Evans, an old and valued former employee of the Canada Paint Company, who is well remembered, and much regretted by the firm and staff.

News of the sudden death of Mr. Harry Clucas, of the Canada Paint Co., in Toronto, was received with the greatest regret by the management and staff of the firm in Montreal, and on Tuesday night there left for Toronto, to attend the funeral, Messrs. H. M. Ashby, general manager; J. R. Nimmo, W. H. Newton, Robert Bremner, and L. N. Dansereau, bearing with them the tributes of respect to the deceased from Montreal.

Maritime Items

Thursday, February 22, is being observed as dollar day by the retail merchants in St. John.

The stock of Melvin's hardware store, Halifax, was destroyed in a fire which caused $40,000 damage, on February 15.

Tenders for the construction of a highway bridge over the Kennebecasis River, close at the office of the New Brunswick Department of Public Works, Fredericton, N.B., on March 21.

Among the hardware men who are candidates in the New Brunswick Provincial general elections are Philip Grannan, of St. John, and L. A. Dugal, of Edmundston, both of whom are standing for re-election. In the last Legislature, Mr. Dugal was one of the two members who composed the Opposition party representation.

Blain Hardware Burned

A fire was discovered in the hardware store of Richard Blain, Brampton, on February 13, which gutted it. The fire is supposed to have been caused by an overheated furnace.

Mission Hardware Store is Destroyed

The Mission Hardware Store, Mission City, B.C., owned by J. Gascoigne, was burnt to the ground early Monday morning. Practically everything except the books was lost. The building was partly covered by insurance.

Retail Merchants Elect Officers

The Retail Merchants' Association of Moncton, N.B., has elected officers as follows:—Honorary president, L. H. Higgins; president, D. A. McSweeney; vice-president, B. E. Smith; second vice-president, J. H. Deroche; treasurer, W. D. Charters; secretary, T. B. Price; executive, L. H. Higgins, B. E. Smith, J. J. Bourgeois, P. H. Fryers, E. A McSweeney, William Murray; dollar day committee, J. H. Deroche, John Ross, T. B. Price, Temple Doyle and W. D. Charters. Robert Red, provincial secretary of R. M. A., was present and addressed the meeting.

Old Partnership Dissolves

Guelph, Ont.—The old retail hardware firm of S. and G. Penfold, which has been in existence for well over a quarter of a century, has been dissolved. The older brother, Sam, and his son, Herb., will continue the business, under the new firm name of Penfold Hardware & Carriage Co., retaining the old stand on Macdonnel street. George Penfold and his son Charles are withdrawing. The firm was one of the oldest established in Ontario, having a particularly good farm trade connection.

Customs' Decisions

The Board of Customs has decided that Basic sulphate of lead; sulphate of lead, or, sublimed lead, are dutiable under tariff 711.

Some Hockey Match!

On Wednesday afternoon, some of the more energetic delegates added to the gaiety of the convention, by giving an exhibition of Canada's national winter sport.

Hamilton hardware travelers lined up against Toronto retailers, and, when the smoke cleared away, the Queen City men were found to be victorious, by a score of 3 to 1.

The line-up:—

Hamilton Travelers—T. R. Jackson (Ringer); J. W. Peacock, W. Howard, W. J. Morrell, K. Walsh, W. E. Smith.

Toronto Retailers—E. McMichael, J. E. Booth, W. E. Platt, A. Atkinson, J. E. Hewitson, W. Matheson.

Referee—H. Shuttleworth, Bart.

Substitute Referee and Official Arbitrator—A. J. Wright, V.C.

Master of Ceremonies and Gentleman Usher of the Black Rod—Bert. Webster, D.S.O.

Chief Surgeon, in charge of Casualty Clearing Station—Dr. John Caslor, M.D.

Timekeeper and Constable—Grant McEwen, M.C.

DEATH OF PROMINENT WESTERN MERCHANT

John Sommerville, one of Edmonton's pioneer business men, died in that city on Saturday, February 17th.

Mr. Sommerville was very well known in the hardware trade, with which he had been associated for a number of years.

In 1912 Mr. Sommerville founded the Sommerville Hardware Company, one of Edmonton's prominent concerns. His death will prove a great loss to the trade and will be deeply regretted by his very large circle of friends.

FIRE AT WINNIPEG

Fire on Thursday night, Feb. 15, destroyed the plant and building of The Owl Metal Company, Winnipeg, as well as the offices and stock of Bissett and Webb, manufacturers agents and The James Stewart Co. The two former are now located at 141 Bannatyne Ave. The Owl Metal Company's loss is estimated at about $12,000, which includes machinery and stock, partly covered by insurance. They are now looking for premises to start the manufacture of their metals. They have metals on the road, and in the course of a week or so should be able to make deliveries again. Bissett and Webb were fortunate enough to rescue their correspondence files and records, but lost all their stock valued at $20,000, and price lists. The James Stewart Company, Woodstock, Ont., occupied the fourth and fifth floors. Their stock of stoves, etc., valued at about $25,000, was destroyed. The other firms in the building were in the wholesale grocery business. The building, which was owned by the Scott-Bathgate Company was ruined. It was insured for $40,000.

NEW DUTY ON SEWER PIPE

Appraisers Bulletin No. 1346 is cancelled and the following is substituted therefor on sewer pipe and flue lining from the United States. Dating from the 1st Feb., 1917, the following rates from the United States:—

Discounts

Eastern Price List "A"— Sewer Pipe—	Standard Pipe	Standard Seconds
Sizes 3" to 24"	80 %	82 %
Sizes 27" and 30"	79 %	82 %
Sizes 33" and 36"	77½%	79 %
	Double Strength	
Sizes 15" to 24"		77½%
Sizes 27" and 30"		76 %
Sizes 33" and 36"		74 %
Stove pipe and fittings up to and including 24"		80 %
Wall coping		80 %
Flue liners, in mixed cars		82 %

Stove pipe larger than 24" diameter takes the same discount as standard pipe of corresponding size.

All pipe in 2½' and 3' lengths to take 2% less discount than above, except 27" and over.

Round ue filin liners larger than 24" diameter 2% greater than above discounts on standard pipe of same size.

Price lists can be obtained from the Department of Customs upon request being made for appraisers bulletin No. 1426.

PRACTICAL SHEET METAL WORK

(Continued from page 52)

diagrams L M in the usual way, which gives the true length of the slant lines for top and bottom gussets.

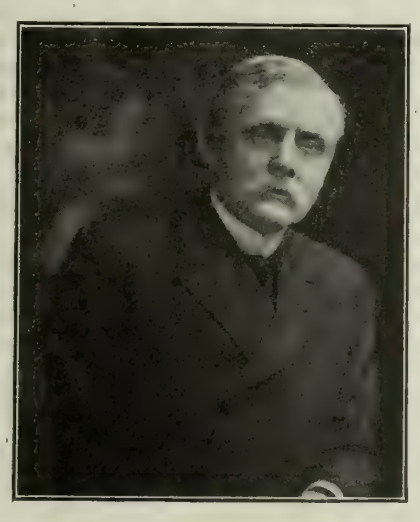
It will be noted that points 1 to D and D to 9 and 9 to 1 form really another true elevation of the side. From the various points transfer the corresponding measurements to the triangular side in pattern which in practice is really developing circular, or curved stretchout lines of the gussets required. While this is really a one-piece pattern, it will be noted that there require to be two seams—one at the back of the pipe and one at C^1 B, at top of the pipe.

Continued in next issue.

Harry Clucas Passes Away

Paint Veteran Dies Suddenly at Home in Toronto — Prominent Figure in Paint Circles for 32 Years.

THE death occurred suddenly, in Toronto, of H. Clucas, sales manager Toronto branch Canada Paint Co. The late Mr. Clucas, familiarly known as Harry, was one of the best known paint men in the Dominion. During his 32 years in the paint trade,



THE LATE H. CLUCAS

he made a host of friends in all parts of the Dominion. In his younger days, Mr. Clucas was a sailor and had visited practically all important ports in the world. Thirty-two years ago he engaged with Wm. Johnson Co., Montreal, to represent them and introduce their specialties in the Province of Ontario. Mr. Clucas had been a practical painter, and consequently had an intimate knowledge of the products he decided to sell. When the Johnson business was taken over 25 years ago by the Canada Paint Co., Mr. Clucas continued with the new firm, and since 1901, had been manager of the sales department for Toronto. His long experience, and practical knowledge of paints and varnishes, made him an interesting conversationalist, and an undoubted authority on the goods he offered for sale. Mr. Clucas was frequently called upon to address painters' conventions, and other meetings where information of a practical nature was required.

At the time of his death, Mr. Clucas was 68 years of age. He was at his office up to Wednesday at 5 o'clock. On Thursday he felt rather indisposed and remained at his home until Saturday, when he ventured out. He planned to leave Toronto on Sunday morning at 9 o'clock to go to Montreal to attend a salesmen's convention. At 7 a.m., he decided he would be unable to go. His death took place suddenly three hours later.

The funeral took place at Toronto on Wednesday, to Forest Lawn Mausoleum.

NEW HARDWARE GOODS

OFFERED TO CANADIAN HARDWAREMEN

RELIANCE LIQUID GLUE

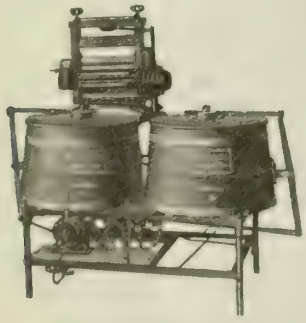
Reliance Ink Co., Winnipeg, Man., is manufacturing "Reliance Liquid Glue" put up in packages of various sizes. The makers state that the tenacity of this glue is exceptional, being equal to the best hard Scotch Glue. It combines with great strength a remarkable degree of toughness and elasticity, so that joints made of it do not require cross tongues for the purpose of strength. It is always ready for use, which is an obvious convenience for work outside the shops. The makers claim it will keep in good condition for seven years before use, and the work done is absolutely permanent. Its use abolishes the glue pot, gas or other heating appliance, waste dirt, burnt glue, cracked pots, and spoilt brushes.

It is put up in the following sized packages:—Tubes; 1 oz. bottles; 2 oz. bottles; ¼ pt. cans; ½ pt. cans; pt. cans; qt. cans; ½ gal. cans; 1 gal. cans.

AUTOMATIC TWIN WASHERS

The "Automatic Twin Washer" is offered to the trade by the Automatic Electric Washer Co., Newton, Iowa. The makers claim that although the Automatic Washer Twins will do the washing in half the time, they occupy no more floor space than the regular long bench models of the single washer tub machines.

The double set of spur gears that actuate the washing mechanism, are carefully machine cut from high grade grey gear iron, and the bearings are carefully machined to a perfect fit, so that while the machine is doing double the work of the single machine, it makes no fuss about it, but its smooth dolly and smooth



Automatic Twin Washers

pins simply swing the clothes backward and forward through the soap suds, just far enough to get the water going all one way, and then instantly reverse, thus forcing the soapy water through and through the soiled linen or other wash material.

The "TWINS" are equipped with a Reversible-Swinging Wringer, with 12 inch rolls.

Either washer can be used as a rinse

Baily Baby Bathtub

tub if desired. Catalogs will be supplied on request.

B. B. TUB

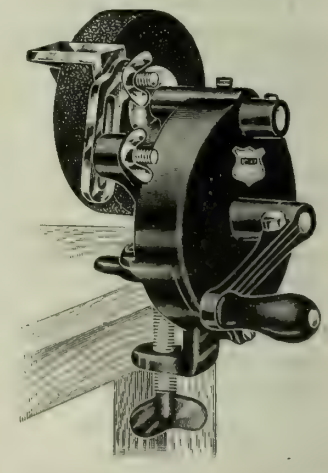
"The Baily Baby Bathtub," here illustrated is claimed by the makers to have been developed in response to a widespread demand for something in the way of a baby's bathtub, safe and convenient. The Bailey tub it is claimed will save the mother hours of back bending and of wiping wet floors. She can handle her baby when seated with ease and comfort. The baby can enjoy his daily bath with no danger of bruises or upsetting. The tub is fitted with a strong heavy framework. The special fabric front of which the tub is made, is prepared with a secret process, so as to resist the entry of dirt and make it capable of being cleaned with any soap, household cleanser, or disinfecting chemical. It is proof against uric acid, perspiration and boiling water, and will not peel or chip off. This special rubberlike material is seamless, so can not rip, tear or leak where joined. The fabric can be detached as easily as a glove, spread out flat to clean and thus be kept sanitary for the baby. Everything is white, the enamel on the frame as well as both sides of the fabric. The fabric, by going around the bars, both protects them from moisture and makes a soft bumper for the baby. The BBB tub is only 30 inches square and 2 inches thick when ready to use. By taking off a few wing nuts you can put it all in a space 30 inches long by 3 inches square.

The tub is manufactured by the Baily Baby Bathtub Co., 160 W. Jackson Boulevard, Chicago, Ill.

MECHANICS' TOOL GRINDER

A "Mechanics' Tool Grinder," with a new feature in connection with the gear case, is being marketed by B. L. Fry Mfg. Co., St. Louis, Mo. The gear case is split in the lower half of the back of the case to admit the gears in assembling. By means of this design all the bearings are kept in one piece of metal insuring perfect alignment; smooth and quiet running of the gears at all times. With the case split, it appears to be of solid construction throughout. The grinders are made in a number of sizes, and can be furnished with Carborundum, or with Vitrified Corundum wheels.

The main drive shaft as well as the grinding wheel shaft runs through both sides of the gear case, thus it is claimed, increasing the strength and life of the entire machine. The gears are accurately cut from solid blanks and tested before they are assembled. The patent grinding wheel flange, it is claimed, overcomes the necessity of using grinding wheels with shaft holes of a special made diameter, and the patent overlapping dust hood gives absolute protection against



Mechanics' Tool Grinder

dust and grit entering the bearings.

A catalog showing the various styles of grinders will be mailed on request.

WHAT OTHER PAPERS SAY

RIGHT BUYING

From *Hardware Age.*

Few of us realize to what extent carelessness and waste on our own part add to our living costs.

The guarantee on good goods has an effect in offsetting the higher prices. While it is not good salesmanship to emphasize the guarantee to such an extent that people will buy with the expectation of coming back on somebody to make good, still the fact that the goods bear a reliable guarantee will be an added service to counterbalance the price and often the discreet mention of guarantees will quiet price complaints.

Make the terms of the guarantee plain enough always so that there will be no excuse for a subsequent misunderstanding. The guarantee is worth more to the customer now than ever before, but it should not be abused, and the retailer owes it to the house behind the guarantee to make its terms plain.

Under the present price conditions, you will have more customers who will be anxious to buy economically. Many of them will be people who have previously bought without considering price very much. It is up to the salesman to do and say everything he can to make such customers feel comfortable.

Unfortunately there are hardware stores where once in a while a clerk seems to feel more or less scorn for the customer who has to consider prices closely in his buying. If there ever was any excuse for that position, it long ago ceased to exist.

This is a time for our salespeople to do all they can to help their customers to buy economically and satisfactorily. It is by working hard to make the customer see that we are on his side, that we don't like high prices, that we are willing to do everything in our power to help him offset them; it is by this position that we are going to hold our trade and keep it satisfied that the cause of the high prices is not ours, but that of conditions beyond our control.

It is a time to buy well in advance of needs. Shipments have been slow coming through in the past. Goods have been unobtainable in some lines. This condition is not likely to improve right away.

The existing conditions are unique and the wise dealer is going to plan and figure further ahead than he has generally done, buying early and having shipments made early.

A CALL TO EMPLOYERS

BY SIR EDMUND WALKER,

President of the Canadian Bank of Commerce.

The end of the war is not in sight, but the wounded and otherwise disabled soldiers are coming back, and it is not too early to come to close grips with the problem of finding employment for those who have no claims on previous employers, and of caring for those who are partly or completely disabled.

We have to consider what we owe to the man who has fought to defend our lives, our property and our liberty, and we have to consider how to prevent the disorganiation of industrial society when the soldiers come back in large numbers and the making of army supplies has come to an end.

We do not wish the soldiers' home-coming to mean, except perhaps temporarily, a cause of industrial disturbance. We want, on the contrary, to find in it a great opportunity to increase the prosperity and happiness of that part of the Empire which they have fought to save.

We shall have lost forever the laboring power of our heroic dead and of those few who are totally disabled. We shall have gained the labor of many women untried before the war; we shall have gained the added strength, physical and mental, of countless soldiers who through the war have "found" themselves; and we shall, in much fewer cases, have returned soldiers who are more or less wrecked physically or mentally but who are not quite useless to the community.

I presume much of the work to be done by the Military Hospitals Commission leads directly to the larger work of land and industrial settlement. For obvious reasons we shall hope that many of the returned soldiers will take up land. **The manner of selecting such land so that communities of loyal men shall be planted in every province, of caring for the soldier-farmer in his early years of settlement, and of lending him money for improvements, is of prime importance.**

Meantime the Hospitals Commission has, added to its other burdens, the duty of making suitable for work, by training and by the use of newly invented implements, men who would otherwise in many cases be a charge upon the country and a monument of our ingratitude.

In my younger days the one-legged and one-armed soldier was always present, eloquent of war, and not without a meaning to the community,—"lest we forget." We were used to seeing a bank messenger with one sleeve pinned to his breast and his handsome commissionaire coat covered with medals.

Handicapped, But Not Disabled.

To-day, every employer of labor, manufacturer, merchant, banker, or whatever his calling, should be considered how he can employ a few partly disabled men, and thus do something more in carrying the burdens of the war.

Many a machine shop can use a certain number of one-armed and one-legged men with hardly any loss of efficiency. The Hospitals Commission sends them out better prepared to lessen the effect of their disabilities than the wounded soldiers of other wars.

In a recent campaign to raise money for the British Red Cross, two officers totally blind from the effects of wounds appeared before the public. Both had been trained in the wonderful establishment in England administered by Sir Arthur Pearson. One of these blind officers is now employed as an expert electrician, while the other is a competent actuary and already engaged in soliciting life insurance.

Totally blind men are being trained as stenographers, taking short-hand notes by a system which enables them to be read by touch before being read by the same blind operator. Some of these men are already more efficient than the average stenographer.

PRACTICAL SHEET-METAL WORK

THREE PIECE ELBOW WITH GUSSET OR GORE PIECE.

BY THOMAS STANFIELD

THE article described in this issue, for which a pattern is to be developed, is of somewhat different line to any other previously shown, that of a one-piece pattern for a garbage, or ash chute. Not only can it be used for a chute, but also for a round to square branch of a furnace pipe; it sometimes is necessary to make a Y branch from round to square fan system piping. However we will call it a chute outlet, the square being the lid or inlet to the chute.

First, determine the diameter of the round part, and draw the plan G and from sides of circle project lines upward as shown at A B F E. Then draw centre line X X, cutting through centre of line F E from centre of circle G. Now take a 45 degree triangle and draw a line from X on line F E, as shown at D, and again draw line D C by reversing the position of the 45 degree triangle. It will be seen that the sides from X to D to C form nearly two sides of a square. Now divide the right hand side of the circle G into 8 equal parts. It will be noted that the line C D is simply the length of the side of square opening and may be any length. Next drop a line from C describing line J K and again another line from point D until the line H I is drawn. Now connect J and H, K and I. To complete the elevation, draw lines from points 9 1 to 9^1, which is the centre of both plan and elevation. Next draw line from 8 2 to 2^1, and so on until all the dotted lines shown are completed.

The next step is to find the true length of lines C, 5^1, 4^1, etc., and D E, 6^1, 7^1, etc., then draw the triangular lines from points H I J K to the circle G, 1, 2, 3, 4, 5, 6, 7, 8, 9, viz., H to 5 and J to 5, 4, 3, 2, 1, and K, 1 to 5, with I to 6, 7, 8 and 9.

It will be noted that only one-half the pattern is developed, but it is simply a matter of turning over the pattern at points X X to complete.

First, lay off two lines the length of A F in elevation and the same distance apart equal to one-quarter of the circumference of the round piece, see A, F, I, D in pattern, next develop the

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, Feb. 21. — Paint market conditions this week are in almost every respect firm. There is an uneasiness as regards mixed paint prices, with a tendency to advance unless conditions affecting raw materials improve. Linseed oil is all but unquotable. Putty is very firm. White lead in oil looks like another advance shortly. Shellac is firm and scarce. Glass seems to be decidedly on the verge of a considerable advance in the United States and locally also. Prices have been announced on Paris green, and demand is coming along with the usual season's activity. Market business is much hampered by railway congestion at present, this affecting deliveries to the retailers in the country as well as affecting supplies to the manufacturers.

Indications Towards Mixed Paint Advance

MIXED PAINTS.—Owing to the situation affecting linseed oil so seriously at present, and owing to general difficulties affecting the metal markets upon which paint manufacturers depend for basic ingredients of paints as well as the still rather serious conditions affecting all raw materials used in the paint trade, there is once again a hint that paint prices are still far from settled at their present level. While to advance prices at this time with spring trade deliveries in hand, and all spring trade orders not yet in, would be a step unfavorably regarded by the paint manufacturers, still the situation is pressing upon them so hard that opinions are expressed pointing to the possibility of advances being unavoidable should market conditions for raw materials go still firmer. With the production of linseed oil so seriously set back at present, there are chances that this ingredient of paints may remain steadily high-priced for a considerable time, and this in itself, regardless of other conditions, would almost compel higher prices for paints. Cost of containers is also a factor bearing seriously on the prospect of mixed paint prices at present.

Linseed Oil All But Off Market

LINSEED OIL.—Owing to the serious conditions brought about by railway embargoes, and the general congestion of traffic resulting therefrom, there is practically no market in linseed oil for the present. Crushers are making the best of the situation, but are not looking for business for the time being, but concentrating their energies on the effort to secure supplies of flaxseed as soon as at all possible. Even with the best of efforts, it may be some time before the situation is relieved. Most of the paint manufacturing firms are not quoting linseed oil at all, and those willing to mention a price are only in the market to oblige steady customers, and will not quote for or supply more than single barrel lots. The prices mentioned in this connection, though they can hardly be considered regular market quotations, are:

Linseed oil.	Raw.	Boiled.
In 1-bbl. lots only....	$1.32½	$1.35

Turpentine in Firm But Average Market

TURPENTINE.—Market for turpentine remains in condition similar to that prevailing last week, but the higher quotations given last week are this week shaded down a little, as the firmness then prevailing has eased off to some extent, and lower quotations are mentioned. There is no special indication one way or the other in turpentine this week, but the market continues firmish, with demand normal, and supplies causing no immediate anxiety. Prices quoted are as under, the most general price being about 80 cents:

Turpentine.	Per Imp. gal.
1-bbl. lots	77-80-84c
2-4 bbls.	76-79-83c
5-10 bbls.	75-78-82c

Top Price Still to Reach in White Lead

WHITE LEAD IN OIL.—Once again pig lead has gone to higher levels in the New York market, and the difficulties affecting transportation are making the price of the metal still higher in Montreal, lead being, in fact, at its highest record now in the metal markets of Canada. This fact, coupled with the serious conditions affecting linseed oil, makes the prospect of a further rise in price for white lead in oil almost self-evident. But so far as the present week is concerned prices for white lead in oil remain as quoted last week, when the advance to $14.80 per hundred pounds in one ton lots was made. It is felt by most manufacturers of paints that white lead in oil can hardly escape a further rise in price within a very short time, and dry white lead, in fact, has gone considerably firmer since the prices of white lead in oil were last advanced.

White Lead in Oil:	Per 100 lbs.
In 1-ton lots	$14.80
In 5-ton lots	14.50
Less than ton lots	15.10

Glass Almost Sure To Advance Shortly

GLASS AND PUTTY.—As indicated in last week's HARDWARE AND METAL report on the subject, glass is in a very firm market at present in Montreal and district, and beyond doubt there will be advances before long. Information by wire from the United States to one of the leading glass dealers in Montreal this week pointed unmistakably to a forthcoming advance in cost of glass, how soon the advance may take place was not stated, but it may happen quite shortly. At present glass is being disposed of in Montreal at prices below cost, even should there be no advance. Putty which advanced last week is still in exceedingly firm market, and there will probably be further advances in putty unless the situation affecting linseed oil and the importation of whiting is most unexpectedly and most thoroughly altered for the better within a few days, which seems a most unlikely eventuality. Putty by the last advance was quoted at $3.10 per hundred pounds for bulk in barrels, taken in five-ton lots. In irons, putty is $3.55 per hundred pounds, in bladders; in barrels, $3.80 per 100 pounds, and in kegs holding 100 pounds, $3.90 per hundred pounds.

Shellac Shortage Keeps Market Firm

SHELLAC.—There is great firmness in the market for shellac owing to shortage, and the effect of the embargo placed by the British Government on exports from India. Prices quoted in Montreal by a firm fairly well placed as regards stocks and expected supplies were $2.65 per gallon for orange, and $2.90 per gal. for white. The spirit has been advancing in price seriously of late also. Other quotations for shellac in Montreal are

Whether he be the experienced, discriminating master-painter, or the householder who comes to you for advice on his first painting job—

You are doing what is right, advising for the good of the customer and for your own profit when you recommend

$3 per gallon for orange, and $3.25 for white. It is undoubtedly a firm market, and none too plentifully supplied.

Prices on Paris Green Announced

PARIS GREEN.—Prices on Paris green have arrived with the first stirrings of spring in the air, and demand for this product used so extensively in the country is setting in strongly. The quotations for Munro's are: 300-lb. kegs, 43¾c; 50 and 100-lb. drums, 44¾c; 25-lb. drums, 45c; 1-lb. papers, 47c; 1-lb. tins, 48c; ½-lb. papers, 49c; ½-lb. tins, 50c. There is a ¼c advance on these prices for Toronto, Hamilton, and London.

TORONTO

TORONTO, Feb. 23.—New prices on Paris green have been announced locally during the week and quotations are in the neighborhood of 4¼c per pound higher than the opening price of last year. White lead in oil is in firm market due to the great strength in pig lead and the high prices prevailing for linseed oil. Some jobbers have not been shipping very much on their mixed paint orders for spring owing to the acute railway situation. Reports from some of the manufacturers continue satisfactory as to the way bookings are being made for spring trade.

More Linseed Oil Dealers in Market

LINSEED OIL.—Some dealers in linseed oil who have been out of the market for some time past came back during the week with quotations. In one instance where the quotation is lower than those recorded last week the concern makes it clear that they will sell only in single barrel lots and that to their customers. The price in this instance was $1.35 per gallon for raw and $1.37½ for boiled. Another dealer who has been out of the market for some time came back and quoted raw at $1.39 and boiled at $1.42. The market price that prevailed more generally, however, was $1.40 for raw and $1.43 for boiled in one to two barrel lots. The situation with respect to getting seed from the Canadian West has improved but little during the week. Some of the crushers have the seed already loaded from the elevators but when they will be able to get it moved is another question. If prompt shipment were made and delivery secured by the crushers in the East it would take at least six weeks before this oil could be placed into consumptive channels. Inspections of cars of flaxseed at Winnipeg during the week were heavier than last week by ten cars. For the week ending with Wednesday, 78 cars passed inspection as against 68 cars for the same period preceding. Flaxseed showed a slight firmness in price during the week, the cash product being quoted at $2.50 per bushel at Winnipeg on Wednesday of last week while on the same day during the present week it closed of $2.53¼. Demand for linseed oil has been comparatively light during the week. The determining factor in the market continues to be the freight situation. When relief from that quarter remains to be seen.

	Raw, Per gal.	Boiled. Per gal.
1 to 2 bbls.	$1.35—$1.40	$1.37½—$1.43
3 to 5 bbls.	— 1.39	— 1.42
6 to 9 bbls.	— 1.37	— 1.40

Turpentine Easier, But No Decline As Yet

TURPENTINE.—There has been an easier feeling in turpentine during the week as a result of the situation in the primary market, where the market was dull and quoted ½c per wine gallon lower than at the same time last week. There is not a heavy demand for this commodity at the present time. Some dealers anticipating there may be trouble in getting further supplies forward owing to the railway situation have decided to conserve their stocks and will sell only in single barrel lots to their customers. There is a weakness in the local market which to some dealers indicates that lower prices would not be improbable in the near future. Quotations remains the same as last week.

	Per Imp. gallon.
1 barrel lots	$0.75-0.81
2 to 4 barrels	0.74-0.80
5-gallon lots	0.80-0.88

White Lead in Oil In Increasing Firmness

WHITE LEAD IN OIL.—Following the advance of 50c per hundred pounds in white lead in oil that was recorded last week there is increasing firmness in the market due to the situation in pig lead. In the New York market pig lead sold during the week as high as $11.50 per hundred pounds as compared with a quotation of $9.25 to $9.75 at the time of writing the previous week and with $8.50 two weeks ago. There is a strong position in the pig lead with very little offered. Quotations during the week in the New York market ranged from $10 to $10.62½. In the local market pig lead was quoted at $12.25 per hundred pounds With the high price of linseed oil and the difficulty crushers are experiencing in getting seed all things have operated to put still greater firmness in the market. Higher prices for white lead in oil would not come as a surprise. Prices remained unchanged during the week at $15.30 per hundred pounds in small lots and $15 in ton lots.

Paris Green Prices Have Been Announced

PARIS GREEN. — New prices have been announced on Paris Green during the past which which are in the neighborhood of 4¼c higher than the opening prices of last year. Former prices have been withdrawn for some time and the announcement of prices have been awaited for some weeks. As the season for the use of Paris Green approaches there is renewed interest in the commodity. Following are the prices on two of the well-known brands:

	Canada Paint Per 100 lbs.	Berger's Per 100 lbs.
600 barrels	$43 75	$44 50
250-lb. kegs	44 00	44 75
100-lb. drums	45 00	45 75
50-lb. drums	45 00	45 75
25-lb. drums	45 25	46 00
1-lb. papers	47 25	48 00
½-lb. papers	49 25	50 00
1-lb. tins	48 25	49 00

Last season the 1-lb. papers opened at $43 per hundred pounds, while this year the opening price is $47.25. Other styles of packages show approximately the same differential over last year.

Mixed Paints Reflect Firmness in Oil Market

MIXED PAINT.—With the firmness in the linseed oil market and high prices prevailing, together with higher prices for white lead and a tendency to still higher, paint men incline to the opinion that higher prices for mixed paints will come if the present situation continues long or grows more acute. Dealers for the most part report trade in mixed paints continuing satisfactory. They anticipate the demand will run more to mixed paints in view of the high prices prevailing for linseed oil and white lead in oil.

Glass and Putty Both in Firm Market

GLASS AND PUTTY. — Prices for glass locally have held at the quotations of recent weeks of 15 per cent. discount off list. Dealers are firm in their assertion that they can see nothing but higher prices in view of the situation with manufacturers in the United States. Higher prices in that quarter have not been announced generally by all the manufacturers, but it is understood one of the large manufacturers has announced that their prices will be sixteen per cent. higher. Prices of most of the manufacturers are still withdrawn. Putty is also in firm market due to the scarcity of whiting and linseed oil. Prices held during the week at the advance of 20c per hundred announced last week. Bulk putty in casks is quoted at 3.40 per hundred pounds in less than ton lots.

Tie Your Paint Stock to Our Big Advertising Campaign

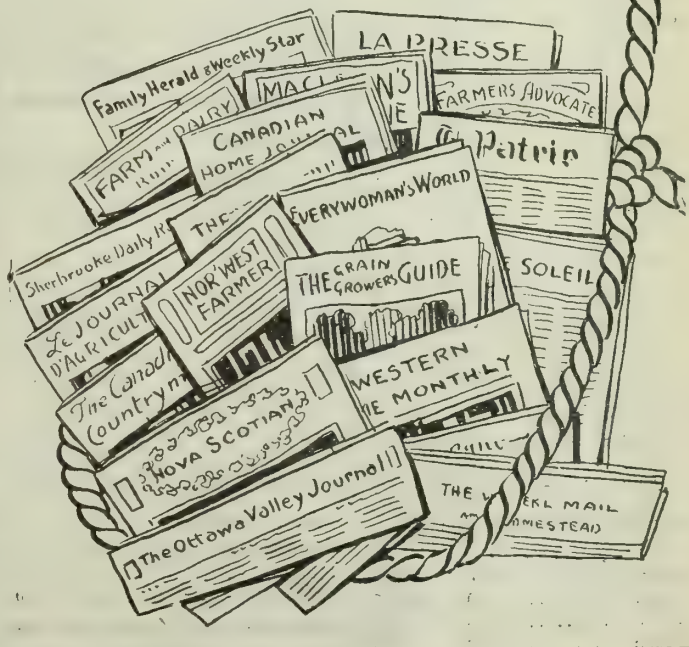
A stock of Canada Paint Products on your shelves will enable you to obtain the full benefits of our big Consumer Advertising Campaign for this Spring, which blankets Canada from coast to coast.

Our products will be brought to the attention of every user of paint and varnish, not once, but several times during the next three or four months.

This advertising will increase the volume of sales for "C.P. Full Line Agents" and it will help them to obtain a large part of the Paint and Varnish trade in their districts.

The C.P. trade-mark marks the livest, fastest selling line of finishes in Canada. The quality and satisfaction in the first order makes each customer a permanent C.P. user, the second order is a demand for "more of the same."

If you want to know about the proposition that is making record profits for Canada Paint Agents, ask us to give you full particulars.



The Canada Paint Company, Limited
572 William Street, Montreal
112 Sutherland Avenue, Winnipeg

Re Gauges and Prices of Sheets.

Prices which follow on black and galvanized sheets are purely nominal. The market has reached a state where prices are quoted only on application and for immediate acceptance.

On account of it being practically impossible to secure galvanized sheets from England, owing to the war, American mills have decided that they will no longer roll the English gauges to meet this competition. However, they will continue to roll at 10¾ oz., which will be known as such or a 30 gauge, and will take the place of the former English 28 gauge.

SHEETS (BLACK)

	Montreal 100 lbs.	Toronto 100 lbs
10 gauge	6 20	5.60-6.00
12 gauge	6 30	5.60-6.00
14 gauge	5 55	5 40
16 gauge	5 65	5 60
18-20 gauge	5 55	5 55
22-24 gauge	5 60	5 60
26 gauge	5 60	5 65
28 gauge	5 75	5 75

There's Not a Single Weak Link!

Effecto Auto Finishes—a Strong Line all the Way Through

1. Every Auto Owner is a Prospect. Effecto is a material with which he can *refinish his car himself,* making it look like new in a short time and at a very small cost. *It's not a wax or a polish* — it's a durable, beautiful *enamel* made in black and colors, — including also the fast-selling Top and Seat Dressing.

2. Effecto is Nationally Advertised. The same liberal aggressive policy of advertising that has made "61" Floor Varnish and Vitralite Enamel familiar is being pursued in developing this new line. The Effecto Campaign this Spring will be entirely independent of our other publicity.

3. Competes with Nothing Else You Sell. The Effecto line is not an improvement on, nor a substitute for some article that has always brought you a good profit in the past. Money spent in your store for Effecto would otherwise *not have been spent there at all.* It is *new* profit.

4. Brings You the Auto Trade. These are the successful people — the kind whose other business is of real value to you. They own homes, factories and other buildings. Their annual purchases of your goods are enormous — and once inside your store, they'll come again.

5. Only a Small Investment Needed. The special One-Case Assortment -a full line of Effecto, lots of live publicity. Inquire about it today!

Effecto AUTO FINISHES

We sell this paint FOR you!

The big, wide, persistent advertising propaganda behind

LOWE BROS.' High Standard Paints

must be seen to be appreciated. And there's no doubt of your appreciation once you do see it.

There are three basic principles in our business: 1st, the best Paint that skill and experience can make; 2nd, the best advertising that brains can produce; 3rd, the most complete co-operation with our dealers that good-will can devise. That is why Lowe Brothers' agents are so successful.

Ask us to put our proposition before you NOW.

The Best Share For Every Plow

CRESCENT FORGE & SHOVEL CO. — TRUE FIT TRADE MARK — HAVANA, ILL. U.S.A.

Fits Practically Every Plow in Western Canada

OUR WARRANTY: We warrant all goods of our manufacture to be made of the best quality of steel for the purpose intended, and to be made in a workmanlike manner. Fitted plowshares are warranted to fit the plow for which they are intended. The fit of every share is carefully tested before leaving the factory, and every precaution is taken to prevent mistakes, which occasionally occur. Should any share prove defective in fit, material or workmanship, it will be cheerfully replaced free of charge

Made in Over 600 Patterns.

There is no other varnish that will suit the requirements of your trade so well as

DOUGALL VARNISH

Your customers want Varnish that is easy to apply, has good covering power, looks well when applied, and will wear well.

No Varnish can give this service unless it is properly made from proper materials under correct formulas. Also it must be properly aged.

DOUGALL VARNISH IS AS NEARLY PERFECT IN EVERY RESPECT AS HUMAN SKILL AND QUALITY OF MATERIALS CAN MAKE IT.

Let us send you full particulars—No obligation

Mention This Paper When Writing Advertisers

When Carter Went Into Flashlights

Ex-President Carter Tells How His First Fifty Dollar Order of Eveready Looked Like a Mountain, but Later Turned Out to be a Real Gold Mine of Profitable Business.

"DID we sell flashlights? Well, we think we did," said W. J. Carter at the O.R.H. and S.D.A. Convention at Hamilton this week when asked if he had any sale in Picton for flashlights.

Before we give Mr. Carter's statement we would mention here that the town of Picton is the county seat of Prince Edward and has a population of some 3,700—a wide-awake "Quinte" town with real live merchants, of whom Carter Brothers, the local hardware men, are among the leaders.

Mr. W. J. Carter, who this week vacated the presidential chair of the Ontario Retail Hardware and Stove Dealers' Association, is well known to the Canadian Hardware trade, and is credited with being right on his toes for anything that looks like a live proposition. He sizes everything up well before making the plunge, but when he plunges he usually comes out with a win.

W. J. CARTER, Picton.
Retiring President of the Ontario Retail Hardware and Stove Dealers' Association, which met this week in Hamilton.

Here is Mr. Carter's story of how he got into the selling of flashlights:

"In the Fall of 1915 we read an ad. which told of the safe and useful qualities of 'Eveready' flashlights. The ad. featured a fifty dollar assortment. We knew nothing about flashlights, as we had never handled anything of the kind before; however, the convincing arguments of the ad. set us thinking, and thinking good and hard. To buy or not to buy was the question. A fifty-dollar order of a line that we did not know looked like a mountain to us at that time; however, after discussing the matter two or three days, we decided, with fear and trembling, to make the plunge. Away went our order, and as quickly, back came the goods. Now to get rid of them and make some money.

"On their arrival, with plenty of vim and pep aboard as ammunition, we cleared the forward deck of our store for action. With the aid of one of the Special Window trims furnished by the 'Eveready' firm, we dressed our best window and also made a display in one of our silent salesmen, as well as displaying some lines outside in the vestibule of the store front, in full view of every passer-by. Then last, but not least, we used to the full the splendid newspaper copy furnished by the 'Eveready' people.

"Did we sell flashlights? Well! We think we did.

"Our Fall Fair, coming in the next week after the 'Eveready's' arrival, was a big help; for on the second day of the same week we wired in another fifty dollar order; two weeks later a salesman arrived, and he also carried away another order for fifty dollars' worth of flashlights to be delivered the first of December. Long before the specified time we had this shipment forwarded.

"On the 10th of December our disastrous fire occurred. The 'Eveready' people wired a message of sympathy, to which we replied by a wire asking them to ship $100.00 worth of 'Eveready's', assorted to suit our need. They arrived in time for the Christmas trade, and we fairly revelled in flashlight trade.

"That our sales have kept up ever since goes without saying, and the sale of batteries for cases already sold is something great. We might say that it was a fortunate day for us when we took up the agency for 'Eveready' flashlights."

And That Is Not All

The ex-president is not the only satisfied agent for "Evereadys." His experience has been the experience of hundreds of hardware dealers in Canada. The "Eveready" has flashed from coast to coast, is to-day flashing everywhere in the public and private life of the Dominion. It's the people's flashlight—hold a minute, that word "flashlight," the "Eveready" people claim that their product has outgrown the name and the latter part of last year they offered a prize of $3,000 for a suitable substitute.

The original plan of the better name contest was to present $3,000 on Christmas Day to the person submitting the winning word.

Never did a contest meet with such generous and enthusiastic response. Suggestions poured in at a tremendous rate until on the official date set for the close of the contest (Nov. 7th, 1916), over 530,000 suggestions had been received.

The company were obliged to ask for more time. On its settlement depends not only the fulfillment of an obligation to pay $3,000, but a decision on that name which is best suited to the product.

April 5th is the date now set for the award announcement. The announcement will be made through "Eveready" dealers, as well as through newspapers and magazines. The news must reach the greatest number of people with the least possible delay. *Announcement cards and streamers will be supplied to "Eveready" dealers.*

If the judges decide before April 5th, the announcement will not be held back. A half million people will not be kept waiting.

Who Gets That $3,000?

A Straight Talk from the Manager

No. 58

JUST one month from to-day you will receive your copy of HARDWARE AND METAL'S Annual Spring Number.

No effort is being spared to make this number the finest yet presented to the Canadian hardware trade.

The Editors have prepared an advance list of articles to appear in this issue, and there is going to be lots of good reading—practical as well as interesting—for hardware merchants in every section of the Dominion.

Is there any subject that you would like to have discussed in the Spring Number? If so, just drop a line to Mr. Davis, and he'll appreciate it.

Meantime, prepare a hearty welcome for this great issue. Read it over carefully, and then hang it up beside your desk, where you can reach it handily, day after day, in the Spring selling season.

J. G. L.

The White Mop Wringers

Because of their wonderfully quick turnover the White Mop Wringers are one of the most profitable commodities any dealer can sell. Their ease of operation and general desirability make a quick and strong appeal to the consumer.

They are virtually self-sellers. They are made of hard Maple or Birch wood and the best malleable iron. They fit on any pail and wring the Mop perfectly.

They are often used as Fruit and Vegetable presses with good results.

MACLEAN'S MAGAZINE *for* March

Sir Gilbert Parker
Robert W. Service
Stephen Leacock
Alan Sullivan
Agnes C. Laut
H. F. Gadsby
Erman J. Ridgeway
Madge MacBeth
L. M. Montgomery
Norman Lambert
Hopkins Moorhouse
H. M. Tandy
Robson Black
Adam Barnhart Brown
Arthur William Brown
Peter McArthur

BE thankful that Canada has a magazine of BIG calibre. A magazine fit to be placed alongside the best British and American magazines—by the test of those who contribute to it regularly and of ideals.

MACLEAN'S MAGAZINE carries world-famous names in its list of contributors—writers who have an open sesame to any magazine, yet writers that some magazines cannot get, because they fail to measure up to a standard set. Not every or any magazine can have the work of Sir Gilbert Parker, Miss Laut, Stephen Leacock, Arthur Stringer, Arthur E. McFarlane, L. M. Montgomery, Nellie McClung, Robert W. Service, Alan Sullivan, and others whose names are familiar to readers of MACLEAN'S MAGAZINE.

MACLEAN'S MAGAZINE is favored by these fine and high-priced writers because they are Canadian-born or bred and because they are genuinely interested in seeing the land of their birth or adoption have a magazine worthy of the land of their love and of their work and fame. *And they have found this magazine in MACLEAN'S.* MacLean's gives them access to the readership they desire to reach—the man and women of culture and position, of real love for Canada and in earnest to see its nationality enlarge and its destiny advanced.

And so we feel that we have a right to ask you to give MACLEAN'S MAGAZINE a first place in your favor. *It is truly Canadian,* doing a needed service for Canada, and doing this worthily. Doing all that it is doing at a heavy present cost, looking to the future for its larger reward.

You can show your appreciation of what the publishers of MACLEAN'S MAGAZINE are doing by making MACLEAN'S an elect magazine among all magazines enjoying your favor, and by making it better known to others who have your spirit—your sense of Canadian nationality, your purpose to advance Canada in all right and high ways.

At All News-Agents - Fifteen Cents -

Contents of MARCH MACLEAN'S
(CONDENSED)

Jordan is a Hard Road. Serial by Sir Gilbert Parker.

The Guile of Ulysses. By Peter McArthur.

Face Up. By Hopkins Moorhouse.

The Rabbit Revolution. By Adam Barnhart Brown, with illustrations by his brother, Arthur William Brown.

The Above are Stories

Ten Million for the Asking. By Stephen Leacock—a serious contribution on a phase of national finance.

National Policies—How they are formulated and exploited by Parties and Cabinets. By H. F. Gadsby.

Prospects for Peace and Peace's Problems. By Agnes C. Laut. A stirring and thought-provoking article by this wonderful woman writer with a statesman's mind.

The Above are Special Articles

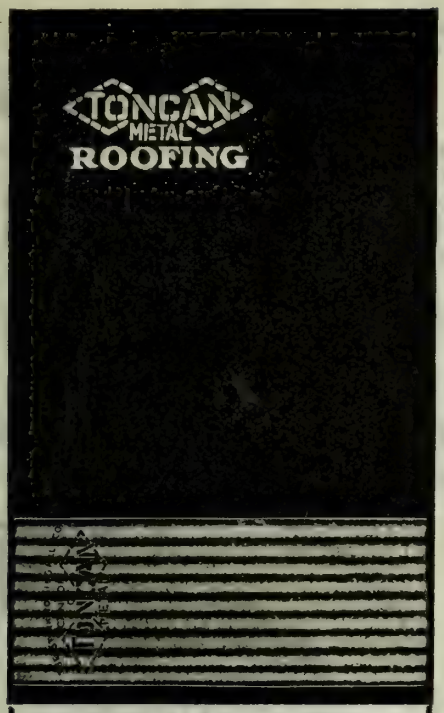
Mrs. Hayter Reed—the woman who is responsible for the decorative schemes of the big C.P.R. hotels. By Madge MacBeth.

H. C. Brewster—Premier of British Columbia. By Norman Lambert. A timely sketch of a man of interest to all Canadians.
These are brief biographies of interesting Canadians—a feature of every issue of MACLEAN'S MAGAZINE.

The Review of Reviews Department condenses for busy readers the cream of the best things appearing in the current magazines of the world. So MACLEAN'S becomes many magazines in one.

The Business Outlook and **Information for Investors** are two features of MACLEAN'S greatly liked and esteemed by many of its readers.

These are Department Features found in every issue



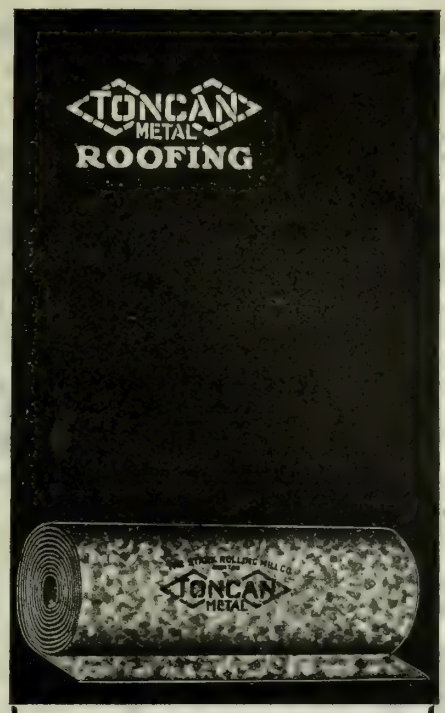
Toncan Metal Corrugated Roofing

Painted or Galvanized

WHERE durability, strength, fire-resistance, appearance and economy are necessary, Corrugated Toncan Metal Roofing will fulfill the requirements in every respect.

Under service conditions it will not burn, break, melt or warp, and it is corrosion-resisting. It is very easy and economical to apply. Only a light superstructure is needed. And its cost is very moderate.

Toncan Metal Corrugated Roofing is used extensively for factories, warehouses, railroad buildings and other similar structures. Corrugated Sheets also make a splendid siding.



Toncan Metal Roll Roofing

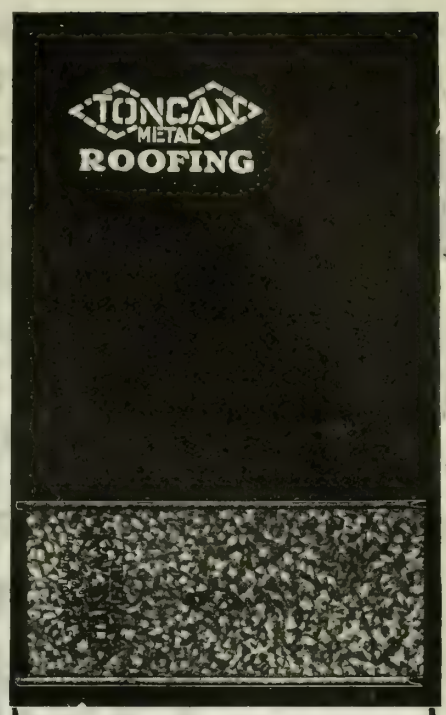
Painted or Galvanized

WHERE there is only a slight pitch to the roof, Toncan Metal Roll Roofing should be used.

It makes a weather-proof, fireproof and durable roof.

Toncan Metal is particularly adapted for this form of roofing, not only because of its corrosion-resisting properties, but also because of its ductility. The tinner when applying roll roofing must bend and seam it. Naturally, a material that will do this easily and without breaking is desirable. Toncan Metal bends and seams excellently.

Each roll will lay 100 square feet on the building.



Toncan Metal Standing Seam Roofing

Painted or Galvanized

HERE is a roofing suitable for practically any kind of a building having a sloping or pitch roof—schools, libraries, churches, factories, railroad buildings, warehouses, garages, farm buildings, etc.

The appearance of Toncan Metal Standing Seam Roofing conforms admirably with many of the modern styles of architecture.

It is corrosion-resisting, fireproof, weather-proof, nonbreakable, economical to apply and moderate in cost.

It is made in lengths from 5 to 12 feet inclusive, and in 20, 22, 24, 26, 27 and 28 gauges. Covering width of each sheet is 24 inches.

Write for a copy of "Corrosion—The Cause—The Effect—The Remedy"

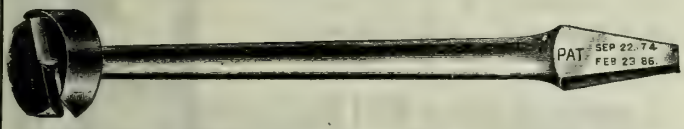
J. H. McCOMB, LIMITED Manufacturers of all kinds of Building Paper, Pitch and Coal Tar **MONTREAL**



THE PROGRESSIVE MANUFACTURING CO.
Torrington, Conn., U.S.A.

FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTRE. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability.
Made for Brace—made for machine. Packed singly—packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Order through your jobber to-day.

Auger Bits, Bolts and Nuts, Bolster Springs, Chain, Drills, Files, Handles, Horseshoes.

"DELTA" FILES

Put a Merry Jingle in Your Cash Register

Make your store a happy remembrance with the customer.

That's why it pays to sell "DELTA" FILES.

The good work they do and the long service they give are constant suggestions to the customer to purchase other needed articles at that store, where they serve those DELTA files.

Thus does the dealer create permanent good-will. Delta Quality does it.

Dealers find Delta Files a worthwhile line to handle. We co-operate with dealers to bring new customers to their stores.

Let us send you full particulars of our attractive agency proposition.

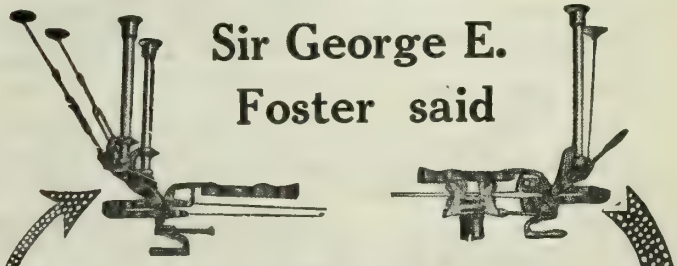
Sir George E. Foster said



that Canada is asleep in regard to after-the-war trade. But many of us are asleep on the matter of RIGHT NOW trade; we're not carrying on our business as carefully and efficiently as is possible, and so money leaks out—the good hard money that took so much out of us to earn. We're talking dollars and sense. Our Circular would interest you. Send for it—to-day, please.

Condensed or "Want" Advertisements

There is always someone, somewhere, who is looking for just such a proposition as you have to offer—and it is more than likely that he is a hardwareman and a subscriber to HARDWARE AND METAL. Let an advertisement on this page bring you together.

RATES (payable in advance): 2 cents per word first insertion, 1c per word subsequent insertion. An additional charge of 5 cents for each insertion is made when Box Number is required. Each figure counts as one word.

SITUATION VACANT

WANTED—GOOD WINDOW TRIMMER — must have general knowledge of hardware; good opening for the right man. Apply to Mr. Illsey, care of J. H. Ashdown Hardware Co., Calgary.

WANTED—BY AN OLD ESTABLISHED company, a travelling furnace representative to cover territory between Toronto and Montreal. One with experience as tinsmith in the installation of furnaces preferred. Apply by letter, giving salary expected, Box 430, Hardware and Metal.

AGENCIES WANTED

THE SUREST WAY FOR THE MANUFACturers' agent to connect with good live firms, is to tell the manufacturers who read Hardware and Metal, all about his ability to sell their goods. Try an advertisement on the Condensed Ad. Page of Hardware and Metal, under this heading.

WANTED—FOR HAMILTON AND DISTrict, several good lines on commission. Excellent connection with factories, stores and corporations. Box 428, Hardware and Metal, Toronto.

STORE EQUIPMENT FOR SALE

HARDWARE STOCK AND FIXTURES FOR sale in Sudbury. For particulars write Box 88, Sudbury, Ont.

YOU MUST HAVE A LOT OF OLD FIXtures around the store which are no longer of any value to you, but would prove very useful to someone else in the hardware business. Find a purchaser for this equipment through an advertisement on Hardware and Metal's Condensed Ad. Page.

FIFTY DOLLARS TIED UP IN OLD FIXtures that you are no longer using would make a lot of money for you if invested in stock and turned over three or four times a year. Get your money out, by selling the fixtures to one of Hardware and Metal's readers who may be looking for exactly what you have to offer.

PAPER BALERS

THERE IS MONEY IN USING AND SELLing the Jewell Paper Baler. It is the only low-priced, efficient baler on the market. Every hardware store should use one. Splendid side line for one line traveller in each territory. General Sales Co., Stair Bldg., Toronto.

SITUATIONS WANTED

EXPERIENCED RETAIL HARDWARE manager is open for position with first-class firm, retail or wholesale. Wide experience. Address Box 427, Hardware and Metal.

THE "CHANGING TIME" IS GETTING near. There are many firms who have vacancies on their sales or office staffs to fill during the next few months. If you want to qualify for some of these vacancies, tell your story briefly in a Condensed Advertisement, and try it out in Hardware and Metal. A twenty-five word advertisement may land you a permanent position with splendid prospects.

RELIABLE MAN, 40 YEARS OF AGE, with ten years' successful experience calling on hardware trade, desires position as salesman for some well established hardware line. Territory in Eastern Ontario preferred. Best of references. Apply Box 429, Hardware and Metal.

FOR SALE

HARDWARE BUSINESS IN HAMILTON for sale, including stock, fixtures and dwelling. Cash deposit required, security for balance. Best reason for selling. Box 426, Hardware and Metal, Toronto.

WE HAVE FOR SALE CHEAP, A QUANtity of good clean cuttings; good sizes in both galvanized and black, all gauges, 10 to 10¾ oz. inclusive. Wheeler & Bain, Toronto.

MISCELLANEOUS

GOOD STENOGRAPHERS ARE WHAT every employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

ADDING TYPEWRITERS WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited. Room 314, Stair Building, Toronto.

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Ltd. Supplied by the trade throughout Canada. (tf)

DOUBLE YOUR FLOOR SPACE — BY INstalling an Otis-Fenson hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B." Otis-Fenson Elevator Co., Toronto.

SIGNS AND SHOW CARDS

"WE MADE SIGNS BEFORE WE COULD talk." W. H. Stevenson, Stevenson Building, Toronto.

Want Ads.

There is someone who is looking for just such a proposition as you have to offer. For two cents a word you can speak across the continent with a condensed advertisement in this paper.

KINDLY MENTION THIS PAPER WHEN WRITING ADVERTISERS

Every Day IS PAY DAY

THAT'S RIGHT—every day you work our plan, your pay is given you. "Pay yourself first" that's the idea of our representative plan. When you devote ten hours daily acting as our representative—your pay is sure and certain.

We need a hustling representative right in your district. A young man capable of producing good business, preferably one with salesmanship experience. The position will pay big money to one with enthusiasm, energy and ability. Do you know, or are you such a man?

If you *are* and are willing to exchange *your spare time*, representing our publications, *we will* show you how that same spare time, properly used, *will produce* for you as much *cash* as your regular income.

Does this interest you? If so write us TO-DAY and we will tell you all about it.

The MACLEAN PUBLISHING CO., LTD
143-153 University Avenue
TORONTO, CAN.

Get Behind This Range
It is the Popular Seller

The **HOME COMFORT** Range has an army of 50,000 satisfied users, all speaking its praise. This great army gives a momentum to the selling power of **HOME COMFORT** that makes selling easy.

THE HOME COMFORT Malleable Steel Range has made good for 20 years. It meets the housewife's ideal —in fact its special features are based mainly on the suggestions from the women themselves.

McKINNON SPECIALTIES

Increase Dealers' Profits

It requires no technical knowledge about automobiles to sell McKinnon goods. They have been thoroughly tested and approved by dealers and car owners—they have been proven to be dependable goods that you can sell with confidence that they will give perfect satisfaction. They are trade-building profit makers.

McKINNON TIRE HOLDERS

They are made throughout of steel—no heavy castings or forgings. Light weight, yet exceedingly strong. Being electrically welded, they are practically one solid piece—there is no break or get-out-of-order to them. Nos. 170 and 175 can be used on the side of any car taking 30 x 3½" tires. We offer other models for the rear of Fords and Chevrolets.

RESILIENT SPRING STEEL BUMPERS

are a necessity on every car. They are reasonable in price and wonderfully efficient. We make special models for Fords and Chevrolets as a medium weight bumper with universal attaching irons for all the cars.

AUXILIARY SEATS

We make the most complete line offered to the trade. It includes Chairs, Camp Stools and Third Seats, as well as several unique styles for special purposes. Of these our No. 90 Seat for Fords is an excellent seller.

It will pay you to get our catalogue and prices. Ask your jobber, or write us direct.

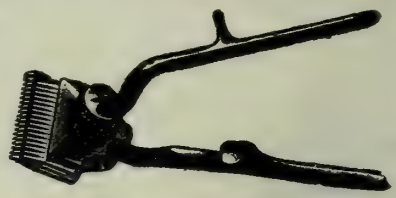
Made by American Shearer Mfg. Co.

present a complete line at a range of prices covering all requirements of the trade. They are all quality goods, and represent best designs and highest standards of workmanship, regardless of price.

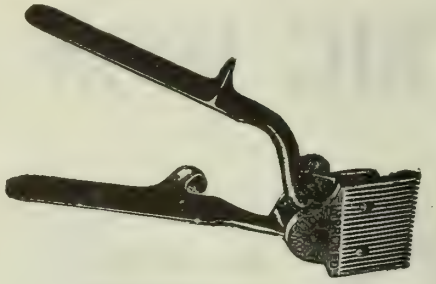
Some styles of Toilet Clippers are illustrated below. All are heavily copper plated and polished before nickeling, thus giving a higher finish, which lasts much longer than ordinary plating. The utmost care is used in grinding and tempering the cutting plates, giving cutting qualities whose superiority may be readily demonstrated by comparison. No. 00 and No. 000 Shaver for beard and neck trimming, are clippers of the utmost lightness and refinement, not paralleled by any other American manufacturer.

STANDARD No. 0, No. 1 and No. 2.
Retailing at about $2.50. High-class barber's clipper.

No. 00 SHAVER
A light and elegant Clipper for beard and neck trimming. Retailing at about $2.25.



SPEED
Best low-priced Clipper made. Retailing at about $1.00.



IMPROVED COLUMBIAN
with grooved bottom plate, retailing at about $1.50.

If you are not familiar with these goods, send for samples and compare them with others.

KING MOTOR CAR CO.

What Automobiles Have Done

The tremendous developments in automobile and accessory manufacturing have created a most profitable market for fine measuring instruments. To produce the necessary jigs and dies for duplicate parts, it is necessary to have accurate tools to lay out, check up and inspect the work. Most toolmakers and machinists are using

Starrett Tools

because of their accuracy, reliability, and convenient design. They are the standard for all accurate measurements.

It will pay dealers to carry a complete line of these tools to fill the machinist's demand for rules, squares, levels, micrometers, calipers, and gages, to supply toolmakers and manufacturers with the larger and more expensive instruments such as vernier calipers, height gages, depth gages, large micrometers, large calipers, etc.

Write for free catalogue No. 21MA describing 2,100 styles and sizes of fine tools.

OIL STOVE OVENS

Black Iron Japanned

Glass Paneled Drop Doors

Glass-paneled Oven Doors are very popular on account of the user not having to open oven door when baking is in progress. The Cooking is always in plain sight. This saves the heat and fuel. When light baking is being done, such as cakes, it saves disturbing contents by jarring the oven.

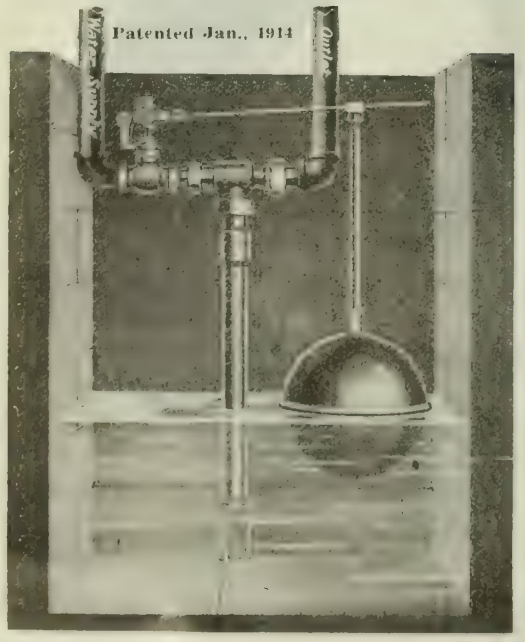
TORONTO MONTREAL WINNIPEG

MORRISON
Automatic Cellar Drainer



A simple, durable, automatic device for draining cellars, wheel pits, furnace pits, cesspools, foundations, and for any purpose where it is necessary to remove water economically from one level to another by water pressure.

The operation of the machine is extremely simple, being actuated by the raising or lowering of float as the water level changes in the pit. It operates purely by water. With our patented improvement it works under a far greater range and gives much larger capacities than any other device on the market, so far as we know, operating as low as 10 lbs. water pressure.

The operating limits of other types of cellar drainers range from 15 to 18 feet lift. The Morrison machine lifts as high as 30 feet at 60 lbs. pressure.

All working parts above water. Nothing to get out of order.

A New N.C.R. Invention

as important to you as your telephone or cash register

It's a new credit file that *safeguards* your credit business—in a better, easier, safer, quicker way than you thought possible.

It is so simple that anyone can operate it.

It is so speedy that all entries are made in the presence of the customer, who leaves with a statement of the purchase—plus a record of the balance carried forward.

It is so convenient that you can set it on any size counter, table or desk. The exact balance due from any customer is instantly available, and the file can be operated with one hand while the other holds the telephone receiver.

It is so complete that a true record of the whole credit business is always available in short order.

And this knowledge alone is worth more than the cost of the file.

It is so safe that records once filed in its locked compartment cannot be lost or destroyed. Records can be seen, but not tampered with.

A few weeks' use will pay for it.

There's nothing else like it, and it can be seen at the N. C. R. office near you, or a letter to us will bring you complete information.

See this new file or find out how it will stop your losses, please your customers, and relieve you of work and worry. Use the coupon.

Do not confuse our U.S. POULTRY FENCE with the Hexagon Poultry Netting

It is built on miniature scale of farm fence, interwoven with parallel wires and hinge joints, so that it stretches to the posts straight, even and nice without buckling, bagging or sagging.

It's so stiff and satisfactory that it does not require top rail and base board or so many posts as the old style netting.

Guaranteed 5 or 6 times as strong and at least 100 per cent. better in every way. All parallel wires are of even length and all meshes of uniform size. They can't be otherwise the way it's made.

Made in heights from 12 to 72 inches. Galvanized before weaving. Put up in 150 foot rolls and sold by the square foot.

It's not merely a substitute for the old style netting. It's something much better and more economical to the consumer and sells on sight. It is handled only by the legitimate trade—*the dealers*—not a departmental store or mail order proposition. It's the strongest, cheapest, most sightly and best fence for the purpose yet invented.

It's a great leader, trade-builder and customer-satisfier. Do not purchase poultry netting or fencing until you have seen our N. S. Poultry Fencing, it will be a surprise and revelation to you and your trade.

This fence has stood the test and has proven **its superiority during the last three years, fulfilling all the promises we had made for it as to quality and economy.**

The very act of unrolling U.S. Poultry Fence is a surprise, as it rolls out flat and even like a roll of carpet or building paper. Set it up on edge and again to observer's surprise it stands up straight, stiff and true. The parallel wires and hinge joints are responsible for this perfect condition.

Made of No. 19 wire only.

Order from the sole distributors and thereby make certain of getting the genuine article.

We have a complete stock and recommend you to order for early shipment to guard against possible shortage later on.

TOOLS ATTRACT CUSTOMERS

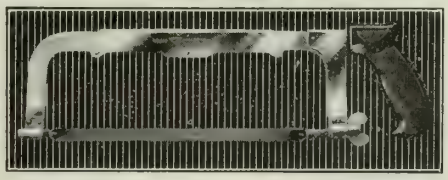
Tools attract carpenters, machinists, metal workers, garage men, contractors and other big hardware users.

Especially Millers Falls Tools with their fifty years' leadership and quality reputation.

Once in your store, these customers buy large quantities of builder's hardware, general hardware and supplies of every kind. Make your tool department the best in your locality and your whole store will profit.

Our book "How to Sell Tools," our selling helps and our monthly paper the "Star" help you make your tool department a big factor in your business, help you turn your tool stock oftener and make tools an entering wedge to other profitable trade.

Here's one tool among the hundreds that prove Millers Falls leadership.



The "pistol grip" and the hang of the saw give you the greatest power with the least effort. Handle fits largest hand. Straining nut under the handle allows maximum stroke. Extra strong and rigid for heavy work.

Send for the Millers Falls Catalog and for our Selling Help proposition to all dealers. It will show you how to put a bigger profit in tools.

SELL HER A BISSELL'S

FOR easy sales that *stay sold,* BISSELL'S breaks all records, as every dealer knows. The name alone is guarantee of superiority. Its prestige makes argument unnecessary. The variety of Bissell models gives every customer just the machine they want.

The Bissell Carpet Sweeper is just as popular as the day it was introduced. It is just as much valued by intelligent housekeepers.

Bissell Vacuum Sweepers, introduced more recently, have been a phenomenal success. They are efficient, convenient, and built for a lifetime of use.

There are de luxe Bissell's and inexpensive Bissell's, both in the carpet sweepers and vacuum sweeper lines.

Therefore, they outsell competing lines in price as well as quality. And they keep you clear of the price-cutting wars that eat up legitimate profits.

Because of these exclusive advantages most dealers specialize on the Bissell line.

The Bissell line has been manufactured for over forty years in a factory devoted entirely to the making of cleaning devices. If you need further information, address

Sells Like Wildfire!

Big Profit For All Hardware Dealers

Car washing is going out of fashion. Nine out of ten car owners to-day want an easier, quicker and less expensive method of cleaning and polishing. Here's the answer, your old friend, Liquid Veneer, now being advertised to all motorists as

AUTO LIQUID VENEER

(MADE IN CANADA)

You just spray it on with the L-V Sprayer in a light vapor, right over dust, light mud and road tar. This loosens and lubricates all accumulations so that they easily slide off. Then wipe the car with a dry cloth and the job is done. It takes 10 minutes, costs 5 cents. Leaves no oily film.

The result is a bright, clean, glossy car, restored to its original newness. The Liquid Veneer feeds and renews the finish. Water, as you know, dulls and ruins the finish. There is no comparison. Every motorist can readily see how this new method will save him much time, much dirty, sloppy work, much expense, and keep his car just like new.

The outfit, consisting of a $1.00 32-ounce bottle of Liquid Veneer and a 50c brass finished sprayer, retails for $1.50; each outfit packed in a handsome strong display case.

A big advertising campaign is now under way. Liquid Veneer is the best known polish in the world; your profit is most liberal; everything is in your favor! Don't delay investigation. Send the coupon at once.

33⅓% Profits for You

More and more hardware dealers are stocking and pushing automobile lubricants, and other automobile accessories. The modern hardware dealer finds that the motorist is coming in to him for supplies. As a result many hardware dealers have found a profitable source of income, especially in pushing automobile oils.

The Imperial Oil Company, Limited, offers the hardware dealer an exceptionally good money-making opportunity. By handling POLARINE or GARGOYLE MOBILOILS you are enabled to make from 33 1/3% profit and up, depending upon the quantity you sell.

For years the Imperial Oil Company has manufactured and sold POLARINE MOTOR OIL in Canada. It is also the Canadian distributor of GARGOYLE MOBILOILS.

POLARINE, which is now supplied in two grades, called POLARINE and POLARINE HEAVY will be advertised more extensively this year than ever before in newspapers, motoring magazines, and farm papers from Coast to Coast.

GARGOYLE MOBILOILS, supplied in four grades for engine lubrication, and sold by a Chart of Recommendations to insure the use of the correct grade, have been sold by us in Canada for some years. These oils will be advertised in the Hardware Trade Press, and the Motoring Magazines during 1917.

The Imperial Oil Company offers you the co-operation of extensive dealer helps in marketing both POLARINE and GARGOYLE MOBILOILS. Signs, booklets, circulars, movie slides, etc., are available to you in pushing these excellent products.

This is your opportunity to join with hundreds of other hardware dealers in the profits and permanent patrons which will result from your co-operation in the handling of these products.

Please write us at 56 Church St., Toronto, for full information. We will answer by return mail.

The IMPERIAL OIL COMPANY Limited

BRANCHES IN ALL CITIES

STARTS THIS MONTH

Griffith Advertising Working Again for YOU

A new advertising campaign for Griffith Specialties will be inaugurated in this month. A new series of ads, similar to the one shown above, is being used. They will add a fresh impetus to the demand of your customers for Griffith Traces and Equipment.

The popularity of the Griffith outfit has made it a leading seller in all districts. Despite the fact that we have been forced to raise the price, it still costs your customer less than half the price of a smiliar outfit in leather, and the new price allows you a larger margin of profit. Special attention is drawn to the inclusion of the Giant Yoke Rope in the Team Outfit this year.

We hope to be able to take care of all our customers this Spring, but the rush of orders has us working at top speed in order to handle them, so we would advise any dealers who are not carrying a stock of Griffith Specialties to place their orders without delay.

From Saturday Evening Post February 17th

The Target for Millions of Eyes

Again public interest is focused on the Eveready Dealer's store. As a result of this advertisement, millions of eyes are watching his windows for an answer to the question of the hour—

Who won that $3000 for a better name than "flashlight"?

Over 530,000 suggestions for a new name were received. The response nearly swamped us. We were forced to ask for more time. But the delay has been an advantage in disguise. It has given us the opportunity to again throw the Eveready Dealer's store into the limelight of public interest. Do not lose sight of this advantage. Dress your windows in their best. Put in Evereadys where they will be seen. Goods well displayed are more than half sold.

And remember, interest will be at white heat right up to the climax of this campaign on April 5th. And your store will be the center of this interest in your town.

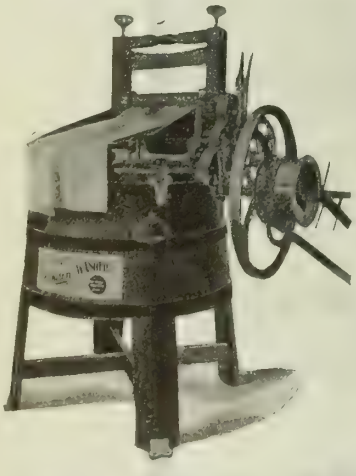
The "LONDON" No. 4 Family Power Washer



The London No. 4 Family Power Washing Machine, operates by Gasoline Engine. Built like the "London" No. 3 Electric. Instead of motor wire, belting, etc., it has a driving and loose pulley on the fly-wheel, a handy belt shift for leading the belt from one pulley to the other.

This machine is a marvel for convenience and efficiency and its price is *low.*

MACLEAN'S MAGAZINE *for* March

Sir Gilbert Parker
Robert W. Service
Stephen Leacock
Alan Sullivan
Agnes C. Laut
H. F. Gadsby
Erman J. Ridgeway
Madge MacBeth
L. M. Montgomery
Norman Lambert
Hopkins Moorhouse
H. M. Tandy
Robson Black
Adam Barnhart Brown
Arthur William Brown
Peter McArthur

BE thankful that Canada has a magazine of BIG calibre. A magazine fit to be placed alongside the best British and American magazines—by the test of those who contribute to it regularly and of ideals.

MACLEAN'S MAGAZINE carries world-famous names in its list of contributors—writers who have an open sesame to any magazine, yet writers that some magazines cannot get, because they fail to measure up to a standard set. Not every or any magazine can have the work of Sir Gilbert Parker, Miss Laut, Stephen Leacock, Arthur Stringer, Arthur E. McFarlane, L. M. Montgomery, Nellie McClung, Robert W. Service, Alan Sullivan, and others whose names are familiar to readers of MACLEAN'S MAGAZINE.

MACLEAN'S MAGAZINE is favored by these fine and high-priced writers because they are Canadian-born or bred and because they are genuinely interested in seeing the land of their birth or adoption have a magazine worthy of the land of their love and of their work and fame. *And they have found this magazine in MACLEAN'S.* MacLean's gives them access to the readership they desire to reach—the man and women of culture and position, of real love for Canada and in earnest to see its nationality enlarge and its destiny advanced.

And so we feel that we have a right to ask you to give MACLEAN'S MAGAZINE a first place in your favor. *It is truly Canadian,* doing a needed service for Canada, and doing this worthily. Doing all that it is doing at a heavy present cost, looking to the future for its larger reward.

You can show your appreciation of what the publishers of MACLEAN'S MAGAZINE are doing by making MACLEAN'S an elect magazine among all magazines enjoying your favor, and by making it better known to others who have your spirit—your sense of Canadian nationality, your purpose to advance Canada in all right and high ways.

Quality

THE leader in every industry, to maintain his lead, must safeguard the quality of his products.—Rigid inspection and careful supervision are important factors.—To products of iron and steel this principle applies with tremendous force.—It means safety, security and stability.—We safeguard the quality of our products, believing quality will be recognized long after the price is forgotten.

Service

OUR customers must be served. One of the dominating factors in any successful business is Service.—We succeed only through the good will and good wish of the people we serve.—This thought permeates our entire Organization, from the President down.—Our employees feel the sense of responsibility this principle implies; and each one directs his efforts to maintain the high standard of service we aim to render.

Canada's Only Weekly Hardware Paper

HARDWARE AND METAL

Published Every Saturday Since 1888

Vol. 29 TORONTO, MARCH 3, 1917 No. 9

What Is Wrong With the Association?

HARDWARE AND METAL believes that at the present juncture it would be in the best interests of the Ontario Retail Hardware & Stove Dealers' Association to "speak out in meeting." The association has reached a crucial stage. This is apparent to everyone connected with it, and at this time, with the recent convention fresh in mind, it would be well for the members to get together in these columns and talk candidly and unreservedly of the affairs of the association, past, present and future—but mostly future. HARDWARE AND METAL will start the discussion with a statement of its views; and will then throw its columns open gladly to a general discussion, welcoming letters from all sources.

At the outset it must be stated that the association has not been the great success it had been hoped to make it. It has done good work as far as it has gone, but it has not gone far enough. The membership is too small and not representative enough of the trade in the larger buying centres. The attendance at the conventions has been too small and every year there has been too much delay in starting meetings, too much waste time, too much dilatory discussion of doubtful value. This may sound like a severe indictment. But HARDWARE AND METAL is convinced that every member will on reflection agree that it is entirely within the facts; and will further agree that to thus openly discuss such matters is very necessary to the future welfare of the association.

* * *

LET it be understood at once that it is not intended to blame individual officers. Every year there have been energetic and capable men among the officers. Every year some of the officers at least have worked earnestly for the achievement of the broadest association aims. The fault can perhaps be traced back to the very outset when the keel of the good ship "O.R.H. & S.D.A." was laid down. It was, perhaps, not as long nor as stout as it should have been; and ever since each set of new officers has endeavored to build anew on the same bottom instead of hauling new timber and starting absolutely afresh. The program each year also has been based largely on what went before. Each set of officers has felt more or less that precedent must be observed. There has been hesitation to accept the idea, or failure to recognize the necessity of cutting away from the old way of doing things—of getting new features, of adopting arbitrary methods of getting meetings started on time, of finding means of practical service, of galvanizing the meetings generally to such a degree that no live hardwareman would *dare* to remain away.

As stated, it would be impossible and unfair to attribute any degree of blame to any individuals. It has been a collective form of backsliding. HARDWARE AND METAL has probably been as much to blame as any of the officers, for not "cutting loose" with more straight discussion long ago.

* * *

THE all-important thing is the future. It is not too late to lay down a new keel. This should be a propitious time to make a new start, for in J. N. McGregor the association has a president of established executive ability, and in secretary Macpherson a real hustler. Also, the war has taught the need for reconstruction along the lines of efficiency. When nations throw precedent and officialdom overboard, it should not be hard for an association to drop its comfortable, smug old habits, and get down to brass tacks.

It should be possible to raise the membership this year, to five hundred. Set that as a minimum mark, Mr. President. Also the reconstruction should be worked out on such a basis that the larger city hardwaremen will join in larger numbers. Get the London crowd in; line up the hardwaremen in Toronto, Ottawa, Hamilton, Brantford, Peterborough, St. Thomas, etc. These dealers can be secured if they are convinced that the association is going to be built into a big, potent force. It is not intended to imply that it is more important to secure the co-operation of the city dealer than of the hardwareman from the country town. The need for a "set" on city members is mentioned only because the representation of city dealers has been conspicuously small.

* * *

AND, equally important, it is necessary for the association to give service. The move to establish an exchange, as discussed at the recent convention, is along the right line. Show the members that something practical is being done. If at the next

convention, say, a member gives a talk on lines that he has found being pushed in departmental stores, let him have samples on hand to show. Further, let him have information as to where the members can secure goods to retail at the same figures. If the association works along such lines it will not be found hard to get the members at the meetings on time. They will be ready to start at 6 o'clock in the morning.

* * *

FINALLY, interest must not be allowed to lag at any time during the year. It is not sufficient to have an occasional meeting of the officers and then a flurry of preparation just before the next convention. Confidential Bulletins should be issued to members regularly. Service plans should be formulated and *put into operation*. The interest of the members should be kept up to a high point.

All this will mean the hardest kind of work for the officers. It can only be made to succeed through the aroused interest of the individual member and the close co-operation of the trade press. HARDWARE AND METAL is prepared to do its share as it has always done. Are you, Mr. Officer and you, Mr. Member?

* * *

The discussion is started. Opinions from all sources on means of making the association a bigger success will be welcomed by HARDWARE AND METAL.

Hamilton Manufacturers Fined!

Disorderly Conduct Leads to Stiff Sentences in Hatch Court — Majesty of the Law Vigorously and Rigorously Upheld by Appointed Minions—One Prisoner Makes His Escape.

COL. Arthur Hatch converted the luncheon given on Thursday last at the Royal Connaught Hotel, Hamilton, to the members of the Ontario Retail Hardware and Stove Dealers Association by the Hamilton hardware manufacturers into a comic opera police court and incidentally provided the

JUDGE ARTHUR HATCH.

most laughable entertainment that it has been the good fortune of his audience to enjoy in some time.

A feature of the luncheon was a drawing contest for a list of prizes supplied by the manufacturers and running all the way from a dozen hand saws to 2 fountain pens. Tickets were sold to every one present for the sum of fifty cents and the proceeds were given to the Babies Dispensary. As the tickets were passed around, Colonel Hatch announced that it was his intention to watch the company closely and punish any unseemly conduct by fining the offenders to buy additional tickets. For this purpose he would need policemen; and he forthwith appointed Messrs. Cinnamon, Oldham, Spence, and Ginder to act in that capacity.

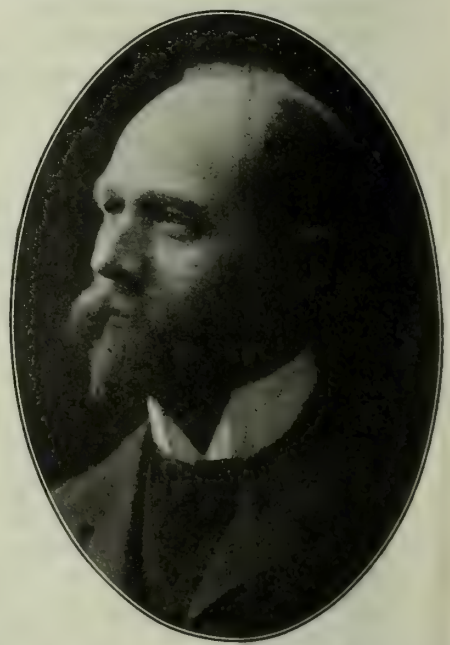
A delinquent was soon discovered "I see Wm. Cummer," announced the Colonel. "I fine him two tickets for making the washing machine that ripped the buttons off Willie Wood's pyjamas." Amid load laughter the policemen hunted up the offender and made him buy the extra tickets.

Charlie Magie, of the Welland Vale Co., was next to come under the magisterical eye. He was fined 4 tickets for "making manure forks that wouldn't manure." This time the offender was marched by the officers up to the head table and compelled to disgorge there.

Harry Wright of E. T. Wright Co. was mulcted three tickets for "taking the retailers through his old dungeon of a factory." The prisoner put up a strenuous kick on his appearance before the beak and was peremptorily fined 2 more for back talk.

Victims were picked out on every hand. Mr. Carrick was hauled up for "making stoves when coal is so dear," Geo. Spence was "soaked" for not being married; Charlie Deitrich laughed too hard at a certain joke told by one of the speakers and was promptly hauled up and assessed; the same joke cost Mr. Dingyee, of the Disston Co., 4 tickets.

About this time the company began to think the process could be reversed and Mr. Wood, who was in the chair, took the initiative with the suggestion that Arthur Hatch be fined all the tickets



POLICE CONSTABLE DAN. CINNAMON.

that were left. It looked for a moment as though the joke had been effectively turned but the doughty Colonel was equal to the occasion. He promptly summoned the police force.

"Attend to this man Wood," he

ordered. "He's fined 4 tickets for contempt of court!"

The fine was paid.

About this time William McMahon of the Union Drawn Steel Co., started to leave the room. The police force pounced upon him and hauled him before the bench, where he was mulcted 4 tickets for attempting to leave the room and resisting arrest. The only culprit to successfully resist the iron hand of the Hatch law was Harry Wright. Although once bitten, he unwisely drew the magisterial attention to himself again with the result that the police force was despatched to "bring him in." He resisted vigorously, calling loudly on the company not to stand by and see an injustice done. He finally got away and thereafter hovered on the outskirts.

As the machinery of legal extraction was grinding too slowly it was decided to resort to open highway methods. Accordingly lots of 5 and 10 were offered at auction and knocked down at anywhere from $10 to $20. Sometimes the lots were knocked down to people who had not bid at all. For instance, a bid of $10 from a far corner of the room carried off one package of 5 tickets. "Sold to H. S. Alexander," announced Colonel Hatch. The police force saw that the victim promptly "pungled in" with the ten spot.

At the finish one lot of 10 tickets was left and by the unanimous voice of the meeting this lot was given to Colonel Hatch for the small sum of $20. And so scores were evened off.

President McGregor was then deputed to pick the winning tickets from a hat and the prizes were apportioned off in that way.

MAKING WIRE AND FENCING

One of the most interesting plants visited by the hardware merchants during the convention last week was that of the Frost Steel and Wire Co. Here the hardware dealers had explained to them all the interesting processes of wire drawing, galvanizing and the manufacture of wire into woven fence, as well as getting the wire ready for a great many other usages to which it is put.

The rolled rods or raw material of different sizes are unloaded from cars by a large electric crane, after which they are taken in ton lots into the cleaning house, where they are passed through a pickling solution of sulphuric acid and hot water, which cleanses them from dirt and all foreign substance. After being rinsed, they are dipped in a tank of slacked lime, which is baked on the surface and keeps the rods clean until they are taken to the draw blocks, where they are cold drawn down to whatever size of wire is wanted. The smaller the wire required, the oftener the operation of drawing down is repeated.

Next comes the galvanizing mills, where the wires are coated with a solution of spelter or zinc to prevent rust. Before the wire passes through the molten zinc, however, it is taken through molten lead of a temperature of about 960 degrees. This process not only toughens the wire, but by the speed in which it is taken through is determined the temper or hardness of the wire. From this lead tank it goes through a vat of muriatic acid and hot water, which is another process of making the wire absolutely clean, as the zinc will not properly adhere to it if there is any dirt whatever on the wire.

The wire, which is kept continually on the move, comes through a large pan or kettle of melted zinc, which adheres to it and forms a coating or galvanizing, which prevents rust. This coating, originally, is somewhat rough, but it is smoothed over by rubbing the wire with hard pieces of asbestos, which are pressed down on it by means of screw wipers

A cold water bath is the next operation, which cools the wire off, and it is rolled up by a set of reels all working together in the large take-up frame. The average coils, when bundled up ready for shipment or to go on to the fence machines, weigh about 150 lbs. each.

The automatic fence looms, which weave galvanized wire into ready-made fence, were an education to the hardware delegates, particularly those who are wire fence dealers. The practical information picked up will be of great help to them in their selling talks.

Some of the automatic machines were making farm fence; others, ready-made lawn fence; some poultry fence. As one delegate remarked: "They seemed to be almost human in the work they do."

The barb wire machines received considerable attention, as did the explanations given regarding the systematic workings of a large fence factory, the chief aim being efficiency, which results in the largest production by a low cost.

The gate department proved to be most interesting. Here, steel tubing is bent, electrically welded at the joints, galvanized, and "filled" with woven wire. The welding process was particularly spectacular.

COMPLETE REPORTS LAST WEEK

A complete report of the proceedings of the Twelfth Annual Convention of the Ontario Retail Hardware and Stove Dealers' Association appeared in last week's issue of HARDWARE AND METAL. *Although the Convention was not concluded until Thursday, a full report of the discussions, question box sessions, election of officers, reports of officers and committees, etc., appeared in last week's issue. Several retailers have commented on the promptness with which the report was published. The effort was undertaken in order to give what* HARDWARE AND METAL *has always striven to give—the best possible service.*

Exports of Oil Cake Shut Off

Several Cars of Seed Have Reached Toronto—With Export of Coke Shut Off Prices for Oil Will Probably Hold Firm for Some Time.

FROM a supercvial glance at the conditions in the linseed oil trade it would appear that conditions would point to easier prices in the not distant future for linseed oil. During the past week several cars of flaxseed reached Toronto and on first glance this might seem to indicate that crushers may soon expect to get plenty of seed from the West. As a matter of fact conditions do not warrant optimism that a plentiful supply of seed will reach Eastern points. It is understood that as yet there has been no arrival of seed to the crushers in Montreal. But as one oil man who is a careful observer of conditions pointed out to HARDWARE AND METAL, even if crushers could get all the seed they could handle, there would probably be firm prices in linseed oil for some time to come. He based his opinion on the fact that the exports of oil cake are now shut off through the operation of the embargo both to Canadian and American crushers. With the coming of the grass feeding season there will be a decreased demand for oil cake for home consumption. Oil cake would become a drug on the market and crushers would have to get firm prices for their oil in order to make up for the loss of a market for the oil cake. Furthermore, another factor that militates against lower prices in linseed oil is that without exception crushers have anticipated their needs with respect to seed and have consequently purchased at somewhere near present high prices. Even should the price of seed come tumbling down there would be no prospect of easier prices until the crushers had worked out their present stocks which have been pur-

(Continued on page 41.)

Keeping Trade at Home

Methods Adopted by Various Communities to Boost Trade in Home Stores and Restrict Buying Outside—How Splendid Results Have Been Obtained in Many Towns—Boosting the Market

EDITOR'S NOTE.—*Despite the fact that the accompanying article from* SYSTEM, *the Magazine of Business, deals exclusively with experiences in American towns, it is reprinted because of the big lesson that it drives home. Merchants who sit back and groan over the aggressiveness of the mail order houses should read this article carefully. It tells how the merchants of any community can join in combating the outside buying tendency by concerted action.*

ONE day last fall a number of merchants and business men of Cadillac, Michigan, might have been seen making their way along the country roads to various neighboring farms. Each man had a potato fork over his shoulder. Most of the stores and places of business in Cadillac were closed for the day.

The men were not having a holiday, however. They had learned that the farmers could not get the necessary help to dig their potato crops—even though they offered four dollars a day—and the potatoes were in danger of freezing in the ground. The business men of Cadillac had turned out to do what they could for the farmers. They did not finish digging all the potatoes, but they at least gave considerable help that could not have been obtained for money, and what was more, they furnished a proof of their willingness to co-operate with the farmers for the good of the community.

Not every community has a potato crop that is in danger of freezing for want of diggers. But business men are finding that there are any number of ways in which they can co-operate with the people of their community to the end that better feeling may prevail and—the real point at issue—the buyers will place their orders at home.

Competition is becoming tremendously keen, and in nearly every community there are forces at work trying to draw orders away from home. The neighboring larger town or city often gets a good share of the business that local merchants might expect to secure. And there almost always are inducements for the customer to sit down at his leisure, finger through a big catalogue, and send his order away by mail.

Counteracting Methods

How can merchants counteract all these forces that tend to draw trade away from them?

In many places merchants find that as individuals they cannot compete effectively against these forces. They are realizing more and more that it is necessary for them to work co-operatively, even with their local competitors, in order to meet the attacks of their more-to-be-feared outside competitors. Hence such undertakings as the potato-digging day in Cadillac, which was intended to bring home to the farmers the willingness of the merchants and business men to serve local interests and the desire to bring about better feeling.

Similar or different methods to check outside competition are being used in other cities. This article—which has developed as the result of an investigation among 74 towns—describes some of the methods which are proving most effective.

Elyria, Ohio, is a good example of a city which has faced outside competition squarely, and is doing constructive work to build up home trade. The "Buy-at-Home" division of the Elyria Chamber of Commerce decided to find out just how much trade was going out of the town, and why the people of Elyria preferred not to buy off local merchants.

A careful check was made of all goods delivered daily to individuals by freight, express and parcel post from out-of-town concerns. In addition, a questionnaire was sent to five hundred householders, asking them to tabulate their experiences regarding the service to be had in local stores, the completeness of stocks, fairness of prices, and the like.

A mass of information was secured in this way. With this at hand the committee called a meeting of all local merchants and laid the facts before them. The report submitted was a revelation to practically all of the merchants. In the first place, they could hardly believe that such large quantities of goods were actually being bought out of town. In the second place, many of the replies received to the questionnaire created still greater surprise.

Signatures had not been asked for on the question blank, so people felt free to criticize. They exercised the privilege in full. Of course, a certain proportion of the complaints were unreasonable, but in many cases they were backed up by statements of actual incidents and were apparently justified. A few of the criticisms, taken from the bulletin laid before each merchant at the meeting, are given below. The various complaints were classified according to lines of business:

Dry Goods—Not enough articles of one kind—underwear, coats, shirts, dresses, and the like. Clerks talk about customers to other clerks in hearing of customers. Clerks do not know goods. Children's clothing selection very incomplete. Waited one hour for five yards of towelling.

Meats—Prices too high. Not shown and handled in sanitary manner; left exposed; handled with dirty hands.

Shoes—Do not carry good line of sizes and widths. No assortment of overshoes. Clerks visit.

Clothing—Cater to cheaper trade only. Assortment lacking in boys' clothing, children's hats and bonnets.

Suggestions_____

Associations in some towns have made out surveys as above. The "Trade Survey" Slip.

Stocks incomplete; can't fit any but standard sizes.

Groceries—Goods not invitingly displayed. Prices too high. Inferior goods substituted for those ordered. Favoritism shown in waiting on customers. Dogs allowed in stores.

Hardware—Stocks too much like those of ordinary country stores — little variety.

General—Clerks inattentive and ignorant of stock. Children imposed upon. Merchants agree to order goods not in stock, but do not keep promises.

Deliveries—Delivery service often unreliable; young children employed; packages tossed about and handled in insanitary manner.

This report convinced the merchants that it was up to them to do something. They decided that a "Buy-at-Home" campaign in Elyria was out of the question until there had been a general house-cleaning by the merchants themselves. A fund was quickly raised, sufficient to provide for a series of lectures upon salesmanship and better business methods in general.

Series of Lectures

The first lecture in the series was given by an expert, following a week's personal study of the situation. During this time he visited most of the stores and talked with many customers. A second lecture was given three weeks later by another sales authority after a similar personal investigation. Neither speaker took pains to spare anybody's feelings.

The second lecturer in particular was able to give names in specific instances of carelessness, inattention and poor service, as well as poorly selected stocks, faults of delivery, too liberal credit, and the like. He did not mince his words, for he was convinced that in order to effect a cure it might be a good thing to hurt the feelings of some. A heated discussion followed his address. Several of the merchants showed that they had been deeply cut by his remarks. There could be no doubt that every man present was compelled to think about his business as perhaps he had never thought about it before.

Profitable results from the lectures were apparent almost at once. One of the department stores, for example, was the store against which perhaps the greatest number of complaints had been lodged. The trouble with this store had been a lack of attention to customers by salesmen—this was due to the absence of proper supervision. In the replies given on the questionnaires, cases had been cited of customers with whom the salesmen were not acquainted, who had walked up and down the aisles for more than an hour, and had left the store without receiving attention. Again,

Roads like this drive farmers to the rival town.

no effort had been made to greet customers entering the store, to direct them to proper departments, or to make sure on their leaving that they were satisfied.

As a matter of fact, the heads of the business were entirely unaware of this customer's dissatisfaction. The store offices were located in the rear of the third floor, and the management was quite out of touch with actual conditions.

As a result of the investigation this store was completely reorganized. The management moved its offices to the first floor, near the front entrance. Here it is possible to keep constantly in touch with customers and salesmen. Every customer entering the store is now met by a member of the firm and directed to the proper department. When he leaves the store, a tactful effort is made to learn whether the service he received was entirely satisfactory—and if not, adjustment can usually be made at once.

A further result of the series of lectures, for the merchants as a whole, has been the organization of a class in salesmanship in the local business college.

The merchants have not only urged their salespeople to take this course, but in a number of instances have paid half the tuition for them.

Get-Acquainted Trips

Following this thorough house-cleaning on the part of the merchants, the "Buy-at-Home" committee made a number of "get-acquainted" trips among farmers within a fifteen-mile radius of Elyria. On these trips the members left attractive souvenirs at each home, together with rebate coupons allowing the holder a discount of 25c upon purchases of goods amounting to $1 or more from any of the Elyria stores whose names appeared on the back of the coupon.

Over six thousand of these rebate coupons were issued. Each user was required to fill in his name and address when he turned in his coupon. In this way an excellent mailing list was compiled.

As a further step towards meeting mail order competition the following pledge has been signed by practically every Elyria merchant:

We, the undersigned merchants of Elyria, agree to meet the prices for the same goods, of the same style and quality, offered under the same conditions by any mail order house or outside retail dealer.

Results Are Shown

The Elyria "Buy-at-Home" campaign has been in operation considerably less than a year—many of its details are not even yet worked out. However, tangible results are already apparent. People of means who had been accustomed to going to Cleveland for their purchases are now entering local stores for almost the first time in many years. The reorganization of the various stores has secured deserved recognition, not only among local people, but among country buyers as well.

The success of the methods worked out in Elyria has been so marked in helping to keep trade at home that some thirty other cities scattered over the Middle West are already putting in operation similar campaigns, modified, of course, to meet local conditions.

The Commercial Club of Wabash, Indiana, for example, has carried out a "Buy-at-Home" campaign along lines similar to those used in Elyria. Local newspapers have supplied valuable cooperation in connection with the campaign.

A common objection which farmers used to urge against trading in Wabash was that it was a poor produce market—they said they could get better prices in other cities. This condition was thoroughly investigated, and a front page article appeared in the several local papers supplying the actual facts. Com-

parative figures were quoted from the morning's market reports showing that Wabash was not only as good a market as the cities near-by, but in a number of instances from one to five cents more was paid for produce than elsewhere.

In the Wabash campaign the policy of urging the purchase of goods in Wabash has been carefully avoided. Efforts are directed to the improvement of local conditions. When faults are corrected the papers advertise the facts to show farmers that mutual trading is to the common interest of both country and city.

How Much Business Merchants Should Secure

The chief feature of another "Buy-at-Home" campaign—that conducted at Galion, Ohio—has been a so-called "trade survey." Galion is a city of ten thousand population. It is surrounded by a rich agricultural district. Galion merchants wanted facts on the amount of business that was going from their community to cities near-by and to the distant mail order houses. Accordingly, a "trade extension" division was formed in the local Chamber of Commerce. The plan decided on was to make a survey of the trade territory within a radius of twelve miles of Galion. The survey had a two-fold purpose. In the first place, the merchants wanted accurate information on where people were buying, and why. In the second place, they wanted to build up a reliable mailing list.

As a result paid investigators were employed. They made house-to-house calls and secured the required information, which they wrote on survey slips, like the one illustrated. About 75 families were reached daily, and in all the investigators got in touch with 5,000 families. The tabulation of replies brought forth many interesting facts. For one thing, more than two-thirds of the people interviewed were buying in Galion. Of the remainder the investigators were convinced a large portion could be induced to buy if Galion's trade advantages were properly presented.

Typical replies to some of the questions on the survey slips were these:

Can't get things when we want them.

We can get more for our butter at B——, so we buy there.

They blame slow deliveries on the railroads, but last week we got a mail order shipment from Chicago right on time.

Dirty store windows.

Dangerous railroad crossing just outside of the city.

Inattention of clerks.

These, of course, were from dissatisfied people. Very many thought conditions were all right. The information, however, revealed to the Galion merchants certain weaknesses, which they set about at once to correct.

Elyria, Wabash and Galion are all good instances of cities which are planning intelligently to keep trade at home. Each city has deliberately set out to learn its faults—and once it knows the truth, has endeavored to remedy its weak points and to make local buying so attractive that people will not care to trade elsewhere.

On somewhat different lines Trenton, Missouri, has been doing equally effective work towards keeping trade at home. There the efforts of the merchants have been directed to building up a strong community spirit. The local commercial club has made the farmers eligible to membership, and now the town and country people are working all the time to push forward their common interests.

In a Better Community Feeling

The imaginary boundary line which used to keep town and country a little apart, exists no longer. From a municipality of seven thousand population, covering four square miles, the city has been transformed into a Greater Trenton, with a population of twenty thousand, and covering some four hundred square miles. The consolidation of schools, provisions for expert instruction on the care of soil and the proper feeding of stock, the building of better roads, greater emphasis on the importance of proper sanitary conditions in houses and barns, are but a few of the many means the club has used to advance community interests.

Not a word is said, however, about buying at home—and no appeal of the sort is necessary. The Trenton farmer buys his goods in Trenton instead of sending his order to the catalogue houses, because he realizes he is getting honest values, and because he feels that his interests and the interests of Trenton merchants are interdependent.

Scores of other cities and towns are finding in the local community club a means of breaking down the imaginary boundary line between country and town. That the community club succeeds as well in the small village as in the city is shown in the good record of the Kiester Community Club, of Kiester, Minnesota. Kiester has a population of only 258, yet there are over 160 active workers in the Kiester Community Club.

One of the conspicuous achievements of this club has been a series of four "good roads days." Townsmen and merchants did the shoveling and farmers furnished the teams. On the last "good roads day" a picnic dinner in the village park was served to the farmers. During the winter months the entertainment committee has kept interest active by arranging debates on farm subjects and addresses by State agricultural agents on silos, dairying, stock-raising and kindred subjects.

Does the merchant, as well as the farmer, benefit by the community club? In Trenton and Kiester they believe he does. Approached in the right spirit, the farmer is glad to give when he gets. Meet him half-way, they say, and it is easy to convince him his interests are identical with those of his city brother—that without the farmer the town could not exist—and without the town the prosperity and markets of the farmer would suffer seriously. Build the right foundation, they urge, and the farmer will think twice before he listens to the inducements of out-of-town competitors.

How a Community Paper is Bringing Results

One way in which a number of towns are laying this proper foundation is through a community paper. About two years ago, for instance, the merchants in Lisbon, North Dakota, decided to publish a journal of their own. Twenty merchants agreed to take sufficient advertising to pay the publishing and editorial cost. This "Get-Together Magazine," as it is called, is published eight months out of the twelve, and is sent without cost to the people of Lisbon and to the country district tributary to Lisbon. It contains 32 pages, two-thirds of which are devoted to advertising. The editorial section is filled with articles of timely interest to townspeople and farmers alike.

Many other communities besides Lisbon have found that papers of this sort serve a definite purpose in building home trade. The community paper satisfies a need which the country newspaper cannot always fill. It brings the merchants of a town to an appreciation of their mutual interests in building up home trade—gives them an advertising medium more valuable, sometimes, than the ordinary small-town newspaper—and provides a means of creating a bond of fellowship between merchants, townspeople and farmers.

All these plans are only different expressions of the realization among merchants that trade may be slipping away, and unusual means must be used to keep it at home. In these various campaigns the appeal to buyers is not made on the basis of sympathy, but rather on the basis of actual, tested service, and dollar-for-dollar value against what the out-of-town competitor can furnish. The results accomplished show what may be done when merchants work in close co-operation.

Standard, Alta.—The Standard Supply Co., hardware and implements have sold to O. P. Larsen.

EDITORIAL COMMENT

DO COMBINES EXIST?

THE Minister of Labor has called the attention of certain firms to "alleged illegal practices," which it is claimed are responsible for many high prices. It is claimed that domestic trade is largely throttled by combines and agreements, and that consumers are being victimized. The Minister, however, directs attention to the fact that the retailers are not receiving undue profits, and their prices are not immoderate. It is quite evident that the investigations have been conducted largely among the manufacturers, wholesalers and retailers of foodstuffs. The Minister states in part, as follows:

"These inquiries and investigations, however, have revealed a widespread system in active operation of buying and selling agreements and arrangements long established by manufacturers and jobbers of various foods, and forced upon retail merchants, fixing commissions, prices, etc., preventing wholesome competition and freedom in domestic trade, restricting the same, and tending to enhanced cost to the consumer."

So far as hardware lines are concerned, the retailers are certainly not taking undue profits. In many instances the retailers have been very backward in advancing prices. It is not uncommon to find retailers selling goods retail at less than wholesale prices. Just how far the Ministers investigation has gone, is not stated. One thing is certain, however, something more drastic than a mere request from the Minister of Labor for a discontinuation of the practices, will be required to oust the "illegal practices," if any exist.

NO SUDDEN DROP COMING

FOR some months past many buyers have followed a very conservative course. Some have unloaded stocks of goods at low prices in order to get from under before the crash comes. In some cases they could hardly be criticized, because it was generally felt some time ago that the top of the market had been reached and that lower prices on many lines were in the offing. Events of the past two months have made it quite clear, however, that high prices are going to prevail for some considerable distance into the future. Prices of many commodities will go still higher, before there is much chance of a decline. This is particularly true regarding hardware products. There is now a greater shortage of many basic materials than at any time since the outbreak of the war. Prices generally are firmer, and the output of many mills is contracted for up to the end of the year, and in some cases into 1918. Some authorities express the belief that the only reason why many mills have not sold up well into 1918 is their unwillingness to contract so far ahead. The average dealer cannot comprehend the immense tonnage of foreign business being rejected. It is stated on good authority that no matter when the war ends the United States steel and metal mills will have enough business on their books to keep their plants running full capacity for at least six months ahead.

There is a feeling now that the war will continue for at least another year, and perhaps longer. There is even now great danger of further complications in the international situation. There does not appear to be any good reason why there should be any appreciable decline in prices of hardware lines for many months to come.

THE AMBITIONS OF LETHBRIDGE

THE duty of the local Board of Trade is to improve the conditions of trade in the locality. Sometimes this ambitious task is carried out successfully. Seldom, however, is it undertaken so thoroughly as in the case of the Board of Lethbridge, Alberta.

Here, in a nutshell, is what they are aiming to achieve out in the shadow of the Rockies where seemingly the mail order menace is felt just as keenly as back east where the catalogue houses abound!

The Lethbridge Board of Trade is organizing the retail merchants of that city to withstand the assaults from the catalog houses of the east. There is no suggestion of any artificial protection, but the proposal is that there should be improved business methods in some direction and a certain amount of co-operation, which would be of advantage to all.

In the first place, the Board of Trade suggests that the merchants have two distinct prices, one a cash price and the other a credit price. In that way the customer may be encouraged to do a cash business. The board also encourages the merchants to limit their credit business as much as possible. The credit business has wrecked many a promising undertaking.

Another move suggested by the Lethbridge board is to have some co-operation in the way of delivery. If Lethbridge is at all like Calgary, an amount of money is wasted by competition in delivery. A central delivery would be a very businesslike arrangement in any city.

The Lethbridge Board of Trade would do well to go even further than that and induce the merchants to encourage their customers to carry their own parcels. If purchasers would carry parcels of a moderate size, the cost of the storekeeper would be greatly reduced. Of course, the customer forgets that in the long run he pays for the delivery.

Good work, Lethbridge. The ideas are sound and sensible. Only—don't forget that the road to commercial stagnation is like the road somewhere else; it is paved with good intentions. Let actions follow the pronouncement of this fine programme and all Canada will sit up and—take lessons.

* * *

PRESIDENT WILSON is still looking for an "overt act." Some people are so hard to please.

EVENTS IN THE TRADE

Business Changes

Toronto, Ont.—Leake & Son, hardware, have sold out to Wm. Howarth.

Minitonas, Man.—Laing & Co., hardware, have sold out to Abraham & Co.

Turtleford, Sask.—E. E. Le Borde is discontinuing his hardware and tin business.

Robart, Sask.—Melina & Hellinger, hardware and implements, has been succeeded by John Hughes.

Obituary

Ayton, Ont.—The death occurred here of Aaron Wenger, for many years engaged in the hardware business.

Personal

J. A. Hossack of the Lufkin Rule Co., Windsor Ontario was a business visitor in Montreal this week.

A. L. Fitzgerald, of the Merrick-Anderson Co., Ltd., Winnipeg, left last Saturday for a week's business trip in the South.

J. M. Lynch, buyer for the Merrick-Anderson Co., Ltd., Winnipeg, returns next week from San Antonio, Texas, where he has been spending the past few weeks, holidaying.

Industrial Notes

Three Rivers, Que.—The Quebec Steel Foundries, Ltd., are building a plant here.

Trenton, Ont.—The British Chemical Co. have extended their plans and have purchased a large block of land in Patricia Park

Montreal, Que.—The Montreal Locomotive Co. have taken out permits for the erection of four distinct additions to their plant. All of these buildings will be located on Notre Dame east.

Hull, Que.—The Hull Iron & Steel Foundries are making extensions to their plants. They have also opened a sales office at 165 Broadway, New York City, to take care of their export business.

Eburne, B.C.—The British Pacific Iron & Steel Co. has placed an order for open-hearth furnaces for the steel plant they will erect on the Fraser River, near Eburne. A site of 10 acres has been secured.

Windsor, Ont. The Canadian Oil Co., proposes to erect a factory for the manufacture of oils, paints, etc. A by-law will be prepared and a vote taken on the question of the city selling a site on Howard Ave. to the company.

Dayton, Ohio.—The Dayton Rubber Co. have just completed arrangements for the erection in Dayton, Ohio, of a large new factory which will have a capacity of 1,000 tires a day. The plant will be ready for occupancy about June 1.

Guelph, Ont.—In a few weeks the International Malleable Iron Co., expects to proceed with the erection of a large addition to their plant. The new building will be 216 feet long, one storey high. Tenders are now being received for the construction.

Kitchener, Ont.—V. O. Phillips and Sons, Kitchener, Ont., have made application for a permit to erect a new addition 60 by 100 feet, to the plant of the Twin City Oil Company, for the purpose of manufacturing a visible gasoline pump, having purchased the Canadian rights.

J. E. PENFOUND,

Who has joined McArthur, Irwin Limited, and will look after the interests of dealers in Toronto and Northern Ontario. Mr. Penfound was formely Western Division Manager of Brandram-Henderson, Limited, with headquarters at Winnipeg.

Campbellford, Ont.—Work has begun on the rebuilding of the Dickson Bridge Co.'s plant here, which was burned some weeks ago. It is stated that the National Mfg. Co., of Ottawa and Brockville, have purchased a controlling interest, but that the firm will still be known as the Dickson Bridge Works Co.

Hamilton, Ont.—The carbon & Alloy Steels Co., Ltd., has obtained a Dominion charter, with an authorized capital of $1,500,000, and will erect furnaces and a foundry plant here, for the manufacture of steel castings, ingots, etc., by the Moffat electric process. The company will also take over the Moffat-Irving Steel Works of Toronto, which will be moved to Hamilton and added to the new plant.

Montreal, Que.—The Thomas Davidson Mfg. Co., have taken out a permit to erect a plant near the Lachine Canal, between the Canada Car and Dominion Mahogany factories, to cost in the vicinity of $25,000. This plant will have dimensions of 200 x 50 ft. and will be used for the manufacture of munitions while the war lasts and then will be used in the manufacture of the company's ordinary product.

Ohio Varnish Co. to Open Canadian Plant

It is understood that the Ohio Varnish Co., Cleveland, Ohio, manufacturers of Chi-namel, will in the near future open a Canadian plant. The company has been doing business in Canada for upwards of six years. It is probable that the plant will be located at Toronto.

CATALOGUES AND BOOKLETS

Auto Accessory Catalogue

A new automobile accessory catalogue has just been issued by the Northern Electric Company, Limited, Montreal. The front and back cover designs were made by Myron Perley, who is one of the greatest commercial impressionistic artists on the American Continent. These designs were reproduced from four-color plates, and give an unusually pleasing effect. The catalogue contains a very complete listing of high-grade electrical accessories for automobiles, motor boats and motorcycles. There are 118 pages in the book, as well as the general index and a special Ford material index.

Catalogue in Spanish

Jenkins Bros., Limited, Montreal, Canada, manufacturers of valves, have entered the leading markets of South America. In this connection they have issued new catalogues, one No. 8-S., printed in the Spanish language, and another, No. 8-P., in Portuguese, both of which fully describe and illustrate valves and mechanical rubber goods suitable for the requirements of power and industrial plants, mines and office buildings.

Veterans in the Trade Pass Away

Wm. H. Evans, Well-Known in Paint Circles, Died in Montreal—Late James Chalmers, Over 30 Years With McClary Mfg. Company.

IN the brief note in last week's HARDWARE AND METAL announcing the passing of William H. Evans, members of the paint trade and hardware business over Canada from coast to coast read of the death of an esteemed friend and veteran of the paint business.

The late William H. Evans came originally from Liverpool, England, and when he first came to Canada in the years of Queen Victoria's reign, just previous to her Jubilee, he was associated with McDougall & Logie. Later he was with the Alexander Ferguson Co., and when these two firms amalgamated and formed the Canada Paint Company Mr.

The Late W. H. EVANS.

Evans was appointed sales manager. For twenty-five years he was with the Canada Paint Company in Montreal, Toronto, and Victoria, B.C., and his business acquaintance in all intermediate cities of importance was exceptionally wide.

He took charge of the Canada Paint Co.'s offices in Victoria, B.C., until the firm, concentrating their executive energies on the Eastern centre, disposed of their offices on the Coast. Mr. Evans then returned East and became sales and advertising manager for the firm in Montreal and Toronto, which position he held until he engaged in business for himself as a manufacturers' agent, representing British firms in the paint and chemical business on a large scale.

In this capacity Mr. Evans travelled widely in Canada, and enlarged his acquaintance, so that there is probably no city in the Dominion in which the item announcing his death has not been read with regretful interest.

A serious automobile accident, no doubt, contributed to the acceleration of his passing away, for though a man of splendid health, Mr. Evans suffered from the shock after being run down by an automobile on St. Catherine Street, Montreal, some four years ago. His leg was fractured in the accident, and, although he made a good recovery, and was still further recuperated by a visit to the Old Country, his activities were lessened by the mishap. One of the oldest members of the St. James Club, and a valued member of the Church of the Advent, he passed away at his home, 127 Clandeboye Avenue, Westmount, on Tuesday, February 20. He is survived by his widow. His funeral was attended by many friends.

JAS. CHALMERS PASSES AWAY

THE death occurred recently at his home, Strathroy, Ont., of Jas. Chalmers, for thirty years a traveler for the McClary Mfg. Co., London, Ont. The late Mr. Chalmers was one of the best known and best liked travelers on the road. "Jim" as he was familiarly known, devoted most of his time to covering Western Ontario for his firm, although many years ago he made a trip through the West as far as British Columbia in the interests of the firm he represented. He was born on March 30, 1841 and was 73 years of age before he retired from the road. At the age of 29 he left the farm and for 14 years engaged in the retail stove and tinware business. The knowledge he had gained of stoves, tinware, etc., in this way stood him in good stead when he joined the staff of the McClary Mfg. Co.

"Jim" Chalmers made many friends. He was a big man physically, had a strong face lighted by a pair of twinkling, humorous eyes. He received a warm welcome wherever he called, a welcome won partly by his long association with those he called on, but mostly through the force of his own personality. He did a great deal of driving and had won the reputation of being a hard worker. His calls included a great many of the small towns, where he had built up a large circle of friends.

HARDWARE LETTER BOX

Electric Ranges

Robt. McVittie, Southampton, Ont.—Please give names of manufacturers of electric ranges.

Hughes Electric Heating Co., Toronto; National Electric Heating Co., Toronto; McClary Mfg. Co.., London, Ont.; Moffatt Stove Co., Weston, Ont.; Hotpoint Electric Heating Co., Toronto. —Ed.

EXPORTS OF OIL CAKE SHUT OFF

(Continued from page 35.)

chased and are at the head of the Lakes in most instances waiting to be moved by the railways. Linseed oil has been in

The Late JAS. CHALMERS.

big demand from crushers, but they have not been in a position to book orders through the uncertainty of the seed situation. During the past week there has been a firming tendency in prices for linseed oil, the range being within 1c. variation, the lowest being $1.39 per gallon for raw and high $1.40.

CATALOGUES WANTED

Fire recently in the hardware store of John Stewart, Westboro, Ont., destroyed all catalogues. Mr. Stewart has opened a hardware store at 648 Somerset Street, Ottawa, and would be glad to receive catalogues from manufacturers.

Geo. A. Marshall, 70 Lombard Street, Toronto, has been appointed Eastern representative of the Erie Handle and Basket Co., Leamington, Ont.

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

Prices of hardware continue to advance, and there is no evidence of weakening in the prices of iron and steel products. Even though the war should cease suddenly, which is not likely, prices would not move downwards for some time.

Stocks of ingot metals in Canada are very light and prices are firm. Tin advanced further in price during the week, owing to submarine activity and increased insurance rates. The pig-iron situation is unchanged, and some furnaces in both United States and Canada have closed down. The demand for iron and steel is as insistent as ever. Wholesalers have experienced great difficulty in securing deliveries of supplies, owing to the freight congestion. One large wholesaler is anxiously awaiting the arrival of four full cars of freight, one of which was shipped in November, two in December and one in January. A new standard auger bit list has been issued, and new net prices are out on game traps.

There has been a general advance of approximately 10 per cent. in the price of all makes of Canadian builders' hardware. There have also been advances on liquid glue, night latches and padlocks, pocket knives, sash weights, sisal halters, steel hoops, sidewalk scrapers, crosscut saws, shoe thread, auger bits, knife handle wrenches, hog ringers, sad irons, black sheets, gasoline, benzine, coal oil, hemp and jute sewing twine, old materials. Linseed oil is still in firm position in spite of the fact that some cars of flaxseed have been received by Eastern crushers. The shutting off of exports of oil cake and a decrease in domestic consumption with the coming of spring grass for feed is expected to be a factor that will keep prices firm even should seed decline.

MONTREAL MARKETS

MONTREAL, March 1.—Once again the markets for hardware and all the lines manufactured of metals which come within the scope of the hardware trade show advances. The wire products show the most changes this week, but there are many important changes also in the lines of shelf goods, notably a new list on auger bits, and a new list on liquid glues. The shortages of plates continues. There are very few bright plates, and Canada plates to be found. Many other lines are off the market for all but the most infinitesimal enquiries. Further advances in many hardware lines are believed to be imminent, though the past week has been rather a lighter one for the "change-list" men than they have experienced quite frequently of late. Demand for maple sugaring hardware begins strongly now, and there is a renewed demand for munition making hardware. Good business is in the main reported, but traffic congestion still keeps business back a good deal.

Important Changes In Shelf Goods

SHELF GOODS.—It is known that a number of shelf goods items are likely to show changes in price and price adjustments (mostly upwards) in future, and leading wholesalers in Montreal are making revisions of such matters as come within their range. The opinion still strongly prevails amongst wholesale houses that the retailer is continually losing here and there by not following his market changes rapidly enough.

Sandpapers Advance

The cost of glue is principally responsible for the advancing prices of sandpaper. B. & A. sand paper is now quoted at plus 15 per cent. and Garnett, and plus 50 per cent. There may be further advances on sandpapers.

New List on Glues

Two well known brands of liquid glue, Le Page's and Chase's are advanced substantially this week. Following are the list prices on the new revised list issued, which applies to both the brands mentioned per dozen:—1 oz. $1.06; 2 oz. $1.67; half gill $1.80; 1 gill $2.80; half pint $4.50; 1 pint $7.00; 1 quart $11.25; half gallon $21.00; 1 gallon $40.00; 6 gallons $231.00.

All prices quoted are per dozen containers, and the discounts are for Le Page's 25 per cent off, and for Chase's 35 per cent. off.

Builders' Hardware Up

As predicted in HARDWARE AND METAL last week, builders' hardware, Peterboro' Belleville, and Yale goods, all come in for an advance by at least ten per cent. this week. Practically everything in the scope of the term builders' hardware is affected. Demand is not very strong for this line but the advances hold because of cost of manufacture. Door checks have escaped the advance apparently, but there's no certainty even about them.

Night Latches and Padlocks

Yale night latches are advanced ten per cent.; Yale padlocks have advanced only five per cent. according to Montreal information.

Hinges and Butts to Advance

Advances are practically certain to take place shortly on heavy hinges and butts. Both wrought and fancy butts are likely to be affected.

Game Traps Costing More

A general advance on game traps, prices not calculated out to detailed percentage of advance is reported by a large wholesale firm in Montreal. All the familiar lines of what are known as "animal traps" are affected by this advance which is due to cost of materials and of manufacture.

Auger Bits Show New List

An important matter from the point of view of the hardware retailer is the issue of a new list of auger bits. This line has not been subject to a new list for a long time, and many retailers should note the altered prices with interest and profit to themselves. Here are the new list prices, the sizes being in "sixteenths" throughout, per doz.: 3-15th, $6.00; 4 8-16ths. $5.00; 9-10-16 per doz., $6.00; 11 12-16ths, $7.00; 13-14, $8.25; 15-16, $9.50; 17-18, $12.00;

19-20, $14.00; 21-22, $16.00; 24-16th, $18.00.

Different makers have their different discounts but the new list is effective on most frequently asked for auger bits.

Fine Wire Advances

An advance is noted in fine wire black and tinned. The advance takes the form of a discount change to plus 30 per cent. on Numbers 17 and finer grades.

Sash Weights Advance

Not exactly shelf goods, being in the class of the "heavies" sash weights, however, show advances this week. Solid are priced $2.55 and sectional $3.90.

Lumbermen's Tools to Rise

Another line of heavies predicted to be in for a further advance is Lumbermen's tools. This advance if it arrives is an upward movement almost unexpected considering that an advance took place only very recently. But in these days no advance in any line of metal made goods need be unexpected.

Files and Screws Short

Shortages in many lines and sizes of screws and files are again noted by wholesalers. There is an active demand again in munition trades.

Brisk Demand For Enamelled Ware

ENAMELLED WARE AND STOVES.—While the market for stoves, ranges, and heaters of various kinds is at present not making any price movements these are still within the province of possibility, and the demand being good with supplies scarce in the line of raw materials, firm conditions prevail. Enamelled ware is in particularly good demand and manufacturers in Montreal report that the lack of raw materials and slow deliveries of consignments of metals and other materials required in their business is hampering production, and tending to firm up the market continuously.

Rope Market Firm; Materials Scarce

ROPE, TWINE, ETC.—The market for rope and twines of all descriptions is exceedingly firm, although no actual upward changes have been recorded since the end of January. Manufacturers report serious hampering of the industry owing to shortages of raw materials and difficulties of getting supplies. Prices for binder twine are still unannounced for the current season, and there is every prospect that these when they do appear will be found exceedingly high as compared to previous years. The question of raw materials enters into this matter with exceptional strengthening influence. Principal rope prices are contained in current quotations.

Gasoline and Coal Oil Have Gone Up 1c

GASOLINE AND COAL OIL.—changes in price have been reported this week in the market for gasoline and coal oil, both of which products are in firm market, and the effects of transportation troubles are very noticeable in hampering arrival of supplies. The immediate demand for gasoline is connected principally with the field of industrial activity, and is reported steady and even brisk. So far, owing to snow covered roads, there has been little automobile demand. Coal oil in the various grades is quoted 1c per gallon higher this week, Royalite selling at 15 cents, and Palacine at 18 cents per gallon. Gasoline quotes at 30½-31c per gallon.

New Higher Prices On Various Wires

NAILS, WIRE, ETC.—Wire nails quote at the same base price this week as last week, that is $5.00 base in Montreal, and predictions are not absent from market opinions that they may yet go higher. Some hints have even been heard of $6.00 base especially if war's tenacles extend to United States when weird effects upon markets are anticipated. Cut nails keep at $4.70 base so far. Fence staples (plain) have gone to $5.10 base, and galvanized to $5.95 base. Hay wire in coils has advanced per hundred lbs. to the following standards of price: No. 13, $5.15; No. 14 $5.20; No. 15, $5.30. Car load prices 5 cents less per hundred lbs. Following prices are also quoted on cut hay baling wire, constituting a twenty-five cent advance; No. 9, $5.50 per hundred pounds; No.10, $5.55; No. 11, $5.65; No. 12, $5.75; No. 13, $5.85; No. 13½, $5.85; No. 14, $6.00; No. 15, $6.25

One large firm of wholesalers quotes the following prices on hay baling wire (cut) prices being plus 7½ per cent. No. 9, $5.10 per hundred pounds. No. 10, $5.15, No. 11, $5.25; No. 12, $5.35. No. 13, $5.35; No. 13½, $5.45; No. 14, $5.60; No. 15, $5.85. "Ironbrite" wire is quoted at $5.25 per hundred lbs. base f.o.b., Montreal, St. John, N.B., Toronto, Hamilton, and London; freight equalised, by one large firm. Bale ties are also advanced, the prices quoted being as follows per hundred lbs:—Bale ties. No. 12, $5.55; No. 13, $5.65; No. 13½, $5.70; No. 14, $5.80, No. 15, $6.00; No. 16, $6 25. Prices per hundred pounds fo.b. Montreal, Hamilton, Toronto.

Stove pipe wire No. 18 is priced at $6.45 per hundred pounds, No. 19, $6.95 per hundred, this week in Montreal. O and A wire prices have advanced 25 cents No. 10 now $5.41; No. 11 $5.47, and No. 12, $5.55. Smooth steel wire 0-9 gauge is now at $5.25 base.

The whole market for wire and wire products could not well be firmer, and under present conditions even higher prices later on might arrive relentlessly.

Advances Noted in Sheets and Plates

SHEETS, PLATES, ETC.—The shortages in sheets and plates, both plain iron, and galvanized, also tinplate, waster cokes, and tinned iron have inevitably firmed up prices, and firmer prices will be noted this week in tinned iron in case lots up to 24 gauge. This is now priced $16.50 and 26 gauge is $17.00 as will be seen in current quotations. Queen's head galvanized sheets are also advanced in price by 25 cents in case lots as compared with last week's current quotations, and 50 cents in less than case lots. Gorbals "Best-Best" remain as quoted last week in current quotations. One firm has advanced prices of black sheets over the quotations given in current quotations, but other firms selling in large quantities when supplies can be had sufficiently, still quote at current quotation prices. The advanced prices on black sheets as found in one influential quarter as regards smaller orders for these are as follows: No. 10 guage $6.60; No. 12, $6.70; No. 14, $6.45; No. 16, $6.50; No. 18, $5.80; No. 20, $5.80; Nos. 23-24, $5.85; No. 26, $5.90; and No. 28, $6.00 per hundred pounds.

"Band Iron" Is Not Made: "Band Steel" Now

IRON AND STEEL.—The market conditions affecting iron and steel are unchanged this week, if anything the various difficulties of the past weeks are intensified, though in certain cases where new business was being looked for, firms were found ready to book orders farther ahead than some of their competitors. There is considerable uncertainty in the whole market in view of the precarious position of the United States on the brink of war as many judge, inevitably. A point worth noting by many retail hardwaremen in the country districts is that the class of iron known as 'Band iron' is not manufactured any more. Band steel has supplanted this material in market usage, according to one very large firm of wholesalers who receive daily enquiries for the obsolete 'band iron'. It would be well for retailers interested to note this change in market conditions. No changes in price of the various iron and steel products listed below are noted

this week, but the market is very firm, and the nominal quotation of $38 to $40 per ton is still all that is available as a guide in this direction.

	Basis.
Common bar iron, per 100 lbs.	$ 3.40
Refined iron, per 100 lbs.	3.65
Horseshoe iron, per 100 lbs.	3.65
Norway iron	11.00
Mild steel	4.30
Band steel	4.30
Sleigh shoe steel	4.30
Tire Steel	4.50
Toe calk steel	5.20
Mining tool steel, per lb.	0.13½
Black Diamond tool steel, per lb.	0.14½
Spring steel	6.00

Lead Products Show Further Advances

LEAD, ZINC, ETC.—The market for the metal in the ingot is still firm, though without actual price advances at the time of writing, but lead products affected by last week's changes in the market for lead are advanced in several respects. Lead traps and bends are this week quoted at plus ten per cent. instead of nett list as formerly. Lead wool has gone up to 16 cents a pound. Three pound (to square foot) lead sheets are now at 17 cents a pound, and the three and a half pound sheets are the same price. Four pounds to a square foot lead sheets cost 16 cents a pound this week which is an unchanged price, though market conditions are very firm for these. Zinc products are still priced at last week's quotations.

Lead pipe, lb.	$0 16	....
Lead waste pipe, lb.	0 17	....
Lead traps and bends	Plus 10%	....
Lead wool, lb.	0 16	....
Lead sheets, 3 lbs. sq. ft.	0 17	....
Lead sheets, 3½ lbs. sq. ft.	0 17	....
Lead sheets, 4 to 6 lbs. sq. ft.	0 16	....
Cut sheets, ¾c lb. extra and cut sheets to size, 1c lb. extra.		
Solder, guaranteed, lb.	0 37	....
Solder, strictly, lb.	0 35	....
Solder, commercial, lb.	0 33	....
Solder, wiping, lb.	0 33	....
Solder, wire, lb.	....	0 52
Zinc sheets, per lb.	0 33	....

Market For Old Materials Quiet

OLD METALS.—Owing to the difficulties of transportation which still prevail in the district of Montreal and vicinity there is no particular change in the conditions affecting demand and prices for old metals. Supplies are not very plentiful at present. Quietness of the general market for metals is usually reflected in the old metal market, and this is the case for the current week. Prices quoted are unchanged from quotations of last week.

Tea lead	0. 6½	.....
Heavy lead pipe	0. 8½	.....
Yellow brass	0.16	.....
Red brass	0.20½	.....
Light brass	0.10½	.....
Heavy zinc	0.10	.....
Heavy copper	0.27	.....
Old cast iron, per gross ton.	18.00	19.00
Stove plate, per ton	11.75	.....
Old rubbers, boots and shoes	0. 8¼	.....
Overshoes, lumbermen's rubber boots	0. 6½	.....
Auto tires	0. 5½	.....
Bicycle tires	0. 2¼	.....

Ingot Metals in A Quieter Market

INGOT METALS.—In the midst of a certain quietness of tone in the market for ingot metals tin was reported to be showing a little more strength, the other metals for the most part maintaining their price standards as quoted last week as far as large supplies are concerned. Some price shadings are always possible in respect to supplies of smaller quantities, but the general tone of the metal markets this week has been rather quieter.

Tin Slightly Firmer

TIN.—Firmness, due to difficulty in securing supplies is reported this week as regards tin, and for large orders the prices have been showing a tendency upwards, one important source of supply quoting $50 to $52 per 100 pounds for tin as compared with $49-$51 last week. For smaller quantities $56 to $57 per hundred was quoted.

Lead Steadily Firm

LEAD.—Lead keeps up its records in the Canadian market for metals but there have been no exciting phases of the struggle in the week following last report, and at time of writing lead is still steady at the prices quoted last week. For large quantities from $11.00 to $12.00 per hundred pounds is quoted, and from $14.00 to $14.25 is mentioned for smaller quantities. Delivery troubles are not at all alleviated as regards the heavy metals.

Aluminum Varies in Price

ALUMINUM. — Various kinds of aluminum are offered on the market at present, and various prices prevail for these. The average quotations for virgin aluminum range between $58 and $60 and $65 per hundred pounds. Remelted 99 per cent. aluminum is quoted at from $52 to $54 per hundred pounds. Remelted alloyed aluminum is $38 to $40 per hundred pounds, while powdered aluminum is quoted from $86 to $92 per hundred pounds.

Copper Keeps Strong

COPPER.—The market tone for copper which was firmer last week, keeps still steadily strong. Prices quoted in Montreal are from $36 to $39 per hundred pounds, small orders being filled at the higher quotations.

Spelter Still Steady

SPELTER.—There has been no special movement to record in spelter during the week following last report, and at the time of writing spelter is in market condition rather similar to the reported market of last week. Prices quoted in Montreal are still ranging from $13 to $14 per hundred pounds for the larger orders, and $16 for smaller quantities with possible shadings to firmer.

Antimony Steady Also

ANTIMONY.—In still rather quiet demand, antimony is quoted at the prices prevailing last week per hundred pounds. As high as $38.50 has been mentioned for small orders, and $31.00 to $33.00 for smaller quantities of the metal to suit requirements.

TORONTO MARKETS

TORONTO, March 1.—Some changes in prices of various lines of hardware cover an extensive line, such for instance as the advance in Canadian builders' hardware and all wire goods. Padlocks and night latches have again been moved to higher levels. There have been a number of changes also in various lines of shelf hardware, such as liquid glue, pocket knives, sash weights, sisal and jute halters, steel hoops, sidewalk scrapers, furnace scoops, crosscut saws, shoe thread, auger bits, knife handle wrenches, hog wringers, sad irons. The freight situation has not improved any. Business has been very good, but still most unsatisfactory in view of the shortages in lines and difficulty attached to getting goods in and out over the railroads.

Builders' Hardware Advances 10 *Per Cent.*

BUILDERS' HARDWARE.—Following the recent advance in all lines of American builders' hardware, an advance has been made effective by Canadian manufacturers, which provides for an increase of 10 per cent. On iron and steel goods the discount is now 25 and 2½ per cent., as compared with 33 1-3 per cent. formerly. On brass and bronze lines the new discount from list is 22½ per cent., as compared with 25 and 5 per cent. formerly. Some of the articles that are included are rim locks, which have made an advance of 20c per dozen, and are now quoted at $2.05; while door knobs, with japanned mountings, are 15c higher, and are now quoted at $1.80 per dozen.

Night Latches and Padlocks Again Go Up

LATCHES, PADLOCKS.— Wholesalers have been advised of an advance in the price of the Canadian Yale & Towne night latches and padlocks. In

the instance of the night latches the advance has been 10 per cent., and on padlocks the increase has been 5 per cent. Advances have accordingly been made by wholesalers to the retail trade.

Liquid Glue, Pocket Knives and Other Lines Up

SHELF HARDWARE.—There have been a number of increases in shelf hardware during the week, which are found quite generally in the stocks of hardware merchants. Taken altogether the list of changes during the week have been numerous, and shelf goods have contributed a fair proportion of the advances.

Liquid Glue Higher

An advance has been made effective in Lepage's liquid glue in the larger sizes. For the ¼-pint sizes the new price is $2.10 per dozen; for the ½-pint size the price is $3.40 per dozen; one-pint size $5.25, and one-quart size $8.45 per dozen.

Pocket Knives Up Again

Following an advance within recent weeks in all Rodgers' table cutlery and pocket knives, a further advance has been made effective during the week on pocket knives, which amounts to about 10 per cent.

Sash Weights Up $1

Advances have been recorded in sectional and solid sash weights, which in the instance of the sectional amounts to $1 per hundred pounds, and in the case of the solid 25c per hundred. Sectional are now sold at $3.50 per hundred pounds and solid at $2.25 per hundred.

Sisal Halters Up Again

Advances have been made in sisal and jute halters during the week, which in the case of the former amounts to $3.60 per gross on the 7-16 inch and $5.50 per gross on the 9-16 inch halter. The price of the 7-16 inch is now $21.60 per gross and for the 9-16 $32.50. Jute halters have also advanced, and are quoted at the same price as the sisal halters. A firmness has been put into this market through the high price for sisal fibre and the shortage of stocks of jute which has led the Government of Great Britain to commandeer all stocks in the Islands.

Steel Hoops Up 50c Hundred

An advance of 50c per hundred pounds has been made in price of steel hoops, the new selling price being $6, as compared with $5.50 formerly. There is a continued firmness in the steel market, which has worked out in an advance in this commodity.

Sidewalk Scrapers Higher

New prices have been named on sidewalk scrapers and snow shovels for delivery next season. In the sidewalk scrapers, the Fox brand are quoted at $3 per dozen, which represents an advance of 75c, while the Bulldog is quoted at $4.50 per dozen, which represents an advance of 50c per dozen.

Sandpaper 15 Per Cent. on List

Prices on sandpaper have recently been made effective by some wholesale houses, which is now quoted at 15 per cent. on list for B. & A. goods.

Furnace Scoops Move Up

Following the recent advance in spades and shovels, an advance has been put into effect on furnace scoops. These are now quoted at $6.75 per dozen.

New Prices on Crosscuts

New prices on Simons and S. & D crosscut saws have been announced during the week, which provide for a substantial increase. On the Racer Lance No. 1, 4½ feet in length, the price is $3.15 each, $3.50 for the 5-foot, $4 for 5½-foot, and $4.75 for 6-foot.

Shoe Thread $1.64 Pound

A further advance has been made in the price of shoe thread, which now makes the price on certain brands $1.64 per pound. Before the present upward trend in prices or in pre-war times this commodity sold at 60c per pound.

New Discount on Auger Bits

A new discount on Irwin auger bits has been announced during the week, which provides for approximately a 5 per cent. increase. The discount is now 30 and 5 per cent., as compared with 40 per cent. formerly.

Knife Handle Wrenches Up

Knife handle wrenches of the Whitman & Barnes make have been advanced in price, and are now quoted at 15 per cent. off list.

Hog Ringers Are Higher

In conformity with the advances in many other lines, hog ringers got in the procession during the week, and No. 1 are now quoted at $1 per dozen, while No. 2 is quoted at $1.75 per dozen.

New Discounts on Alabastine

Discounts on alabastine have been changed, which provide for a substantial increase. The discount is now 50 and 25 per cent. off list, as compared with 55 and 28 per cent. formerly.

Sad Irons Advance

Mrs. Potts' sad irons have been moved to higher levels, and are now quoted at $1.30 per set for the plain and $1.35 per set for nickel-plated.

All Wire Products Advance 25c Hundred

WIRE.—As intimated in HARDWARE AND METAL for several weeks past, there was a firmness in the wire products market that pointed toward higher prices. An advance of 25c per hundred pounds has become effective in cut hay baling wire, hay wire in coils, smooth steel wire, wire bale ties, stovepipe wire, and fine steel wire.

According to the new prices effective on cut hay baling wire, No. 9 will sell at $5.50 per 100 pounds, No. 10 at $5.55, No. 11 at $5.65, No. 12 at $5.75, No. 13 at $5.85, No. 13½ at $5.85, No. 14 at $6, and No. 15 at $6.25. These prices are f.o.b. Toronto and Hamilton.

Hay Wire in Coils

For No. 13 hay wire in coils the new price is $5.15 per 100 pounds, and for No. 14 the quotation is $5.20; while No. 15 will sell at $5.30 per hundred.

Smooth Steel Wire

In the smooth steel wire the base gauges of Nos. 0 to 9 are now quoted at $5.25, with the usual extras for the smaller gauges, which are given in the current quotations.

Wire Bale Ties

In the wire bale ties the price for No. 12 is now $5.55 per 100 pounds, No. 13 is $5.65, No. 13½ is $5.70, No. 14 is $5.80, No. 15 is $6, and No. 16 $6.25. Oiled and annealed wire in the No. 10 gauge is now quoted at $5.41, No. 12 at $5.47 and No. 12 at $5.55.

Stove Pipe Wire Also Up

Stovepipe wire is also among the wire products that has been increased, and No. 18 is now quoted at $6.45 per 100 pounds, and No. 19 at $6.95 per 100 pounds.

Fine Steel Wire

The price of fine steel wire also has been moved higher, and instead of adding 20 per cent. to list prices, the new prices make provision for the addition of 30 per cent. This will be in the neighborhood of a 15 per cent. advance on this commodity.

Wire Nails Have Been Moved Up 25c in Week

NAILS.—Standard steel wire nails have been advanced during the week, and are now selling at $5 in certain sections. The upward tendency has been to the extent of 25c per 100 pounds. At Toronto, London, Hamilton and Milton the f.o.b. price is now $4.95 base, while at Montreal the base price is $5 per 100 pounds. The probable trend of this market has been anticipated in these columns for weeks past. At Gananoque, Collingwood, and Owen Sound the price is also $5 base. For Windsor and Walkerville the prices are $5.02½ f.o.b., factory points, with freight allowed on carloads. An advance of 25c per hundred in cut nails has also become effective, which advance was recorded last week. At Toronto the base price is now $4.75.

Lawn Mowers Make Advance of 20 Per Cent.

LAWN MOWERS.—Another advance of 20 per cent. has been made on the price of the lawn mowers through the changing of the discount to 40 per cent. off list. Advances were recently made in this line of goods, and the Taylor-Forbes Company now announce additional increases in their various makes, applying to Daisy, Star, Woodyatt and Empress. The householder will even find it costs more to cut his grass this year.

Steel Game Trap Prices Are Adjusted

GAME TRAPS.—By an adjustment in the prices of steel game traps slightly different prices have become effective on some of the lines. Quotations on some of the makes are now as follows, which are now net prices instead of list and discount as formerly:—

Victor, with chain—No. 0, $1.30 doz.; No. 1, $1.65 doz.; No. 1½, $2.45 doz.; No. 2, $3.45 doz.

Oneida Jump, with chain—No. 0, $1.80 doz.; No. 1, $2.15 doz.; No. 1½, $3.20 doz.; No. 2, $4.65 doz.

Hawley & Norton, with chain—No. 0, $2.15 doz.; No. 1, $2.50 doz.; No. 1½, $3.75 doz.; No. 2, $5.25 doz.

Newhouse, with chain—No. 0, $2.90 doz.; No. 1, $3.45 doz.; No. 1½, $5.15 doz.; No. 2, $7.60 doz.

Fence and Poultry Staples Go Higher

STAPLES, FENCE HOOKS.—An advance of 25c per keg has been recorded in the price of fence staples and bright in kegs are now selling at $5.10 per 100 pounds, with the 25-lb. boxes at $5.35 per 100 pounds. Galvanized fence staples in kegs are quoted at $5.95 per 100 pounds, and in 25-lb. boxes at $6.20. Poultry netting staples have also been moved to higher levels, and the new prices are no was follows:—100-lb. kegs, $9.95 per 100 lbs.; 50-lb. boxes, $10.25 per 100 lbs.; 25-lb. boxes, $10.35 per 100 lbs.; 10-lb. boxes, $10.75 per 100 lbs. Fence hooks are also 25c per 100 pounds higher, and are now quoted at $5.95 in 100-lb. kegs, and $6.20 in 25-lb. boxes per 100 lbs.

Range Boilers Are Up; Enamelware Market Firm

RANGE BOILERS, ENAMELWARE. An advance of 50c has been made in the price of the standard 30-gallon range boiler, the new quotation now being $10.50 each. For the extra heavy 30-gallon range boiler the price is now $13 each, as compared with $12.50 formerly. Enamelware is in firm market, and business in bath tubs and sinks has been fairly good. The market for pig iron is high, with a tendency to advance, and it is anticipated if the situation continues there will be higher prices for cast iron enamelware as a result. One firm reports their business during the month of January this year in enamelware was double that of January last year. February gives promise of being a better business month than the same month last year.

30-gallon range boilers, standard	$10.50
30-gallon range boilers, extra heavy	13.00
Bathtubs, roll-top, 4, 4½, 5 feet, 24 to 30 in. wide	23.70
Bathtubs, 5½ ft.	27.30
Sinks, roll-top, 18 x 30 in., staple	12.15

Malleable Fittings Due For An Advance

SOIL PIPE, FITTINGS. — Manufacturers have advised dealers that the price of malleable fittings have been advanced from 10 to 15 per cent. Wholesalers have not yet moved their quotations higher but it is highly probable they will in the near future. The discount on malleable fittings is now 15 per cent. off list and will probably be selling net list in the not distant future. The situation in soil pipe continues to be one of great firmness owing to the difficulty manufacturers are experiencing in getting the supplies of raw materials and coke. Shipments have been held up through embargoes and this has made manufacturers reluctant to give quotations on goods they were not sure they could deliver. There is a firm and advancing market in pig iron, which taken together with the coke situation, has led some dealers to look for higher prices in the near future. Demand for soil pipe at present is somewhat light, except where it is being used in munition plants. Following are the discounts:

	Discount
Medium and extra heavy soil pipe, 6-inch and under	55%
8-inch soil pipe	40%
Medium and extra heavy fittings, 6-inch and under	60%
Malleable fittings	15%
Cast iron fittings	45%

Black Sheets Have Been Moved Higher

SHEETS, PLATES. — With the heavy demand for black sheets and the recent firmness in the market there has been a movement toward higher prices in certain quarters during the week, with the probability that other dealers will be quoting higher also in the near future. For the No. 10 and No. 12 gauge the low price is now $6 per 100 pounds as compared with $5.60 quoted last week. Other gauges have advanced also. Quotations are given in the current market columns. Galvanized sheets are also in firm market, with an inclination to advance but as yet no actual advance being recorded. Galvanized shingles and painted shingles held in a firm market.

Iron and Steel Prices Maintained

IRON AND STEEL.—The market in iron and steel commodities held firm without any advances being recorded. There is a continued good demand and dealers state they cannot see that the top of the market has been reached as yet. Following are the quotations:

Common bar iron	$	$ 4 00
Common bar steel	....	4 25
Refined iron	....	4 25
Angles, base	....	4 75
Horseshoe iron	....	4 25
Norway iron	7 50	12 00
Mild steel	....	4 25
Tire steel	....	4 45
Toe calk steel	4 90	6 00
Sleigh shoe steel	....	4 50
Band steel	4 50	4 75
Spring steel	....	6 00
Mining tool steel	14 00	25 00
Sheet cast steel	25 00	35 00
Spring steel	....	6 00

Small Stocks Of Ingot Metals

Ingot metal stocks are exceedingly light, and there is a good demand. Tin made the greatest price advances during the week. A wide range of prices is quoted between prices to large and small buyers. Should trouble develop between the United States and Mexico the metal markets may be seriously affected. The local demand at present is greater than during the corresponding period of last year.

COPPER.—Copper stocks are very light and there is a good demand. Supples are scarce and the price is nominal at 38c lb.

TIN.—Owing to submarine activity and the increased insurance rates, tin has moved higher. Stocks are light locally and quotations range from 52½c to 55c lb.

SPELTER.—Supplies are very scarce locally and quotations range from 13½c quoted large buyers to 16c lb. in small lots.

LEAD.—The lead market continues firm. Prices quoted by inrependents at New York range from 1½c to 2c lb. over the "Trust" price. Prices locally range from 12¼c to 13c lb.

ANTIMONY.—The market is quiet but firm, with supplies scarce. The price is 35c lb.

Aluminum.—Aluminum is unchanged at 68c lb.

PIG IRON.—The pig iron market continues very strong with very little improvement in freight conditions. The difficulty being experienced in getting coke and other raw materials, combined with a shortage of labor is checking furnace production. A large number of furnaces in the States are banked owing to the shortage of coke, while this material is also increasing in cost. The

situation in Canada is still acute with no immediate relief in sight.

Old Materials Again Make Some Advances

OLD MATERIALS.—Advances have been made in a number of lines of old materials owing to the strength in this market. Tea lead is being quoted ¼c higher per pound, heavy lead pipe is ¾c higher, red brass has advanced 1c, while light brass has declined ½c per pound. Heavy copper is quoted up 1c at 29c per pound. There is an underlying strength to the market for old materials and dealers are inclined to anticipate higher prices. Demand is very good. Following are the prices being paid by dealers:

	Per lb.	
Tea lead	$ 0 06½	......
Heavy lead pipe	0 09½	......
Yellow brass	0 17	......
Red brass	0 22	......
Light brass	0 10	......
Heavy zinc	0 09½	......
Heavy copper	0 29	......
Old cast iron, per ton	16 00	......
Stove plate, per ton	14 50	......
Old rubbers, boots & shoes	0 08¾	......
Overshoes, lumbermen's rubber boots	0 06½	......
Auto tires	0 06	......
Bicycle tires	0 03½	......

Lead and Zinc Products Held Steady During Week

LEAD AND ZINC PRODUCTS.—There is a continued firmness in the market for lead and zinc products due to the firm position of the ingot metals. Spot lead in the New York market during certain days was quoted down slightly but the downward trend has not been sufficient to affect the local market for the products. Following are the quotations:

Lead pipe, lb.	$0 16	....
Lead waste pipe, lb.	0 17	....
Lead traps and bends	10% on list	
Lead wool, lb.	0 15	....
Lead sheets, 3 lbs. sq. ft.	0 15¼	....
Lead sheets, 3½ lbs. sq. ft.	0 15¼	....
Lead sheets, 4 to 6 lbs. sq. ft.	0 15	....

Cut sheets, ¾c lb. extra and cut sheets to size, 1c lb. extra.

Solder, guaranteed, lb.	0 34	....
Solder, strictly, lb.	0 32¼	....
Solder, commercial, lb.	0 31¾	....
Solder, wiping, lb.	0 31½	0 32
Solder, wire, lb.	0 35	....
Zinc sheets, per lb.	0 25	....

Italian Hemp and Jute Sewing Twines Up

CORDAGE TWINES. — Advances have been put into effect on Italian hemp sewing twine by the manufacturers of 3c per pound and on jute sewing twine of 1½c per pound. The commandeering of supplies of jute in the United Kingdom has operated to put a firmness in the market although it will in all probability not shut off entirely the supplies that reach United States and Canada. It is pointed out by twine men that these supplies can still come from India by direct steamer to Boston. There is a scarcity of the Italian hemp, however, owing to war conditions and difficulty of obtaining tonnage. Some orders for spring delivery of cordage are now being sent out in the hope that it will reach dealers in time for the spring trade. Manufacturers are having increased difficulty in getting raw materials through the operation embargoes and shortage of tonnage. Prices on binder twine have not yet been announced.

Spring Shipments of Stoves Going Forward

STOVES, ENAMELWARE.—Manufacturers have commenced shipping out goods that have been booked for spring delivery on oil stoves and oil heaters. There has been a good demand for these and merchants are anxious to get their stocks in hand as soon as possible. There is a lull in the demand for gas ranges at the present time as compared with the heavier demand a short time ago. Enamelware is in firm market and sales are being made readily. There have been no price changes during the week.

Gasoline and Coal Oil Advanced 1c Gallon

GASOLINE, COAL OIL.—An advance of 1c per gallon has been made effective in the price of gasoline and benzine and coal oil during the week. Gasoline is quoted at 29½c-30c per gallon and benzine at 28½c. This price for gasoline is now 1c higher than it was at the highest point last year. With a still heavier consumption anticipated during the spring and summer months and with production holding about steady there are oil men who strongly assert that the prices of last season will seem low in comparison with those that may prevail this year. Coal oil on all grades has been advanced 1c per gallon. Prime white petrol is now selling at 14c per gallon, Royalite, 14c, Palacine 17c, Tompoline 15c, Electroline 18c.

LONDON MARKETS

LONDON, Mar. 1.—Farmers in this district are commencing to buy goods for their spring work. Among the many articles that are beginning to move freely are sap buckets and supplies in preparation for syrup-making season which is expected to begin in the not distant future. Business in the district is seasonably good and collections continue satisfactory. There have been advances in the price of many lines during the week, including nails and wire.

All Wire Products Advance 25c Hundred

WIRE. — As intimated in HARDWARE AND METAL for several weeks past there was a firmness in the wire products market that pointed toward higher prices. An advance of 25c. per hundred pounds has become effective in cut hay baling wire, hay wire in coils, smooth steel wire, wire bale ties.

Baling Wire Prices

According to the new prices effective on cut hay baling wire No. 9 will sell at $5.50 per hundred pounds; No. 10 at $5.55, No. 11 at $5.65, No. 12 at $5.75, No. 13 at $5.85, No. 13½ at $5.85, No. 14 at $6 and No. 15 at $6.25.

Hay Wire in Coils

For No. 13 hay wire in coils the new price is $5.15 per hundred pounds, and for No. 14 the quotation is $5.20, while No. 15 will sell at $5.30 per hundred pounds.

Smooth Steel Wire

In the smooth steel wire the base gauges of Nos. 0 to 9 are now quoted at $5.25. with the usual extras for the smaller gauges, which are given in the current quotations.

In the wire bale ties the price for No. 12 is now $5.55 per hundred pounds, No. 13 is $5.65, No. 13½ is $5.70, No. 14 is $5.80, No. 15 is $6 and No. 16 $6.25. Oiled and annealed wire in the No 10 gauge is now quoted at $5.41, No. 12 at $5.47 and No. 12 at $5.55.

Stove Pipe Wire Also Up

Stovepipe wire is also among the wire products that have been increased and No. 18 is now quoted at $6.45 per hundred pounds and No. 19 at $6.95 per hundred pounds.

Discount on Fine Steel Wire

The price of fine steel wire also has been moved higher and instead of adding 20 per cent. to list prices the new prices make provision for the addition of 30 per cent. This will be in the neighborhood of a 15 per cent. advance on this commodity.

Wire Nails Have Been Moved Up 25c in Week

NAILS. — Standard steel wire nails have been advanced during the week and are now selling at $5 in certain sections. The upward tendency has been to the extent of 25c. per hundred pounds. At Toronto, London, Hamilton and Milton the f.o.b. price is now $4.95 base, while at Montreal the base price is $5 per hundred pounds. The probable trend of this market has been anticipated in these columns for weeks past. At Gananoque, Collingwood and Owen Sound the price is also $5 base. For Windsor and Walkerville the prices are $5.02½ f.o.b. factory points, with freight allowed on carloads. An advance of 25c. per hundred in cut nails has also become effective, which advance was recorded last week. At To-

Canada Metal Holds Fifth Convention

Practical Addresses to Salesmen—Prizes Aggregating $1,000 Distributed—Manufacturing Processes Explained—Optimistic Regarding 1917

THE fifth annual convention of The Canada Metal Co., was held recently at the head office, Toronto. Representatives and managers were present from all parts of the Dominion.

W. G. Harris, Jr., who presided in his opening address referred to the pleasure it was each year to meet together, for not only did all become better acquainted, but from the exchange of ideas and experiences each one was

W. G. HARRIS, Sr.

able to become better acquainted and have a much wider knowledge of the lines manufactured by the firm.

During 1916 he continued, the company made greater progress than any previous year in its history and twice during the year has the Toronto factory to be enlarged until there is now five acres of floor space and every inch fully utilized and in the near future extensions will be necessary. Many difficulties were met with during 1916, but he congratulated the salesmen on the excellent results of the past year.

Practical Instructions

To give salesmen an accurate knowledge of the requirements of the plumbing business, an excellent address was given by Messrs. Rogers and Martin. Every item was laid out on the floor and shown in its particular position from the outside of the house to the cellar, kitchen, and bathroom. Every connection and fitting was on view and in its place and undoubtedly the knowledge gained by the salesmen should prove immensely valuable in the assistance the salesmen can render the plumber when making estimates.

Prizes for Salesmen

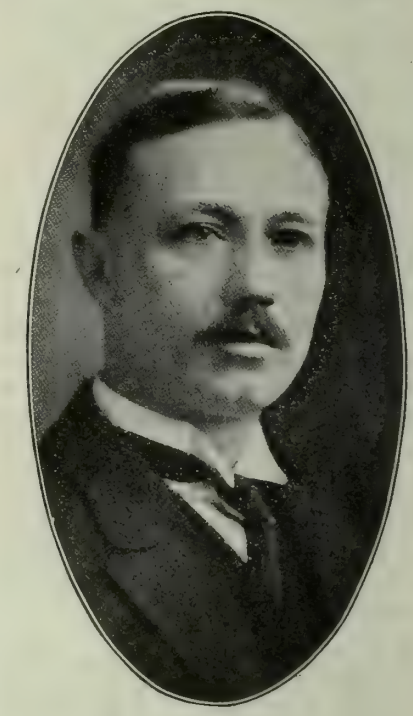
In dealing with the report of the sales for the year one of the most interesting features was presenting the prizes to the salesmen who headed the lists in the various sales competitions. In 1911 a modest competition for $10 per month was suggested and inaugurated by H. C. Crow and under his supervision and guidance the competitions grew until in 1916 the value reached $1000. These competitions necessitate the keeping of most valuable records and at the end of each year reports are compiled showing in value what each salesman has sold in babbitt metals, type metals, ingot metals, solders, plumbing supplies, etc.

For general sales H. E. Cameron took first prize of $100 and D. L. Scott took the second prize of $50.

In the Harris Heavy Pressure Competition the first prize is a gold watch and chain, valued at $100. The honor of presenting same fell upon H. C. Crow. In making the presentation he pointed out that this was the most successful competition ever conducted by the company. In presenting the gold watch and chain to Mr. Cameron he congratulated him upon his success and paid tribute to the way in which he had stuck to it every minute of the time during the past year.

H. C. CROW.

E. Parkin of Hamilton, who was second in the Harris Heavy Pressure Competition gave a most interesting address on Enthusiasm. This was well received, fully appreciated and loudly applauded and every one seemed to see what a fundamental asset enthusiasm is to the salesmen.



W. G. HARRIS, Jr.

Babbitt metals were discussed from A to Z, and under the supervision of Mr. Harris, Jr., many metallurgical tests were made and illustrations given how raw material was first taken to the laboratory and from there to the large melting pots of 35 tons capacity. Then followed the various chemical tests illustrating the methods of testing the alloy during the melting period.

Following this came the year's report on the babbitt metal business and when the figures were given out the usual lightning calculator got up and said I have been figuring out that if we could put together all the babbitt metal sold in 1916 it would take a trainload of 43 cars to move it.

(Continued on page 51.)

NEW HARDWARE GOODS

OFFERED TO CANADIAN HARDWAREMEN

KENNEDY MACHINISTS' KIT

Kennedy Mfg. Co., Van Wert, Ohio, is marketing the Kennedy all-steel machinists' case. The case is built of steel throughout for strength and durability, and is claimed to be wearproof, weatherproof, fireproof, waterproof and burglarproof. Fitted with brass two-key notch lock, each case with different keys; brass corners and heavy catches on ends to

Kennedy Machinist Case.

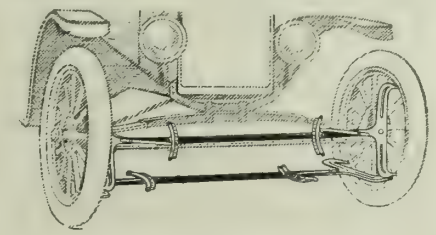
take parts of greatest strain; genuine cowhide handle, with steel core so riveted it cannot pull out. Finished in three coats leather black or brown baked enamel which will not chip, rub, or easily scratch off. All drawers and extra till under lid are lined with best quality felt and fitted with solid brass pulls. Drawers reinforced with electrically welded runners making them strong and rigid. Each drawer runs on separate tracking. These features, it is said, prevent warping, swelling and changing shape, and enables drawers to slide smoothly. Front drops and slides under lower drawer when open; fastens at bottom and locks securely to upper lid when closed. Will carry heaviest tool equipment without buckling or changing shape. Extra strengthening and corrugation in lid. Electrically welded and reinforced throughout. Circulars and prices, etc., will be supplied upon request.

CHINALAC ENAMEL COLORS

Brandram-Henderson, Ltd., Montreal, have added to their line Chinalac solid enamel colors. The makers claim that this will make a profitable addition to the Chinalac line of products. The new line has a porcelain-like finish, which, it is claimed, makes it a desirable finish for home use. The enamels dry with a high gloss, possess deep tones, and are suitable for woodwork, bedsteads, iron or metal fixtures, porch furniture, etc.

PERFECTION WHEEL TRUING GAUGE

The American Spring Tire Co., No. 30 West Lake Street, Chicago, are manufacturing the Perfection wheel truing gauge. Of its needs and uses, they say: "Motorists who are not posted on the necessity of perfectly true alignment of the wheels of a car are often puzzled to know why, under similar conditions as to distance travelled and character of roads, one tire wears faster than another, or the front tires wear faster than those on the rear. The expert knows that this is due almost entirely to faulty alignment, and will prescribe occasional tests, but this has heretofore been difficult for even men of experience to make. With the Perfection wheel truing gauge, it is claimed, it is easy for even the amateur driver to test the alignment of his wheels and adjust them whenever necessary, which means the lengthening of the life of the tires. Sometimes the cause is the bending of the axle by a severe blow, or the steering apparatus gets out of adjustment or demountable rims are not on straight, or bearings become worn, allowing wheels to wobble. When this device shows the wheels are not running true, one of these causes will be discovered and the wheel or wheels out of order may be quickly ad-

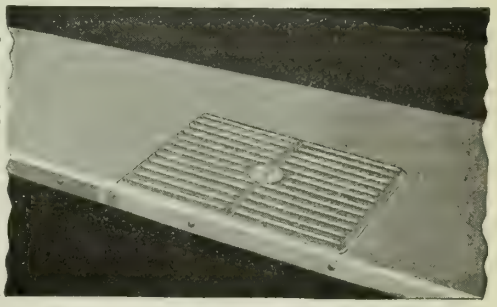


Perfection Truing Gauge.

justed. The gauge is manufactured of cold-rolled steel, finely finished, with fork ends of solid steel, with embossed ribs to reinforce the forks. A spring arrangement automatically holds the gauge tight against the felloe of each wheel.

STANWOOD STEP PLATE

Stanwood safety step plates, manufactured by the Stanwood Equipment Co., Chicago, are being marketed in Canada by the Canadian Fairbanks-Morse Co., Montreal. The makers claim that the plates present a safe foothold, are a hygienic necessity, and insure contentment through cleanliness to those who care. They will not mat down or become discolored with use, add to car re-



Stanwood Safety Step Plate.

finement, and are quickly applied; performs the same office for the automobile that the vestibule mat does for the house.

The mats are made in three types as follows:—

Type A Plate—A nickel-plated metal plate enameled gray (baked on), and provided with longitudinal apertures, through which project 24 replaceable rubber segments. These plates are attached to the running-board with nickel-plated brass machine screws, lock washers and nuts furnished with each plate. Size of plate 8⅜ inches wide, 11¾ inches long. The plate projects only ⅜ of an inch above the plane of the running-board.

Type B Plate—This type of plate is a duplicate of type A, except it is enameled black, and is provided with two replaceable rubber segments having 12 ribs each.

Type C Plate—A perforated metal plate entirely covered with rubber, which is moulded with 24 longitudinal rubber ribs securely to the metal plate. This plate is also provided with screws, lock washers and nuts. Size of this type of plate, 8 inches wide, 11½ inches long.

THE JUNIOR CLERK'S PAGE

How Big Salaried Men Are Made

Door of Opportunity is Open, but Those Who Would Succeed Must be Ready to do Two Full Days' Work Each Day.

By Frank A. Vanderlip, President National City Bank.

EDITOR'S NOTE.—Frank A. Vanderlip, President of the National City Bank, was asked to answer the following questions:

What are the opportunities offered to young men in industrial and business life to-day?

Are these opportunities the equal of those which their fathers encountered, or have difficulties been built up by the great development of our industrial life, by the aggregation of capital and the increase of its power through the formation of corporations, by the keener competition which characterizes our times, so that the chances of success are less than in former days, the struggle for its attainment greater, the prize harder to secure, the worth of the individual more difficult to demonstrate?

Mr. Vanderlip answered the questions in an article which appeared in the New York Sun and reproduced in part herewith. The article should be read by every hardware salesman.

YOUNG men, you are under no handicaps because of the time in which your career is placed. I believe I can give you the most unqualified assurance of that. I see the situation from the point of view of membership in executive committees of important corporations, and if I know anything at all of business and industrial corporations I believe that there has never been a more insistent call for well trained, energetic men of character, ability and initiative, and that the world has never been ready to pay greater rewards or offer so many prizes for especial distinction as is the case to-day.

I speak from a considerable experience in the search of men of exceptional qualifications to fill places of great importance, and there is no fact clearer to me than the fact that our industrial and business life to-day is rich beyond anything that has gone before in opportunity for men with ability, industry, imagination and character.

There is a theory entertained by many that we have reached a time when work should be less urgent than in other days; when men should have more leisure, that their hours of labor should be shorter and periods of recreation longer. If you hope to gain one of the prizes of life do not adopt that theory for your individual guidance and practice. It may be true for the man whose day's work is solely made up of an expenditure of physical effort; there never was a time when it was less true of the man who hopes to make an intellectual success of life.

I have often said to young men who have asked advice about their work that if they hoped for a large measure of success they must make up their minds to do two full days work each day. They must do one full day's work at their regular appointed task— at their job; to that day's work they must bring energy, a quick intelligence to comprehend not only the details of what they are doing but the relation of what they are doing to the larger movement to which their work belongs, and not only must they have a desire to accomplish the stint of work that will justify their day's pay but they must voluntarily and vigorously assume every other duty to which they can lay their hand in addition to that stint, so that they may learn not alone the technique of their own task but the technique of the work others are doing.

When they have done all that, however, they have done but one day's work, and they have done but half of what should be the real measure of a day's accomplishment for the man who is determined to make a distinguished success.

I tell you if you are to secure one of the large prizes of success you must make up your mind to adopt the theory of the double day's work, and when the regular day's work is finished you must be prepared systematically to devote some considerable portion of time to study, toward gaining a broad and intelligent view in all its large aspects of the work with which you are engaged, toward making additions to your stock of general knowledge, to the understanding of problems of the day, to your duties as part of the social organization.

You will not do that by a quick scanning of newspaper headlines or a detailed study of the baseball scores; you will not do it by any desultory and unplanned system of reading. You will only accomplish it in full measure if you have learned or have natively implanted in your habits of systematic mental application, the intelligence to lay out definite courses of study and the strength of purpose to adhere to them.

Now just one more thought in regard to those qualities which make for material success. To forget yourself is more important than to remember any single thing you have ever learned in your lifetime.

Do not worry about your personal relation to a piece of work, but give the deepest attention and consideration to the execution of that piece of work. Never mind whether you have what you regard as your full share of it; never mind whether you are getting what you feel to be your full measure of credit; have the single purpose of getting the work done, of seeing that every proper means is employed to do the work better than it has been done before, and forget yourself, the credit you will receive, the relation you personally occupy toward the work, and if you will do that I give you my word you will have accomplished for yourself the greatest good.

"Integrity, honesty of purpose, good character are the foundations upon which success must depend. You may hear stories of gains that have been made by unfair means, by sharp practices, by shrewdness that, only just keeps within the law; but those gains are not success, and in so far as you will establish a reputation for honor, in so far as you put sound character into your work and never try to reach a goal by a short cut that means some loss of your own self-respect, you will lay a substantial foundation for real success.

This is not a mere preachment; it is

one of the most practical suggestions that I could give you out of the years of experience that I have had. For just mere practical shrewdness in the way of advice by which to reach position and secure reward there is no observation that I could make that would be of more use to you than one that I once heard to the effect that God had somehow so fixed the world that a man can afford to do about right.

We are in a time when there is going on much readjustment in regard to our views concerning business ethics, concerning natural laws affecting the distribution of wealth and the varying proportion that different classes are entitled to in that distribution. It is a time when there is great criticism of the established order; when there are many new theories of how the powers of government should be exercised. These days are fruitful in the birth of hopeful plans for giving equality of opportunity, easier conditions of life, a wider distribution of prosperity by the magic of legislation.

Now, I tell you that there is no new political economy. There is no novel arrangement of society which will permit you to succeed otherwise than by the exercise of those same qualities that have brought success in other generations. But you are entering active life at a time when sound judgment and serious purpose must be brought to the testing of an endless number of legislative schemes, to the making of political decisions that will be of the greatest moment.

Educated men in accepting the same rights of citizenship that uneducated men accept assume a far greater weight of responsibility. It is the duty of the educated man to study with intelligence the political questions of the day, to form opinions of his own rather than to accept the dictum of others, to be an intelligent guide to those whose minds have been less well prepared to form intellectual judgments.

With us a majority controls actions, and the view of the majority tends to usurp the control of public opinion. Do not fall into the easy habit of taking your opinion from majorities. You have been given the equipment and you now have the duty imposed upon you of thinking for yourselves.

If I have been able to make myself clear to you, you will have seen that I believe that in one word is encompassed the law of material success, the scope of your duty to society, the measure of your responsibility to citizenship. That one worl is service.

Make up our mind to serve. It is service that receives reward; it is by service, forgetful of self-interest, service for the sake of accomplishment, that you will gain the greatest material rewards. It is by service to society, by recognition of rights more sacred than any that are personal to yourself, that you will gain an attitude toward life rich in permanent satisfactions.

It is by intelligent service, free from self-interest, in the political activity of your time that you will justify the great gift of citizenship which has been bestowed upon you.

CANADA METAL HOLDS FIFTH CONVENTION

(Continued from page 48.)

Explanation of Terms

For weeks before the convention salesmen are asked to send in questions and to illustrate how the salesmen are encouraged to educate themselves thoroughly in their lines, the following questions which were submitted may prove interesting:—

1. What do we mean by specific gravity and describe how to figure same, giving an example?
2. How to determine the Brinell hardness of metals.
3. What is the Electro-Magnetic-Method of determining the hardness of metals.
4. What is the Scleroscope?

These subjects were taken up and fully dealt with by H. C. Crow, and examples were given of how to ascertain the specific gravity of metals or any other substance which is insoluble in water.

The different departments of the factory were visited and so as to give a wider and better knowledge of the goods manufactured the salesmen were allowed to see the actual making of lead traps, lead bends and lead pipe, etc.

In demonstrating the manufacture of sheet lead, the pig lead was first exhibited, melted and made into large slabs which were transferred to the rolling department and sheet lead was made in all sizes and lengths up to 7 ft. 8 in. in width and 50 ft. in length and by comparison they were then taken to the finer rolls for making tin and lead foils.

Under the guidance of Mr. Harris, Jr., a tour of inspection was made to the shell forging plant which has only been operating a few months. Here they were shown the full process of manufacture from the steel billets to the steel shell (in the rough) ready for the machinist. It was explained that shortly 12000 per day will be the output.

Later Mr. Harris, Jr., replied to such questions as what is Tobin bronze, Muntz metal, Monel metal, Pewter metal and Brittania metal. He dealt very fully upon these subjects.

Mr. Harris, Sr., President and founder of company was unavoidably absent at the opening of the convention but when he arrived gave an address on the duties of a salesman and his connection with the firm. He dealt in detail with the true meaning of the connection and necessity of real combination of field, office and factory. Looking at one of the signs on the wall he pointed out what a great help it would be to each one if they would dwell upon what it said, viz: "What I can do, I ought to do—What I ought to do—I will do," and to those who know the President's compelling personality it will readily be admitted that when he spoke of putting the punch into one's business he only advised doing what he has always done and as he declared, "It is putting the Punch there that has built up this organization.

The Convention broke up with the usual votes of thanks. In dismissing the visitors, Mr. Harris, Jr., hoped that all had derived some greater knowledge from the meeting, and that they could go out with the same conviction that he had, that 1917 would be another great year for Canada. His reasons for his conviction were:—Ontario is busy; Ontario is a producer; Her factories working to capacity, cannot keep pace with the demands; New factories are being built; New industries are being established; The whole Province pulsates with the dynamic energy of tremendous commercial achievements.

Canada, it was pointed out is making colossal strides in manufacturing. To-day Canada is recognized as a factor in world commerce. Canada is now exporting at the rate of $173.00 per capita, as compared with $63.00 per capita in the United States. Canada's total exports are more than one-fifth of the United States total. Three years ago Canada had an adverse trade balance of $310,000,000. To-day she has a favorable balance of over $367.000.000. This means that in 1913 Canada was buying abroad at the rate of $86.00 per capita and was selling at the rate of $47.00 per capital. But in 1916 Canada's sales abroad equalled $132 00 per capita, while buying remained unchanged at $86.00 per capita. Canada's net gain in foreign commerce alone in this period is over $677.000,000 or about $85.00 per capita. Ontario products more than one-half of Canada's manufactures.

Pease Foundry Co. have opened a Montreal office and salesroom at 324 Beaver Hall Hill. The new branch will be under the management of T. J. Carlind.

WEEKLY MARKET REPORTS

(Continued from page 47.)

ronto the base price is now $4.75, London, $4.70, and Montreal, $4.70, with no equalization of freights.

Fence and Poultry Staples Go Higher

STAPLES, FENCE HOOKS.—An advance of 25c. per keg has been recorded in the price of fence staples and bright in kegs are now selling at $5.10 per 100 pounds, with the 25-lb. boxes at $5.35 per hundred pounds. Galvanized fence staples in kegs are quoted at $5.95 per hundred pounds and in 25-lb. boxes at $6.20. Poultry netting staples have also been moved to higher levels and the new prices are now as follows: 100-lb. kegs, $9.95 per 100 lbs.; 50-lb. boxes, $10.25 per 100 lbs.; 25-lb. boxes, $10.35 per 100 lbs.; 10-lb. boxes, $10.75 per 100 lbs. Fence hooks are also 25c. per hundred pounds higher and are now quoted at $5.95 in 100-lb. kegs, and $6.20 in 25-lb. boxes per 100 lbs.

Steel Game Trap Prices Are Adjusted

GAME TRAPS.—By an adjustment in the prices of steel game traps slightly different prices have become effective on some of the lines. Net quotations on some makes are now as follows:—

Victor, with chain.—No. 0, $1.40 doz.; No. 1, $1.65 doz.; No. 1½, $2.45 doz.; No. 2, $3.45 doz.

Oneida Jump, with chain.—No 0, $1.80 doz.; No. 1, $2.15 doz.; No. 1½, $3.20 doz.; No. 2, $4.65 doz.

Hawley & Norton, with chain.—No. 0, $2.15 doz.; No. 1, $2.50 doz.; No. 1½, $3.75 doz.; No. 2, $5.25 doz.

Newhouse, with chain.—No. 0, $2.90 doz.; No. 1, $3.45 doz.; No. 1½, $5.15 doz.; No. 2, $7.60 doz.

Lawn Mowers Make Advance of 20 Per Cent.

LAWN MOWERS.—Another advance of 20 per cent. has been made on the price of the lawn mowers through the changing of the discount to 40 per cent. off list. Advances were recently made in this line of goods and the Taylor-Forbes Company now announces additional increases in their various makes, applying to Daisy, Star, Woodyatt and Empress.

New Prices on Coaster Wagons

New prices have been announced for the auto wheel coaster wagons. No. 00, solid wood wheel, are now quoted at $1.55 each; No. 01, spoke wheel, $2.90 each; No. 1, $3.55 each; No. 2, $3.85; No. 3, $4.30; No. 1, $4.80.

Linseed Oil Steady

There has been no change in the price of linseed oil during the week, quotations being still made in 1 to 2 barrel lots at $1.40 per gallon for raw and $1.43 for boiled, with 3 to 5 barrel lots at $1.39 for raw and $1.42 for boiled and 6 to 9 barrel lots at $1.37 for raw and $1.40 for boiled.

Turpentine Holds

Although there has been a weakness in the primary market the local market prices have not been altered and is selling at the time of writing at 81c. per gallon in single barrels, 80c. in 2 to 4 barrels and 88c. per gallon in 5-gallon lots.

White Lead in Oil Unchanged

There is a very light sale of white lead in oil at present. Prices during the week were unchanged at $15 per hundred in ton lots and $15.30 in less than ton lots.

Putty Prices Firm

Although there has been no change in putty the price is firm at the recent advance. Standard in 100-lb. drums is quoted at $3.85 per 100 lbs., and in 25-lb. drums at $3.95. Pure putty is quoted 80c. per hundred higher.

Advance in Axle Grease

An advance has been made effective in the price of Mica axle grease and 3-lb. tins, one dozen to case, are now selling at $2.50 per dozen and in cases of two dozen at $2.40 per dozen. One-pound tins, 4 dozen to case, are now quoted at $10.50 per gross.

Liquid Glue Higher

New prices announced on Lepage's liquid glue make provision for higher prices in the larger sized tines. In the 1-oz. bottle, 2-oz. bottles and ½ gill tins there has been no increase, but in the larger sizes the prices are as follows, all of which provide for an advance: 1 gill tins, $2.10 doz.; ½ pint tins, $3.38; 1 pint tins, $5.25 doz.; 1 quart tins, $8.44 doz.; ½ gallon tins, $15.75 doz.; 1 gallon tins, $30 doz.

Pocket Cutlery Up 10%

A further advance has been made in Rodger's pocket cutlery of 10 per cent. This advance follows one made within recent weeks on table cutlery and pocket knives.

WINNIPEG MARKETS

WINNIPEG, March 1.—Predictions of the various jobbers as to the amount of business which would be handled during February have come true and the result, though not fully ascertained, show substantial increases over former records. Business in sight for March is good and will undoubtedly show very satisfactory returns.

Higher Prices On Many Lines

The various markets show little change for the week, but it will be noticed that prices have been issued on Paris Green and revised quotations are in order for soft and chilled shot, annealed wire, bale ties and black wire cloth. The new prices are in all instances higher than those formerly ruling and mark new high levels throughout.

It is several weeks since any advance has been recorded in the price of soft or chilled shot, but the new prices now in effect show a decided increase. Although present prices on loaded shells are extremely high, further advances in shot and powder are almost sure to affect this line also and it would be well for retailers to cover for this year's requirements at present prices. Quotations now prevailing on shot are as fallow:

Per cwt., soft, $17; chilled, $18.50; Buck, S.S.G., $17.80; 28 ball, $18.20.

For some time prices prevailing on screen wire cloth from Winnipeg have been less than Eastern quotations and only now since new contracts have had to be made is a change put forward Today's price on black wire cloth is $3 per 100 ft. in 100-ft. rolls; $3.10 per 100 ft. in 50-ft. rolls, representing an advance of 50c. over former quotations.

Another increase of 25c. per 100 lbs. is now in effect on bale ties and annealed wire. New prices based on this increase are as follows:

Annealed wire, per 100 lbs.: 9, $5.95; 10, $6; 12, $6.15; 14, $6.30; 15, $6.45; 16, $6.60.

Bale ties 14 ga., single loop, Winnipeg, $6.70; head of Lakes, $6.30, per 100 lbs.

Paris Green, Shovels, Scoops Advance

The advanced prices now being quoted on Paris Green are: ½ lb. packages, 51c. lb.; 1 lb. packages, 49c. lb.

Through these columns last week we mentioned that revisions in the prices of shovels, spades and scoops were likely to be made at any time and we now announce a direct increase in scoops with revisions on shovels and spades for the finish. Full polished shovels and spades now take a net extra of 75c. per doz., and half polished, 50c. per doz.

The revised quotations now ruling on the different lines of grain scoops are:

Black Cat and Crescent, per doz.: 4, $11.25; 6, $12; 8, $12.75; 10, $13.55. Moore & Jones, 4, $12.45; 6, $13.15; 8, $13.85; 10, $14.55.

Paint Products Firm; Lamp Chimneys Higher

Markets still hold firm on linseed oil and no further change has been recorded during the week. The present situation

(Continued on page 56.)

Bristles Converge to the Centre

Boeckh's "Steel Grip" Rubber Set Paint and Varnish Brushes

Practical painters are demanding a brush that is constructed so that the Bristles converge to the centre as shown in **Cut A.** Painters have learned from experience that this converging to the centre produces an elastic and resilient action that makes it easy to spread paint evenly and easily.

Cut B shows the type of brush that has the spreading tendency, found more or less in brushes made with a straight or flat sided ferrule.

"Steel Grip" ferrule construction entirely overcomes this spreading, besides in "Steel Grip" Rubber Set brushes the bristles are held so firmly and fast that they simply cannot come out.

"Steel Grip" Rubber Set Brushes wear longer and are most economical to use.

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, March 1.—Tendencies of the paint market this week are all towards firmness. There is no department of the industry which does not find conditions if anything rather more difficult commercially than those prevailing last week. Therefore, predictions of advancing prices for all paint products are considered in order even by the most conservative minds in the trade circles of the city, and, while no man will readily commit himself to announce that paint prices are actually going to advance within any stated time, there is every hint that advances are at present being considered, and the responsibility for this state of affairs is wholly and solely with the markets for raw materials.

No Market For Linseed Oil

LINSEED OIL.—It is a token of love in these days to have a little linseed oil to sell to a friend at the topmost possible price. This is no fiction, not even mild exaggeration. Only the best business friends of those who have any linseed oil above their actual industrial requirements are favored to the extent of an occasional delivery of one barrel of linseed oil. Only one or two firms are able to oblige even to that trifling extent, and the price asked for linseed oil so disposed of in one barrel lots only, and, as a matter of courtesy at that, is in the neighborhood of the nominal figures given below, which are, as will be noted, above the figures similarly mentioned last week. The fact is that there is no real market for linseed oil at present in Montreal. One leading member of the paint manufacturing business circle said on the date of writing: "There is no linseed oil for sale in Montreal; none in Canada, I do believe. If we want to buy linseed oil in quantities to-day we'd have to go to England or the United States for it." As a matter of passing mention, prices as quoted in U. S. trade journals for linseed oil are away under these quoted nominally now in Montreal. It is reported that there are quantities of flaxseed awaiting transportation in the elevators at Fort William, one estimate putting the amount at 400,000 bushels over the figures of last year at this time. Within ten hours of the arrival of a consignment in Montreal crushers could have the oil persuaded from the seed, so that the question of supply of linseed oil to refresh a thirsty market is only a matter of time and transportation. Prices, however, are very likely to rule very firm even after the seed begins to come East again.

Linseed Oil—In 1 bbl. lots only—Raw $1.40; boiled, $1.42½.

Above quotations refer to the paint trade particularly, but one large hardware store in Montreal was willing to quote for linseed oil at the rate of:—1 bbl. lots—Raw, $1.37; boiled, $1.40 (subject to 2 per cent. off and 30 days).

Turpentine Slightly Firmer in Tendency

TURPENTINE.—There ist not a great eagerness on the market to sell turpentine at present. Something about the oil situation—due to the extreme difficulties in which linseed oil is laboring perhaps—has induced a feeling of reluctance on the part of holders to dispose of turpentine in any large amounts. Prices, however, are still normal, and not nominal, as in the case of linseed oil. The market for turpentine is firm, and reports from Savannah at time of writing were towards slightly greater firmness in sight. Following quotations are found on the market similar to those mentioned last week, and it may be noted that the low quotation, though still found on the market, is not considered likely to maintain under present conditions of firmness:

Turpentine.	Per Imp. gal.
1 bbl. lots	77-80-84c
2-4 bbls.	76-79-83c
5-10 bbls.	75-78-82c

White Lead in Oil Prices Precarious

WHITE LEAD IN OIL.—White lead in linseed oil is holding on to firm prices, according to the recent advance, and though the tide of market trend to firmer levels, still for both metal and oil is very strong, the product has so far remained steady at the quotations of last week. Almost any day might see a change, however, for the metal is still in firmest market tone, and the metal market is most precariously leaning towards exciting things, should America come into the war, and the oil is, as mentioned, positively off the market. The manufacturers are reluctant to advance prices without giving the market time to mend its ways, but markets in the present wartimes have a way of "mending" their ways by making moves to still higher levels. Quotations are:

White Lead in Oil.	Per 100 lbs.
In 1 ton lots	$14.80
In 5 ton lots	14.50
Less than tons	15.10

Advances May Come Soon in Mixed Paints

MIXED PAINTS.—Should mixed paints advance shortly no one need be surprised. The market for metals and the market for oil have been in such condition of late that it is merely a matter of observation and figuring to predict advances in mixed paints unless some rapid and totally unexpected changes occur. It is known that advances are contemplated by paint manufacturers at present, but the matter has not reached the stage of definite announcements yet. It may be that some manufacturers of paints are still reluctant to follow the market for raw materials aloft, even at risk of much smaller profits, perhaps actual losses. The present time is not ideally suited to making advances in mixed paint prices, and Canadian manufacturers have always had consideration for customers and fair-play quite as much at heart as perfection of product, and increase of business. These factors complicate the situation, as will be apparent to all in touch with the trade.

Glass is Advanced; Putty is Very Firm

GLASS AND PUTTY.—Glass is costing more in Montreal to-day than it could be purchased for last week, the extent of the advance being in accordance with the United States advances, but not closely calculated out in all details as yet. Montreal glass merchants are watching Toronto markets for glass in anticipation of advances there also, this having a bearing on the Montreal situation to some extent. Putty prices are still as quoted last week, but the market is firm to the point where firmness indicates almost the prediction of further price advances. The linseed oil trouble and the great shortage of whiting are responsible. Bulk putty in casks

is quoted at $3.10 per hundred pounds. The other packages and quantities in proportion, as previously reported.

Shellac Market Shows A Decided Firmness

SHELLAC.—Prices of shellac are showing strong tendencies to advance from week to week now while the British embargo on the exportation of this product from India maintains. New York reports shrinking supplies, and the local stocks, while reasonably large, are not being drawn upon very readily to supply needs of retail trade. Prices range still from $2.65 for orange and $2.90 for white per gallon to $3.35 and $3.50 respectively. Information from New York notes the fact that Great Britain has taken 80 per cent. of available ship space for Government needs. and predicts further firmness in shellac likely to last some time.

TORONTO

TORONTO, March 1.—There have been several cars of flaxseed reach Toronto during the week and this will afford a slight measure of relief in the linseed oil situation. However, it is not looked upon as sufficient in quantity to affect the market or make any easier feeling. Mixed paints are all in firm market and some paint men are positive in their opinion that prices will go higher. Turpentine held in a steady market during the week, in the face of an anticipated decline.

Some Flaxseed Arrives But Oil Prices Firmer

LINSEED OIL.—Although several cars of flaxseed reached Toronto during the week after a considerable period when supplies have been shut off. This is not taken by linseed oil men to mean that there will be a free movement of seed from the West from this time forward, as there is no intimation by the railroads as yet that there will be a free movement of seed. Those closely in touch with the linseed oil situation assert that even if there should be large quantities of seed supplied to the crushers, and even if the price of flaxseed should drop considerably below present figures, there is small prospect of a drop in linseed oil for some little time. It is pointed out that the export of oil cake is entirely shut off and with the domestic demand for this commodity decreased with the approach of spring grass, there must necessarily be frm prices for oil to compensate for the loss of the market for the oil cake. Flaxseed in the Winnipeg market held remarkably steady during the week, there being only ¼ of a cent variation from the close of Thursday of last week as compared with the close on Wednesday of this week, the prices for the respective days being $2.53¼ and $2.53½. Inspections of cars of flaxseed were fairly heavy during the week, no less than 80 cars having passed through the inspector's hands at Winnipeg. Prices of linseed oil locally inclined to firmer levels. Where quotations were made last week at $1.35 in single barrel lots to customers the price has been increased to $1.40. The lowest quotation secured in the market was $1.39 for single barrels of raw. Crushers report a good demand for oil, but supplies are very limited with which to meet it.

	Raw. Per gal.	Boiled. Per gal.
1 to 2 barrels..	$1.39-$1.40	$1.42-$1.43
3 to 5 barrels..	....- 1.39	....- 1.42
6 to 9 barrels..	....- 1.37	....- 1.40

Turpentine Prices Maintained During Week

TURPENTINE.—Owing to the uncertainty of arrival of additional supplies of turpentine this factor entered into the market to arrest for a time at least the downward trend. A decline is anticipated as soon as dealers can see that further supplies are going to get into this market. In the primary market there was little of interest during the week, except that none of the old crop turpentine was offered for sale. At the present it is estimated the holding of turpentine in the three primary points of the south are 76,000 casks. Following is the range of quotations:

	Per Imp. Gallon.
1 barrel lots	$0.77-$0.81
2 to 4 barrels	0.76- 0.80
5-gallon lots	0.82- 0.88

White Lead Held Steady During Week

WHITE LEAD IN OIL.—There was a slightly easier feeling in the primary market in pig lead during the week which resulted in lower prices being quoted there. The movement was not sufficient to make material difference in the price of white lead in oil. There is a disposition to look upon the present price of white lead in oil as somewhere near the top of the market. Consumption is being greatly curtailed through the high price and there is fear that should the prices go higher the demand may be shut off entirely. In ton lots the commodity is quoted at $15 per hundred pounds and in small lots at $15.30.

Mixed Paints Are In Still Firmer Tone

MIXED PAINTS.—There is a disposition to look for higher prices in mixed paints among some of the paint dealers. They point out that with the firm position of linseed oil and the high price for white lead in oil that higher prices seem highly probable. Orders continue to come in quite satisfactory for spring delivery, the demand for mixed paints being reported good.

WINNIPEG MARKET REPORTS

(Continued from page 52.)

is affected considerably by the embargo in the States and tho quotations are still being made, jobbers and manufacturers are anticipating a shortage. This may result in higher prices, which with the recent advances in white lead will undoubtedly affect the price of mixed paints. To-day's prices on linseed oil are:

Per gal., bbl. lots: raw, $1.35; boiled, $1.38.

Turpentine remains firm with demand normal and no present word is available of a possible shortage. Quotations remain as for the past few weeks, namely:

85c. per gal, bbl lots; 88c. per gal., ½ bbl. lots; 90c. per gal., 5 gal and 1 gal. lots

Advances have been made effective in the price of lamp chimneys, the following quotations now being best available:

A, 8 doz. case, 75c. doz., $5.50 case; A, 4 doz. cases, 75c. doz.; $2.85 case; B, 6 doz. cases, 90c. doz., $4.85 case.

Another revision is noticeable in Yale & Town Co. products which affect chest locks, wardrobe locks, night latches, etc. New prices on night latches, with which the average retailer is familiar, are as follows:

Yale night latches, per doz.: No. 42, $26.40; No. 042, $24.75; No. 44, $30.10.

Hinges, Clout Nails, Set Screws Higher

Hook and strap hinges have advanced in price and all sizes are now quoted at 8c per lb.

New prices have been issued on Penberthy valves and the following quotations go into effect at once. It will be seen that all lines of Compodisk advance, but present prices on the regrinding will be maintained for some time at least:

Compodisk Angle and Globe Valves, each: ¼, $1; ⅜, $1.10; ½, $1.45; ¾, $2; 1, $2.50; 1¼, $3.60; 1½, $4.95; 2, $7.90.

Compodisk Hor. Check Valves, each: ¼, $1; ⅜, $1.10; ½, $1.15; ¾, $1.70; 1, $2.35; 1¼, $3.25; 1½, $4.50.

Quality Fruits and Vegetables Command High Prices. This Will Create an Increased Demand for S-W Quality Spray Products

which means increased sales and profits to the dealer who is prepared to supply this demand, and, [incidentally help him sell spraying outfits and sundries.

Among the high quality S-W Spray Products, none will prove more popular this season than

Calpoiso

The Arsenate of Calcium Insecticide

Because Calpoiso has been proved by some of the best authorities on spraying in Canada, to be the proper material to use with Lime Sulphur or Bordeaux Mixture to obtain best results.

Calpoiso is in dry powdered form, does not clog the sprayer nozzles, does not deteriorate, remains well in suspension, adheres well to the leaf, does not freeze, and being a dry product there is a considerable saving in freight.

These facts and many others having been extensively advertised to all orchardists and farmers in Canada will create a large demand for Calpoiso. Are you prepared to meet it ?

Ask us about the S-W Agency Proposition.

Re Gauges and Prices of Sheets.

Prices which follow on black **and galvanized sheets are purely nominal. The market has reached a state where prices are quoted only on application and for immediate acceptance.**

On account of it being practically impossible to secure galvanized sheets from England, owing to the war, American mills have decided that they will no longer roll the English gauges to meet this competition. However, they will continue to roll at 10¾ oz., which will be known as such or a 30 gauge, and will take the place of the former English 28 gauge.

SHEETS (BLACK)

	Montreal 100 lbs.	Toronto 100 lbs.
10 gauge	6 20	6.00-6.05
12 gauge	6 30	6.10-6.10
14 gauge	5 55	5.80-6.15
16 gauge	5 65	5.90-6.25
18-20 gauge	5 55	5.95-6.30
22-24 gauge	5 60	6.00-6.65
26 gauge	5 60	6.05-6.70
28 gauge	5 75	6.15-6.80

SHEETS, CORRUGATED

Per 100 sq. ft. Galvanized

28 ga.	$ 6 50	$ 6 50	$ 6 50
26 ga.	7 00	7 00	7 00
24 ga.	8 75	9 50	10 00
22 ga.	10 50	11 50	12 00
20 ga.	12 00	13 20	14 00
18 ga.	15 00	16 50	18 00

Above prices are subject to 7½ per cent. discount to dealers.

Feed them Glidden Auto Finishes. There's good profit in it for you.

You can get a profit from every automobile in your community. Picture it? Every automobile means a buyer—present or future—of Glidden Auto Finishes.

Automobiles are well finished when made. But wear and weather, dust, mud and grease, neglect and accidents, all act to deaden the finish. Every motor car needs to be finished once a season—at least.

Every owner selling a used motor car should refinish it and add to its value. Every buyer of a used motor car should refinish it and have it look like new.

They can do it themselves—easily, conveniently, economically, quickly. They will do it themselves if you tell them all the reasons why they should use Glidden Auto Finishes.

Write to-day for our extra special offers.

By our special introductory plan every dealer in the Dominion is given an unusual opportunity to make big Auto Finish profits this year. We have prepared several special offers which include the complete Glidden Auto Finish line, a full set of new advertising (everything you'll need for quick selling).

These offers are made for a short period only, and are subject to withdrawal without notice. The present price situation suggests quick action. So drop us a line (postal or wire) and get full details.

Remember that Glidden Auto Finishes are the only nationally advertised Auto Finishes on the market.

WA-KO-VER STAIN FOR FLOORS AND INTERIOR FINISH

Is essentially a colored varnish of such remarkable toughness and elasticity, that wood treated with it may dent under a blow, but the finish will give with it without cracking.

WA-KO-VER STAIN does not cover up the natural beauty of the wood, but rather emphasizes the grain and imparts any desired effect.

Any article finished with these stains may be washed with soap and water without impairing the brilliancy of the finish.

Are we represented in your town? If not, write for our exclusive agency proposition. *It stands in a class by itself as a profit-maker.*

JENKINS BROS.' "Type K" BRASS GATE VALVES

MADE IN CANADA

Only the WEAR and TEAR of HARD, CONTINUOUS SERVICE is the TRUE TEST of a VALVE.

EFFICIENCY, under the most exacting conditions, has PLACED and KEPT TYPE "K" GATE VALVES in thousands of up - to - the - minute POWER PLANTS.

Their design is graceful, the metal is evenly distributed so as to insure rigidity and strength, preventing distortion due to strain or shock, and are of the DOUBLE WEDGE type.

Unlike Valves with a solid wedge, the Discs in the TYPE "K" VALVE will not jam in the Valve body, for the first movement of the Spindle loosens the Discs and the guides in the body remove them from the seat-faces.

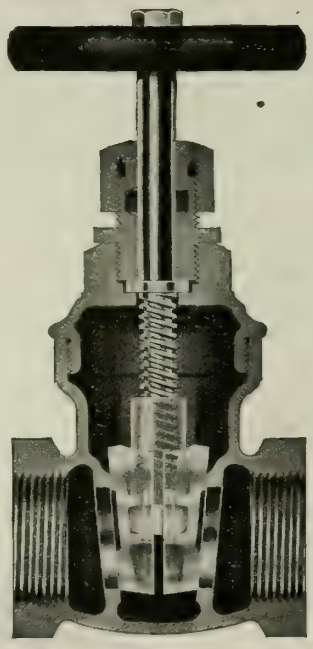

Fig. 300. Type "K" Brass Gate Valve. Screwed. (Sectional View)

TYPE "K" GATE VALVES are a "TRIED" VALVE.

In SERVICE they have PROVEN themselves to be WITHOUT an EQUAL.

They are not sold for trial or testing purposes, but to stand hard, continuous work.

GUARANTEED against defects in MATERIAL or WORKMANSHIP and in other respects carrying the usual JENKINS BROS.' GUARANTEE OF SERVICE and SATISFACTION.

Registered and approved for use in the Provinces by the Departments of Public Works.

Write for Catalogue No. 8.

DESIGNING AND BUILDING THE PERFECT HOME

Who knows it all when it comes to planning a new home? Do you? Does your neighbor? Does your architect? Does your builder? What perfect home do you know of?

Now perfection may be impossible to obtain, but one can approach perfection by educating oneself concerning

the site, the plan, the style, the decoration, and other related matters.

Experience teaches. Therefore use the experience of others and their good counsel, born of errors and of successes, as found in the book.

BUILDING A HOME

By Desmond and Frohne, the editors of **The Architectural Record**, America's leading paper in its field.
(Price, $1.50, with 15c extra for postage.)

In this book are gathered together the counsels and experiences and suggestions of men who have had an exceptional opportunity to acquire wisdom in relation to the building of homes. The book is a beautiful one as a piece of book-making, and is richly illustrated. It is no economy to save $1.50 when you are considering the building of a home.

Send for the book now, and have it ready against the day when you will build the home of your dreams.

This is the Kind of Trade Our Advertising Reaches

Lowe Brothers' advertising is based on the principle that it pays to go after GOOD trade, and go after it hard and all the time.

Lowe Brothers' dealers are often surprised with the breadth and depth of our advertising appeals—they forget for the moment that we've been not only making High Standard Paints for over 50 years, but we have been learning how to advertise them, and to sell them for our dealers.

The result is—Lowe Brothers' advertising GETS the right trade—Lowe Brothers' "High Standard" quality HOLDS it—and our dealers find the local "best" trade comes their way as a matter of course.

Let us send you our proposition to-day.

A Straight Talk from the Manager

No. 59

ONE of the livest hardware stores in Ontario was visited by a HARDWARE AND METAL representative this week. The proprietor* has made a conspicuous success of his business, and dealers everywhere could profit by his example, in any department.

"The first thing I look for in Saturday's mail," said this merchant, "is the 'Markets at a Glance' column in Hardware and Metal. On Sunday I read Hardware and Metal after my Bible, and then I bring it back to my office, where I keep a complete file right at my elbow."

The well-thumbed copies of last year's Spring and Fall Numbers of Hardware and Metal speak eloquently of the use this merchant finds for the two big issues of the year.

It is a fact that the biggest and most successful hardware merchants in the Dominion are the closest readers of Hardware and Metal. It is not unreasonable to suppose that this habit has contributed very materially to their success.

J. G. L.

*Name on request.

OWL BABBITT METALS

We broke in on one dealer after hard work. At first he didn't want to handle babbitt metal. Now he sells $100 a month. The profit each month pays half his rent. What about you?

DON'T STOP ADVERTISING.

Keep your name to the front, so that you are in the market for the business that is going and for the new business that is coming. Do not let the world think that you have "gone under."

Stopping an advertisement to save money is like stopping a clock to save time. Advertising is an insurance policy against forgetfulness —it compels people to think of you.

Dollars for Debts

TURN YOUR SLOW AND BAD ACCOUNTS into money. Every business and professional man abandons as hopeless, many outstanding dollars that should show in his cash drawer, or Bank Account. Every bookkeeper, credit man, collection manager or other employees who handle accounts, let GOOD dollars get away that should appear in larger profits for his employer, and increased salary for himself.

Every professional collector, every Commercial Lawyer puts into his "Drop or Dead File" the equivalent of hard dollars that ought to figure in his monthly income. THE COMMERCIAL UNDERWRITERS has a system that will bring your dollars home.

We are NOT a collecting agency. Our method of adjusting bad accounts is DIRECT FROM DEBTOR TO CREDITOR. We handle no moneys.

If you have any bad accounts, you need us. Adjustment made in the United States and Canada. Write us for full particulars.

Commercial Underwriters

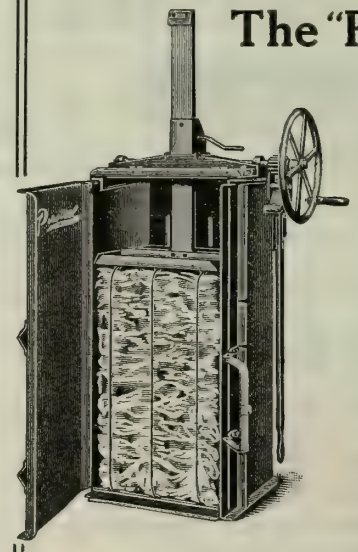
Don't Burn Dollars

Turn Your Waste Paper Into Paper Money

The waste paper that you spend so much time in destroying has a considerable cash value, which is increasing almost daily.



The "Presteel" Fire-Proof Baler

Is all-steel and fire-proof, unbreakable and unburnable, also very compact.

The Presteel has fewer parts than any other baler. It cannot get out of order, and will last a lifetime. It is easy, simple and quick to operate.

Its special features make it superior to any other baler on the market.

Greatly reduces fire danger.

There's a place for a Presteel in every store, office and factory.

They're profitable to use and profitable to sell.

Write for full details.

Spielmann Agencies (Reg'd.)
45 St. Alexander St., Montreal, P.Q.

"I don't know why I ever stopped subscribing to HARDWARE AND METAL," says an ex-hardwareman who has been in the real estate business for the past six years.

"I am thinking of getting back into hardware again, so you may enter my subscription.

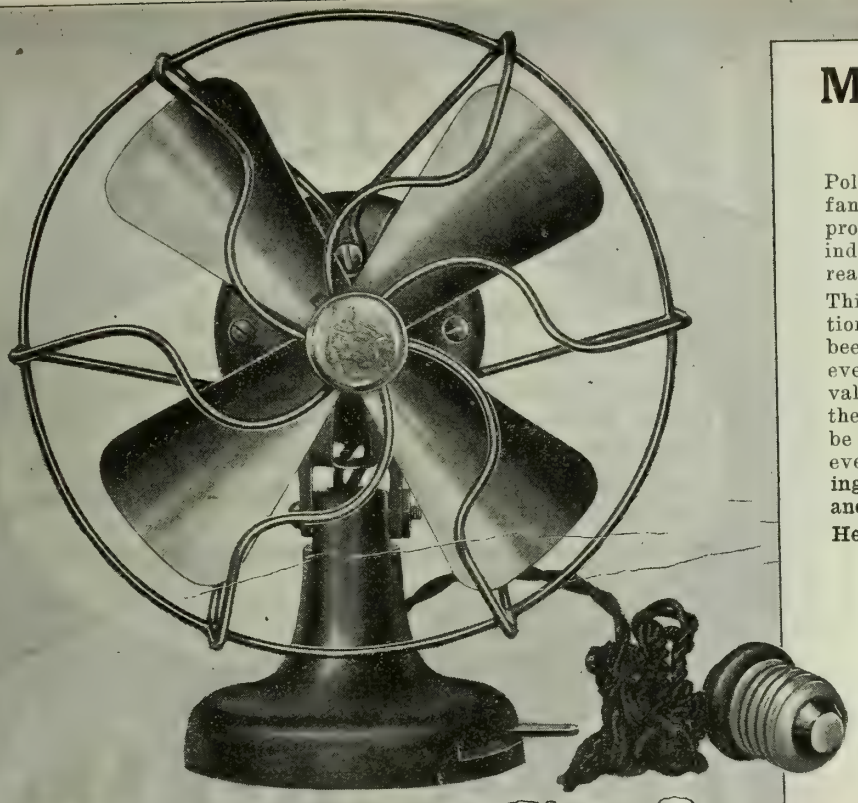
"I have always had a warm spot in my heart for HARDWARE AND METAL, because I made a lot of money through it.

"The best deal I ever made was the result of a prediction in HARDWARE AND METAL, that the price of pig-iron would advance shortly.

"I immediately placed a big order for stoves with one of HARDWARE AND METAL'S advertisers, just in time to take advantage of a heavy increase in the price of stoves.

"I could tell you of many other profitable deals that HARDWARE AND METAL helped me to make, but this was the best one."

If interested, tear out this page and keep with letters to be answered.



Polar Cub
REG. U.S. PAT. OFF.
Electric Fan
$7.50

Making a Good Thing Better

Polar Cub was the **first** low-priced fan. It "led the procession" by proving the vast sales field for an individual fan at a price within the reach of everybody.

This year Polar Cub is without question the **best** low-priced fan. It has been improved and perfected in every detail. It gives much bigger value than the previous models. But the price remains $7.50! And it will be advertised on a bigger scale than ever before—in **The Saturday Evening Post, Collier's, Literary Digest, and System.**

Here are the 1917 improvements:

- **Two speeds and stop.**
- **Die-cast frame (57 fewer parts).**
- **Bearings are integral part of die-casting.**
- **Cannot get out of alignment.**
- **Guard spot-welded and unbreakable.**
- **Fan adjustable to any angle.**
- **Hook on base for attaching to wall if desired.**
- **Equipped with 8-foot cord and plug.**
- **Blade diameter, 6 inches; height of fan, 8 inches; net weight, 3 lbs. 5 oz.**

Trade discounts as follows:

Less than 6 fans .....$7.50 each
Six fans and over .....$5.50 each

Terms: 2-10-30 f.o.b. Toronto.

Fans packed 6 and 12 to the package. Upon request we furnish, free, striking sales-making store display material.

Order Early. We have largely increased our production facilities, but despite this the demand will exceed the supply.

So place your order now. If further information is wanted, write us.

HOYT METALS

MEMO
March 3rd

for your Babbitt Metal file

HOYT FROST KING BABBITT is no experiment. This metal is the result of experience in alloying for over forty years. In placing this metal on the market we are positive we are giving the trade the most efficient and durable babbitt for all round engine and machine work that can be manufactured. We have never had a complaint as to its quality, and have had many letters stating emphatically the superiority of this metal over other babbitts that have been used in the past.

The Hoyt Metal Company believes you will serve your best interests by giving this alloy a trial.

Write for our price list.

HOYT METAL CO., Toronto

NEW YORK, N.Y. LONDON, ENG. ST. LOUIS, MO.

Condensed or "Want" Advertisements

There is always someone, somewhere, who is looking for just such a proposition as you have to offer—and it is more than likely that he is a hardwareman and a subscriber to HARDWARE AND METAL. Let an advertisement on this page bring you together.

RATES (payable in advance): 2 cents per word first insertion, 1c per word subsequent insertion. An additional charge of 5 cents for each insertion is made when Box Number is required. Each figure counts as one word.

SITUATION VACANT

WANTED — HARDWARE CLERK, GOOD salesman. State experience and salary wanted. Apply Box 51, Meyronne, Sask.

A FIRST-CLASS TINSMITH — STEADY work; also a man of two or three years' experience; references required; state wages wanted. Box 424, Hardware and Metal, Toronto.

AGENCIES WANTED

THE SUREST WAY FOR THE MANUFACturers' agent to connect with good live firms, is to tell the manufacturers who read Hardware and Metal, all about his ability to sell their goods. Try an advertisement on the Condensed Ad. Page of Hardware and Metal, under this heading.

STORE EQUIPMENT FOR SALE

YOU MUST HAVE A LOT OF OLD FIXtures around the store which are no longer of any value to you, but would prove very useful to someone else in the hardware business. Find a purchaser for this equipment through an advertisement on Hardware and Metal's Condensed Ad. Page.

FIFTY DOLLARS TIED UP IN OLD FIXtures that you are no longer using would make a lot of money for you if invested in stock and turned over three or four times a year. Get your money out, by selling the fixtures to one of Hardware and Metal's readers who may be looking for exactly what you have to offer.

PAPER BALERS

THERE IS MONEY IN USING AND SELLing the Jewell Paper Baler. It is the only low-priced, efficient baler on the market. Every hardware store should use one. Splendid side line for one line traveller in each territory. General Sales Co., Stair Bldg., Toronto.

SITUATIONS WANTED

HARDWARE CLERK SEEKS POSITION—12 years' experience. Can take charge. Box 433, Hardware and Metal, Toronto.

SHEET METAL WORKER WITH 13 years' experience, is open for engagement after March. Can take charge of shop. Can do plumbing. Box 432, Hardware and Metal.

EXPERIENCED HARDWARE MAN, NOW in the employ of a large Canadian house, is anxious to better his position; has wide wholesale and retail experience. Anxious to locate in Montreal or Winnipeg. Position must be permanent and salary good. If you have need of such help, here is a man who will give you value for every cent invested in his salary. Box 431, Hardware and Metal, Toronto.

THE "CHANGING TIME" IS GETTING near. There are many firms who have vacancies on their sales or office staffs to fill during the next few months. If you want to qualify for some of these vacancies, tell your story briefly in a Condensed Advertisement, and try it out in Hardware and Metal. A twenty-five word advertisement may land you a permanent position with splendid prospects.

FOR SALE

FOR RENT — TINSHOP AND TOOLS — good opening for good mechanic. Apply Box 51, Orangeville, Ont.

A 640 ACCOUNT McCASKEY REGISTER —practically new; will sell cheap for cash; reason for selling, doing a cash business; can recommend register. R. A. Wells, Dresden, Ont.

HARDWARE BUSINESS IN HAMILTON for sale, including stock, fixtures and dwelling. Cash deposit required, security for balance. Best reason for selling. Box 426, Hardware and Metal, Toronto.

WE HAVE FOR SALE CHEAP, A QUANtity of good clean cuttings; good sizes in both galvanized and black, all gauges, 10 to 10¾ oz. inclusive. Wheeler & Bain, Toronto.

WELL ESTABLISHED GENERAL STORE business and dwelling in lively western town; turnover $100,000 yearly. Hardware, groceries and dry goods. A good proposition for the right party. Good reasons for selling. Apply to Box 435, Hardware and Metal, Toronto.

HARDWARE STOCK IN THE TOWN OF South Porcupine, right in the heart of the great Porcupine gold fields. Stock is clean, well assorted and mostly bought before the heavy advances. Will run about $7,000.00. Spring lines booked at prices very much below present market. Best stand in town. Will either sell or rent property. Doing a fine, profitable business, which promises continual increase. Splendid chance for two young men. Best reasons for selling. Will be off market unless sold by March 15th. Write or wire the owner. H. N. Joy, South Porcupine, Ont.

MISCELLANEOUS

GOOD STENOGRAPHERS ARE WHAT every employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

ADDING TYPEWRITERS WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited. Room 314, Stair Building, Toronto.

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Ltd. Supplied by the trade throughout Canada. (tf)

DOUBLE YOUR FLOOR SPACE — BY INstalling an Otis-Fenson hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B." Otis-Fenson Elevator Co., Toronto.

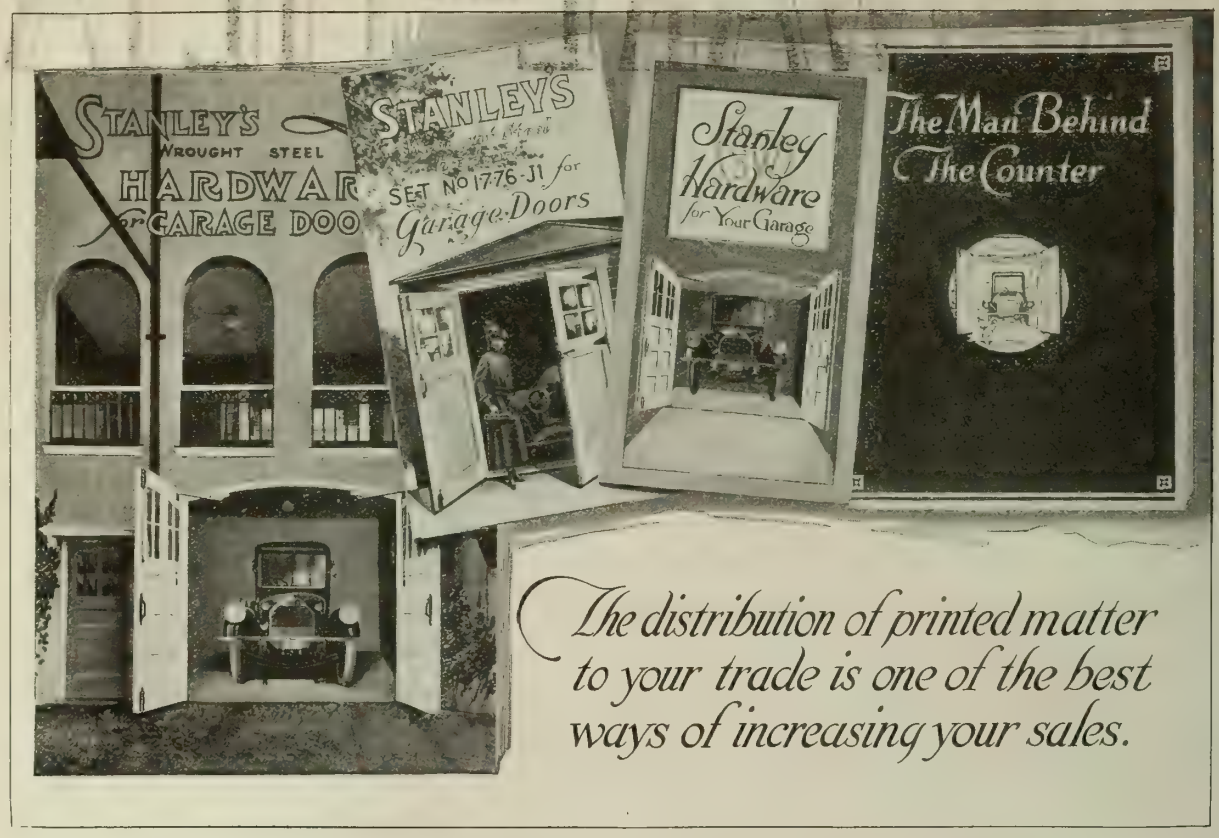
FILES OF QUALITY



The distribution of printed matter to your trade is one of the best ways of increasing your sales.

THE judicious use of circulars furnished you by your manufacturers is a form of advertising that costs you little or nothing. Yet it is a most effective means of keeping your various lines before your trade.

Enterprising merchants never allow a package or a local letter to go out of their stores without a business-getting enclosure of some sort.

The Stanley Works will supply you with well designed folders, advertising Stanley Garage Hardware. These, with your name prominently printed on the front cover, will get the attention of all garage owners and builders who see them.

A blank for ordering advertising matter will be sent you with a booklet, "Selling More Stanley Garage Hardware." This booklet illustrates and describes the complete series of selling helps we have prepared to assist you increase your sales in this profitable line.

Fill out the attached coupon, pin it to your letterhead and send it to us to-day. It will bring you your copy of "Selling More Stanley Garage Hardware" immediately.

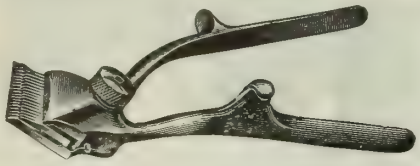
PRIEST'S HORSE and TOILET CLIPPERS

Made by American Shearer Mfg. Co.

present a complete line at a range of prices covering all requirements of the trade. They are all quality goods, and represent best designs and highest standards of workmanship, regardless of price.

Some styles of Toilet Clippers are illustrated below. All are heavily copper plated and polished before nickeling, thus giving a higher finish, which lasts much longer than ordinary plating. The utmost care is used in grinding and tempering the cutting plates, giving cutting qualities whose superiority may be readily demonstrated by comparison. No. 00 and No. 000 Shaver for beard and neck trimming, are clippers of the utmost lightness and refinement, not paralleled by any other American manufacturer.



STANDARD No. 0, No. 1 and No. 2.
Retailing at about $2.50. High-class barber's clipper.

No. 00 SHAVER
A light and elegant Clipper for beard and neck trimming. Retailing at about $2.25.

SPEED

INSPECTING PISTONS
KING MOTOR CAR CO.

What Automobiles Have Done

The tremendous developments in automobile and accessory manufacturing have created a most profitable market for fine measuring instruments. To produce the necessary jigs and dies for duplicate parts, it is necessary to have accurate tools to lay out, check up and inspect the work. Most toolmakers and machinists are using

Starrett Tools

because of their accuracy, reliability, and convenient design. They are the standard for all accurate measurements.

It will pay dealers to carry a complete line of these tools to fill the machinist's demand for rules, squares, levels, micrometers, calipers, and gages, to supply toolmakers and manufacturers with the larger and more expensive instruments such as vernier calipers, height gages, depth gages, large micrometers, large calipers, etc.

Write for free catalogue No. 21MA describing 2,100 styles and sizes of fine tools.

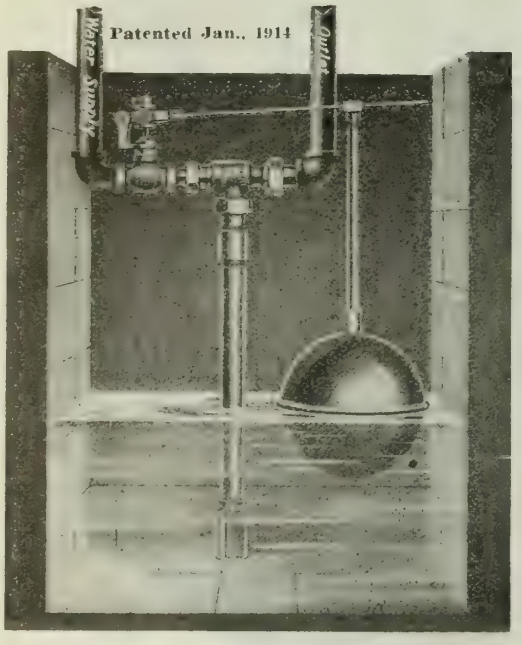
MORRISON
Automatic Cellar Drainer



A simple, durable, automatic device for draining cellars, wheel pits, furnace pits, cesspools, foundations, and for any purpose where it is necessary to remove water economically from one level to another by water pressure.

The operation of the machine is extremely simple, being actuated by the raising or lowering of float as the water level changes in the pit. It operates purely by water. With our patented improvement it works under a far greater range and gives much larger capacities than any other device on the market, so far as we know, operating as low as 10 lbs. water pressure.

The operating limits of other types of cellar drainers range from 15 to 18 feet lift. The Morrison machine lifts as high as 30 feet at 60 lbs. pressure.

All working parts above water. Nothing to get out of order.

The James Morrison Brass Mfg. Company, Limited

more sales—larger profit—less effort

Here's the way Plymouth Rope is now sold by the foot in hundreds of progressive stores.

The buyer enters and inquires the price of the length of rope he wants.

The dealer turns to his price-by-the-foot schedule card and at once quotes the exact cost. No weighing of rope as in the old days.

The figure quoted is less than that demanded elsewhere for cheap ropes sold by the pound. (Plymouth's greater yardage is the reason). The buyer says, "All right."

The dealer measures the rope, cuts off the proper length and the buyer departs with his purchase—satisfied.

The dealer is satisfied too. He has made an easier and more profitable sale than he would have under the old price-per-pound plan. And he makes more Plymouth sales than formerly.

Are *you* profiting by this new plan?

Plymouth Rope
Sell it by the foot

Quality

THE leader in every industry, to maintain his lead, must safeguard the quality of his products.—Rigid inspection and careful supervision are important factors.—To products of iron and steel this principle applies with tremendous force.—It means safety, security and stability.—We safeguard the quality of our products, believing quality will be recognized long after the price is forgotten.

Service

OUR customers must be served. One of the dominating factors in any successful business is Service.—We succeed only through the good will and good wish of the people we serve.—This thought permeates our entire Organization, from the President down.—Our employees feel the sense of responsibility this principle implies; and each one directs his efforts to maintain the high standard of service we aim to render.

Facts to Remember When Ordering Files

"Famous Five" files are made in standard kinds and sizes. The kinds most called for are taper, slim taper, mill, flat, half round, round and square.

The sizes go by half inches up to 6" in length on taper and slim taper, and by inches on other kinds up to 8", and then every 2" above that.

It is not advisable to order odd sizes like 6½" or 13" because it means readjusting machines. That takes longer time, whereas standard size files can always be had more promptly.

The regular cuts are bastard, second cut and smooth. The cut is determined by the number of teeth per inch.

These facts about files are not generally known, but is is well to bear them in mind when ordering.

Specify "Famous Five" files on your orders to jobbers.

MASONS SIX-GLASS PLUMBS AND LEVELS

These Levels have two Level Glasses and four Plumb Glasses so arranged that no matter how the tool is taken up, one or more of them are available with which to level or plumb.

Each Glass is set solid in a metal case, which case is screwed into the level stock—a very much more satisfactory arrangement than were the glasses set directly into the wood.

The Glasses are protected on both sides of the stock by a glass disc which serves not only to protect the glass from breakage, but keeps dirt and moisture from the openings. Made in two lengths, 42 and 48 inches long.

THESE ARE NEW TOOLS—SEND FOR FURTHER DETAILS.

Bulk Sales Act for Ontario This Year

New Measure Protecting Retail Merchants on Small Accounts — Sinclair Bill Endorsed by R. M. A., Credit Men's Association, C. M. A. and Canadian Bar— Thirty "Got Away" Last Year.

Based on interviews with V. A. Sinclair, M.P.P.

A BULK Sales Act looks to be assured for Ontario during the present session of the Legislature, which will bring all Canada, except a portion of the Maritime Provinces, under the operation of a Bulk Sales Act of some description. The whole of the West, from Manitoba to the Coast, is under an Act similar to that proposed for Ontario; and Quebec and Nova Scotia have some legislation, though of a somewhat different nature, on their statute books.

After becoming what has been described in Queen's Park as a "hardy annual," being brought up year after year, only to meet defeat, the prospects for the bill winning out this season, HARDWARE AND METAL is assured, are of the brightest.

The sponsor for the present bill—an improvement of former ones—is Mr. V. A. Sinclair, member of South Oxford, and the bill was introduced for its First Reading last Friday, and the Second Reading, the real test, will be proposed shortly. The "godfather" of the bill for several year past was Hon. W. D. Macpherson, M.P.P. for Northwest Toronto, and its defeat was only by a few votes of the whole House last session. This year its supporters point out, Mr. McPherson has the added strength of a Cabinet Minister, and, in addition, the leaders of the Opposition last year, it is understood, have declared their willingness to be no more than "passive" objectors, if indeed they do not come round to vote for it.

For several years the Retail Merchants' Association has opposed such a bill, not because they did not agree with the principle, but on account of the terms, which bore inequalities for the retail merchant.

Strong Support This Year

In an interview with Mr. Sinclair on Wednesday of this week, HARDWARE AND METAL secured an interpretation of the Act as it has been drawn up this year. It will be noted that the retail merchants are protected in the new regulations on two points. This bill has now the approval of the R. M. A., the Canadian Credit Men's Association, the Canadian Manufacturers' Association, and the Canadian Bar Association.

SCHEDULE "A."

Statement showing names and addresses of all creditors of
Name of Creditors.
Post Office Add.
Nature of Indebtedness.
Amount.
When Due.

I, of
in the Province of Ontario, do solemnly declare that the above is, to the best of my knowledge and belief, a true and correct statement of the names and addresses of all creditors and shows correctly the amount of indebtedness or liability due, owing, payable or accruing due, or to become due and payable by to each of the said creditors. (If the declaration is made by an agent, add: I am the duly authorized agent of the vendor and have a personal knowledge of the matter herein declared to.)

Or if the vendor is a corporation:—

I, of
in the Province of Ontario, do solemnly declare that the above is, to the best of my knowledge and belief, a true and correct statement of the names and addresses of all the creditors of the Company, and shows correctly the amount of the indebtedness or liability due, owing, payable or accruing due, or to become due and payable by such Company to each of the said creditors, and that I am the of the said Company, and have a personal knowledge of the matter herein declared to.

And I make this solemn declaration, conscientiously believing it to be true and knowing that it is of the same force and effect as if made under oath and by virtue of The Canadian Evidence Act.

Declared before me at the of
in the Province of Ontario,
this day of
A.D. 19

A Commissioner.

Boardinghouse Keepers Included

"The first change that has been made in last year's bill," Mr. Sinclair explained, "protects the retail merchant by bringing boarding keepers under the operation of the Act. This is done by adding to the description of "stock." In the old bills it was defined as "(c 1)—a stock of goods, wares, merchandise and chattels, ordinarily the subject of trade and commerce; (c 2)—the goods, wares, merchandise or chattels in which any person trades, or which he produces or which are outputs of."

To this definition has been added the words, **"or with which he carries on any business, trade or occupation."** Thus a boardinghouse keeper who could have eluded the protection to creditors features of the bill, are brought under its operation.

Looking After the Small Creditors

"A second point to which objection was raised in the former bills was the ignoring of the creditor whose claim fell under $50.

"The main purpose of the Bulk Sales Act of course, is to prevent a man selling out his stock, pocketing the proceeds, and then snapping his fingers at his creditors.

Thirty Ignored Creditors Last Year

"Among the ammunition I have gathered in support of this bill is the fact that last year 30 men sold out in bulk, and kept the money from their creditors. In one case, I understand one man advised a creditor that he had $2000 in cash in his pocket from the sale of his stock and intended to keep it there!

Sworn Statement of All Creditors

"To prevent any such treatment of creditors the bill makes it compulsory on any one who is bargaining for or purchasing any stock in bulk, whether for cash or on credit, before paying the

vendor any part of the purchase price (save $50 to bind the agreement) to receive from him a sworn statement containing the names and addresses of all creditors, together with the amounts owing in each case. The bill compels the vendor on his part, to furnish this complete list.

"Formerly this list of creditors was to include only those to whom $50 or more was owing; now all are included, at my suggestion. It is the only fair way; why should not the man to whom $5 is owed be protected as well as the other."

In case no such statement is made, and any money is paid over, the sale shall be deemed fraudulent and shall be void, unless all the creditors are paid in full out of the proceeds.

Unless the creditors give a written waiver, the purchase money must be delivered to a trustee to be distributed among the creditors pro rata. The trustee's fee shall not exceed 3 per cent. and this must be paid out of the proceeds.

Judge May Choose Trustee

"A new clause has been added in reference to this trustee," explained Mr. Sinclair. Before, there was no penalty for failure on the vendor's part to name a trustee; now if he does not within 30 days, a county judge is empowered to do so, on application of any creditor."

Cannot Seize Cash on Person

Mr. Sinclair pointed out a curious technicality that enabled the vendor to enjoy his ill-gotten gains in defiance of the rights of his creditors, if he keeps it about his person.

"If a man got $2,000 from a sale he could hang on to it, and no creditor could move to seize it on him, for this would constitute a 'breach of the peace'."

Majority of One Vote

The member who introduced the Bulk Sales bill is a lawyer, one of the bright, younger men, in the house, who says he occupies the position of being "the one with the smallest majority in the house." Mr. Sinclair tackled a seat, which was a traditional stronghold of the other side, and after the death of the canditate on his own side, three weeks before the election of 1914. The night of the election Col. Mayberry the sitting member of 300 majority in 1911, was declared elected by 4 votes. The official returns gave the seat to Mr. Sinclair by 4 votes. A recount increased this to 5, but an appeal reduced it to 1!

But this, really has nothing to do with the Bulk Sales bill of 1917.

BILL

His Majesty, by and with the advice and consent of the Legislative Assembly of the Province of Ontario, enacts as follows:

Short Title.

1. This Act may be cited as The Bulk Sales Act, 1917.

2. In this Act,

Interpretation.

(a) "Creditor" shall mean and include a person to whom the owner of any stock as defined by the Act is indebted, whether the debt is due and owing or not yet payable, and shall include any surety and the endorser of any promissory note or bill of exchange in respect of which such suretyship was entered into or such endorsement given, became a creditor of such owner.

Judge.

(b) "Judge" shall mean a judge of the county or district court of the county or district in which the owner's stock-in-trade is located at the time of the sale or intended sale thereof.

Stock.

(c1) "Stock" shall mean a stock of goods, wares, merchandise and chattels, ordinarily the subject of trade and commerce;

(c2) The goods, wares, merchandise or chattels in which any person trades, or which he produces or which are outputs of, or with which he carries on any business, trade or occupation.

Trustee.

(d) "Trustee" shall mean any person appointed by the vendor to act as trustee and who has lodged a bond marked as satisfactory by the judge, by way of security in respect to his trusteeship with the clerk of the county court of the county or district in which the stock is located at the time of the sale or intended sale thereof; or any person appointed by the vendor with the consent in writing of his creditors holding claims of not less than 50 per cent. in value of the amount of such claims as shown by the statement (Schedule "A"); or shall mean such person as shall, on the summary application of any person interested, be appointed as trustee by the senior judge of the county court of the county in which the vendor resides.

Vendor.

(e) "Vendor" shall mean and include each and every person, firm or corporation owning or claiming to own the stock of any individual share or interest therein.

Purchaser to Procure Written Statement as to Creditors of Vendor.

3. It shall be the duty of every person who shall bargain for, buy or purchase any stock in bulk, for cash or on credit, before closing the purchase of the same and before paying the vendor any part of the purchase price (save as hereinafter provided), or giving any promissory note or notes or any security for the said purchase price to demand and receive from such vendor, and it shall be the duty of each vendor of such goods to furnish a written statement verified by statutory declaration of the vendor or his duly authorized agent, or if the vendor is a corporation, by the declaration of the president, vice-president, secretary-treasurer or manager of such corporation, which statement is to contain the names and addresses of all the creditors of the said vendor, together with the amounts of the indebtedness or liability due and payable by said vendor to each of said creditors, which said statement may be in the form set forth in Schedule "A" hereto: Provided, however, that it shall be competent for a purchaser of any stock to pay to the vendor a sum not exceeding $50 on account of the purchase price for the purpose of constituting a binding agreement for the purchase of such stock, before obtaining such statement as aforesaid.

Sale Without Purchaser Procuring Statement.

4. Whenever any person shall bargain for or purchase any stock in bulk, for cash or on credit, and shall pay any part of the purchase price or execute or deliver to the vendor or to his order, or to any person for his use, any promissory note or other document for or on account of the purchase price of said goods, or any part thereof, without first having demanded and obtained from the vendor or from his agent, a statutory declaration purporting to be such as is provided for in the last preceding section, then such sale shall be deemed to be fraudulent and shall be void as against the creditors of the vendor, unless all the creditors of the vendor are paid in full out of the proceeds of such sale.

Waiver by Creditors or Application of Purchase Money to Debts of Vendor.

5. Any such purchaser, upon obtaining such statutory declaration, shall either obtain written waiver from the creditors of the vendor hereinafter referred to or shall pay the whole of his purchase money or deliver his promissory note or notes or other documents securing the same into the hands of a trustee for distribution pro rata among the creditors of the said vendor, and subject to any preferences provided for by law or by previous contract, such distribution shall be made in like manner as moneys are distributed by an asignee under The Assignments and Preferences Act, and in making such distribution all creditors' claims shall be proved in like manner, shall be subject to the like contestation and entitled to the like priorities as in the case of a distribution under the said Act, and the creditors, trustee and debtor shall in all respects have the same rights, liabilities and powers as the creditors, assignee and debtor have under the said Act.

Limitation Offers of Trustees.

(a) The fee of any such trustee shall not exceed 3 per cent. of the total proceeds of such sale which come to his hands, and shall, together with any disbursements made by him, be paid by being deducted out of the moneys to be received by the said creditors, and shall in no event be charged to the debtor.

No Preference for Creditors.

(b) From and after the furnishing of the statement and declaration provided for by this Act, no preference or priority shall be obtainable by any creditor by attachment, garnishee proceedings, contract or otherwise.

Sale Void if Waiver not Procured or Purchase Money Not Applied as Required by Act.

7. Any sale or transfer of stock, or part statutory declaration, shall fail to observe the requirements of the last preceding section without obtaining the written waiver from creditors hereinafter referred to, then such sale shall be deemed to be fraudulent, and shall be void as against the creditors of the vendor, unless all creditors of the vendor are paid in full out of the proceeds of such sale.

What to be Deemed a Sale in Bulk.

7. Any sale or transfer of stock, or part thereof, out of the usual course of business or trade of the vendor, or whenever substantially the entire stock of the vendor is sold or conveyed, or whenever an interest in the business or trade of the vendor is sold or conveyed, such sale, transfer or conveyance shall be deemed "a sale in bulk" within the meaning of this Act; provided, however, that if the vendor produces and delivers to the vendee a written waiver of the provisions of this Act from his creditors having claims of $50 and over, as shown by the said statutory declaration, then the provisions of this Act shall not apply.

Sales Under Judicial Process Not Affected.

8. Nothing in this Act contained shall apply to or affect any sale by executors, administrators, liquidators, receivers, assignees for the benefit of creditors or any public official acting under judicial process.

Limitation of Action to Set Aside Sale.

9. No action shall be brought or proceedings had or taken to set aside or have declared void any sale in bulk for failure to comply with the provisions of this Act, unless such action is brought within sixty days from the date of such sale or within sixty days from the date when the creditor attacking such sale first received notice thereof.

Appointment of Trustee by County Judge.

10. Upon the application of any person interested, if the vendor has not appointed a trustee, the senior judge of the county court of the county in which the vendor resides, shall by order appoint a trustee, and the judge shall be entitled to a fee of $1 on every such order.

Manufacturers in Fighting Mood

Claim Cost of Living Commissioner is Adopting an Outrageous and Unjustifiable Attitude—Stand Behind Fixed Trade Price System, and Will Defend Their Rights in Courts if Necessary—Urge Formation of Commission Capable of Dealing With Business Questions in a Businesslike Way.

THE activities of Hon. W. C. Crothers, Minister of Labor, and W. F. Connor, the High Cost of Living Commissioner, under the powers conferred by the recent Order-in-Council, have decidedly been getting under the skin of the trade, from the manufacturer and wholesaler, to the retailer. The investigations, and warnings, and the commands, many claim, have put the trade in a very unenviable light before the public. The culmination was the notice of the introduction of a bill by Mr. Knowles, of Moose Jaw, to make the entering into any trade agreement to fix the price of any article unlawful.

A meeting of wholesalers and manufacturers was held recently in Toronto, when the action of the Minister of Labor, and the proposed new bill were indignantly discussed.

Will Fight if Necessary

It was the feeling of this gathering that the charges being made against the trade were unjustifiable, and as a result the resolution noted herewith was unanimously passed. The members of this gathering held that there was no provision in the Order-in-Council to forbid the adoption of trade contract prices, and that the Minister of Labor's activities in this regard were a wholly unwarrantable infringement of the rights of the merchants, and as such they decided not to be bound by his decision, until the authority for such a decision was more plainly made manifest, and to contest in the courts, if necessary, any attempt on the part of the Minister of Labor to attack the present accepted system of price contracts.

It was also decided at this meeting that a committee should wait upon the Hon. George Foster and the Hon. Mr. Crothers, to present this petition and to urge their side of the case, and also to urge the formation of an Inland Trade Commission.

The committee that waited on these Ministers on the forenoon of March 2, consisted of H. C. Moneypenny, Hugh Blain, W. C. Miller, Toronto; H. C. Beckett, Hamilton; Armand Chaput, Stanley Cook, Montreal; Gerald Fitzgerald, Henry Watters, and E. M. Trowern, Ottawa.

Urge an Inland Trade Commission

The primary matter that this committee placed before the Ministers of Trade and Commerce, and of Labor, was that of the formation of an Inland Trade Commission. It was urged that this Commission consist of three members in whom the public had thorough confidence and whom they knew were capable of investigating commercial subjects. It was urged that this commission devote their entire time to these matters and receive suitable remuneration.

The Powers of the Commission

It was suggested that the activities of the Commission should deal with—

1. The investigation of the cost of the production and manufacture of any class of goods and the matter of a fair wholesale and retail selling price.

2. The question of the cost of distribution of these products.

3. The consideration and investigation of the systems now in vogue for the distribution of merchandise, and the suggestion of improvements where such appear necessary.

Minister of Labor Accused of Unwarrantable and Outrageous Conduct

In the course of the discussion that followed, there was a sharp attack on the methods and practices of the Minister of Labor. The Order-in-Council, it was contended, did not give authority to go to the lengths that the Minister of Labor and his officers were going. Mr. O'Connor had sent out questions, it was claimed, that would not arrive at anything, and which displayed an absolute ignorance of trade and commerce. Mr. Beckett said that to accuse business interests of combining, and condemning them as guilty without ever taking evidence, was outrageous conduct.

Another direct question that was put to Mr. Crothers was as to where he found his authority for writing a manufacturer and telling him that he must discontinue all contracts at present existing between himself and his customers. It was admitted by the deputation that the department was empowered to ask such questions as they saw fit, and that these questions had to be ans-

BILL THE R.M.A. AND WHOLESALERS ARE OPPOSING

The following is a copy of the Bill, which was introduced by William E. Knowles, M.P., of Moose Jaw, and which it is the intention of the Wholesalers and Retail Merchants' Association to oppose, and which they say places unfair restrictions on the retail and wholesale trade.

COPY OF BILL

House of Commons of Canada

BILL 21

An Act to Amend the Criminal Code

His Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:—

I. *THE CRIMINAL CODE, Revised Statutes of Canada,* 1906, *chapter one hundred and forty-six, is amended by inserting the following section immediately after section four hundred and ninety-eight thereof:—*

"498A. *Any manufacturer, wholesale merchant, dealer, agent or commission merchant who either directly or indirectly stipulates, agrees or arranges that any goods, wares or merchandise sold or otherwise disposed of by or to him shall be sold by any purchaser thereof at a price not less than one prescribed by him, or who in any way endeavors to prescribe a price below which a purchaser shall not sell the same, shall be guilty of an offence and shall be liable, upon summary conviction to a fine not exceeding five thousand dollars or to imprisonment for a term not exceeding three months or to both fine and imprisonment."*

wered. They denied, however, that the authority of the department went beyond that point. The terms of the Order-in-Council, as interpreted by the members of the deputation, do not contain any clause permitting its administrators to override any existing agreement, and that there was no legal justification for the Minister of Labor or his agents in instructing the manufacturer or owner that he may not lay down a fixed price for their goods.

In answer to a question of Mr. Trowern, Mr. Crothers asked where he was interested. "What have the retail merchants to do with this?" he asked. "We have investigated the retail trade in Ottawa and have found nothing wrong with it." The members of the deputation, in considering this statement, consider that Mr. Crothers has rather cut the ground from under himself, as provided that the retailer is not guilty of combination in the matter of this set trade price, they do not see how the wholesaler or manufacturer, the other parties to the agreement, can be considered guilty.

Both Ministers listened attentively to the arguments brought forward. The Hon. Mr. Foster expressed himself as personally favoring the Inland Trade Commission idea, and promised to bring the matter before the Government and report at a later date. Mr. Crothers did not express any great sympathy with the plan; indeed, he made it clear that no promises must be given relative to the matter that would in any way put a drag on the Cost of Living investigation activities under the powers bestowed by the Order-in-Council. These powers, he assured the deputation, it was his intention to use to the full.

At a meeting held in Toronto on Wednesday, at which representatives from every wholesale distributing centre in Ontario, a number of manufacturers, and E. F. B. Johnston, K.C., and Hon. Geo. Lynch Staunton, K.C., were also present, a resolution was passed that the question of the action taken by the Minister of Labor in assuming authority under the Order-in-Council—to not only accuse, but pronounce guilty, those engaged in the distribution of the necessaries of life before an investigation has taken place, is, in the opinion of trade, not only arbitrary and unreasonable, but by publicly assailing business interests is doing and has done serious injury and is misleading to the consumer. The trade submit that investigation by an unprejudiced non-political tribunal will establish the fact that the situation is being grossly and ignorantly misrepresented. Therefore, it is "unanimously resolved and agreed that the attacks of the Minister of Labor in connection with internal trade methods are unfair and unwarranted and that unless the Government are prepared to have an investigation of trade details with a view to dealing justly with the trade of Canada, the members of the Wholesale Grocery Trade are unanimously agreed to contest in the courts, if necessary, their just rights, and that F. T. Smye, Walter Lumber, Hugh Blain, H. C. Beckett, and A. H. Pafford be appointed a committee to look after the matter if litigation ensues with power to engage counsel, and that the members of the trade present each agree to pay their share of the expenses. Also that the committee are hereby empowered to engage a secretary to keep the trade posted in Ontario and advise J. Stanley Cook, Montreal, and that he in turn advise the trade of the other provinces, and further, that a copy of this resolution be forwarded to the Acting Premier, Hon. Sir Geo. E. Foster, for prompt consideration by the Government.

REASONS FOR INLAND TRADE COMMISSION

E. M. Trowern, representing the Retail Merchants' Association, gives the following reasons why a "Branch of Inland Trade" should be established under the Department of Trade and Commerce. The reasons are said to represent the views of the members of the R.M.A.

1st.—To ascertain officially the general conditions of the retail trade from time to time throughout Canada.

2nd.—To ascertain correctly, through the Government census, how many retail stores there are in Canada.

3rd.—To ascertain how may retail merchants there are in Canada.

4th.—How many clerks are employed.

5th.—Are the retail merchants giving the public the service they should receive, and if not, what is the reason?

6th.—Is the retail trade in the cities and towns of Canada growing, or is it on the decline, and if so, why?

7th.—Are the retail merchants buying and selling as many Canadian made goods as they should, and if they are not, give the reasons why.

8th. Is the Government aware that thousands of yards of silk, tape, dress goods, and velvets, etc., pass through the customs with the number of yards printed thereon, and upon which duty is paid, and when they are measured out for sale the merchants find that they have been wrongly marked? The merchants, therefore, pay more duty than they should, and they pay for goods they do not receive. A Government officer to whom they could refer their complaint to in an official way would remedy this evil.

9th.—Is the Government aware that a varying rate of duty, according to the rate of the duty of the goods enclosed, is being paid on packing cases amounting to thousands of dollars a year.

10th.—Why so-called Co-operative Trading is a delusion, and, why it will injure, rather than help the legitimate trade of Canada.

11th.—Why the recent amendments made by the Cabinet to the Criminal Code regarding combines will injure rather than help the trade of Canada.

12th.—Why foreign fruits should not be prohibited from coming into Canada during our fruit season, as requested by some fruit grocers' associations.

13th.—Why a better plan for selling butter, than that adopted at present, should be established

14th.—Whether Canada should follow the plan adopted by Australia in not allowing any woollen goods to enter the country unless they are marked as to their quality, and what effect this would have on the trade of Canada.

15th.—The advisability of having a legal standard for the quality of paint.

16th.—Why retailers, wholesalers and manufacturers should co-operate with the railroads in having goods shipped from one point to the other in Canada during the dull season, rather than during the season of grain transportation.

17th.—The reason why the retail trade could not extend their businesses to the same advantage as they do now, if the wholesale trade was abolished as some theorists believe it should be.

18th.—The reason why the plan adopted by many manufacturers to sell their goods on the price maintenance contract plan is an advantage to the public as well as to the retail and the wholesale trade.

19th.—To submit to the Government authentic facts regarding the increased cost of living, and to keep the Government informed from time to time, by those qualified to know.

20th.—Why mail order catalogue houses should not have special privileges over those who do business through the mails in the ordinary way.

21st.—To have the Government appoint an official to prosecute all those who falsely advertise any article in the same way that is now being done under the Gold and Silver Marking Act.

22nd.—To have all matters relating to inland trade, and which is now being dealt with by the Department of Labor, transferred to the Department of Trade and Commerce to be dealt with through the proposed branch.

THE GROWTH OF THE CHAIN STORE IDEA

The financial success of the chain store seems to be increasing with every passing year, and the five and ten cent store is proving an enormous factor in business. Four big concerns with stores in various centres made a gross turnover for the year of $135,000,000, of this the Woolworth Company provided $87,082,513 the S. S. Kresge Co. $26,-393,544 the S. H. Krees Co. $15,122,558 the McCrory Co. $6,796,989. These enormous sales represent a very substantial increase in business the Woolworth Company showing an increase of 84. per cent. the Kresge Company 26.04 per cent. The Kress Co. 21.7 per cent. and McCory Stores Corporation 20.89 per cent. Taking as a basis the net profit of last year these earnings should show a profit for the Woolworth stores approximately $8,600,000; for the Kresge stores a net of $1,583,510 for the Kress stores, a net of $1,590,000 and for the McCrory stores a net of $461,513. The past year has been one of great progress for these chain stores.

Canadian Buyer's Impressions of Japan

Buyer Predicts Keen Competition From Japan—Many Small Manufacturers — Japs are Improving Their Wares

Written for Hardware and Metal by a buyer for a large Canadian house, who for obvious reasons does not wish his name to be made public.

BACK from Japan after a buying trip, that has occupied several months and ready to return shortly to make arrangements for an even more extensive buying programme for next season, I very gladly accede to the request of HARDWARE AND METAL for an account of some of my impressions as to the conditions of manufacture there and the influence they will have on the export of goods to Canada and other countries and also the extent to which they will compete with the manufacturers of this country and the rest of the western world.

One is struck with the absence of large industrial concerns there. The ordinary factory is a small affair, and very often goods are made up in the homes of the people. One doesn't find very many large establishments with thousands employed, such as you do in Europe, and to some extent in Canada. There are, of course, very large munitions works and these are likely to be used for manufacturing ordinary lines for export after the war is over.

Nor is there much organization yet among the manufacturers. I expected to find Chambers of Commerce like we have here and in Europe in the principal centres, but the only organization I could discover was a branch of the Department of Agriculture, so that this end of their industrial life is poorly developed so far. Another difficulty is that so many of the men who are turning out goods have very little capital and have to depend on the banks for advances when big orders come in from America or Europe. The banks advance this money on the understanding that payments must be made for the goods before they leave the country and this is a rule that confronts us in all our buying there. The country, however, is full of buyers from America and Europe, several of them from Canada besides myself, and a wonderful development will take place in the next few years in Japanese manufacture.

As to some of the lines in which Canadian houses are interetsed, I find that my previous impression as to their ability to turn out cheap toys was quite correct. According to their present development they will soon replace the cheaper lines of German toys that flooded the world before the war. They are extremely ingenious, as we all know, have been imitating these toys, and are turning them out in huge numbers and at prices that will more than meet the German prices before the war.

As far as dolls are concerned, there has been a criticism of their output on the ground that they sent us dolls with Japanese faces and which were unfamiliar to the children. They are working to get rid of the handicap and have samples of dolls from every country in the world there now and are working on them and are turning out lines that will satisfy the people in the different countries because they represent the type of face and dress to which they are accustomed.

In regard to hosiery, they are turning out all kinds, men's ladies' and children's. They are also turning out ladies' waists and other lines for export. I heard of one Canadian manufacturer who actually sent over some stuff to be made into ladies' waists. Many ties are being turned out and they are going extensively into underwear and already have exported some. Indeed I found that they would make anything you want. Just give them the sample and they will do their best to turn out an equivalent. They showed me some cheap unbleached cotton, which is far below the prices we have ever been accustomed to.

In fancy goods, of course, they have always been strong and are coming out increasing their lines. They are going extensively now into the higher class of silks and one sample of taffeta which they made was sent over to Switzerland and this dealer said he thought it was made in Switzerland, the quailty was so high. This particular piece could not be laid down in Canada under $1.85 to $2 a yard, yet I bought this in a retail store in Japan for $1. They are going into the making of crepe de Chine and crepe Georgette, and other lines, and will soon be formidable competitors with European countries, although, of course, there is a difficulty yet in getting expert workmen.

One of the most impressive things, something that is suggestive of a menace to Canadian industry, as well as that of other countries, is the cheapness of the labor, extraordinary cheapness. I was informed from what I feel to be good authority that a woman worker in a silk mill receives only $3.75 in our money for one month's work. Not only do they work very cheaply, but they work longer hours than we are accustomed to—7.00 a.m. to 8.00 p.m. in many cases—and they have crowded together in very small space half a dozen looms where we would have probably not more than two. I wondered at how the girls worked in and out among the machines, the pulleys and the belts, without being caught in them. Nevertheless, they have a Workmen's Compensation system. Adding to their cheap labor their national characteristic of being persistent, never knowing failure, keeping on, working out towards perfection on the samples that they receive from other countries, and we have an element that will become a very important one, and more so every year, in connection with manufacture.

The Japs I found would not only make anything you want, but a good many of the smaller firms would put any stamp on it that you wanted them to, even to "Made in Canada." I could buy soap there, the quality that would burn your face off, but still it would be marked, "Pear's Soap." There is another point somewhat along the same lines that I found in dealing with the smaller men, not the larger ones, that is, that they do not seem to realize the value or the meaning of a contract. They will sell you goods, or agree to sell you goods, and if a buyer comes along and gives them a higher price, many of them will sell to him. Mind you, they will tell

you they have done so. They are quite honest about it, and frank, and that is more than some other manufacturers will do. They will sell and won't tell. The Jap of this small business type finds it hard to understand how it is that we buyers will agree to pay them a certain price and then keep to our bargain even if the market price goes down, as it often does in the case of silks.

There are many points of interest that I might mention here. One is in connection with the preliminary to making any business deal. They take you in and you are supposed to drink two cups of tea, and smoke a cigarette, before getting down to business. We have, of course, to use an interpreter with most of them, and you ask him to tell them something, and he talks away for three or four minutes and the other man talks away and then he comes back to you and tells you he said, "Yes." You wonder what else he said all that time.

They are, however, very anxious to learn English, not only the business men, manufacturers, but even the boys. They will guide you in the cities free of charge just for the chance of picking up some English words.

There was one fact in connection with their export which reminded me of the German custom, and in many respects the Japs are imitating German methods of efficiency. They are sending carloads of china to the South Sea Islands. Germany has, we have learned, covered practically the whole world with various lines, having studied the particular needs of the people in those countries. It almost makes one suspect on hearing of the carloads of china going to the South Sea Islands that our usual views of these as inhabited only by wild savages must have been helped on some by German literature. We wonder in how many other cases we have been deceived when it was to the advantage of Germany to do so for the development of her own commerce and the retardment of ours.

Regarding cutlery lines and brushes, the first samples sent to this country were roughly finished, and the goods when received here, were in some cases not up to the sample. However, I have reason to believe that in the past four months great strides have been made in improving the cutlery products in both patterns, quality and finish. I was able to buy only a few cutlery lines on my last trip, but I hope to secure a great many more lines on this trip. When I left Japan towards the end of 1916, a large cutlery plant was being started. The Japs are very anxious to secure patterns of goods needed in other parts of the world. They undoubtedly have agents in the guise of buyers collecting samples in various parts of the world. These samples are sent back to Japan for the purpose of turning out duplicates of the samples.

For the buyer in Ontario the cost of transportation from Japan is a big item. Keener competition in shipping is now being felt on the Pacific and there should be a steady improvement from now on, both as regards time and cost.

From an industrial standpoint, the Japs at present are disorganized; but since the outbreak of the war they have been trying hard to overcome this handicap. I feel that in a very few years the competition of Japan will be more in evidence than was Germany before the war. Japan has an abundance of cheap labor. The people are patient, persistent and industrious.

One thing that struck me as rather peculiar in the big cities was the system of numbering. They use the block system of numbering. For instance, Jap Japolo's address is "Jap Japolo, 274 Yokohama." This means that Jap Japolo is located in block No. 274, and there is no way of telling in which part of the block he is located. You simply have to hunt up Block 274 and travel around the block until you find him. Canadian firms buying from Japan should have a representative there, of necessity working on commission, who will receive the goods and O.K. them for payment.

What the Co-Insurance Clause Means

Retail Merchants Have Been Showing an Increased Interest in What is Involved in This Apparently Innocent Contract—How One Merchant Lost Money.

"IS the co-insurance clause in a policy a good thing?"—that is a question that has been of live interest to many hardwaremen since the appearance in HARDWARE AND METAL some months ago of an article bearing on this question. There is a big danger that the merchant will lose through the operation of this clause, and all unconsciously. Some experts in the insurance business advise that it should be left out of the insurance policy altogether. They maintain that it is one of the biggest assets that the insurance company has, and state that too much care cannot be taken by the retailer in this connection.

The co-insurance clause is a contract by which the insured agrees to keep insured usually to the extent of 80 per cent. of the value of the property. But this percentage may vary. If he fails to do so, he himself must stand for any loss which would have been paid through the insurance he should have carried in excess of the amount he actually did carry.

As an instance. A merchant has a thousand dollars' worth of stock and insures it subject to this 80 per cent. clause. Later in the year his stock increases to $1,500, but the merchant neglects—perhaps only for a day or two—to increase his insurance. Then the fire comes. The loss and damage amount to $600. The merchant, under the co-insurance clause, should have had insurance to the extent of 80 per cent. of $1,500, or $1,200. Instead of that he has only 80 per cent. of his original $1,000, which is $800. The insurance company, therefore, according to the terms of the clause, is only compelled to pay eight-twelfths of the loss of $600, equalling $400. The merchant must himself stand the other four-twelfths of the loss, $200. That is, the company will pay only the same proportion of the loss that the insurance carried bears to the value of the property.

Of course, one of the inducements held out by the insurance companies for a policy with a co-insurance clause is a lower rate. The chances for them to be the winners through the clause are by far the greater. It is usually in that odd day or two before the merchant places the additional insurance that the fire occurs. Straight insurance may be a little higher in cost, but there is greater security in it.

How Co-Insurance Works Out

"The co-insurance clause is certainly to the advantage of the company unless great care is exercised in looking after the policy," said an official of a Toronto Adjustment and Inspection Bureau, who are adjusters for the insured. "The attraction held out in the policy is a reduction of 15 per cent. on the premium price for stock and 20 per cent. reduction on building. On an insurance policy of $3,000, with a rate of, say, 1 per cent., this reduction would amount to $4.50 per annum. Here is an actual case of a merchant who lost $116.40 because he had a policy containing the co-insurance clause. This merchant did not keep a record of his stock, and when fire came it was difficult for an appraisement to be made. It was finally adjusted, on an agreed estimate, that his stock amount-

ed to $4,300 at the time of the fire. According to the terms of the policy he should have been carrying 80 per cent. insurance on this amount, or $3,440. He did not know the exact condition of his stock, and his insurance was only for $3,000. According to the contract he should have carried insurance to the extent of $3,440. There was a deficiency, therefore, of $440. The loss was adjusted at $910. If the policy had not been subject to the co-insurance clause the merchant would have been paid the full amount of THE LOSS.

"The insured by the terms of this particular policy carried his own insurance to the extent of $440. In other words, he became a co-insurer to the extent of 440-3,440 of the loss, or reduced to a smaller fraction, 44-344 of the loss. The company, according to the terms of their policy carried insurance to the extent of 3,000-3,440, or reduced to a smaller fraction, 300-344. The company was, therefore, liable for 300-344 of $910, which amounted to $793.60, while the merchant had to stand 44-344 of the loss, or $116.40. While the merchant saved $4.50 on his premium, he in reality lost $116.40 through the operation of the clause."

Policy in Broad Terms

Merchants should see to it that their policy does not name articles too specifically. It should be broad and general in its enumeration of the stock insured. A clause, such as "goods, wares and merchandise, and such articles as are commonly carried in a general hardware business," is the best specification. There is always a chance that the insured can be tripped up when there is an attempt made to cover all the articles minutely.

It is a good plan to keep the number of permits named in the insurance policy down to the minimum. Only where there is a contravention of the insurance law in the keeping of certain goods is there necessity for securing permits from the company. The merchant should take the trouble to find out just what he is allowed to keep on his premises without a permit. As an instance, the insurance law provides that he shall not carry more than five gallons of coal oil without a permit. It is also necessary to have a permit to carry more than five gallons of lubricating oil. The merchant is advised by experts not to have a large number of permits inserted in his policy. Only those that conflict with statutory provisions should be provided for.

Should Notify Company of Loss

An expert on the insurance business states that one of the first things a merchant should do is to notify the company of loss. This, of course, should be the first precaution after the very necessary step of seeing that the policy is all right and that the company is a reliable one.

Some merchants have found to their financial loss that notification to the agent of the company is not sufficient. The law requires that notification must be sent to the company in writing. Notice from the agent in your own town is not considered notice from the one insured. There are a few very essential points that the merchant should observe in order that his case may get a hearing at all. This is one of them. If a company is not notified that there has been a fire, can it be presumed that they know? This is a matter that it does not take an expert insurance adjuster to attend to. It can safely be left in the hands of the merchant. But it is very necessary that he knows the requirements of the law with respect to the matter.

Save Everything Possible

It has been the custom of many merchants in the event of fire to walk out of their stores and leave the goods. They were of the opinion that their policy protected all their goods, whether damaged or not. An expert on insurance recently pointed out that the policy covers only the actual loss on goods. He is of the opinion that a merchant should take every possible precaution to protect his goods. It is advisable that he assist in every way to get the goods out of the burning building. It is wrong to presume that the insurance companies want the goods. They do not. The merchant, if he is wise, would save as much as possible. Any goods that are damaged or stolen after they have been removed would then be chargeable to the insurance company.

Banker Points Out Deficiencies

IT is a very wholesome thing now and then to be brought face to face with cold facts, even when such facts are somewhat damaging to our self-esteem. In an address before a large gathering of retailers, wholesalers and manufacturers in Winnipeg recently, Vere Brown, Superintendent of the Western branches of the Bank of Commerce, charged that 80 per cent. of the merchants of Manitoba, Saskatchewan and Alberta made no distinction between cash and credit purchases and that 60 per cent. of them were not provided with a system of bookkeeping sufficient to strike a profit and loss account for the year. A striking statement this, and one fraught with considerable significance. Moreover, Mr. Brown gives facts and figures to back these statements, based on the known conditions of the trade in the towns where the 140 odd branches of the bank are located. These are the figures:—

"Total number of merchants 890
Number on a cash basis 155
Number giving credit 735

"The 735 merchants giving more or less credit report allowing discounts for cash as follows:—

"9 allow 10 per cent.
1 allows 8 per cent.
20 allow 5 per cent.
1 allows 2 per cent.
1 allows 1 per cent.
703 allow no discount.

"The number keeping a proper set of books and striking an annual profit and loss statement is 368. In other words, 532, or nearly 60 per cent., do not keep a proper set of books."

The inference is clear, but Mr. Brown points the inference with some very forceful words:—

"These conditions simply mean that the West is a veritable paradise for the mail-order business. A farmer who would take all his credit from a bank at 8 or 9 per cent. in order to pay cash for goods, contenting himself with credit prices, should have a guardian. And having cash, would he not be a fool if, in the absence of a full cash discount from the local store, he didn't patronize the mail-order houses? Can you wonder either at the rapid development of the co-operative buying movement among the farmers?"

There is a solid business sense in these remarks. Why should a customer pay cash when there is no advantage to be gained thereby? In the goods they buy they are still paying a proportion of the charges that are necessitated by certain percentages of bad debts inherent in all credit systems. They are, therefore, paying more than they should be required to pay. Herein, as Mr. Brown has pointed out, has lain one item of the strength of the mail-order house. Selling for cash, the mail-order house gives the customer the benefit of a cash price, whereas, as the figures above prove, the majority of merchants, even when selling for cash, do not give to the customer this advantage.

In all the arguments against these enterprises this is a factor that is seldom considered. Stress is laid on the large buying capacity, and but little attention paid to this other element that permits low prices.

The solution that Mr. Brown finds for

(Continued on page 29.)

EDITORIAL COMMENT

EDITORIAL BRIEFS

AMONG ships recently sunk was a Peruvian Bark. This is, indeed, a bitter blow.

* * *

SOMEONE suggests that the way to stop the submarines from sinking ships would be to paint the ships like beefsteaks or sausages.

* * *

HERE'S one resolution that every man in the country has made: This fall he will lay in all the coal he needs!

* * *

THE DAYLIGHT saving idea is coming into general use in Europe. For that matter questions of day and night, over there, have lost all significance.

* * *

SOME property owners are excusing themselves from painting this year on the score that the war is still on. War or no war, buildings will fall into decay for lack of paint and it is poor patriotism as well as poor business to let things slide.

* * *

ANY MEMBER who takes a real interest in the affairs of the Ontario Retail Hardware and Stove Dealers' Association will have something to say on the matters introduced in last week's issue of HARDWARE AND METAL. It can be taken for granted that those who do not respond take no interest.

MAIL ORDER HOUSES AND THE WHOLESALER

LEGISLATION is pending at Ottawa that may be shaped to hit the wholesale and retail interests of the country. There is the question of making price contracts illegal. There is the High Cost of Living Commissioner tilting at what he conceives to be Trade Combines. In fact, there is a very grave danger that trade interests are going to suffer if active steps are not taken to set the Dominion legislators right.

Manufacturers and wholesalers are beginning to worry, to realize that uninformed public opinion is likely to stampede the House into measures that will prove eminently unfair and unwise. They feel that behind the public agitation is the even more potent influence of the mail order houses. And realizing all this, some of the wholesalers are beginning to say that the mail order houses have been given too free a rein, that firmer steps should have been taken in the past to check their activities. One wholesaler even goes to the length of blaming the trade papers for not giving sufficient space to educating the retailers to meet the mail order menace. This criticism will astonish anyone who has followed the trade papers closely and has thereby realized the great amount of space that has been devoted to this problem. It has been the one subject year in and year out that has always been to the fore. If the matter that has appeared in HARDWARE AND METAL and the other MacLean papers on this subject—practical, constructive matter, all of it—were pasted in a single column, it would stretch from Toronto to——, well, some considerable distance. And it has had its effect. Merchants generally have benefited. Specific cases could be quoted to show the practical benefits that discerning merchants have secured from following the suggestions thus advanced.

HARDWARE AND METAL does not feel that it is necesary, therefore, to enter any defence on that score. It is felt on the contrary that the criticism thus leveled at the trade press can be fairly and effectively turned on the wholesalers themselves. Excepting the aggressive and up-to-date firms, it can be said that the wholesalers as a class have not been doing all that they could to keep the mail order industry from abnormal growth.

It may be asked, what could the wholesaler do

that he has not been doing? He can do what the trade press does, prompt the merchant to more aggressive methods. He can look into the matter of wholesale efficiency; eliminate costly and intricate systems, the heritage of long years in business, and thereby cut his own cost of doing business. Long homilies are directed at the retailer on the score of simplification of retail systems; there is at least equal room for improvement in many wholesale establishments. A reduction of wholesale costs would be a real factor in enabling the retailer to meet mail order competition.

This is not said in a controversial spirit. It is said because grave dangers face the mercantile trades and the time has come for plain speaking and prompt acting. All branches of trade should face the situation squarely and endeavor to find how conditions can be improved to meet the menace of the fast-growing mail order industry.

INDUSTRIAL RESEARCH

THE making of shells has increased industrial efficiency: The shortage of labor has speeded up the men who are left in the shops: War measures have taught the need of improved organization and the folly of waste. Out of the welter and loss of this terrible conflict of nations, at least one benefit bids fair to emerge—a higher degree of efficiency in all pursuits.

A broader vision is already apparent in Canada. Men are looking to the future, are planning to avail themselves of the opportunities that are opening. The end of the war will usher-in an era of active participation in world trade. If present indications hold good, Canadian products will play a larger part in the markets of the world.

A good suggestion for further advancement along these lines comes from Industrial Canada. The need for industrial research is put forward as follows:

"The question of how industrial research can best be conducted is one of primary importance. Is it better to have all research organized and installed in a national institution, or is it better to let it grow wherever it will? There are some classes of physical inquiry that, like rare plants, will only grow on a particular soil. Under the inspiration of a particular individual or nurtured by the traditons of a particular place, they flourish and give to the world wonderful fruit. Any attempt to transplant them might end in the loss of the strain forever. Such researches should be nurtured by the state with suitable funds and facilities, but no interference should be made with this mode of growth.

"There are, on the other hand, many problems, the solutions of which have for long been wanted, and which are most likely to be solved, if at all, by being attacked on a large scale by many workers with almost unlimited funds behind them. They are the questions of the more economical consumption of coal, the more universal distribution of electrical energy, and numerous large chemical and electrochemical problems that can be carried out with greater expedition under state aid than by individual enterprise. For these matters one wants national physical laboratories, controlled by a commission on industrial and scientific research, such as is understood to be the scheme of the Minister of Trade and Commerce."

SHOULD TRAIN DEALERS' CLERKS

HARDWARE AND METAL has on many occasions emphasized the importance of training the dealer's clerks, and a great many articles of an educational nature for clerks have appeared at various times in this paper. Too many manufacturers, wholesalers and even retailers are too apt to forget that the clerk is often the deciding factor in putting across a good sales or advertising campaign.

Printers' Ink, an authority on advertising and sales problems, quite properly states that the dealer's clerk daily stands as a barrier between manufacturers and thousands of sales. Literally millions of dollars are annually spent to overcome his inertia. Being the last link in the chain between the factory and the consumer, he constitutes a problem of universal interest to all lines distributed and sold through retail channels. His strategic position is well-nigh perfect when it comes to hindering or quickening sales, for it is the clerk who performs the final transaction—placing the merchandise in the hands of the ultimate buyer. He is an integral part in the machinery of selling, and his education in selling any particular line must not be left to mere chance.

Spending money to train dealers' clerks is identical with spending money training salesmen. How many manufacturers are there who would send a man on the road without any selling knowledge of the product? Yet these same manufacturers expect the dealers' salesmen—those who sell their goods to the consumer—to understand the product as well, if not better, than the salesman selling the trade without any training whatever.

How can the clerks be reached, you ask? There are several ways, but undoubtedly the most effective and the quickest way is through the medium of good trade papers.

RUSSIAN BUYERS OF CANADA'S CAPITAL

THE Russian Government, that up to the present time has been conducting all it's purchases from New York, has on the suggestion of the Canadian Government opened offices in Ottawa, which are under the charge of Col. Kovaloff, of the Russian Army.

Russia has been buying several million dollars' worth of war supplies in Canada of recent date, and it is expected that with the opening of this new bureau this trade may be still further increased.

EVENTS IN THE TRADE

Business Changes

Sperling, Man.—H. M. Steeves & Co., hardware have sold out to T. E. Grant.

Fire Losses

Swift Current, Sask.—Fire destroyed the Wetmore Hardware Co. store and stock.

Obituary

Callander, Ont.—The death occured here of George Morrison, aged 62, who for many years conducted a general store here.

Now Walter Belyea & Co.

Walter Belyea & Co., was registered in Winnipeg last week, and under this name the business formerly conducted by the late Thomas Black will be known in future.

Lieut. Carmichael Killed

Weyburn, Sask.—Official intimation has reached here that Lieut. Ken Carmichael, who has been reported missing for the past few months, is now posted as having been killed in action on October 8. The late Lieut. Carmichael, who left for service with the 68th battalion, was one of the principals of the Hoshal-Carmichael Hardware Co.

Business Changes

Morris, Man.—Phillips Bros. hardware are moving to Nemiskam, Alta.

Sinclair, Man.—W. H. Smith hardware has been succeeded by C. R. Smith.

Edmonton, Alta.—W. C. Ferguson, hardware has discontinued business here.

Sperling, Man.—H. M. Steeves & Co., hardware have sold out to T. E. Grant

Lomond, Alta.—Phillips & Munro, have succeeded Lars A. Ostrum hardware.

Bladworth, Sask.—P. H. Robertson hardware has been succeeded by F. R. Robertson.

Turtleford, Alta.—E. E. Laborde, hardware has been succeeded by H. Burrman.

Personal

W. H. Teskey, Winnipeg, Man., will represent the Winnipeg Paint & Glass Co., Ltd., calling on the trade in Southern Manitoba.

Roy A. Harris, has severed his connection with the Stratford Mfg. Co., Stratford, and will in future represent the Renfrew Electric Mfg. Co., Renfrew, Ont. Mr. Harris represented the Stratford Mfg. Co., in Ontario for 7 years.

E. E. Lyday, Canadian manager of The Maytag Co., Winnipeg, will be in Toronto and Montreal this week arranging for representatives to handle their washing machines in Eastern Canada.

Mr. Hubbard Chairman at Hamilton

In a report in the March 3 issue of HARDWARE AND METAL of the proceedings at the luncheon tendered by Hamilton Hardware Manufacturers to the delegates attending the Ontario Retail Hardware & Stove Dealers' Association convention, it was inadvertently stated that Mr. Wood acted as chairman. The chairman was H. P. Hubbard, of the E. C. Atkins Co., Hamilton. Mr. Hubbard was instrumental in getting the manufacturers together in the first place and also made arrangements for retailers to see through the factories, including the munitions plant of the Canadian Cartridge Co. The sum of $167.05 was collected at the drawing which occurred at the luncheon, a report of which appeared in last week's issue. The money collected was donated to the Babies' Dispensary.

Montreal Personals

Douglas Clarke, of the Rome Mfg. Co., Rome, N.Y., was in Montreal this week on business.

H. W. Halsey, of Renfrew Electric Mfg. Co., Renfrew, Ont., was a business visitor in Montreal this week.

C. S. Hemenway, of the Smith Hemenway Co., New York, was hailed by business friends in Montreal this week.

R. W. Pain, of the American Ring Co., Waterbury, Connecticut, was in Montreal this week visiting friends in business.

Albert E. Hanna, general manager of the Steel Co. of Canada, at Winnipeg, was in Montreal this week, calling on a number of friends in hardware circles.

W. N. McNeil, of William Vogel & Sons, Brooklyn and Chicago, was in Montreal this week; his visit noted by several business friends in the hardware trade.

William Starke, of Starke, Seybold & Co., Montreal, is at present spending a recuperative holiday in Hot Springs, Virginia, and is making excellent progress.

Mr. Stuart, general manager of the Taylor Instrument Co., Rochester, N.Y., spent part of the week in Montreal, and was a welcome business visitor in the city.

W. Bruce Morrow, manufacturers' agent, Toronto, was in Montreal this week visiting the business circle of his acquaintance in the hardware and other trades.

Industrial Notes

Grimsby, Ont.—The Metal Craft Co. have obtained a building permit to erect a factory here at a cost of about $4,000.

Guelph, Ont.—The Page Hersey Iron Tube & Lead Co. has awarded the contract for the erection of an addition to its plant to cost $3,500.

Princeton, B.C.—The Canada Copper Corporation is to erect a 2,000-ton mill here, and will construct 13 miles of railroad to mines on Copper Mountain. Work will cost about $2,000,000.

Brantford, Ont.—The Cockshutt Plow Co. are making tractor plows for the British market. Over 500 have already been shipped to the Old Country, and the company have orders on hand for 400 more.

Thorold, Ont.—The Exolon Co., manufacturer of abrasive refractory materials, has commenced the erection of an addition to its plant, and will instal equipment so as to increase the production by 100 per cent.

Toronto, Ont.—The Illinois Tool Works, Chicago, Ill., have opened an office in 403 C. P. R. Building, Yonge and King Streets, in charge of Allan B Wearing, who has been appointed Canadian representative.

Durham, Ont.—The National Portland Cement Co. is now manufacturing at its plant, near here, a considerable quantity of potash from feldspar as a by-product. The output of potash, which is being used as a fertilizer, is 14 to 16 tons per day.

Parry Sound, Ont.—The new plant of the British Cordite Co., to be built at Parry Sound by the Canadian Explosives, Ltd., for the Imperial Munitions Board, will probably be the largest work of its kind in Canada. Orders for the material and equipment are being placed by the Canadian Explosives, Ltd., Montreal.

Brandram-Henderson Travellers Hold Monthly Meetings

Brandram-Henderson, Ltd., sales staff, of the Ontario Division, with headquarters at Toronto, has adopted a new plan of get-together meetings for the travellers. The meetings are held on the first Monday of each month. The first meeting was held at the Prince George Hotel, Toronto, the second at the Tecumseh, London, Ont. The third meeting was held on Wednesday night of this week at Toronto. The monthly meeting idea is a new one with the company, and to date the beneficial results have proved beyond expectation. The travellers come in from the various territories, and subjects of interest to all are taken up and discussed. Among the many subjects taken up so far are advertising, window trimming, credits, how to assist retailers, etc. Various paint problems, which arise from time to time, are also gone into, and a general interchange of ideas and knowledge takes place.

St. John, N.B. News

Hardware dealers report trade excellent with payments satisfactory. The outlook for spring trade is regarded as most promising, provided that the dealers can secure stock. The railway embargoes and freight congestion has made it extremely difficult to secure shipments and this may affect business to a serious extent.

An announcement of interest in trade circles is that of the granting of Dominion incorporation to the Shipbuilding Corporation, Limited, with head office in Montreal. It is reported that the capital stock is $2,000,000, and that the scene of operations will be on the Miramichi river in New Brunswick, on a site near the town of Newcastle. Iron ore and coal supplies are available in that district and it is believed that the proposition would include steel making.

The greatly increased prices of paints, oils and other supplies is given as the chief reason of the master painters of St. John in refusing their men a demand for increase in wages from 37½ to 45 cents an hour. The men are on strike but may compromise on 40 cents.

The New Brunswick Commercial Travellers' Patriotic Club has succeeded, since the first of the year, in raising $6,000 of the $10,000 which they undertook to secure for patriotic purposes. The club has a membership of 220, of whom more than fifty are at the front. Three of their members, Lieutenants Edward Porter, John Brock and Ernest Welch, have been killed in action.

At the annual meeting of the St. John branch of the Retail Merchants Association officers for the coming year were elected as follows:

A. O. Skinner, president; F. W. Daniel, 1st vice-president; A. A. McIntyre, 2nd vice-president; Wm. H. Hawker, treasurer, and D. J. Barrett, secretary.

The executive committee was elected as follows: Harold W. Rising, S. C. Young, T. J. McPherson, J. H. Vaughan, S. C. Webb and J. S. McGivern.

The provincial convention of the Retail Merchants' Association of New Brunswick will be held in St John on March 14 and 15.

BRANDRAM-HENDERSON, LTD., APPOINT NEW WINNIPEG MANAGER

Harry Cunningham has been appointed manager Western division of Brandram-Henderson, Limited, offices and warehouse at 120 Lombard Street, Winnipeg. Mr. Cunningham has resided in the Prairie Provinces for the past sixteen to eighteen years, and is personally acquainted not only in business, but in a social way, with practically every hardware paint buyer throughout the North-West. For years he was connected with Marshall Wells, and during the last years of his connection with them was manager for Alberta. He is also quite familiar with the products of Brandram-Henderson, as several years ago he acted in the capacity of a salesman for this firm.

W. S. McLennan, sales and advertising manager for Brandram-Henderson, Limited, at Montreal, has recently spent a few weeks in Manitoba, Saskatchewan and Alberta, completing plans for an advertising campaign, and for an increased distribution of the company's products this spring. Mr. McLennan was very favorably impressed with the prospect for new and increased business during 1917.

Kingston, Ont.—The St. Lawrence Smelting & Refining Co. has been incorporated to carry on smelting and to manufacture metals of all kinds, with $100,000 capital.

HARDWARE LETTER BOX

Sheep Dip

S. R. Peart, Rockwood, Ont.—Please give names of firms handling Cooper's sheep dip and also McDougalls sheep dip. McDougall's sheep dip is sold by Lyman Bros. Co., 71 Front St. E, Toronto; Cooper's sheep dip is sold by J. A. Simmers Ltd., 147 King St. E, Toronto.—Ed.

Mik Box Stove

The McFarland Hardware,, Etzekom, Alta.—Can you advise where a box stove called the Mik is made?

Can any of our readers kindly supply name of maker.—Ed.

Dairy Supplies

Chas. E. Boyd, Simcoe, Ont.—Please give names of Dairy Supply people in Canada?

J. W. Richardson & Co., St. Marys, Ont.; De Laval Dairy Supply Co., Peterboro, Ont; W. A. Drummond and Co., Toronto; D. Derbyshire, Brockville, Ont.—Ed.

BANKER POINTS OUT DEFICIENCIES

(Continued from page 25.)

this difficulty is that the cash price should be made the basis of sale, that is the lowest price that a strictly cash business would permit. Such a price, it is believed, would approach very nearly to the mail-order house figures. The credit price might then be fixed at such a percentage above this figure as would be necessitated by the percentage of bad debts, likely to occur from a reasonably discriminative credit system.

Surely this is a business-like method, surely also it is a more just and equitable system than that largely in vogue. Making the innocent customer suffer for the guilt of a delinquent debtor, is neither honest nor good business.

Mr. Brown, on the other hand, realizes that there is something to be said for the credit system. He makes the statement that 40 per cent., to speak in conservative figures, of the farmers in the three provinces could pay cash without any inconvenience. They are not doing so because the merchant has encouraged the destructive habit of running unnecessary credit, and on the other hand because the average merchant has neither required them to pay cash, nor made it to their advantage to do so.

In concluding, Mr. Brown suggested three grades of prices:—

1. A strictly cash price.
2. A price for credit to a given date, as an example, till after harvest, with interest added for any further extension.
3. Recognizing the convenience of a monthly account, the credit price for such accounts subject to a certain discount only when such accounts are settled promptly by the fifteenth of the succeeding month.

As it is generally conceded that lax credit systems are probably the most fruitful cause of business disaster, these words of a man who has made a study of the situation are well worth the most careful consideration of all merchants.

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

There has been no diminution in the number of price advances in hardware lines during the week. Wholesalers express some degree of surprise at the steadily upward trend in so many lines. Wrought iron pipe has advanced again to the extent of $4 per ton. Wire products have been moved upward 25c per 100 lbs. following an advance as recent as last week. One manufacturer has also increased the price of wire nails. Canadian buyers have been endeavoring to place orders for nails in the United States, but without success, and consequently must depend on the Canadian source of supply. Cutlery manufacturers in the United States have announced big advances during the week and wholesalers have moved their prices up in conformity. Stocks of cutlery are very low, with little prospect of being replenished in sufficient quantity to meet requirements. Numerous lines of shelf hardware have been marked higher, including thumb latches, axle pulleys, sash weights, box chisels, meat choppers, builders' hardware, wrenches, door checks, nail claws, petroleum faucets. Some manufacturers of screen doors and windows have announced that they will take no further orders this season, as their output is booked up. An advance in galvanized sheets has been recorded. Bathtubs and sinks and other enamelware supplies have been increased in price. Valves of various kinds have also been moved higher in price. Turpentine declined 3c per gallon during the week and is the only exception to a generally upward market. Business has been good during the week.

MONTREAL MARKETS

MONTREAL, March 7.—Some of the most important advances this week have been in the line of heavy goods. Iron pipe both black and galvanized has gone up in price due to the firm condition of the market. Anvils are also higher priced, and nails and wire are again advanced. In shelf goods there have not been so many advances this week, but the new discounts on Stillson wrenches is noteworthy and the fact that all hinges and butts are up in price is important. Soldering irons are advanced also cross cut saws, and several lines of valves. The market has been active in sending forth supplies for the maple industry, only the large wholesalers, but also the manufacturers of stoves and ranges who handle maple sugaring apparatus being exceptionally busy at present. Delivery troubles still vex the trade, but are being surmounted. A firmness in rope market conditions is mentioned, and may lead to advances before very long. Binder twine prices are not yet out, and will be late this season. It is noted by the trade that very well assorted orders of hardware are going out at present. Shortages are quite frequent in many lines of screws, nuts, and tools which are in demand.

Shelf Goods Show Some More Advances

SHELF GOODS.—Not so many advances in shelf goods fell to be recorded this week, and the midnight oil was not burned to the extent formerly familiar in connection with change lists. The following changes in price were noted however besides those under larger headings farther on in this report:

Rim Locks Cost More

All rim locks are costing more now in line with the advances in builders' hardware. The cheapest rim locks on the market now are priced at $2.00 a dozen, an advance of twenty cents per dozen.

Door Knobs Also

In the same way door knobs are dearer. The cheapest door knob now on the market costs $1.75 per dozen now.

Hinges and Butts Up

An extensive list of hinges and butts has come before the hardwaremen for advancing of prices. The amount of the advances could not be given out at the time of writing but practically all butts and hinges light and heavy are included in the advances.

Knife Handle Wrenches

Knife handle wrenches are advanced to 12½ off list by one firm of wholesalers in Montreal this week.

Standard Globe Angle and Check Valves

Advances in standard globe, angle and check valves are recorded. These are now quoted 40 per cent. off.

Stop and Waste Cocks

Compression bibbs are 55 per cent. off and stop and waste cocks are advanced also to 62½ off.

Jenkins' Genuine Valves Up

The advance on Jenkins' Genuine Valves is shown by the discount 10 per cent. off list now in force.

Stillson Wrenches Advance

An important advance is that of Stillson wrenches now quoted at 55 per cent. off instead of 60 per cent. off list.

Simonds Saws Prices

Advanced prices on Simonds saws "Crescent Crosscut" are as follows: 4 ft., $3.15; 4½ ft. $3.50; 5 ft., $3.75; and 5½ ft., $4.35.

Anvils Advance in Price This Week

ANVILS.—The market for iron goods is so firm that advances in such heavy iron lines as anvils might well be expected. This week shows considerable advances in the Peter Wright line of anvils from the lighter to the heavier sizes. Following prices are quoted by one wholesale house noting the advance. Others had not at time of writing recorded it.

45 lb. anvils per lb. 9½ cents; 46-50 lbs., per lb 20 cents; 51-60 lbs., per lb. 19½ cents; 60 lbs. per lb. 19 cents; 70 lbs., per lb. 18 cents; 80 lbs and over per lb. 17 cents.

Soldering Irons Have Advanced 10%

SOLDERING IRONS.—An advance of about ten per cent. has been registered in soldering irons this week. The following prices are quoted by one large wholesale firm, others not having the list calculated at time of reporting.

1 lb., per pair 80 cents; 1½ lbs., per

pair, $1.15; 2 lbs., per pair $1.50; 2½ lbs., per pair, $1.85; 3 lbs., per pair $2.15; 4 lbs., per pair, $2.85; 5 lbs., per pair $3.60; 6 lbs., per pair $4.35; 8 lbs., per pair, $5.75.

New Prices Again On Iron Pipe

IRON PIPE.—There have been advances again in black and galvanized iron pipe owing to the unprecedented state of the market for iron products. Following are the prices being quoted by Montreal wholesalers for buttweld pipe:—

Size.	Black	Galvanized
¼ in.	$ 3 78	$ 5 91
⅜ in.	3 78	5 91
½ in.	4 93	6 50
¾ in.	6 10	8 22
1 in.	9 01	12 16
1¼ in.	12 19	16 45
1½ in.	14 58	19 66
2 in.	19 61	26 46
2½ in.	31 01	41 82
3 in.	40 55	54 70
3½ in.	50 60	67 62
4 in.	59 95	80 12

Prices on Lapweld Pipe are shown in a panel elsewhere, and in current quotations.

Prices on lapweld pipe are shown in a panel elsewhere and in current quotations.

Stoves and Ranges Are Steadily Firm

STOVES, ETC.—There is still a steady but not eventful condition to report in regard to the market for stoves, ranges, heaters (both oil and coal) and their associated products of manufacture. Events might develop before long which would make this market of more interest for the condition of the iron and steel industry is ominous, and it is almost a foregone conclusion that next winter's supplies of stoves will be on the market at advanced prices. One of the most serious problems before the manufacturers at present is to secure Canada Plates for stove pipes. The cost of stove pipe is likely to be still higher as this shortage becomes felt. Enamelled ware is finding good demand, but difficulties of manufacture due to the many effects of the railway situation and fuel shortage have hampered business to some extent.

Manila and Sisal Market Very Firm

ROPE, TWINE, ETC.—While the market at present for rope and twine is affected in the immediately upward direction only by the advances in hemp and jute goods noted in the Toronto report last week, and which are prevalent also in Montreal, there is this week some hint that Manila and sisal cordage may be in for an advance before very long unless market conditions for the raw materials change rapidly for the better. There has been no advance so far in these lines, but the market conditions are such that advances are not

WROUGT IRON PIPE PRICES

improbable. As regards binder twine no prices are yet announced, and they will be later than usual this year for the manufacturers do not desire to state prices which may not maintain for a reasonable length of time, and conditions are not by any means settled enough to secure permanence of too early price standards in the line of binder twine.

Gasoline and Coal Oil in Firm Market

GASOLINE, COAL OIL.—The advanced prices of last week still hold in gasoline and coal oil, and the market is very firm. The firmness is due to the situation as regards production in the middle west, also to difficulties of delivery by railway. Gasoline is quoted at 0.30½ to 31 cents per gallon. Royalite coal oil is quoting at 15 cents and Palacine at 18 cents per gallon, the advance being one cent. No predictions are ventured as to further advances this week, but firmness is the characteristic of the market. Munition work demand for gasoline is active. Automobile demand not so marked.

Wire Nails Reach Higher Price Levels

NAILS, WIRE, ETC.—Once again the base price for wire nails has gone soaring. One mill this week makes the price $5.25 per hundred pounds f.o.b. Montreal, and the market is fairly well assured that the general quotation will be $5.25. "Wire nails will go to $6.00, and perhaps higher at the rate things are happening to them now" said one wholesale hardwareman this week. He added that his top note of prediction was based on the idea that if the United States go definitely to war there will be prices on iron and steel products such as have never been heard of before since the wane of the stone-age when an iron spike would purchase a herd of oxen and a wife thrown into the bargain. This, however, is looking on the extreme side of things in the steel market. Bright staples have gone up to $5.35 base, and galvanized to $6.20 base, while all lines of wire, bright, oiled, annealed, and coppered are at $5.50 base. Hay wire No.13 quotes now at $5.40 per hundred pounds, No. 14 is $5.45; and No. 15, $5.55. Bale ties will probably advance next as usual when hay-wire advances.

Great Shortage of Canada Plates

SHEETS, PLATES, ETC.—The very serious shortage of Canadian Plates will probably be noted by markets far and wide before long if not already more than apparent. It is impossible to get supplies from Britain though large orders have been sent over there, and strenuous efforts are being made to secure permits for the filling of these. Efforts are also being made to get supplies from the United States, but there are difficulties in the way there also. It looks like short supplies and very high prices for the early part of the season ahead in this line. Galvanized sheets are also scarce to the verge of non- existence on the market. One large firm formerly easily able to fill big orders for British makes of these plates reports empty stores, and the greatest difficulty in securing new supplies. Firms handling the United States product in this line are not very much better off though they have chances of getting orders through. Prices are very firm, current quotations giving an idea of these though in certain cases they are merely nominal, supplies being unobtainable.

Market For Iron And Steel Steady

IRON AND STEEL.—No relief is reported yet in the iron and steel situation, indeed the indications are that things are rather firmer than before. Pig iron is still quoted nominally at $38.00 to $40.00 per ton, and the shortages of fuel are felt in the manufacture not only of the base metal but of the higher products. Prices of iron and steel products are still steadily advancing, and while market watchers some time ago thought the limit upwards was in sight, opinions to-day are not so confidently voiced for the war clouds over the United States are having their effect. Prices of the principal iron and steel lines listed below are not altered

this week, but supplies are restricted, and the market is very firm.

	Basis.
Common bar iron, per 100 lbs.	$ 3.40
Refined iron, per 100 lbs.	3.65
Horseshoe iron, per 100 lbs.	3.65
Norway iron	11.00
Mild steel	4.30
Band steel	4.30
Sleigh shoe steel	4.30
Tire Steel	4.50
Toe calk steel	5.20
Mining tool steel, per lb.	0.13½
Black Diamond tool steel, per lb.	0.14½
Spring steel	6.00

Lead Products Hold At Previous Quotations

LEAD, ZINC, ETC.—There are no changes to record this week in the market for lead products as listed below, but the market remains exceedingly firm. As will be recalled there were advances last week which carried the prices of these products to the proper levels to keep pace with the marrket for ingot lead. The lead market is slightly easier this week though still firm, and the present quotations are likely to maintain steadily for a while. Zinc has been scarce but the prices of zinc products remain so far as quoted last week. It is not anticipated that these will alter upwards just yet.

Lead pipe, lb.	$0 16	....
Lead waste pipe, lb.	0 17	....
Lead traps and bends	Plus 10%	....
Lead wool, lb.	0 16	....

Cut sheets, ¾c lb. extra and cut sheets to size, 1c lb. extra.		
Solder, guaranteed, lb.	0 37	....
Solder, strictly, lb.	0 35	....
Solder, commercial, lb.	0 33	....
Solder, wiping, lb.	0 33	....
Solder, wire, lb.	....	0 52
Zinc sheets, per lb.	0 33	....

Market Strong For Old Cast Iron Now

OLD METALS.—Firmer prices are prevailing this week in the market for old metals. Tea lead is now 7 cents a pound. Heavy lead pipe is bringing 9 cents. Red brass has advanced in market a little and is selling at from 21 cents to 21½ cents. Light brass is priced at 11 cents. An important change is the advance in the price of old cast iron per gross ton. This metal has jumped two dollars per gross ton since last week, and is quoting at $20.00 to $21.00 now. The market for iron is exceedingly firm, and there is a use found for all kinds of old iron capable of being turned into industrial utilities now in demand.

Tea lead	0.07	.....
Heavy lead pipe	0.09	.....
Yellow brass	0.16	.....
Red brass	0.21	0.21½
Light brass	0.11	.....
Heavy zinc	0.10	.....
Heavy copper	0.27	.....
Old cast iron, per gross ton.	20.00	21.00
Stove plate, per ton	11.75	.....
Old rubbers, boots and shoes	0. 8¼	.....
Overshoes, lumbermen's rubber boots	0. 6½	.....
Auto tires	0. 5½	
Bicycle tires	0 2½	

The Ingot Metals Are Less Active

INGOT METALS.—In the main the market for ingot metals in Montreal has been quieter during the week since last report, and the date of writing finds things still undisturbed as regards activity of demand. Supplies are very slow, and uncertain, some metals, notably zinc being found scarce. Tin is also found scarcer this week, and is firmer in price. Supplies from England have been increasingly difficult to get of late.

Tin's Troubles Intensified

TIN.—The same difficulties which beset tin last week are this week present and rather intensified. It has been hard to get supplies of "Lamb and Flag" from England, and there is little help coming from the States. Prices of tin this week ranged from $54.00 per hundred pounds for large orders to $58.00 per hundred pounds for smaller quantities.

Lead Remains Firm

LEAD.—Firm and steady is the state of the market for lead just at present. Demand is quiet. No weakness has been noticed, though no very special activity. Prices of lead range from $12.25 per hundred pounds for large quantities to $14.00 per hundred pounds for smaller orders.

Aluminum Shows Advances

ALUMINUM.—The market for aluminum has shown more firmness as regards the average order for this metal without special activity. Virgin aluminum is quoted at $72.00 per hundred pounds fo such orders as are usual in the hardware trade. Other sorts of aluminum are priced in proportion to the price of virgin, some cheaper some more costly.

Copper a Little Firmer

COPPER.—Copper shows a shade more firmness of tone for the present week, the market quotation for average sized orders being $40.00 per hundred pounds, larger orders a little less in price, about $36-$39 a hundred pounds being mentioned. Supplies of copper are not too plentiful.

Spelter Very Scarce

SPELTER.—Deliveries of spelter have been rather short and uncertain during the week, and the market has noticed a scarcity in this metal. Several tons of spelter had even to be rushed into Montreal by express this week, and prices have been quoted at $15.50 per hundred pounds for fairly large orders to $16.50 for smaller quantities.

Antimony Still Firm

ANTIMONY.—There is a quietness about the market for antimony, but some slight demand exists, and the price quoted for average orders is $33.00 per hundred pounds. Smaller quantities might be priced rather higher. There is not much demand for large quantities.

TORONTO MARKETS

TORONTO, March 8.—Prior to the recent storm there was a noticeable improvement in railway shipments as a result of the milder weather. With the coming of a heavy storm shipments became more difficult again. It is anticipated that with the coming of spring weather wholesalers will be served better by the railways. The opening of navigation on the lakes is expected to relieve some of the congestion of the railway lines. Merchants have quite generally realized the advisability of having the wholesale houses ship their spring goods as early as they were available. There have been a number of price changes in the upward direction during the week, some of the more important being in wire products and wire nails, steel pipe, malleable and cast bushings, unions and plugs, bucksaws, pocket cutlery, black sheets, and galvanized sheets. Valves of certain descriptions have also been marked up.

Steel Pipe Again Advances $4 Per Ton

WROUGHT PIPE.—Another advance of two points has been recorded in the price of wrought steel pipe which provides for an increase of $4 per ton. This increase follows one of a similar amount made three weeks ago. Manufacturers are experiencing difficulty in getting supplies of coke and other raw materials, steel being one of the articles that is inclined to still higher prices. Net prices will be found in a panel elsewhere.

Bushings and Unions Advance 5 Per Cent.

BUSHINGS, UNIONS.—An advance of 5 per cent. has been made in the price of malleable and cast bushings, unions, plugs and pound fittings, by the change of discount. Malleable bushings are now quoted at a discount of 45 per cent. cast bushings at 45 per cent., unions at 50 and 2½ per cent., plugs at 45 per cent., and pound fittings in Classes B and C are quoted net list. Class A in pound fittings is now quoted at 48c. per pound net.

Bucksaws and Crosscuts Higher by 7½ Per Cent.

BUCKSAWS, CROSSCUTS.—An advance of 10 per cent. on bucksaws and

approximately 7½ per cent. on crosscuts of all makes has been recorded during the week. Cheaper grades of crosscuts show an advance of 7c. per foot, which now makes the cheapest grade of crosscut saw 42c. per foot. In the Happy Medium bucksaw the new price is now $6.85 per dozen, while the Happy Medium with lance tooth blade is $7.40 per dozen. No. 1 Maple Leaf and equal bucksaws are now quoted at $7.40 per dozen, while No. 1 Maple Leaf with lance tooth blade is quoted at $7.70 per dozen. Prince Rupert and equal are quoted at $9.05 per dozen, New Century at $8.25 per dozen and Tricolor at $8.80.

Many Lines of Shelf Hardware Quoted Up

SHELF HARDWARE. — The week has seen no diminution in the number of price changes that have taken place in shelf hardware. Wholesalers express their mild surprise at the way the prices keep up a steady advance toward higher levels.

Taylor-Forbes Goods Up.

The Taylor-Forbes Company have issued a new price list on their complete line of goods on which there is an advance of approximately 10 per cent. over recent quotations.

New Terms on Pumps, Ladders, Etc.

New terms have been made effective on the selling price of pumps, ladders, butter workers, butter boxes and barn door track by Beatty Bros., of Fergus. Five per cent. cash is required with order, 2 per cent. discount in thirty days, and net sixty days are now the selling

Sad Irons Up 5c. to 10c.

Mrs. Potts' sad irons have been advanced in price during the week, the No. 55 plain now being quoted at $1.25 as compared with $1.15 formerly, and the No. 50 nickel-plated at $1.35 per set. as compared with $1.30 formerly.

Prices on Thumb Latches.

Japanned steel thumb latches is one of the lines to be marked higher during the week. No. 1 are now quoted at $1.45 per dozen, No. 2 at $1.75 per dozen, No. 3 at $2.30 per dozen and No. 4 at $4.20 per dozen

Grindstone Frames Up.

New prices that have been issued on grindstone frames are as follows: 15-inch, $6.25 per dozen; 17-inch, $6.60 per dozen; 19-inch, $7.80 per dozen; BB, $15 per dozen.

Axle Pulley Price.

The Commonsense Axle Pulley is now quoted at 45c. per dozen for the 2-inch size according to new prices that have been announced.

Sash Weight Prices.

Last week prices on sash weights were given in these columns. Quotations by wholesalers other than those whose line was quoted last week are slightly higher, being $2.40 per hundred pounds for the solid weights and $3.70 per hundred pounds for the sectional.

Box Chisels Also Up.

New prices have been put into effect on box chisels, for the No. 75 the price being $12.15 per dozen and No. 72 x 12, $5:15 per dozen.

Meat Choppers Higher.

Higher prices have been put into effect on meat choppers, which in some instances is 30 per cent. higher than former prices. No. 16 are now quoted at 85c. each, No. 20 at $1.30 each, No. 22 at $1.45 each and No. 24 at $2.10 each.

Eclipse Door Checks Advance.

Another one of the numerous lines to advance during the week is the Eclipse door checks, one size, No. 1613 is quoted at $2.25 each and No. 1625 at $2.95 each.

Nail Claws Up.

Nail claws have been moved up, No. 1 now being quoted at $6.55 dozen and No. 11 at $13.80 per dozen. Nails have been advancing steadily and the claws have now taken the cue. Where the nails go there the claws must follow.

Tobacco Cutters As Well.

Tobacco cutters have been increased in price, the No. 2 now being quoted at $10.45 each and No. 12 at $15.25 each.

Even Petroleum Faucets.

An advance was recorded in the price of coal oil last week. Now even the faucets must go to higher levels. One-half inch are quoted at $6 per dozen, ⅝-inch at $7.10, ¾-inch at $8.10 and 1-inch at $12.50. Petroleum faucets with tin pipe thread are quoted at $6.65 for ½-inch, ⅝-inch at $7.85, ¾-inch at $9.05 and 1-inch at $13.90.

Screen Door Factories Filled Up.

Some wholesalers have advised their representatives to take no more orders for screen doors and windows as the manufacturers of the lines they carry have advised them that they have now more orders on hand than they will be able to fill for the present season's trade.

Net Prices on Lawn Mowers Announced

LAWN MOWERS.—Wholesalers have had an opportunity during the week of figuring out the new net prices on lawn mowers, following the advance of 20 per cent. announced last week. Daisy three-blade mowers are now sold as follows: 12-inch, $4.95; 14-inch, $5.40; 16-inch $5.80. Star three-blade, 12-inch, $6; 14-inch, $6.40; 16-inch, $6.85. Woodyatt four-blade: 12-inch, $6.65; 14-inch, $7.10; 16-inch. $7.50; 18-inch, $7.90; 20-inch, $8.35. The above prices are net and are based on a discount of 40 per cent. off list.

Cutlery Prices Have Made Big Advance

CUTLERY. — United States cutlery manufacturers within the past few days have announced a further big increase in the price of their cutlery lines which in some instances amounts to one-third increase on former prices. One line for instance that was formerly quoted at $1.80 per dozen is now selling by the manufacturers at $3.10 per dozen. Razors coming from the same source have also been marked higher. Some wholesalers have accordingly marked their prices up to correspondent with this increase by the manufacturers. Stocks of cutlery in local hands are very low at present and there seems small chance of getting additional stocks when these are exhausted.

Globe, Angle and Check Valves Higher

VALVES. — An advance of approximately 10 per cent. has been recorded in the price of globe, angle and check valves, brass steam cocks, radiator valves and patent quick-opening valves. Standard globe, angle and check valves are now quoted at a discount of 15 per cent. as compared with the former discount of 25 per cent. Brass steam cocks have been advanced from 20 per cent. off list to 10 per cent. off list, while the high grade is now quoted at 10 per cent. off list. Radiator valves, both standard and high grade, have been changed from 30 to 25 per cent. discount. Patent quick-opening valves are now quoted at 55 per cent. off list as compared with 60 per cent. formerly. Following are the discounts:

	%
Ground work	45-47
Compression work, standard	55
High grade	48
Cushion work	49
Fuller work, standard	54
High grade	47
Basin cocks, No. 0, standard	49-53
High grade	49
Nos. 1 and 2	49-53
Bath cocks	55
Flatway stop and waste cocks, standard	53
High grade	50
Roundway stop and waste cocks, standard	53
High grade	50
Brass steam cocks, standard	10
Globe, angle and check valves, standard	15
High grade	10
Radiator valves, standard	25
High grade	25
Patent quick opening valves	55
Basin Cocks—	
No. 0 and 1, Fuller pattern	53
No. 0 and 1, compression	49
Midget	51
Steam cocks, square nut	50
Steam cocks, iron body	40
Globe, angle and check valves, medium pressure	40
Radiator valves, standard	60
Radiator valves, Jenkins disc	60
Radiator valves, quick opening	60

Plumbing Enamelware Advances 5 to 10%

BATHTUBS, SINKS. — An advance ranging from 5 per cent. to 10 per cent. has been made effective on all lines of plumbers' enamelware. On the ordin-

ary 4-foot, 4½-foot, 5-foot and 5½-foot the advance amounts to $2.10 on each size, which now makes the selling price $25.80. On the 5½-foot baths the advance has been $2.10 also, making the selling price now $29.40. On the sitz, foot and child's baths, the advance has been 5 per cent. On the roll-top sink, 18 x 30 inches, the advance has been 5 per cent. on previous price, making the price now $12.90. Range boilers have held steady during the week at the advances recorded in last issue.

30-gallon range boilers, standard	$10.50
30-gallon range boilers, extra heavy....	13.00
Bathtubs, roll-top, 4, 4½, 5 feet, 24 to 30 in. wide	25.80
Bathtubs, 5½ ft.	29.40
Sinks, roll-top, 18 x 30 in., staple......	12.90

Gasoline and Coal Oil Holding Firm

GASOLINE, COAL OIL.—Prices of gasoline and coal oil held steady during the week at the advances recorded last week. There is a continued firmness in the market, due to the possibility that United States may come into the war, which will necessitate a greatly increased consumption, not only for the industries which would be speeded up, but also for the increased consumption of lubricating oils by the United States navy and an increase in gasoline consumption for the motorboat patrol of the harbors. It is on the programme of the United States Government that one thousand gasoline motorboats should be used for this purpose. Fuel oil is in increased firmness with an advance of ½c per gallon recorded.

Wire Products Again Moved Up 25c Per 100

WIRE PRODUCTS.—Another advance, following the one recorded in HARDWARE AND METAL last week, has been made effective in stovepipe wire, bright annealed wire, oiled and annealed, smooth steel wire bale ties and cut hay baling wire. This advance follows an advance of $4 per ton in all wire products recently made in the United States

Cut Hay Baling Wire

According to the new schedule of prices, No. 9 cut hay baling wire is quoted at $5.75 per 100 pounds, No. 10 at $5.80, No. 11 at $5.90, No. 12 at $6. No. 13 at $6.10, No. 13½ at $6.10, No. 14 at $6.25, and No. 15 at $6.50.

Stovepipe Wire Prices

With the advance in stovepipe wire of 25c, the price for No. 18 is now $6.70 per 100 pounds, and $7.20 per 100 for No. 19.

O. & A. Wire

Prices on No. 10 oiled and annealed wire is now $5.66 per 100 pounds, No. 11 at $5.72, and No. 12 at $5.80.

Bale Ties

On bale ties the new price is $5.80 for No. 12, $5.90 for No. 13, $5.95 for No. 13½, $6.05 for No. 14, $6.25 for No. 15, and $6.50 for No. 16.

Although wire nails and fence staples are in firm market, there has been no advance recorded in these products on the part of the wholesalers. It is understood, however, that the products of the Dominion Iron & Steel Company have been advanced 25c per hundred, including wire nails, staples and wire products. Fine steel wire remains unchanged with local wholesalers. The base on small steel wire is now $5.50 for gauges Nos. 0-9, with the usual extra for heavier gauges.

Unable To Get Nails From U.S. Dealers

NAILS.—While some of the manufacturers have advanced the price of nails in Canada, the upward movement has not been general as yet, although wire products have been moved higher quite generally. It is asserted that several Canadian buyers have recently been trying to place orders for wire nails in the United States, but without success. They are accordingly buying through Canadian supply houses at to-day's prices. Those in touch with the nail situation give it as an opinion that the nail stocks in the United States are in extremely low compass, and that manufacturers in that country are only looking after the requirements of their customers who have had contracts for some little time. They are evidently taking on no new business. Wholesalers locally state they are not pressing for sales. As stated in the foregoing article on wire, the Dominion Iron and Steel Company ha advanced the price of wire nails 25c per hundred.

Galvanized Sheets Increased 50 Cents

SHEETS, PLATES.—An advance of 50c per 100 pounds has been recorded in the price of the Apollo brand galvanized sheets. There has been a firmness in this market for some weeks past, with an inclination toward higher prices. The base size of 10¾-oz. is now quoted at $8. and the prices on other gauges run as follows: No. 28, $7.70; No. 26, $7.40; Nos. 22-24, $7.25; Nos. 18-20, $7.10; No. 16, $6.95; No. 14, $6.85. Galvanized sheets are scarce in the local market. and even higher prices are anticipated in this line. Black sheets are daily getting in smaller compass, and the market is accordingly firm. Boiler plates are in firm market, and an advance has been recorded in this line.

Iron and Steel Are Limited in Quantity

IRON AND STEEL.—There is a steadily diminishing stock of iron and steel in local hands, and supplies are growing less, without much prospect of being replenished in as large quantities as the demand requires. There is an excellent demand at present, and prices have a very firm tendency. During the week there has been no actual change in quotations.

	Per 100 Lbs.	
Common bar iron	$	$ 4 00
Common bar steel	....	4 25
Refined iron	....	4 25
Angles, base	....	4 75

Mining tool steel	17 00	18 00
Sheet cast steel	25 00	35 00
Spring steel	....	6 00

Old Heavy Copper Quoted Up ½c Pound

OLD MATERIALS.—There has been an increase in the price paid by dealers for old heavy copper during the week of ½c per pound, now making the price offered 29½c. With this exception there has been a steady market so far as the prices for old materials are concerned. The tone of the market is one of strength, however, with a good demand for materials of all kinds.

	Per lb.	
Tea lead	$ 0 06½	......
Heavy lead pipe	0 09½	......
Yellow brass	0 17	......
Red brass	0 22	......
Light brass	0 10	......

Old rubbers, boots & shoes	0 08¾	......
Overshoes, lumbermen's rubber boots	0 06½	......
Auto tires	0 06	......
Bicycle tires	0 03½	......

Lead Products Are In Very Firm Market

LEAD AND ZINC PRODUCTS.—There is considerable strength in the market for lead and zinc products, due to the situation in the primary markets for the ingot metals. Pig lead is in very firm position, and spelter is going strong. The local demand for products is good, and there is a disposition to look for still higher prices in some quarters.

Lead pipe, lb.	$0 16	....
Lead waste pipe, lb.........	0 17	....
Lead traps and bends.......	10% on list

Zinc sheets, per lb.	0 25	....

Spring Cordage Trade For Boats Expected

CORDAGE.—Dealers are anticipating a good demand for cordage of all kinds with the opening of navigation on the

lakes. Navigation is expected to open earlier than last year, and activity is anticipated along the lake fronts in preparing for it. Already some orders have been placed, and deliveries will be made in the near future. Small twines have been in good sale during the week, as dealers are stocking up with spring goods and getting ready for the summer trade. Binder twine prices have not yet been announced, but are expected some time during the present month. It is expected they will reach new high levels.

U.S. at War Would Affect Enamelware

STOVES, ENAMELWARE.—Manufacturers state there has been a heavy demand for coal and gas ranges during the week. There has also been a good demand for oil heaters, as people are getting prepared to let their furnaces out. Trade for enamelware has also been good, but prices have held steady during the week. There is difficulty experienced in getting supplies of raw materials, and manufacturers assert with United States in the war there would be a still greater scarcity, which would in all probability make for higher prices.

Ingot Metals Continue Firm

The general tendency of the market continues strong, due for the most part to the expectation that the United States will ultimately be drawn into the war. Copper continues strong, with prices still nominal. Tin, although higher in London, is unchanged here. Prices of tin are also nominal, the market being affected by submarine operations. Spelter and lead are firmer at unchanged quotations, while antimony is quiet and easier.

COPPER.—Copper stocks are still very light, and there is a good demand. Supplies are scarce, and the price is nominal at 38-39c per lb.

TIN.—Owing to submarine activity and the increased insurance rates, tin continues high in price. Stocks are light locally, and quotations range from 53c to 55c lb.

SPELTER. — Supplies are scarce locally, and quotations range from 13½c quoted large buyers to 16c lb. in small lots.

LEAD.—The lead market continues firm. Prices quoted by independents at New York still range from 1½c to 2c lb. over the "Trust" price. Prices locally range from 12½c to 13c lb.

ANTIMONY.—The market is quiet but firm, with supplies scarce. The price is 35c lb.

ALUMINUM. — Aluminum is unchanged at 68c lb.

PIG IRON.—With the freight situation improving, shipments of coke and pig iron are moving more freely. If the improvement continues with no set-back, the furnaces and foundries in this district will resume more active operations. The pig iron market is still very firm and prices steadily advancing. Very little foundry iron has been obtainable from Buffalo furnaces, but what can be secured is around $37 at furnace.

LONDON MARKETS

LONDON, Ont., March 8.—Prices of hardware continue to soar. Business is good and the outlook for spring is exceptionally bright. Collections are very satisfactory.

Lock Knobs, Etc., Go Higher

New and higher quotations have been issued on Peterboro builders' hardware. Goods composed wholly of iron or steel are quoted at 25-5%. Goods composed wholly or in part of brass or bronze are quoted at 20-5%.

Porcelain and jet rim and mortise locks have advanced 30c., to $1.80 per dozen.

Cheap rim locks are up 25c. dozen to $2 per dozen for No. 600.

Cheap mortise lock sets, A.C. or dull brass, are up 30c. dozen to $6.30 dozen.

Yale Latches Up

A further advance of 10% has gone into effect on Yale night latches.

Corn Planters Higher.

King of the Field corn planters have advanced to $9 dozen.

Irwin Bits Up.

Irwin auger bits have advanced to a new discount of 33 1-3%.

Pipe Fittings Higher.

Pipe fittings have again advanced, and new quotations are now in effect as follows:—

Class B & C, net list; nipples, 60% off list; iron plugs, 40% off list; iron stop cocks, 40% off list; bushings, 40-5% off list; unions, 47½% off list.

Jenkins Valves Up to Net List.

Genuine Jenkins globe valves, angle valves, check valves, gate valves, are now quoted at net list.

Plated Ware Higher.

Community silver plated ware has advanced 10%.

Roofing Nails Up.

American roofing nails have advanced again and are now quoted at $7.95 per 100 lbs. in kegs, and $8.20 per 100 lbs. in 25-lb boxes.

Powder, Hangers, Track Are Higher

Blasting powder No. 1 has advanced to $2.75 per keg f.o.b. factory.

Snapshot powders, 25-lb. kegs, F.G., F.F.G., F.F.F.G., have advanced to $11 f.o.b. factory.

Richard Wilcox hangers and track have advanced to following prices:—

Hangers, per doz.: No. 021, $9.50; No. 21, $14; No. 321, $15.60; No. 543, $13; No. 544, $12; No. 545, $9.75; No. 843, $7.80. Trolley track, No. 31, 14½c. ft. Brackets for same, $1.50 doz.

Track for No. 543 and No. 544 is now 10c. foot.

Tire Savers Up 25c.

Tire savers have advanced 25c. per set. The new price is $3.75 set.

Shock absorbers are advanced to $3.25 per sent for full sets, and $2.35 per set for half sets.

Grindstones Higher.

Mounted grindstones No. 300 are quoted at $4.96 each, and No. 400 at $5.52 each.

Wagon Jacks Up.

Richard Wilcox wagon jacks have advanced to the following prices:

Per doz.: No. 528 x 1, $11.60; No. 528 x 2, $15; No. 228 x 3, $23.20.

Turpentine Down.

A decline of 3c. per gallon has taken place on turpentine, and new prices in effect are as follows:

Imp. gal.; 1 barrel lots, 78c.; 2-4 barrel lots, 77c; 5 gal. lots, 85c.

Linseed Oil Unchanged.

Quotations on linseed oil remain unchanged as follows:

	Raw. Per gal.	Boiled. Per. gal.
1 to 2 barrels	$1.40	$1.43
3 to 5 barrels	1.39	1.42
6 to 9 barrels	1.37	1.40

White Lead in Oil Unchanged.

There is a very light sale of white lead in oil at present. Prices during the week were unchanged at $15 per hundred in ton lots and $15.30 in less than ton lots.

Putty Prices Firm.

Although there has been no change in putty the price is firm at the recent advance. Standard in 100-lb. drums is quoted at $3.85 per 100 lbs., and in 25-lb drums at $3.95. Pure putty is quoted 80c. per hundred higher.

Wire Nails, etc., Very Firm.

Wire nails remain firm at $5 base, but an advance of 25c. will probably take place in the near future.

O. & A. wire, hay baling wire and bale ties have again advanced 25c. per 100 lbs.

Iron Pipe Higher.

Higher prices have gone into effect on iron pipes. New prices are shown in current quotations and in panel elsewhere in this issue.

(Continued on page 38.)

PRACTICAL SHEET-METAL WORK

THREE PIECE ELBOW WITH GUSSET OR GORE PIECE.

BY THOMAS STANFIELD

ONE of the main features in the management of a tinshop is to be able to use the patterns for more than one article when there is a similarity. Take a 90-degree elbow pattern of, say, 6 inches diameter, or any diameter, for that matter. Suppose a pattern for a roof flange is required for a pipe 6 inches diameter or any diameter, and the slope of a roof is 90 degrees, all that is required would be to cut out a piece the shape of the pattern, make it up into a pipe, and stand the mitre end on the flat sheet of metal from which the flange is to be made. Mark round the pipe at the mitre, and the pattern for the hole in the flange is procured. The same with the flange piece to fit on the ridging. If the pitch of the roof is, say, 90 degrees, the same method can be followed, and by simply bending the flange at the middle, the piece is ready to fit to the roof.

This does not apply to 90-degree sloped roofs only, but to any slope. The various elbow patterns can be used in this same way, and much time can be saved. While it is not the technical method, "the kink will do the trick," and is a time-saver.

Fig. 1 shows the perspective view of a pipe extending through a roof with plan, elevation, and pattern. The proper way to develop the pattern is by first drawing the plan and elevation. The sloped line in elevation represents a 90-degree pitched roof. A B C D is the pipe extending through roof.

Divide the half plan into equal parts, with X5 as centre. Now draw a number of vertical lines from 1, 2, 3, 4, etc., to line E F, which represents not only the slant of the roof, but also one side of the pattern for flange. From the various points on line F E draw dotted lines parallel to lines F G and E H, and divide the flange by drawing line J K through the centre, and number this line with the corresponding figures on plan.

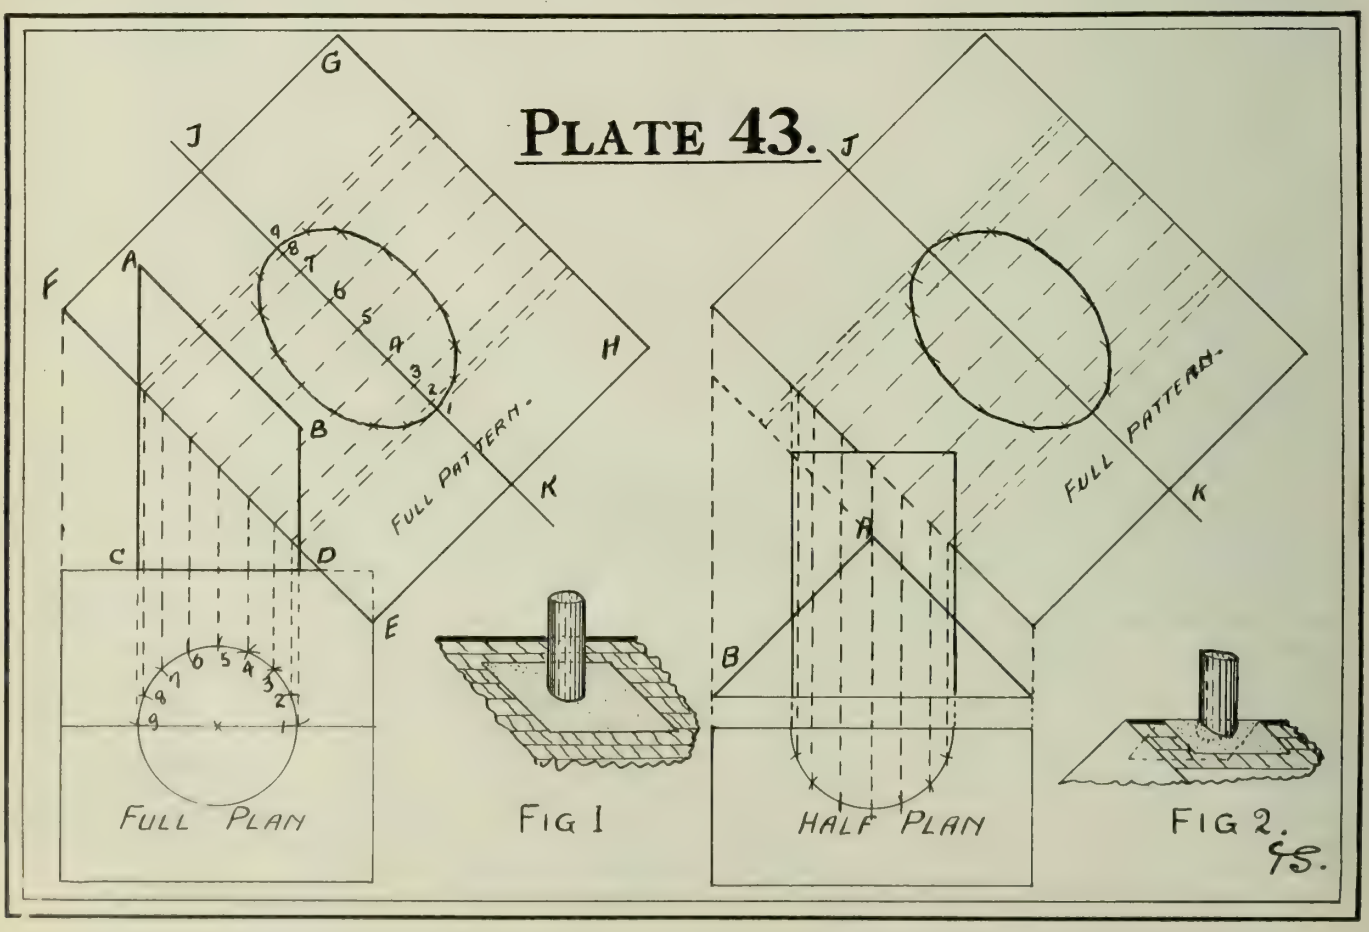
Next place the point of the compass on line drawn through the plan and open to 2, transferring this measurement to the line K J, cutting dotted line 2, and transfer all the measurements from plan in the same manner until all the dotted lines have been intersected.

By connecting these points as shown by solid line, the pattern of the hole for flange is procured.

The same method is adopted whatever the slope of the roof may be.

Fig. 2 shows the perspective view of

(Continued on page 37).



Association Matters Discussed

Members of Ontario Body Follow up Article in Last Issue by Stating Their Views— One Member Wants Buying on Co-operative Basis — Former Member Expresses Willingness to Come Back if Association is on New Basis.

IN last week's issue HARDWARE AND METAL *introduced a discussion of the affairs of the Ontario Retail Hardware and Stove Dealers' Association, pointing out that the association was not growing as it should and suggesting some ideas for correcting this condition. An appeal was made for an open discussion, space being promised in* HARDWARE AND METAL *to letters embodying the views of members. Three such letters have been received and they are published herewith.*

It was hoped that a wider degree of interest would be shown, as it is conceded on all hands that a frank discussion of Association plans and aims would go a long way toward putting things on a broader and more aggressive basis. It was hoped that the officers would put their views into writing for publication, as they are directly responsible for the welfare of the Association during the coming year, and are very directly concerned in the points introduced by HARDWARE AND METAL. *If they concur in what was said and would go on record to that effect, it would be a great impetus toward getting the necessary reforms started. If they do not concur, all the more reason for speaking out. Frankly,* HARDWARE AND METAL *believes that each officer and member of the executive owes it to the Association to take a part in this discussion.*

In any case a start has been made. Herewith are the letters received to date:

LIKE BUSINESS MEN.

Editor, HARDWARE AND METAL.

Dear Sir,—I was pretty near getting up at the Hamilton Convention and saying something about association affairs along the line of the article in last week's HARDWARE AND METAL. Now that you, Mr. Editor, have thrown your paper open to a discussion I want to say that the time has come when the Association must get busy in real earnest. I've been at three or four conventions and have got some good at each alright, but there hasn't been a single occasion when I haven't gone home feeling that the conventions fell short of what they should be. We should have a larger membership. That's the first thing. Then we should run our meetings like business men, not like a bunch of good fellows out for a good time.

That's my idea—let's run things like business men from now on.

Yours truly,
OLD MEMBER.

MR. PHILLIPS SPEAKS OUT.

Editor HARDWARE AND METAL.

Dear Sir,—After reading your article entitled "What is Wrong with the Association," in this week's edition of HARDWARE AND METAL, I must congratulate you and can honestly say that you have hit the nail on the head, but not quite hard enough.

As a member of the O. R. H. & S. D. A. I am going to give you my idea, how we could make the manufacturers buckle down to the dealers. I believe there are about twelve hundred dealers or hardware merchants in the Province of Ontario. Now, if you could get a membership of about half or six hundred, we could form a co-operative association in regard to the purchasing of our merchandise. For instance, our representative could go to a manufacturer and offer to purchase, say, about five thousand wash boilers and have him ship them to the different dealers according to the number they may require, the same could be done with all our different lines. Now, to form this co-operative association, my idea would be, let each member pay an initiation fee of one hundred dollars, which would be placed to his credit, also a charge of five per cent. on all goods he may purchase.

It would be a safe bet that we would have the manufacturers buckling down to us within six months. We could get a good live member in Toronto to act as purchasing agent gratis.

But, believe me, I don't think the O. R. H. & S. D. A. has **gumption** enough in them to follow up a plan like I have outlined, as you know as well as I do what appreciation they showed to me in regard to the recent paint case.

Hoping you will publish this letter, and try and get some of the other members' ideas on this subject, I remain,

Yours truly,
M. PHILLIPS.

A FORMER MEMBER SPEAKS.

Editor, HARDWARE AND METAL.

Just a line to say that I read your article last week and I want to congratulate you. As you say, this should have been done long ago.

I belonged some years ago but dropped out of the Association because, frankly, I did not think it was going to get anywhere. If it can be got running along the lines you suggest I'll come back, and be a strong booster.

To my mind an association of this kind must be run more to a view of holding business meetings than to the social features. The members have got to realize that they are there to benefit and improve themselves as hardwaremen and to strengthen the position of the trade, not to have a good time. A certain amount of good times is necessary but nothing should interfere with the business meetings nor with the routine laid down. My idea would be fewer smokers and banquets and more real, solid business.

Here's hoping that every hardware man will be on hand next year, with the Association on a solid, business basis.

I am,
FORMER MEMBER.

PRACTICAL SHEET METAL WORK

(Continued from page 36.)

a roof flange for pipe that is projecting through roof at the ridge. It will be noted that the patterns are identical. The same course is followed in spite of the fact that the elevation is somewhat different. The plan is the same, but the elevation differs, in that the centre of the flange at A B is turned down 90 degrees instead of being extended upward in the same direction.

If the dotted lines are noted, it will be seen that an outline can be observed. If the reader will look over the various plates already published and carefully note how similar some of the patterns appear, he will be able to adapt many of them for purposes other than what the patterns were originally made for.

(Continued in next issue.)

The Thompson Powder Co. has been incorporated at Toronto with a capital of $500,000 to manufacture all kinds of explosives at Deseronto, Ont.

WEEKLY HARDWARE MARKET REPORTS

(Continued from page 35.)

SNOW SHOVELS.—New prices that have been announced on snow shovels provide for an increase of 10 per cent. in this class of goods. The long-handled socket shovel No. 20 is now quoted at $6 per dozen, the heavy long-handled socket No. 30 is quoted at $6.75. No. 40 is quoted at $8.25; Olds long-handled socket furnace scoops, Nos. 50 and 60, are quoted at $6.75.

WINNIPEG MARKETS

WINNIPEG, March 8.—Conditions in the various markets have remained comparatively steady during the week. There are a number of revised prices to go into effect. Tin plates and Terne plates are again to the fore, along with Eavetrough, Conductor Pipes and Putty.

It will be seen, however, that there has been one reduction made and that is in the price of Terne plates, the new price is $16 per box. Tin plates have advanced from one to almost three dollars per box, the following quotations being now in effect:

Per box: 20-28 I. C., $20; 20-28 I. X., $21.50; 20-33 I. C., $24.25; 20-33 I. X., $25.50.

Prices which have been maintained on Eavetrough and Conductor Pipes for the past two months have been decidedly low when comparisons are made with other galvanized products. The advances which are now going into effect represent an increase of approximately thirty per cent. and from this it can easily be seen at what a low level previous quotations have been. The new prices just issued are as follows:

Eavetrough, O. G., per 100 feet: 8 in., $4.70; 10 in., $5.20; 12 in., $6.10; 15 in., $8.40.

Conductor Pipe Elbows: Doz.: 2 in., $1.30; 3 in., $1.50; 4 in., $2.40; 5 in., $6.

Conductor Pipe, per 100 feet: 2 in., $5.45; 3 in. $6.60; 4 in., $8.70; 5 in., $11.85.

Rainwater Cutoffs, each: 3 in., 42c.; 4 in., 52c.

Higher Prices on Lead Pipe, Solder

There is rather a sharp advance to record in the prices applying to solder, lead pipe, and lead waste. The new prices which are now being quoted for these lines are as follows:

Solder, case lots, 36c. per lb.; small lots, 37c. per lb.; lead pipe, $16.40 per 100 lbs.; lead waste, $17.40 per 100 lbs.

The new prices put into effect on putty represent an advance of twenty-five cents per hundred weight. The linseed oil situation and the scarcity of whiting are given as reasons for these new quotations. It is well to note, however, that this advance comes rather late as eastern prices advanced some time ago and all indications point to further increases within the very near future. No change has been made in the price on the small sized packages which are being quoted at 7½c. each. The following are the new figures:

Bulk, casks, $3.50; 100 lb. drums, $4.25; 50 lb. drums, $4.40; 25 lb. drums, $4.55; 10 lb. drums, $4.75; 5 lb. drums, $4.85.

Bladder putty is $4.75 in bbls. and $5 in boxes.

Bright Tinners' Wire Also Higher

Various lines of hardware have again come in for revision of price and new quotations are now being made on padlocks, barrel bolts, door knobs, etc. The common rim and mortise door knobs have now advanced to $1.90 per dozen.

Last week we mentioned an advance of twenty-five cents per hundred pounds in the prices applying to annealed wire and bale ties. We might have stated further that this advance affected also quotations on bright tinner's ware. The revised quotations on tinner's ware are as follows:

Per 100 lbs.: 0-9, $6.15; 10, $6.21; 11, $6.27; 12, 6.35; 13, $6.45; 14, $6.55; 15, $6.70; 16, $6.85.

Wire Products All Firm in Price

Conditions in the various wire markets are decidedly firm at the new prices now in effect and it is interesting to watch for the next move. It has been confidently stated in many places that wire nails will advance to $5.50 or $6 by the first of May. All indications certainly point to further increases being made, but the situation in Canada in regard to nails is now getting to be one of delivery. There are any number of manufacturers who find it impossible to make delivery of a single keg and this may mean that jobbers will be obliged to go to the States for their supplies. If this condition develops there is no question of doubt but that wire nails will soar very quickly. The present prices are as follows:

F.O.B. Winnipeg, $5.10; f.o.b. head of Lakes, $4.70 per 100 lbs. base.

Black and Galvanized Sheets Firm.

Black sheets and galvanized sheets remain firm at the prices recently quoted. The demand is very steady and with the prospect for spring business extremely good it is quite possible that this demand may influence prices to a higher level. The present quotations are as shown in current market quotations.

Oil and Turps Remain Firm

No further change in the situation regarding linseed oil is recorded and quotations remain firm on the basis existing for the past few weeks. These quotations are as noted herewith:

Ped gallon, bbl. lots: Raw, $1.35; boiled, $1.38.

Turpentine prices have been maintained during the week, the demand being fair and stocks in very good condition. Quotations are as follows:

Per gal.: 85c., bbl. lots; 88c., ½ bbl. lots; 90c., five gal. and one gal. lots

Miscellaneous Lines Higher.

Other lines which have taken revised prices representing advances in each case are as follows:

Boyproof watches, $1.05 each; Pocket Ben, $1.05.

Per doz.: 1847 teaspoons, $3.40; dessert spoons, $6; table spoons, $6.80; dessert forks, $6; medium forks, $6.80.

Business Satisfactory.

Jobbers advise that contracts have been made for skates for the coming season and orders are now being booked at firm prices. The new prices which are now in effect are higher than those prevailing last year by about five to ten per cent. There is no doubt but that the present is a good time for retailers to place their orders as their sales for the past year are still fresh in their minds, quotations now being made are certainly as low as can be expected in the next few months. As a matter of fact should present contracts be entirely filled and new ones made necessary there is no question of doubt but that higher prices will be put into effect.

Business for the opening week of the month has been very satisfactory and some of the jobbers are finding it necessary for their staffs to put in night work to cope with the amount of business on hand. This is a very satisfactory condition of affairs and everything points to a record year for 1917.

INCORPORATIONS

International Shipbuilding Corporation has been incorporated at Ottawa with a capital of $2,000,000 to construct and operate ships of all kinds, with head office at Montreal.

Standard High Speed Steel Hardening Co. has been incorporated at Ottawa with a capital of $150,000 to carry on business as metal manufacturers, founders, machinists, etc., at Montreal. The incorporators are: Anthime Fortin, Frank Willdon and Francis Guerin, all of Montreal.

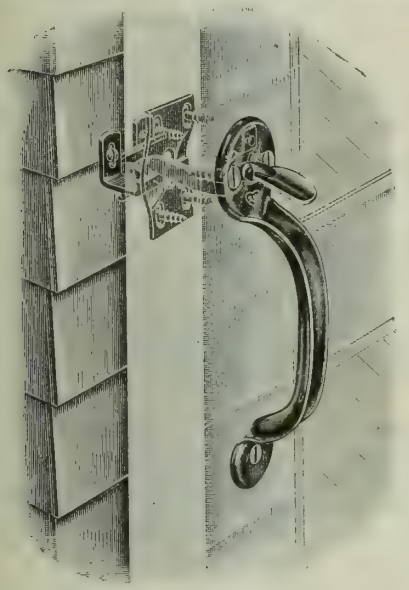
NEW HARDWARE GOODS

OFFERED TO CANADIAN HARDWAREMEN

WROUGHT STEEL BACK CATCH

Garage owners and builders will be interested and pleased to hear that The Stanley Works of New Britain, Connecticut, have added to their line of garage hardware, a wrought steel back catch for 1¾ inch garage and barn doors.

This company states that the back catch holds the door firmly when swung open against the side of the building. Opening the door forces the stout hook over the catch plate, in which position



Wrought Steel Back Catch.

it is securely held down by the double leaf steel spring.

To unlock the hook, press lightly on the thumb piece. The handle is used as a pull to close the door.

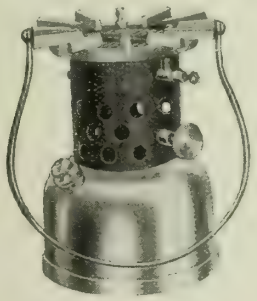
The escutcheon plate is struck up to act as a bumper against the catch plate, thus taking off of the hook the shock of the sudden stopping of the door's motion.

By means of the slotted screw holes the catch plate may be adjusted to meet the bumper squarely.

These are packed one set in a box with screws, and can be furnished in Stanley japan and sherardized finishes.

NULITE CAMP STOVE

National Stamping and Electric Works, 410 S. Clinton St., Chicago, Ill., is marketing the "Nulite" Handy Camp Stove here illustrated. The stove is 8 inches high, and 6 inches in diameter, weighs 3¼ lbs. and operates 6 hours on one filling (1 quart) of gaso-



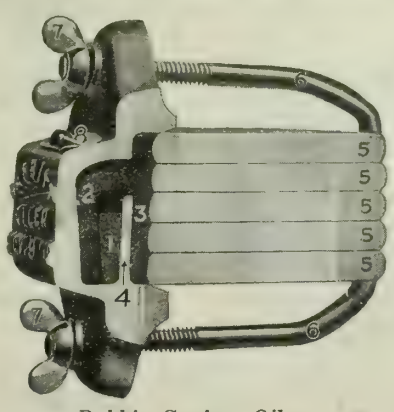
Nulite Camp Stove.

line. The makers claim that the stove produces as much heat as a five-inch gas burner, and there is no smell, no smoke and no dirt. It generates quickly and costs but little to operate. Is safe and reliable and can be carried from place to place even when in operation by means of wire bale or handle with which it is equipped.

The heat can be regulated by means of a regulating valve so that a high or low heat can be obtained and maintained at will. The makers also state that its extremely small size and weight, its economy in operation and its quick lighting qualities make it a very convenient and desirable article for the use of campers, hunters, travellers, motorists, surveying parties, etc.

BABBIT SPRING OILER

Babbit Spring Oiler Co. 1907, East 13th St. Cleveland, Ohio, offers to the trade the Babbit Spring Oiler. The makers claim that the oiler will first clean the rust from the springs by



Babbit Spring Oiler

flushing them with a constant flow of kerosene oil. Do this for a week the makers state and then the oiler will constantly and effectively lubricate, with a light grade of engine oil, the whole surface of all the spring leaves, permitting them to glide smoothly back and forth upon each other as they are designed to do.

The oiler is equipped with a reservoir from which the oil is withdrawn as required by capillary—vacuum process.

It is neat, sturdy and compact. Fits snugly against the spring, hardly noticeable and in no way affecting the appearance of the car.

The oiler is attached only on the outside of the springs—easily put on—is within instant reach, without undue effort. No squirming around under the car is required. The hands need not be soiled when refilling. And there is nothing fussy to get out of order or rattle.

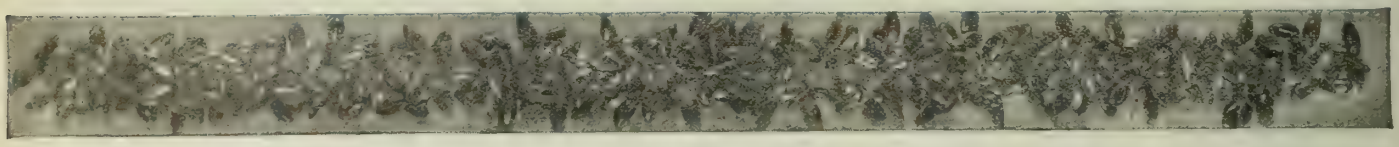
CONTEST FOR RETAILERS

Landers, Frary & Clark, New Britain, Conn., have announced a kitchen efficiency contest. A contest for retailers will be conducted from April 9 to 14 inclusive. The jobbers contest now on, runs from Feb. 1 to March 15. The contest is being held for the purpose of promoting household efficiency and economy and a wider use of universal bread makers, food chopper and percolators. By the terms of the contest, Landers, Frary & Clark will supply to every dealer ordering a specified amount of goods three prizes to be awarded by the retailer to his customers as follows:—A six cup coffee urn for the best loaf of bread baked at home; a pair of breakfast carvers, for the best original recipe made with the aid of a food chopper; a handsome tea ball tea pot to be awarded for the best reason for using a percolator.

Stated in 50 words or less. Prizes are to be displayed in the dealers windows on or before April 7, and are to remain until the conclusion of the contest. The company has prepared practical and attractive advertising matter for the retailer to use in connection with the contest. This matter will be distributed free to the retailer. A special book explaining the details of the contest, has been prepared and will be supplied free upon request.

Behind the Scenes

PEN PICTURES OF LIVINGSTON SERVICE



ONE

Growth

Upon geographical location depends the quality of flaxseed—some sections produce under-matured seed while others, where the climatic and soil conditions are favorable, grow a well-filled, fine-quality product.

We know flax-growing Canada and have facilities, resulting from our old established connection, to secure the best seed produced. **This is the first part of Livingston service.**

TWO

Harvesting

There's a right and wrong time to harvest flax to ensure the seed being in a proper condition. In buying, our buyers are careful to select only properly matured, well-filled seed—nothing less is good enough for Livingston Brand Linseed Oil. Poor seed means poor quality—oil that sacrifices the manufacturer's profit and jeopardizes his service to the consumer.

THREE

Marketing

From the harvest field to the elevator is a long road and a precarious one for flax seed. Unless expert supervision and consistent care are exercised the quality of the seed can very easily be lowered to a point which bars it from Livingston Brand Oil. Livingston service protects Canada's Standard Quality Oil.

FOUR

Seasoning

The seasoning process of the flax seed commences the moment it enters Livingston Elevators. The seed is stored in all-wooden bins to allow the moisture to dry out—the drying process is not hampered or unduly promoted by the use of concrete or steel bins which are very susceptible to climatic changes. This is the fourth step in Livingston service.

FIVE

Crushing

The crushing commences only when the seed is in proper condition. The most modern process is used—the very latest type of machinery operated by experts is employed.

The results obtained in our well equipped plants keep down the overhead cost of production and ensure the holding of the Livingston Standard.

SIX

Ageing Raw Oil

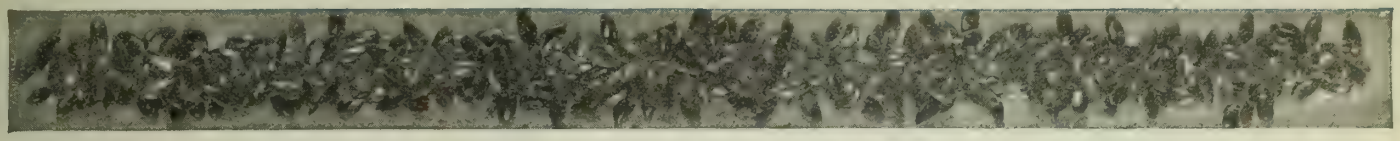
The ageing process is most important in the production of a high-quality linseed oil. This is only made possible where there are adequate facilities.

Livingston raw oil is stored in large steel vats in a uniform temperature for the required length of time, thus ensuring proper ageing.

THE DOMINION LINSEED OIL CO., LTD., BADEN, TORONTO, MONTREAL

Behind the Scenes

PEN PICTURES OF LIVINGSTON SERVICE



SEVEN

Fire Boiling

removes all moisture and precipitates matter which lowers the quality of oil boiled by the steam process. Fire boiling has been used in the manufacture of Livingston Linseed Oil for over half a century and will be adhered to as the only 100% efficient method of boiling oil.

This is one reason why manufacturers of high grade paints use Livingston Brand.

EIGHT

Ageing Boiled Oil

After fire boiling to the proper consistency, Livingston brand linseed oil is allowed to age in large steel vats for long periods. These vats are kept in brick buildings, heated to a uniform temperature. This process though necessitating the tying up of large sums of money ensures a quality in Livingston Brand Linseed Oil, not found in any other.

NINE

Barreling

Every barrel, old or new, is thoroughly steam washed inside and out—cleansed to a degree which appears to the average layman as entirely unnecessary. There's a purpose and a good one. The barrel then is thoroughly dried and seasoned before being filled. Livingston oil is pure when delivered to the consumer.

TEN

Service

—and it's service that counts these days. We stand by our old customers, supplying them with the standard quality product even in the face of very trying conditions.

No new accounts are opened until our old patrons are supplied. No lowering of the Livingston quality is permitted to speed up production. Wherever possible we make delivery when we promise. The result is satisfied patrons.

ELEVEN

Price and Guarantee

Though no expense is spared in the production of Livingston Brand Linseed Oil to keep it up to its high standard of quality, our price is always normal—always consistent with its recognized quality. Every gallon of Livingston oil is guaranteed absolutely to be of a quality second to none and to give absolute satisfaction.

TWELVE

In Blue Barrels

The quality goes into the oil first—then the name goes on the barrel. The blue-painted barrel is a symbol of absolute purity and the finest quality that half a century of oil-making experience can produce.

Manufacturers — specify Livingston Brand.

Jobbers—supply Livingston Brand.

Dealers—insist on Livingston Brand.

THE DOMINION LINSEED OIL CO., LTD., BADEN, TORONTO, MONTREAL

WEEKLY PAINT DEPARTMENT

Practice Thrift With Color Cards

Costs of Production Have Reached High Level — Some Retailers and Clerks Waste Cards and Lose Money —How Cards Are Made.

SPRING shipments of paint are now being received by retailers. Along with the paint, comes the usual liberal supply of color cards and other advertising material, supplied free of charge by the manufacturers.

Most retailers realize that the color cards are valuable articles, and that their proper use should mean increased business for the paint retailer. The cards are prepared at heavy expense by paint manufacturers and contain practical and valuable information for the retail salesman as well as the customer.

The cards prepared for this year's paint selling campaign are probably the most costly on record. Prices of all materials entering into the manufacture of the color cards are at record high levels. Everything from paper, ink and colors up to labor, costs a great deal more than in any previous year in the history of the trade. There are therefore many reasons why the retailer should practice thrift in using color cards. This does not mean that he should distribute fewer cards than in previous years, or endeavor to hold them back from prospective customers. It means that he should be more careful this season, than ever before to distribute the cards where they will be productive of most good in the way of actual sales.

Some Retailers Careless

Although of late years retailers as a whole have been less wasteful, there are still some retailers and clerks who do not use color cards to the best advantage.

The chief reason why some retailers and clerks do not appreciate the value of color cards, is that the cards are supplied free by the manufacturer. If a charge were made for the cards, every retailer would then make better use of them.

Information in Folders

Perhaps the color cards and other advertising matter have been going to the retailer for such a long time that he has grown unappreciative of their merits.

The color card is prepared under the guidance of expert paint manufacturers. It contains knowledge that it has taken the manufacturer years to acquire. The card or folder contains good talking points for the retailer and will help him to have a better understanding of the subject of paints. There is one piece of information , however, that most folders contain, namely, directions for the proper application of the paint. To the dealer in paints this is one of the big essentials. If paints are not properly applied they will not give the best of satisfaction.

Salesmen Should Be Conversant

It is important that the dealer and his clerks should be conversant with the right method to use paints. If he can first give oral instruction to the customer with the request that the customer also read carefully the instructions contained in the color card there is better chance that the paint will be put on properly.

Three very important essentials should be borne in mind by the retailer: First, become acquainted with the contents of the color cards and see that the clerks do also, for they can be used as good talking points. Second, do not give them out indiscriminately. The only thing cheap about them is the price which the retailer pays for them. He pays nothing for them, but should realize that they are of great value if properly used. Third, he should as far as possible give them only to prospective customers. People who are not interested in painting will not expend very much trouble in looking over the card. Other advertising matter should also be distributed with the idea in view of securing business from it.

How Cards Are Made

The manufacture of color cards is no inconsiderable undertaking on the part of the paint makers. They are made in the painting room, in which several painters are kept busy throughout the year on this one class of work. The actual paint is spread on paper, showing all the varieties of paint—house paints, buggy paints, wagon paints, enamels, floor paints. Thousands of these sheets are produced each month. These painted sheets are then cut into small pieces or "chips" by large power cutters and are carefully stored away in small metal trays for future use. Tons of paint are used each year in the production of these color chips. The number of chips produced runs up over the billion mark.

The color card manufacturing department is equipped with special machinery for the placing of the small chips on the printed blanks. Not very many years ago these chips were all attached to the cards by the hand method. On account of the great number of color cards required each year by large manufacturers the hand process had to give way before a speedier one. To-day the work is done most efficiently by an ingenious machine which is under the control of one operator. It first applies the gum to the card then the card is shifted to another section of the machine where it is brought in contact with the small color chips where the gummed surface causes the chips to adhere. In the old hand-pasting days an expert operator could finish two hundred cards in a day while one of the machines will finish the same number in an hour.

But all this labor and scientific knowledge is wasted if the retailer fails to make proper use of the cards and folders.

A PROFITABLE SPECIALTY LINE

From *Hardware Trade.*

There is an unmistakable movement of the automobile accessory business away from the garage and toward the retail hardware stores of the country.

There are many reasons why this is so. Among these causes may be mentioned the better financial standing of the hardware dealers, their more advantageous display facilities, their merchandising experience, and the possession of an experienced selling force.

With the continual increase in the number of motor vehicles used, both for pleasure and business purposes, will come a steady increase in the demand for accessories of all kinds. The business is becoming more and more stabilized, and standardized with each passing day.

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, March 7.—Almost a condition of "no change" is found in the paint markets of Montreal this week, but some alteration of the market for turpentine is observed, and a further tendency to conserve supplies. Linseed oil is very seriously short in supply, and the outlook is if anything worse than it was previously, but a ray of hope is held out that improving weather may bring improved conditions. All raw materials used in the paint business have been exceedingly uncertain in supply for the past few weeks, and the manufacturers have carried on business under the difficulties with which manufacture has grown familiar since the war only rather intensified. Glass and putty are very firm, and shellac is firmer, one firm which quoted low last week having advanced prices to nearer the higher quotations of last week, making the range now for orange in barrels $3-$3.35, and for white $3.25-$3.50 per gal. Glues are tremendously firm, and brushes and sundries said to be advancing almost daily in some minor line and steadily as regards the more important lines owing to difficulties and shortages in the way of manufacture.

Linseed Oil Still Seriously Scarce

LINSEED OIL.—There is, unfortunately, no change in the situation as regards linseed oil in Montreal this week. Continued operation of embargoes, and hampering of railway traffic, keeps the supply of flaxseed from reaching the crushers, and there is even a hint that some period of actual shut-down in the crushing mills might be experienced. Crushers are taking care of orders placed before the shortage of local seed supply developed, but are out of the market for new business, and there are no live quotations on the market only nominal prices as last week. In the weather, which gradually grows milder, there is found the only ray of hope for a speedy renewal of activity on the part of the main market for linseed oil, which some paint manufacturers very urgently require to complete manufacture to meet spring business. It is felt that when there are renewed supplies on the market prices must maintain at very high levels, as demand will certainly be keen, and with the demand for oilcake reduced by the approach of spring crushers will have to take their returns more from the oil than has been the case during the winter. Raw linseed oil at $1.40; boiled at $1.42½ per gallon are the nominal quotations for single barrel lots only.

Turpentine Prices Show Wide ange

TURPENTINE.—While the latest reports from Savannah show the market for turpentine to be quiet, and untroubled by rumors of advances or any activity out of the ordinary routine of business in this line, there are still some elements of firmness in the local market for turpentine. One large firm is not in the market to supply more than one-barrel lots. This firm, however, quoted 76c a gallon for one-barrel lots to regular customers, and the price is easier than had been quoted in general last week. Another firm quoted as high as 87c per gallon for 1-lb. lots, and 85c for 5 bbls., but is not seeking business. In the matter of turpentine supply at present in Montreal, some local difficulties prevail, but they are entirely transportation difficulties, and the presence of firm quotations in the market range is due to shortages caused by the slowness of supply. It is not anticipated that turpentine will find any suddenly firming market at this time; in fact, easier tendencies are more to be expected, but much depends on transportation just now.

Turpentine.	Per Imp. gal.
1 bbl. lots	76-77-81c
2-4 bbls.	..-76-80c
5-10 bbls.	..-75-79c

White Lead in Oil Remains Very Firm

WHITE LEAD IN OIL.—There has been no change in the market quotations in Montreal for white lead in oil up to the time of writing. Great firmness prevails in the metal. Still the manufacturers are holding on to the former standards of price, and there is no actual suggestion heard on the market that white lead in oil will advance immediately, however firm the market may be. An advance would be justified undoubtedly if the prices of lead and oil go much higher, and when linseed oil comes again into the market; the metal market is also worth watching, for if both linseed oil and lead keep at very high quotations, white lead in oil may assume a higher market value. Should lead decline to easier levels, however, there need not be any further advance in white lead in oil. Quotations remain at $14.80 per 100 lbs. for 1-ton lots, $14.50 per 100 lbs. for 5-ton lots, and $15.10 per 100 lbs. for less than 1-ton lots.

Mixed Paints Still Show Firm Tone

MIXED PAINTS.—There has been a serious hampering of the manufacture of mixed paints in Montreal of late, due to the transportation difficulties, which have retarded the incoming of raw materials. Zinc in particular has been scarce. Lead has been hard to get in quantities. The state of linseed oil is well known, and even turpentine has been in a stage to require some degree of conservation. Manufacturers have had to wait for materials, and the output of spring orders, while steadily carried on in spite of difficulties, has been slower than had been anticipated. In the meantime the question of increased paint prices has been thought over in many quarters, and the question may come to a head later on, though probably not before the spring orders and sorting orders for the season have been disposed of. It would not be surprising to find mixed paints in firmer market in the course of some weeks from now, unless market tendencies alter. So much that affects their market has altered in price upwards of late, even the packing materials. A leading manufacturer said this week that if no raw material for paint had advanced at all, the mere advance in cost of cans would have brought about higher prices—and cans are but one item of the bill.

Glass Very Firm Putty Unchanged

GLASS AND PUTTY.—The market for glass continues to show the greatest firmness, and where easier prices are obtainable this is simply due to the large buying of certain dealers in earlier days. It is estimated as a matter of fact that glass was selling in Montreal

Paint Well Advertised Is Half Sold

Montreal Halifax St. John Toronto Winnipeg

If interested, tear out this page and keep with letters to be answered.

recently in case lots at the same price as it would cost to buy from the United States in carload lots. The market for glass is still showing further firming tendencies, and might go higher. Putty prices are unchanged from quotations as given last week—that is, for bulk putty in casks, $3.10 per 100 lbs.; other quantities and packages at the usual proportionate prices.

TORONTO

TORONTO, March 8.—There is a firmer tendency in linseed oil in some quarters during the week. Flaxseed has not been arriving in any better quantities since the arrival of a few cars last week. Turpentine has declined 3c per gallon. White lead held steady in firm market. Mixed paints have been going into trade channels in fairly good volume so far as orders go. The trade is running more to mixed paints owing to the higher cost of the raw materials. Some wholesalers state they are not encouraging their customers to book ahead to any great extent with present high prices prevailing. They adopt the attitude that a hand to mouth basis is the safest. Other wholesalers again can see no prospects of lower prices in the near future and are advising their customers that orders be booked.

Linseed Oil Inclines To Higher Quotations

LINSEED OIL.—There has been a movement toward higher levels in certain quarters on linseed oil, in single barrel lots being quoted as high as $1.45 for raw and $1.47½ for boiled. From reports at hand there has been no improvement in getting seed forward from the Canadian West. A few cars arrived last week but since that time supplies have not been coming to Ontario points. During the week flaxseed advanced 10c per bushel on the Winnipeg market for the cash article. On Thursday of last week the closing price at the Western centre was $2.53¼ per bushel while the close on Wednesday of this week was $2.63¼. There was a steady upward movement in the price of flaxseed and even in the face of slight weakness in the wheat market on Wednesday there was a strong market for flax. Inspections of cars of seed at Winnipeg have surpassed the previous week by a narrow margin, the number being 82 cars as compared with 80 cars during the preceding week. Some authorities are inclined to believe that much of this seed is moving south into the United States as the elevators are well filled on the Lakes and there is very little of the seed coming East. The oil cake situation has not improved and with the approach of spring and the restriction of exports it promises little assistance in the matter of making easier prices for oil. This situation with respect to oil cake is expected to make for firmness in oil. Following are the quotations:

	Raw. Per. gal.	Boiled. Per gal.
1 to 2 barrels	$1.39-$1.45	$1.42-$1.47½

Owing to the scarcity of linseed oil there are few quotations made on the basis of large lots. Sales are made for the most part on a small lot basis. Where larger quantities are obtainable there would be a reduction in price from above figures.

Turpentine Declined 3c Gallon During Week

TURPENTINE.—A decline of 3c per gallon was registered in the price of turpentine during the week, the higher quotations being reduced to 78c per gallon. The lower quotations however remained at the figure quoted last week of 77c. The range therefore is within narrow limits. In the primary market the week in turpentine was one of dullness, the price remaining stationary with no sales whatever recorded. Reports from Savannah are to the effect that the Liff and the Arachne have reached London safely with a combined cargo of 21,000 casks of turpentine. There are now some 51,000 casks of turpentine in London and with the usual consumption at the rate of 1,500 casks per week would give adequate supplies of this commodity until next November. The London market is therefore independent of the American market for some time to come. In the South there is a bearish side to the market that points to the large reserve carried into the new year and the restriction of export through submarine activities. Domestic demand in the United States is also somewhat clouded through the possibility of that country getting into the war. The bullish side of the market is reflected in the opinion that the reserves are no larger than a year ago, that the export movement is only temporarily restricted and that there will be building operations in the country as a result of the prosperous times.

	Per Imp. Gallon
1 barrel lots	$077-$078
2 to 4 barrels	0.76- 0.77
5-gallon lats	0.82- 0.85

White Lead Steady; Demand is Limited

WHITE LEAD IN OIL.—There was an inclination toward higher levels in the primary pig lead market during the week with prices ranging around $10 per hundred pounds for spot metal. This is reflected in white lead in oil but there is little inclination to look for higher prices at present owing to the restricted demand on account of the high price prevailing. Prices remain unchanged at $15 per hundred pounds in ton lots and $15.30 in small lots.

Dealers Feeling Way Toward Glass Advance

GLASS AND PUTTY.—In one instance a dealer in glass stated their quotations have been in a mobile state during the week with an inclination to ask higher prices wherever it was possible. Sales were reported in one instance at net list and in others at 10 per cent. off list, while others were made at the prevailing discount of 15 per cent. One concern reported the demand for window glass improving slightly. Factories in the United States are stated to be behind with their orders, with raw materials in poor supply and the coke situation a disturbing one. Putty prices were maintained during the week, being quoted at $3.40 per hundred pounds in bulk casks and in 100-lb. drums at $3.85.

White Lump Chalk Goes Up 20c Hundred

CHALK.—An advance of 20c per hundred pounds was recorded in the price of white lump chalk during the week, the selling price now being $2 and $2.25 per hundred pounds in barrels. This commodity is used by builders. There is a scarcity of the article in common with whiting. Prices of the latter have held steady.

Mixed Paints Continue To Go Into Trade Well

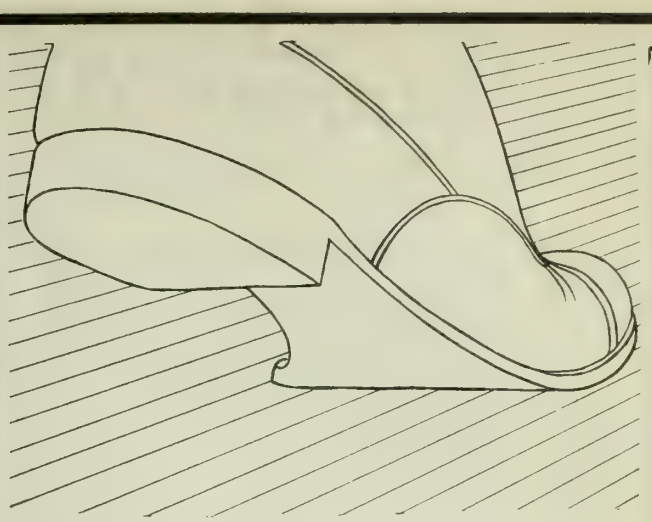
MIXED PAINTS.—Manufacturers of mixed paints report the trade during the week has been satisfactory. Merchants in many instances are not hesitating to take in good stocks. The firmness in the linseed oil and white lead in oil continues, and this is taken as an indication that easier prices cannot be looked for. In fact, the trend of thinking is all toward higher prices. There is a great scarcity of linseed oil and almost every material that enters into the manufacture of paint. Manufacturers state that in actual number of sales, can for can, the demand has been greater than last year. In volume of business the total is much ahead of last year. There is a good demand for the larger sizes of cans in one and five gallons, which indicates to some men in the paint trade that contractors on large painting jobs are showing more interest in this line of ready-mixed paints than ever before. The coming season is expected to be a good painting season, for the reason that people have been putting off painting for the past two or three years, and now deem it unwise from an economic standpoint to neglect it further.

WANTED — RELIABLE, ENERGETIC hardware clerk, 8 to 12 years' experience. Capable of taking charge. Apply, stating salary and giving full particulars, to Box 170, Hardware and Metal, Toronto.

The firm who inserted the above advertisement in HARDWARE AND METAL showed good judgment.

Naturally, replies would only come from clerks who were in the habit of reading HARDWARE AND METAL—and every hardware merchant realizes that a clerk who reads HARDWARE AND METAL is the kind of clerk he wants, because he will be thoroughly informed on market conditions, new selling plans and the best methods of window display and advertising. The above advertisement brought in 23 replies. It cost only 67 cents.

USE THE WANT AD. PAGE.



Heel Marks

IF floors are treated with Liquid Granite they will show no heel marks.

Liquid Granite is the ideal finish for floors and all interior work exposed to severe wear. It is one of the most saleable specialties for the dealer to carry.

Other quick sellers are

LUXEBERRY WHITE ENAMEL
Whitest white; Stays white. Makes permanent snow white finish in either gloss or dull effects.

LUXEBERRY WOOD FINISH
For general interior work. Develops and preserves the grain of all woods, and makes a handsome and lasting finish. Rubs perfectly.

LUXEBERRY SPAR
For exterior work. Especially adapted for durability under extreme exposure—front doors, store fronts, marine work, etc. Makes handsome finish and will not turn white under the severest conditions of wear.

Write for price list and interesting dealer proposition.

The Canada Paint Agency Helps to Sell Other Goods

Our National advertising is teaching paint users in Canada to know and demand Canada Paint Products for satisfaction and economy.

This brings new customers to the stores of Canada Paint agents and enables them to sell many other articles, especially those used in painting and decorating.

Let us place a "C. P. Agency Sign" on your store. It will help you not only to sell more paints and finishes, but your sales of brushes, ladders, wall coverings and practically every other article you carry will increase.

Canada Paint products are well known for reliability and lend to other lines the same conviction of tone and high quality as is contained in each can with the C. P. trademark.

Capitalize the 1917 season by asking us for complete details of the "C. P. Full Line Agency."

Re Gauges and Prices of Sheets.

Prices which follow on black and galvanized sheets are purely nominal. The market has reached a state where prices are quoted only on application and for immediate acceptance.

On account of it being practically impossible to secure galvanized sheets from England, owing to the war, American mills have decided that they will no longer roll the English gauges to meet this competition. However, they will continue to roll at 10¾ oz., which will be known as such or a 30 gauge, and will take the place of the former English 28 gauge.

SHEETS (BLACK)

	Montreal 100 lbs.	Toronto 100 lbs.
10 gauge	6 20	6.00-6.05

SOLDERING COPPERS.

Base, per lb., 63c cents.

Varnished woodwork stands this test if it is Valsparred.

Why Valspar Varnish Sells

First—Because it has qualities not found in ordinary varnishes so that the consumer wants it. Valspar has been demonstrated to be absolutely unharmed by hot or cold water, tea, coffee, milk, even alcohol or ammonia.

Second—Because Valspar makes good its unusual claims, customers come back for more and tell their friends about their discovery.

Third—Because it is being well advertised in Canadian homes.

Fourth — Dealers like to sell Valspar because it has quality, attracts high class trade, makes satisfied customers and is profitable.

VALENTINE'S VALSPAR
The Varnish That Won't Turn White

These facts ought to interest you— any live merchant looking for better goods with which to make business better.

It will be well worth while to write us for the latest Valspar proposition.

Make Preparations NOW for Spring Business

We Strongly Advise Ordering Early

LAWN MOWERS

Pennsylvania Low and High Wheel, with **Crucible Steel Blades**; **"Empress"** Ball-Bearing, **Woodyatt, Star, Daisy, High Speed, Aero, Peerless** Ball-Bearing Mowers, **Leader, Perfection**, etc. Write for circulars and prices.

DUNHAM WATER-WEIGHT LAWN ROLLERS

The **Dunham Water-Weight Roller** is a profitable line to handle.

> "All **lawns** should be rolled in the **Spring**, as during the Winter months freezing and thawing loosen the soil and heave the turf away from the subsoil, leaving millions of sensitive 'feeder-roots' exposed to the air. The **roller** compresses the soil around the roots and presses the turf back against the moist subsoil. **Rolling** throughout the Summer keeps the surface even."

We carry on hand the **Dunham** in the best selling sizes. Write for **circular** and **prices.**

GARDEN HOSE

Corrugated Non-Kinkable, in 500-ft. Reels. We cut any length to order.

Smooth surface Garden Hose in 50-foot lengths, in good variety.

Hose Couplings, Gem Hose Nozzles, Hose Menders, Steel Hose, Reels, Grass Shears, Grass Catchers, etc.

SPORTING GOODS

We carry a large and complete stock for **Lawn Tennis, Baseball, Bowling, Fishing, Canoeing,** etc.

Transparent Finishes

The most beautiful and most durable varnishes made.

These are varnishes with a record of over fifty years behind them.

Varnishes that will wear long after cheaper varnishes have been replaced.

Varnishes that cost less BY THE JOB than cheaper lines, owing to their qualities and covering powers.

Varnishes that you can unhesitatingly recommend to your customers with the full assurance that entire satisfaction will be given.

PYRENE

The Universal

FIRE EXTINGUISHER

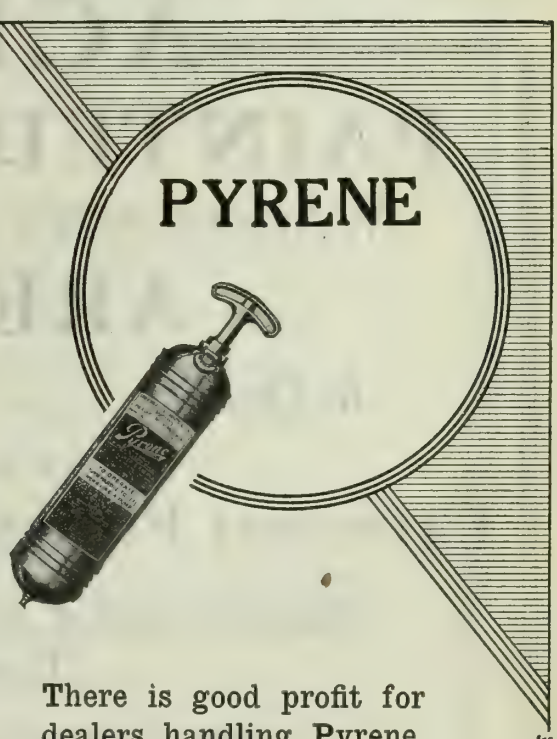
is always ready.

Never Deteriorates, Freezes or Corrodes.

Every Motorist Needs Pyrene

in his garage. It puts out all kinds of fire, gasoline or oil.

It is as effective on an arc of 100,000 volts as on burning shavings. It is a non-conductor, will not injure the finest fabrics, and will not freeze at 50 degrees below zero.

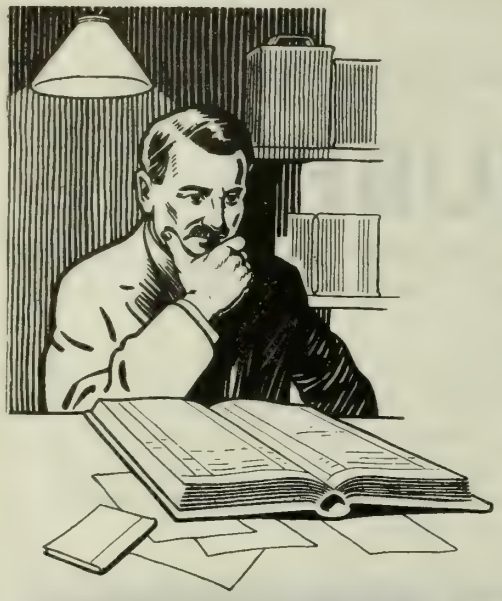


There is good profit for dealers handling Pyrene.

GREAT WEST ELECTRIC CO., LIMITED

Winnipeg, Manitoba

Paint performance—not mere promise



THE GREATEST INDOOR SPORT:
A Lowe Brothers' dealer watching his business grow.

One thing we will NOT do—we will not overstate the case for Lowe Brothers' High Standard Paints in the hands of either public or dealer.

To the public we say—Lowe Brothers' Paints will spread better, stand up better, and look better than any other, if given fair handling.

To the Dealer we say—the Lowe Brothers' proposition means more to you in dollar-making co-operation than any other you have listened to. But you've got to be the right dealer, and you must appreciate what co-operation means.

Do you want to hear our Proposition?

A Straight Talk from the Manager

No. 60

"Saved Hundreds of Dollars"

IN renewing his subscription to Hardware & Metal, G. J. Oliver of Bienfait, Sask., writes saying:

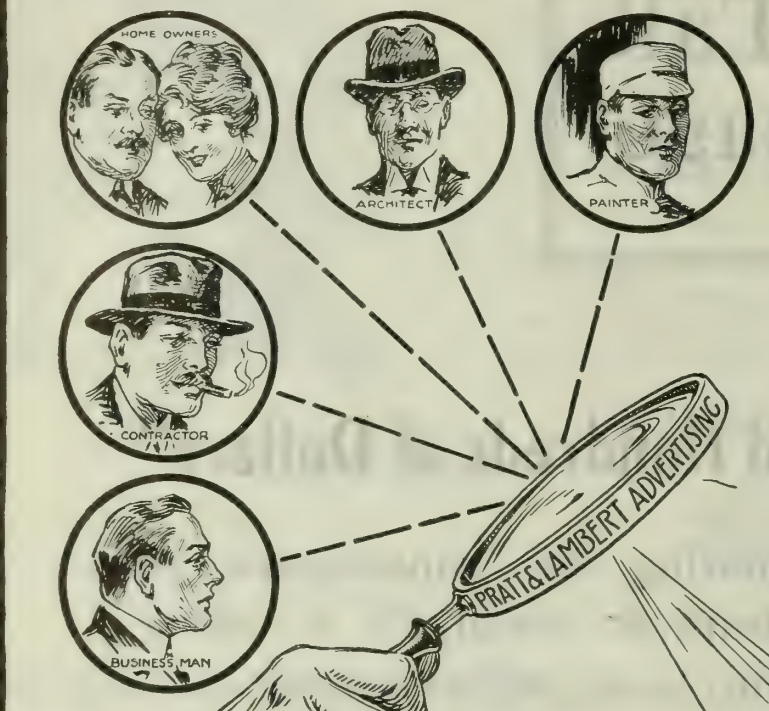
> "Hardware and Metal is the best investment any hardwareman can make at this time of advancing prices. I could not think of doing business without it, and, by a careful persusal of it, I have saved hundreds of dollars."

So it is with every Canadian hardware merchant who reads Hardware and Metal carefully. The market reports give him invaluable information concerning the quotations current at the leading centres of distribution, and the advertising pages show him where he can buy so as to get the maximum of value and service.

Don't forget that as much thought and care is put into the preparation of the advertisements as of the news pages. You will always find them interesting and profitable.

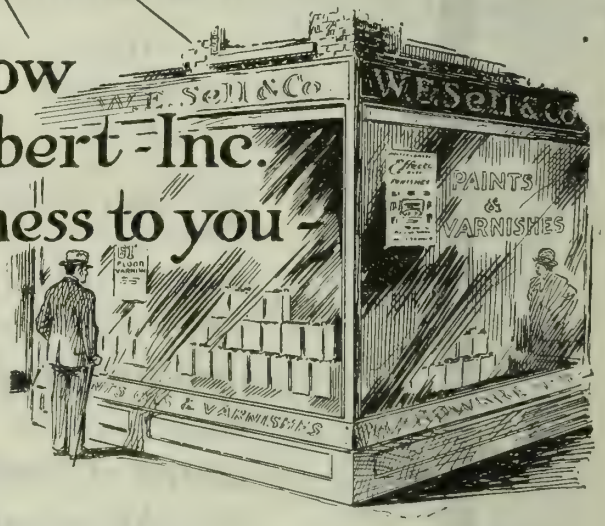
J. G. L.

All Concentrated on YOUR Store



HERE are the five largest buyers of varnish products. The business of any *one* of these classes means a great deal to you—but Pratt & Lambert Advertising does not stop there. By means of great national publicity and by other methods, Pratt & Lambert-Inc. bring the trade of *all five of these buyers* to the stores carrying the P&L Line.

Here's how Pratt & Lambert-Inc. Brings this Business to you—



THROUGH national advertising in great magazines totaling *over six million*, the home-owner comes to look upon Pratt & Lambert Varnishes as the natural thing to buy Personal letters, and advertisements in such publications as Factory Magazine, emphasize to business men the facts which they have already read in the magazines. Our Architectural Service Department continually writes letters to each of our country's ten thousand architects. Architects and contractors are also reached by P&L advertisements in the architectural publications. Seven times a year, seventy thousand painters eagerly absorb the helpful information in our painters' magazine, Varnish Talks; and the final effects of all these untiring influences can be focussed on YOUR STORE if you will make it a Pratt & Lambert store and let our store helps and selling methods direct YOUR SHARE of this huge business TO YOU.

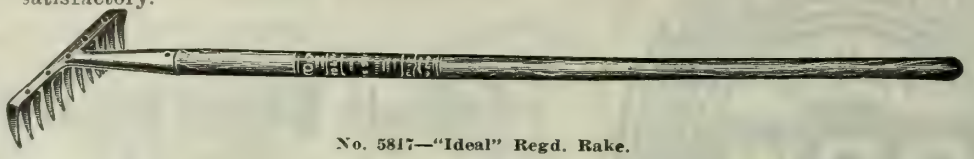
W P WARD

Established in 1803

We are one of the largest makers of these goods in England. The quality is of the best and they are beautifully finished. We are putting in hand large stocks for the coming season, and we ask you to give us a trial order. Our Garden Shears are so well known that they need no advertising; our other tools will be found equally satisfactory.

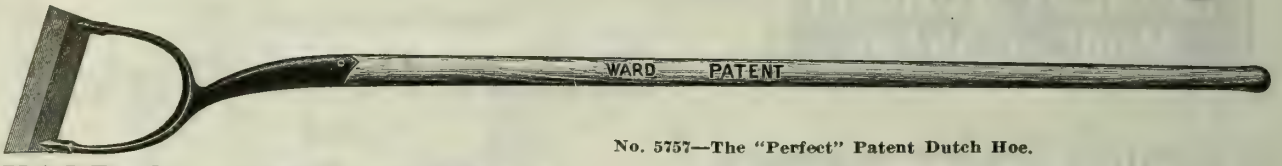
No. 5574—Weed Fork.



No. 5817—"Ideal" Regd. Rake.

No. 5417—Garden Shears.
Guaranteed "Fast Handles."

No. 5552—Trowel.



No. 5757—The "Perfect" Patent Dutch Hoe.

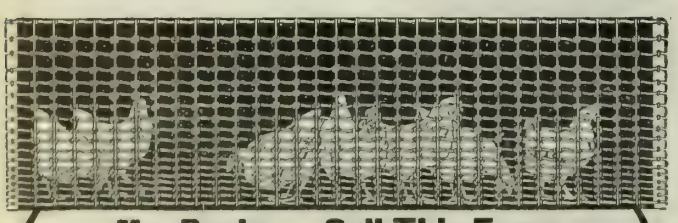
Winnipeg



Mr. Dealer: Sell This Fence

Establish a trade that will stay with you and at the same time will show a substantial growth. Compare this strong, rustless, unyielding fence alongside flimsy netting, and every poultry raiser will flock to your store. Note the close spaces at bottom that turns the small chicks and keeps out intruders.

PEERLESS FENCE

SEND FOR LITERATURE

Get our catalogue of fencing for all purposes. Every foot of it guaranteed. Write today for agency in open territory. Our fence in every instance backs up our advertising.

In Well Kept Homes

A careful housewife takes pride in the appearance of the bath room. The easiest fixture to keep snowy white is the toilet bowl—provided it is cleaned with

Sani-Flush

Instead of dipping the water, bending over and scouring the bowl, the housewife or maid simply shakes a little ***Sani-Flush*** into the water standing in the bowl. Stains disappear. All parts of the bowl are reached, even the unseen trap. Then the closet is flushed and all loosened sediment is washed into the soil pipe.

HAROLD F. RITCHIE & COMPANY, LIMITED
10-12-14 McCaul Street - TORONTO, ONT.

"IDEAL" FENCE

is sold to the farmer

"THROUGH THE DEALER ONLY"

If you have not ordered your FARM FENCE for spring, you will be interested in our new

"IDEAL" SPECIAL SALES PLAN

which allows you to compete with "Mail-Order Houses." No investment—no handling—no collections—you make a profit on every sale.

Full particulars sent on request.

MACLEAN'S MAGAZINE *for* March

Sir Gilbert Parker
Robert W. Service
Stephen Leacock
Alan Sullivan
Agnes C. Laut
H. F. Gadsby
Erman J. Ridgeway
Madge MacBeth
L. M. Montgomery
Norman Lambert
Hopkins Moorhouse
H. M. Tandy
Robson Black
Adam Barnhart Brown
Arthur William Brown
Peter McArthur

BE thankful that Canada has a magazine of BIG calibre. A magazine fit to be placed alongside the best British and American magazines—by the test of those who contribute to it regularly and of ideals.

MACLEAN'S MAGAZINE carries world-famous names in its list of contributors—writers who have an open sesame to any magazine, yet writers that some magazines cannot get, because they fail to measure up to a standard set. Not every or any magazine can have the work of Sir Gilbert Parker, Miss Laut, Stephen Leacock, Arthur Stringer, Arthur E. McFarlane, L. M. Montgomery, Nellie McClung, Robert W. Service, Alan Sullivan, and others whose names are familiar to readers of MACLEAN'S MAGAZINE.

MACLEAN'S MAGAZINE is favored by these fine and high-priced writers because they are Canadian-born or bred and because they are genuinely interested in seeing the land of their birth or adoption have a magazine worthy of the land of their love and of their work and fame. *And they have found this magazine in MACLEAN'S.* MacLean's gives them access to the readership they desire to reach—the man and women of culture and position, of real love for Canada and in earnest to see its nationality enlarge and its destiny advanced.

And so we feel that we have a right to ask you to give MACLEAN'S MAGAZINE a first place in your favor. *It is truly Canadian,* doing a needed service for Canada, and doing this worthily. Doing all that it is doing at a heavy present cost, looking to the future for its larger reward.

You can show your appreciation of what the publishers of MACLEAN'S MAGAZINE are doing by making MACLEAN'S an elect magazine among all magazines enjoying your favor, and by making it better known to others who have your spirit—your sense of Canadian nationality, your purpose to advance Canada in all right and high ways.

At All News-Agents - Fifteen Cents -

Contents of MARCH MACLEAN'S
(CONDENSED)

Jordan is a Hard Road. Serial by Sir Gilbert Parker.

The Guile of Ulysses. By Peter McArthur.

Face Up. By Hopkins Moorhouse.

The Rabbit Revolution. By Adam Barnhart Brown, with illustrations by his brother, Arthur William Brown.

The Above are Stories

Ten Million for the Asking. By Stephen Leacock—a serious contribution on a phase of national finance.

National Policies—How they are formulated and exploited by Parties and Cabinets. By H. F. Gadsby.

Prospects for Peace and Peace's Problems. By Agnes C. Laut. A stirring and thought-provoking article by this wonderful woman writer with a statesman's mind.

The Above are Special Articles

Mrs. Hayter Reed—the woman who is responsible for the decorative schemes of the big C.P.R. hotels. By Madge MacBeth.

H. C. Brewster—Premier of British Columbia. By Norman Lambert. A timely sketch of a man of interest to all Canadians.
These are brief biographies of interesting Canadians—a feature of every issue of MACLEAN'S MAGAZINE.

The Review of Reviews Department condenses for busy readers the cream of the best things appearing in the current magazines of the world. So MACLEAN'S becomes many magazines in one.

The Business Outlook and **Information for Investors** are two features of MACLEAN'S greatly liked and esteemed by many of its readers.

These are Department Features found in every issue

FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTRE. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability.
Made for Brace—made for machine. Packed singly—packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Order through your jobber to-day.

Reliable QUALITY

Before you build your home

You will save many dollars, avoid many mistakes, and add vastly to the satisfactoriness of final results if you make yourself thoroughly familiar with the book—

Building a Home
By Desmond and Frohne

These two men are editors of *The Architectural Record*, the leading paper in its field on this continent. The book is full of sound sense, and is inspiring and educational. Many fine illustrations assist the text.

The price, post paid, is $1.65 ($1.50 at our office). This price is as nothing in comparison with the value of the book to those planning to build.

CAN OPENER

That sells on sight. An absolutely necessary article to every family or individual. List price, $10.00 per gross. Liberal discounts, according to quantity. This is a profitable opportunity.

MONARCH ELECTRIC COMPANY, LIMITED
St. Lambert, P. Q.

DISTRICT MONTREAL

It happened just the other day—

A few days ago a customer went into a hardware store, and noticing a man going out smiling, asked the manager why that man seemed so well pleased. Oh! the manager replied, I just sold him one of Still's Handles, and anyone who knows the quality of Still's Handles is always well pleased. The customer then said, "that is just what I want," so he bought

Still's Handles

and went away smiling, too.

Satisfaction is the road to big business.

Specify Still's Handles when placing your order with your jobber. If he cannot supply you, write us.

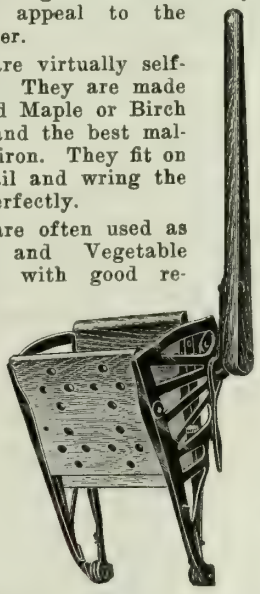
J. H. Still Mfg. Co.
ST. THOMAS. ONT.

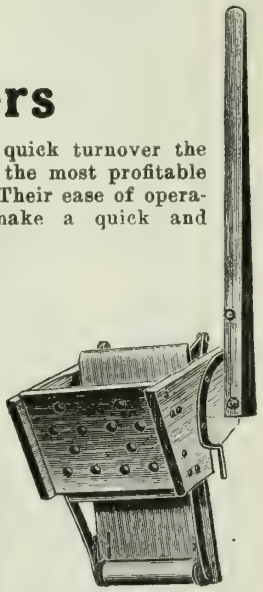
The White Mop Wringers

Because of their wonderfully quick turnover the White Mop Wringers are one of the most profitable commodities any dealer can sell. Their ease of operation and general desirability make a quick and strong appeal to the consumer.

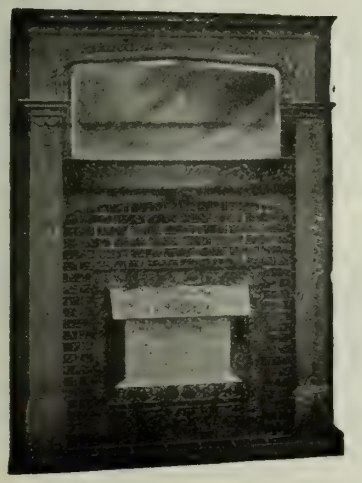
They are virtually self-sellers. They are made of hard Maple or Birch wood and the best malleable iron. They fit on any pail and wring the Mop perfectly.

They are often used as Fruit and Vegetable presses with good results.





White Mop Wringer Company
Fultonville, N.Y.



Did You Ever Buy Fireplace Goods From US?

This is not merely a side-issue with us.

It is our Business and we are Specialists therein. We give you the best there is in Service and Our Motto is "QUALITY."

Condensed or "Want" Advertisements

There is always someone, somewhere, who is looking for just such a proposition as you have to offer—and it is more than likely that he is a hardwareman and a subscriber to HARDWARE AND METAL. Let an advertisement on this page bring you together.

RATES (payable in advance): 2 cents per word first insertion, 1c per word subsequent insertion. An additional charge of 5 cents for each insertion is made when Box Number is required. Each figure counts as one word.

SITUATION VACANT

WANTED — HARDWARE CLERK, GOOD salesman. State experience and salary wanted. Apply Box 51, Meyronne, Sask.

A FIRST-CLASS TINSMITH — STEADY work; also a man of two or three years' experience; references required; state wages wanted. Box 424, Hardware and Metal, Toronto.

TWO CLERKS FOR FIRST-CLASS HARDware store in Toronto. One junior, and one with 2 to 4 years' experience. Give full particulars and state salary wanted. Good opportunity for advancement in good store. Box 441 Hardware and Metal.

WANTED—THOROUGHLY EXPERIENCED hardware man for general store in Saskatchewan town. Must be a good aggressive salesman. State age, experience fully, nationality, church connection, whether married or single, and salary expected. Must be total abstainer from liquor and tobacco. Box 438 Hardware and Metal.

AGENCIES WANTED

THE SUREST WAY FOR THE MANUFACturers' agent to connect with good live firms, is to tell the manufacturers who read Hardware and Metal, all about his ability to sell their goods. Try an advertisement on the Condensed Ad. Page of Hardware and Metal, under this heading.

MANUFACTURERS' AGENT WANTS ANother good, saleable line to sell on commission to the hardware trade in London, Ontario, or London and surrounding territory. Energetic representation assured. References given. E. L. Williams, 192 Cheapside Street, London, Ont.

STORE EQUIPMENT FOR SALE

YOU MUST HAVE A LOT OF OLD FIXtures around the store which are no longer of any value to you, but would prove very useful to someone else in the hardware business. Find a purchaser for this equipment through an advertisement on Hardware and Metal's Condensed Ad. Page.

FIFTY DOLLARS TIED UP IN OLD FIXtures that you are no longer using would make a lot of money for you if invested in stock and turned over three or four times a year. Get your money out, by selling the fixtures to one of Hardware and Metal's readers who may be looking for exactly what you have to offer.

PAPER BALERS

THERE IS MONEY IN USING AND SELLing the Jewell Paper Baler. It is the only low-priced, efficient baler on the market. Every hardware store should use one. Splendid side line for one line traveller in each territory. **General Sales Co., Stair Bldg., Toronto.**

SITUATIONS WANTED

HARDWARE CLERK SEEKS POSITION—12 years' experience. Can take charge. Box 433, Hardware and Metal, Toronto.

SHEET METAL WORKER WITH 13 years' experience, is open for engagement after March. Can take charge of shop. Can do plumbing. Box 432, Hardware and Metal.

WANTED — POSITION IN HARDWARE line. Wholesale, travelling and retail experience. Capable of managing store. Box 439 Hardware and Metal.

YOUNG MAN EXPERT TRAINING AND long practical experience, familiar with price detail and buying, desires a responsible position with jobber or manufacturer. $1,800 to $2,000 to start and good opportunity. Address Box 437 Hardware and Metal.

EXPERIENCED HARDWARE MAN, NOW in the employ of a large Canadian house, is anxious to better his position; has wide wholesale and retail experience. Anxious to locate in Montreal or Winnipeg. Position must be permanent and salary good. If you have need of such help, here is a man who will give you value for every cent invested in his salary. Box 431, Hardware and Metal, Toronto.

THE "CHANGING TIME" IS GETTING near. There are many firms who have vacancies on their sales or office staffs to fill during the next few months. If you want to qualify for some of these vacancies, tell your story briefly in a Condensed Advertisement, and try it out in Hardware and Metal. A twenty-five word advertisement may land you a permanent position with splendid prospects.

FOR SALE

TINNER'S TOOLS FOR SALE CHEAP. Lock Box 503, Hanover.

FOR RENT — TINSHOP AND TOOLS — good opening for good mechanic. Apply Box 51, Orangeville, Ont.

A 640 ACCOUNT McCASKEY REGISTER —practically new; will sell cheap for cash; reason for selling, doing a cash business; can recommend register. R. A. Wells, Dresden, Ont.

PLUMBING AND TINSMITHING, EASTERN Ontario town 1,500, water works, etc. No opposition. Small stock. Good price for a quick sale. Apply Box 436 Hardware and Metal.

HARDWARE, TINWARE, GRANITEWARE, stove business for sale. Having a large sheet metal and furnace trade. Stock including tools and fixtures $3,500. Annual turnover around $18,000. No opposition. Town in Saskatchewan of 1,700 population. Centre of mixed farming district. Rental $50.00. Stock well bought. Cash deal only. Box 132 Kamsack.

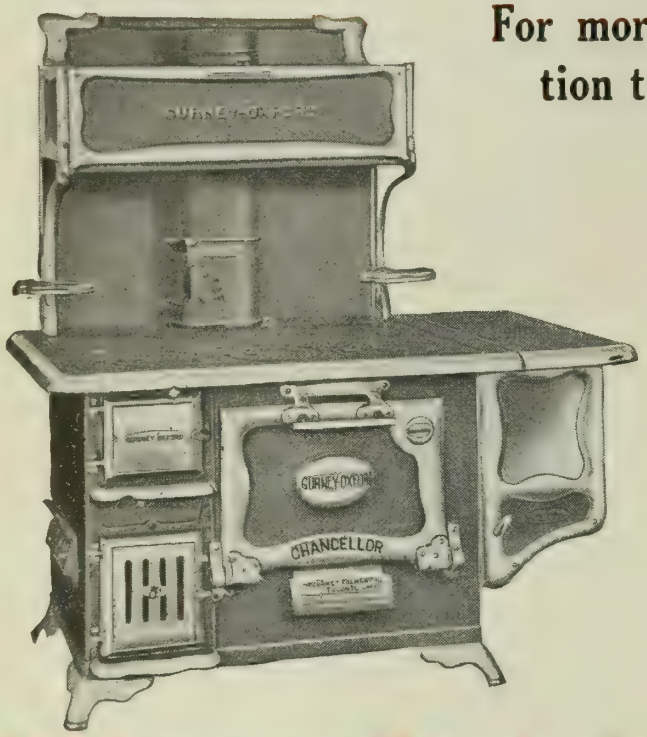
The Prestige of the Gurney-Oxford Line is a Real Trade Magnet



For more than 20 years before Confederation the name Gurney meant enduring quality in the stove world

Many of you dealers (and thousands of your "best" customers) had the meals of your babyhood cooked on Gurney-Oxford stoves.

And so had your fathers before you.

And not only does the Gurney-Oxford name mean service and quality to the public, but Gurney Sales-methods and service to our dealers have always blazed the trail to bigger, broader, more profitable merchandizing methods.

1916 was a Wonderful Gurney-Oxford Year

1917 will beat it

Last year we took the revolutionary step of standardizing and advertising the retail selling prices of our stoves.

Some dealers were skeptical as to the results—for a while, a very little while only.

Where are the skeptics to-day? We don't know. Where are the eager, enthusiastic, business-getting, satisfied Gurney-Oxford dealers to-day? EVERYWHERE.

There have been more Gurney-Oxfords sold in the last twelve months, due to our Special Selling Plan than our dealers dreamed possible.

The S-W Trade Mark is a Sales Producer

Throughout the length and breadth of Canada practically every person knows the high quality products that have made the S-W Trade-Mark famous the whole world over.

Each year there is an ever increasing number of paint users who insist only on S-W Products, because experience has given them a comfortable confidence that a definite and satisfactory result may be expected in their use.

This preference is a remarkable asset to merchants whose stores are marked by the "S-W Full Line Agency" sign, for it gives a quality character to everything he sells, which helps to increase sales.

Let us tell how the S-W Trade Mark can produce sales for you.

Maintaining Accuracy on Inside Measurements

When grinding inside diameters, the progress of the work can be checked up properly only if fine measuring instruments of great accuracy are used.

To insure the necessary degree of accuracy on internal grinding, practical machinists use the Starrett Inside Micrometer. This serviceable tool assures accuracy from 2 to 32 inches, depending upon the various lengths of rods used. Standard gages or rings are furnished to slip under the collars to extend the rods.

Contact surfaces are hardened, and provisions made to adjust for wear. The auxiliary handle is very handy in taking measurements in deep holes and other places where this micrometer could not otherwise be used. It accompanies sets only when ordered.

Study the Starrett catalog No. 21MA and become familiar with the uses for this micrometer and other tools which are not familiar to you. Complete knowledge of the Starret line of 2100 styles and sizes of fine tools will help you in making sales. Write for copy to-day.

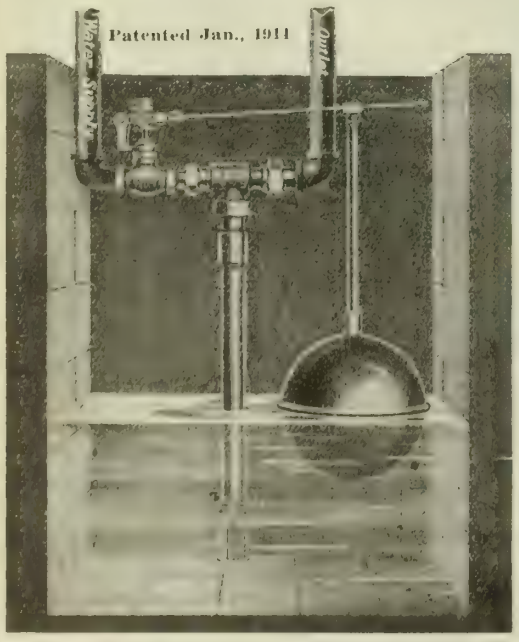
MORRISON Automatic Cellar Drainer



A simple, durable, automatic device for draining cellars, wheel pits, furnace pits, cesspools, foundations, and for any purpose where it is necessary to remove water economically from one level to another by water pressure.

The operation of the machine is extremely simple, being actuated by the raising or lowering of float as the water level changes in the pit. It operates purely by water. With our patented improvement it works under a far greater range and gives much larger capacities than any other device on the market, so far as we know, operating as low as 10 lbs. water pressure.

The operating limits of other types of cellar drainers range from 15 to 18 feet lift. The Morrison machine lifts as high as 30 feet at 60 lbs. pressure.

All working parts above water. Nothing to get out of order.

Quality

THE leader in every industry, to maintain his lead, must safeguard the quality of his products.—Rigid inspection and careful supervision are important factors.—To products of iron and steel this principle applies with tremendous force.—It means safety, security and stability.—We safeguard the quality of our products, believing quality will be recognized long after the price is forgotten.

Service

OUR customers must be served. One of the dominating factors in any successful business is Service.—We succeed only through the good will and good wish of the people we serve.—This thought permeates our entire Organization, from the President down.—Our employees feel the sense of responsibility this principle implies; and each one directs his efforts to maintain the high standard of service we aim to render.

Building a Home

This is the title of a book, designed to inform all those about to build a new home, or make over an old one, concerning the problems which arise inevitably, such as

choosing the site
the owner's own ideas
selecting the architect
choosing a builder
the construction of the home
and so on.

The book has been prepared by H. W. Desmond, editor of the *Architectural Record,* and H. W. Frohne, associate editor, and so is the work of men of broad experience and fine judgment.

This volume is very handsomely put up, and is worth many times its price to every prospective builder. Sent post paid on receipt of price, $1.50, with 15c extra for postage.

TOOLS ATTRACT CUSTOMERS

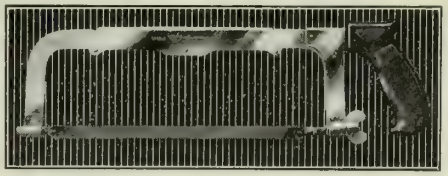
Tools attract carpenters, machinists, metal workers, garage men, contractors and other big hardware users.

Especially Millers Falls Tools with their fifty years' leadership and quality reputation.

Once in your store, these customers buy large quantities of builder's hardware, general hardware and supplies of every kind. Make your tool department the best in your locality and your whole store will profit.

Our book "How to Sell Tools," our selling helps and our monthly paper the "Star" help you make your tool department a big factor in your business, help you turn your tool stock oftener and make tools an entering wedge to other profitable trade.

Here's one tool among the hundreds that prove Millers Falls leadership.



The "pistol grip" and the hang of the saw give you the greatest power with the least effort. Handle fits largest hand. Straining nut under the handle allows maximum stroke. Extra strong and rigid for heavy work.

Send for the Millers Falls Catalog and for our Selling Help proposition to all dealers. It will show you how to put a bigger profit in tools

JENKINS BROS.' "Type K" BRASS GATE VALVES
MADE IN CANADA

Only the WEAR and TEAR of HARD, CONTINUOUS SERVICE is the TRUE TEST of a VALVE.

EFFICIENCY, under the most exacting conditions, has PLACED and KEPT TYPE "K" GATE VALVES in thousands of up-to-the-minute POWER PLANTS.

Their design is graceful, the metal is evenly distributed so as to insure rigidity and strength, preventing distortion due to strain or shock, and are of the DOUBLE WEDGE type.

Unlike Valves with a solid wedge, the Discs in the TYPE "K" VALVE will not jam in the Valve body, for the first movement of the Spindle loosens the Discs and the guides in the body remove them from the seat-faces.

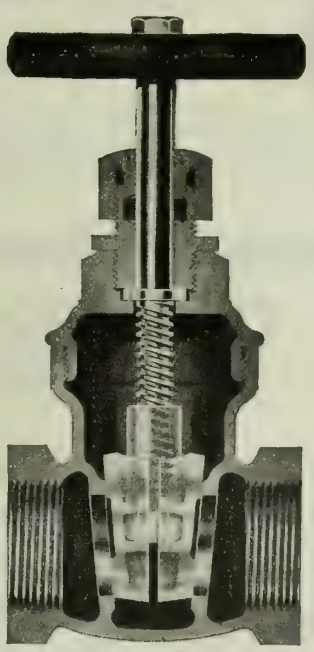

Fig. 300. Type "K" Brass Gate Valve. Screwed. (Sectional View)

TYPE "K" GATE VALVES are a "TRIED" VALVE.

In SERVICE they have PROVEN themselves to be WITHOUT an EQUAL.

They are not sold for trial or testing purposes, but to stand hard, continuous work.

GUARANTEED against defects in MATERIAL or WORKMANSHIP and in other respects carrying the usual JENKINS BROS.' GUARANTEE OF SERVICE and SATISFACTION.

Registered and approved for use in the Provinces by the Department of Public Works.

Seafoam Electric Washer and Wringer

(2 Styles)

No Worry—Little Work, in the Home Laundry with this **LABOR SAVER.**

Style "B" made without electric motor for use with Gasoline, Steam engine or Windmill.

Great for the Farm.

Style "A"

Made only by

Cummer-Dowswell, Limited
Hamilton, Ontario

The cutting qualities of the "Famous Five" files may be compared to those of a sharp razor. They work with minimum effort and give maximum results.

In brief, they are efficient. Their qualities have become standardized; and the "Famous Five" file standard is recognized by mechanics, shop superintendents and purchasing agents everywhere.

That's why it pays dealers to handle them.

Specify them when ordering from your jobber.

They are:

KEARNEY & FOOT

Never Missed Anything So Much

A few months ago a hardware firm in the north-western section of Toronto discontinued their subscription to HARDWARE AND METAL.

Last week, they again placed their order and they were quite frank in expressing regret that they had ever thought of stopping their subscription.

"We never missed anything so much in our business," they said, "as we did the weekly visits of HARDWARE AND METAL. We did not realize how completely we depended upon our trade paper, until it stopped coming."

What do you suppose would be the condition in the Canadian hardware trade, if no such publication as HARDWARE AND METAL existed?

Think that over for a few minutes, and then ask yourself if you are getting all the value out of HARDWARE AND METAL that its accurate market reports, well-written special articles and carefully planned advertising pages should ensure.

Are You Selling Carborundum Sharpening Stones to ALL of Your Carpenter Customers?

THERE are several of the Carborundum Sharpening Stones that should be in every carpenters' tool kit—the Round Combination Stone, the Gouge Stones and the Handy Slip Stones. Carpenters everywhere know of the quick, clean cutting qualities of Carborundum—be sure that you carry a good stock.

Might we suggest a window display of these stones for the carpenter? We have some snappy window display material packed and ready to send you.

Write for Carborundum Display Circular 344

The Carborundum Company
Niagara Falls, N. Y.

No matter what kind of garage your customers build, or what the architectural detail, the doors can be hung and equipped perfectly with

STANLEY GARAGE HARDWARE S.W. S.W.

The design of the doors in the above garage prevent the use of strap hinges. So each door was hung on three ball-bearing Stanley Garage Butts, No. 252, which swing heavy doors easily and without sagging.

The doors are also provided with Stanley Garage Latches 1264, Cremone Bolts 1052, and Door Holders 1774. The latter can be applied with equal success to either curved or straight-topped doors.

Stanley Garage Hardware for other types of garages is shown in the Stanley Garage Hardware Catalog, R-33, which will be sent you on request.

How The Stanley Works helps you to increase your sales is told in the illustrated booklet, "Selling More Stanley Garage Hardware." If you have not received your copy, send for it to-day.

Should the Manufacturers Make Prices?

Opinions on a Live Subject—Knowles Bill Being Opposed in Many Quarters—How it Affects the Retailer—Opinions Wanted from Readers.

Manufacturers, wholesalers and retailers in all parts of Canada, are greatly interested in the Knowles Bill to prohibit the fixing and enforcement of re-sale prices. The bill is to be presented at the next meeting of the Dominion House, presumably in April or May. In last week's issue of HARDWARE AND METAL appeared a copy of the "Knowles" bill, and an article describing the efforts being put forth by some interests to prevent the passage of the bill. The accompanying article on the subject will undoubtedly interest the entire trade. HARDWARE AND METAL hopes that every subscriber will read the article, ponder over it—price maintenance is a big subject—and then send in his views to HARDWARE AND METAL. Letters will be welcomed from all branches of the trade.

The great majority of men in Canada are not able to talk intelligently on the subject of price maintenance—for the good and simple reason that this is a semi-technical subject, and one that has not commonly or acutely come up for study. Among advertising men, especially advertising managers of firms making a standardized, identified product, marketed with the aid of advertising; and among manufacturers of a trade-marked product of high quality, the subject of fixed re-sale prices has for a long time been one of prime concern. But for the general run of men, price maintenance as a name and proposition is without significance.

Because of all this, HARDWARE AND METAL proposes to provide here and now some information and opinion on the matter of price maintenance of the manufacturer's claimed right to fix and enforce the price at which his product shall be retailed.

Some Illustrative Examples

The subject of price maintenance will take on greater clarity for many minds if we make its applications and relations specific. Examples of fixed re-sale prices —fixed, that is, by the manufacturer— are:—

Arrow collars, two for 30 cents.
Columbia Grafonolas, $15 to $350.
Waterman fountain pens, $2.50.
Belding's silk fabrics, $1.25 to $2.50.
Jiffy-Jell, two packages for 25c.
Palmolive specialties, 25c and 50c.
Overland motor cars, $665.
Pears' Soap, 15c.
And so on, and so on.

The prices indicated in the above examples are advertised prices — prices stated in the makers' advertisements. But it does not follow, in every instance, that these fixed prices are enforced prices.

A familiar example of a fixed and enforced price is the Waterman Fountain Pen, $2.50. This pen is sold to dealers only on specific agreement that it shall be retailed at the price or prices fixed by the makers. Similarly many other advertised lines are sold to dealers with an agreement by which the dealer contracts to sell at the prices fixed by manufacturers. In many other cases, the price fixed and advertised by the manufacturer is cut by the dealer—not by all dealers, but by some who hope by this price-cutting to attract and divert trade.

The price fixed and advertised by the maker, when not enforced, is intended to assist the retailer to sell the price-fixed article with greater ease, and to obtain a full profit. It is intended to protect the consumer against an exorbitant price—this by making him familiar with a right price. The advertised fixed price is also designed to facilitate the sale of the article universally—by making the price uniform in all parts of the country.

Many advertised trade-marked or identified commodities have no prices fixed by the maker; their re-sale price is left entirely to the dealer. For example, the resale prices of Old Dutch Cleanser, Sunkist Oranges, Yale Locks, and Grape Nuts are not indicated in the public advertising; and the inference is that the dealer may set his own price, being governed always by the commonly prevailing price and by local competition.

In some cases, from the nature of the goods, the retailers of advertised identified goods are in reality the special agents of manufacturers. Thus pianos, phonographs, typewriters, adding machines, motor cars, agricultural implements, are commonly sold through designated dealers or agents, in which case retail price control is comparatively simple, for the relation between agent and maker is a direct one. But in the case of those commodities sold commonly through jobbers—trade-marked grocery sepcialties, hardware specialties, drug specialties, and so on—it is obviously much more difficult to enforce or control re-sale prices.

The Question of Public Interest

The query will have arisen in many minds—Is it in the interests of consumers to have re-sale prices fixed and enforced?

The natural quick conclusion is that it is a good thing for the consumer to be able to buy what he wants at the lowest possible price—at prices fixed by competition. Also, many will be inclined to say at the beginning of their thinking on this subject, that for a maker to fix and enforce the re-sale price of his product is a "trust" or "combine" procedure, that it is taking away from the liberty of the dealer, that it is a sort of mug's game by which the maker can set any old price on his product and get away with it.

But one runs up very early in his honest thinking against the price-cutting practice with its long train of evil

consequences; and one is compelled in fairness to ask the question: Whether it is better, in the public interest, and in the interest of the consumer, for price-cutting to flourish; or for there to be universal uniformity of price on standard, identified goods? Or to put the question in concrete terms: Whether it is better, in the public interests, and in the interests of the consumer, to have Kodaks sold at maker-fixed or at dealer-made prices? or to have Hoosier Kitchen Cabinets sold at maker-fixed or at dealer-made prices? or to have Ford Motor Cars sold at maker-fixed prices or at dealer-made prices? and so on. When one puts the question in specific terms to the intelligent consumer, the probability is that he will reply—"I prefer a maker-fixed and enforced price to dealer-made prices." And in saying this the consumer says in effect: "I have more faith in the justice and fairness of the price fixed by the maker than in the price any dealer would charge me if the retail price were left entirely to him."

Makers' Versus Dealers' Price

Right here one begins to get at the kernel of the nut; and the whole question of price maintenance begins to take on an added luminosity.

Dealer-made prices are decidedly less trustworthy, taking them by and large, than are maker-fixed prices. In the case of a standardized, identified product, it is difficult for the dealer to get an excessive profit — difficult because of the public's knowledge of the retail value of the advertised, standardized, identified product. Such products, as a rule, have a fairly level maximum retail price. Any variation from this commonly known, recognized, and accepted price, is downward rather than upward. And dealers after big profits prefer, as a rule, to sell unadvertised, unstandardized, unidentified goods — merchandize which the public cannot accurately value or make price comparisons on. On such goods dealers rely on making a generous, if not an excessive, profit.

Just here it may be well to define what is meant by "standardized, identified," as applied to merchandise. By "standardized" is meant goods that have a known and maintained standard of quality. By "identified" is meant goods branded or trade-marked and maker-acknowledged. The two terms taken together usually imply extensive advertising, and accepted responsibility for the high quality and all-round satisfactoriness of the goods.

The question arises—Is it better for the community at large, and for individuals and families in particular, to be supplied with standardized, identified goods or with goods of no established or declared quality, made by no revealed maker, and for which no responsibility is accepted or redress possible, should the goods prove unsatisfactory? The question carries its own answer.

Where Price-cutting Occurs

Price-cutting, from the nature of things, takes place commonly on standardized, identified goods. There is little significance or conviction in an advertisement which reads:—

Moirette Petticoats, regular value $10; special price, Thursday, $5.

Every woman of common sense knows that both of these prices are arbitrary—dealer-made. The very gulf between the "regular" price and the special price suggests original and tremendous price-inflation.

But should a dealer advertise:

Quaker Puffed Wheat, regular 15c., special, 10c.,

then the consumer knows that a genuine reduction or bargain is offered.

Price-cutting as it Affects the Retailer

Let us look at price-cutting from the point of view of the retailer of an advertised, standardized, identified commodity—say, Ingersoll Dollar Watch.

This watch is admittedly excellent value and is in great demand. Suppose that some big store in a populous community cuts the price to 79 cents, and advertises this price extensively. The instant local effect will be that smaller dealers—

Will have to meet the cut price;

Or struggle to maintain the regular price;

Or quit selling the Ingersoll watch.

If they meet the cut price they will be selling at a clear loss. If they struggle to maintain the regular price, this in the face of the known fact that the watch can be obtained elsewhere for 79 cents, they run the risk of losing a customer permanently, and they are under the necessity of putting energy and time into the sales process, to overcome the buyer's resistance.

If they cease handling the Ingersoll Watch, their customers who ask for this watch are disappointed, and perhaps offended, affirming that the dealer is a "back number." In any case, the small dealer suffers. There are two points to be noted in connection with the above illustration: one is that it takes a minimum of time and energy on the part of the dealer or his staff to sell a widely-advertised, standardized, identified article whose price is maintained universally, for it is already fully sold in a very real sense to the customer; the other is that it is of advantage to the public to be able to get widely-advertised and desired goods everywhere — without the effort of search.

Also, there is an economic question involved in this illustration: it is in the public interest that the distribution of the merchandise of general consumption shall be widespread and in many hands rather than centralized in a few big stores. Also, it is far better for community growth and prosperity that there shall be many retailers of the commodities of common consumption rather than few retailers. What is wanted is not so much fewer retailers, but more efficient retailers.

Price-cutting Hurts the Manufacturer

In the Ingersoll Watch illustration, as above, is involved the manufacturer's interest. Is it a good thing for a manufacturer's product to be sold only by a few big dealers? or is it better from his point of view to have a multitude of small dealers distributing his merchandise? Perhaps the answer to this question is to be given by each individual manufacturer concerned. Some manufacturers openly declared that they pre-

SUGGESTED PERSONNEL OF THE INLAND TRADE COMMISSION.

The whosalers and retailers and manufacturers waited upon Sir George Foster some two weeks ago to urge the formation of an "Inland Trade Commission" that should be composed of three members in whom the public would have thorough confidence, and whom it was known would be capable of investigating commercial subjects. It was known that at the time certain names were proposed as men whom the committee were assured would ably fill the positions on this commission. The different members of the committee were, at that time, averse to announcing the names suggested, but it is now asserted that there were four names suggested, though only three members were to compose the proposed committee. They were:

SIR GLENHOLME FALCONBRIDGE,

Chief Justice of the King's Bench. Born in Drummondville, Ont., 1846. Graduated at the University of Toronto, and was called to the Bar in 1871. Created a K.C., in 1885, appointed Judge of the Queen's Bench in 1887; Chief Justice of the same court in 1890. He was Knighted in 1908.

HON. LYMAN POORE DUFF,

Judge of the Supreme Court of Canada. Born at Meaford, Ont., 1865. Graduated from Toronto University and called to the Bar of Ontario in 1893. Aupointed K.C. 1901. Puisne Judge of the Supreme Court 1904-06; in this latter year he was appointed to his present position. His home is in Ottawa, Ont.

HON. JAMES THOMPSON GARROW,

Puisne Judge of the Supreme Court of Ontario. Born at Chippewa, Ont., 1843. Called to the Ontario Bar 1869, created K.C. 1885. Minister without portfolio in the Ross Government, 1899-02. He received his present appointment in 1902. His home is in Toronto.

LIONEL H. CLARKE,

President of the Canadian Malting Co., and member of the Toronto Harbor Board.

The suggested membership of this committee has not been given out to the general public, but in the few instances where it was known there is some criticism of the suggestion on the ground that, in only one instance have the proposed members had any actual business experience, and that the advancing age of some of those suggested would militate against their usefulness in the arduous duties that would, of necessity, devolve upon such a commission.

fer to have the big distributors—the department stores and big local retailers—as customers rather than multitudes of little shops. They say that their selling expense is greatly reduced when they sell to a few big distributors. This is admitted because it is obvious. But, generally speaking, the makers who prefer to sell to a few big distributors are making unidentified merchandise, and, therefore, unadvertised, merchandise—that is, nationally advertised merchandise. As for the makers of nationally advertised merchandise, they, as a rule, seek and desire the greatest possible number of distributors, because thus are maximum sales achieved.

Coming back to the Ingersoll Watch case; if the distribution were confined to a few big stores, the total sales would of a certainty be less than 10,000 dealers in Canada were selling this watch. As a matter of fact, the Ingersoll Dollar Watch is sold by 100,000 dealers on this continent, and it is an inevitable conclusion to draw that it is this very fact of widespread distribution, joined to extensive and long-maintained advertising, that has built up the vast business of the makers of this watch.

Go one more step in the consideration of this case: suppose that the distribution of the Ingersoll Watch fell into the hands of a few big dealers—the result of price-cutting, there would probably be an eventual inclination to subordinate this line, and perhaps an elimination of it altogether; this for two plain reasons: When they had secured a practical monopoly of sale, the advertising and trade-attracting value of the line offered at a cut price would cease, for there would be no trade-diversion; also, the very fact that the watch was being sold at a cut, and presumably non-profit-yielding price, the desire to sell it would decline to the disappearing point; at which time the Ingersoll Watch makers would be without a business.

The economic fact is that cutting the price of a standardized, identified and nationally advertised commodity, while it may temporarily speed up local and individual demand, tends to reduce distribution; and this in time leads to reduced consumption; and in turn leads to the practical ruin of a business, and to the wiping out of the value of the trade-mark built up by years of sedulous effort and extensive advertising.

One asks, therefore: Is price-cutting, in its consequences, good for retailers, manufacturers and consumers? For let it be remembered that consumers are related directly or indirectly to manufacturing prosperity.

Competition of the unfair kind — the competition developed and fostered by price-cutting—is unhealthy, baneful and ruinous.

Price-cutting and the Consumer

In the last analysis it is the consumer's interest that must be considered in arriving at an answer to the question: Is the principle of price maintenance—the right of the manufacturer to fix and enforce the re-sale price of his goods—good for the consumer, and desired by the consumer?

Some contend that price maintenance raises the cost of living; that it is an effort to obtain higher than fair or reasonable pirces from the consumer; that it is an expedient to enrich the manufacturer. But those who argue thus have not, as a rule, given the whole broad matter any serious, deep, wide and prolonged consideration. Their judgments and conclusions, as a rule, are of the "snap" variety, superficial and feathery. These good people, who may be very honest, see in price maintenance a foe to open competition, and a studied, calculated effort to enhance the final price—the price to be paid by the consumer.

What Happens When Re-sale Prices Are Too High

It is to be admitted, frankly, that in regard to certain specific articles or products of the identified, standardizel kind, the consumer price is excessively high—altogether out of relation to the cost of production. But the articles of this nature are, as a general thing, patented, and so are monopolies.

A well-known product, selling retail at $5, is a much-quoted example of a standardized, identified product in which the re-sale price is many times its production price. Yet in spite of this fact and knowledge, the article continues to be the most largely consumed of its class. There is no compulsion of the public to make them buy this particular article; it is bought out of free-will, and this in face of the fact that other articles of the same type can be purchased at from 25c up. Incidentally, it may be stated, as a reply to the argument that price maintenance reduces competition, that since this product was put on the market, at least 40 others of the same general type have appeared; and they have appeared because of the very high price of the original product; which means that any maker who puts a high re-sale price on his product, away above the costs of production and selling; and who, by advertising, creates a great demand for his product and type of product, merely invites competition instead of suppressing it.

Here it may be remarked that the majority of price-fixed, price-enforced, standardized, identified and advertised goods are more or less luxuries; that is they can be done without or replaced with something very much cheaper. So that price-maintenance, even if it does mean an unreasonably high consumer's price, does not necessarily work any injury to the individual consumer; he or she may always refuse to buy, or may choose some cheaper substitute or equi-

THE BRITISH IMPORT EMBARGO

There has been so much discussion as to what articles actually did appear on the embargo list that HARDWARE AND METAL is publishing herewith the list as announced in the *Official Gazette*:

Agricultural Machinery.
Boots and Shoes of leather.
Raw Fruits, except Lemons and Oranges.
Hides.
Leather Gloves.
Glass manufactures.
Linen and Yarns and manufactures thereof.
Canned Lobsters and Salmon.
Manufactured Silk and Skins.
Furs.
Food articles containing Sugar, except Condensed Milk.
Tomatoes.
Typewriters.
Wine of all kinds.
Wood and Timber.
Aerated, Mineral and Table Waters.
Antimonyware.
Apparel not waterproofed.
Works of Art.
Baskets and Bamboo Basketware.
Books, other printed matter, including Posters and Daily, Weekly and other Periodicals exceeding sixteen pages in length.
Materials for the manufacture of Leather Boots and Shoes.
Brandy.
Clocks and parts thereof.
Cloisonne Wares.
Raw Cocoa and preparations thereof.
Coffee.
Cotton Hosiery, Cotton Lace and articles thereof.
Curios.
Diatomine and Infusorial Earth.
Embroidery, Needle Work and Fancy Goods known as Paris Goods.
Fire Extinguishers.
Ornamental Feathers and Down.
Flowers, artificial and fresh.
Hats and Bonnets.
Incandescent Gas Mantles.
Raw Jute Mats and Matting.
Mops.
Painters' Colors and Pigments.
Perfumery.
Photographic Apparatus.
Pictures, Prints, Engravings, Photographs and Maps.
Plated and Gilt Wares.
Live Quails.
Quebracho, Hemlock, Oak and Mangrove Extracts.
Rum.
Soya Beans.
Stereoscopes.
Straw Envelopes for Bottles and Straw plaiting.
Tea.

Both wet and dry hides and dressed and undressed leather are included. Silk yarns are exempted.

The prohibitions do not apply to goods imported under licenses given by the Board of Trade.

The power given to the Board of Trade to issue special licenses, however, may be freely exercised in behalf of the Allies of Great Britain, as ships taking munitions and other supplies to France and Italy have ample tonnage to bring return cargoes.

valent. If consumers elect of their own free-will to buy the high-priced trade-marked and advertised article, when they are free and able to buy a cheaper, even if less satisfactory and acceptable, substitute article, is the blame for the seeming extravagance to be charged up to the manufacturer, or to the retailer? The higher cost of living is not to be charged to the makers of advertised, standardized, identified articles of food, dress, convenience, indulgence or luxury; but to the freely-exercised will of the people who choose to buy the highest-priced goods, and to the inexorable laws of supply and demand. Yet there are those who argue that if the right to fix and enforce re-sale prices be taken away from manufacturers, be refused them, or taken from them, the cost of living will fall. It is rather muddy argument and not at all convincing. Probably what the foes of the price-maintenance principle have in mind is combines of makers or producers to corner and control the price of commodities, and they confuse this with the admitted freedom of a maker of an article of which he has no monopoly to sell to the dealer at any price he likes.

The Maker's Right to Fix the Dealer-Price

Please note this carefully: it is granted by the foes of price maintenance that the manufacturer may fix the price to the dealer at what he wills, but they deny him the equal privilege or right to take a further step and fix the re-sale price—the price the consumer must pay; they leave this re-sale price to the dealer to fix, knowing full well that if the dealer has liberty to fix the price to consumers, he will exact more from them, if competition permits him to do so, than will be required of them if the maker fixes the re-sale price!

As proof of this point, it suffices to say that retailers complain that the makers of advertised, standardized, identified, price-fixed goods rarely or never allow them a sufficient profit; which means that they fix the re-sale price **too low!** So one asks again—Is it a bad thing for consumers to allow the manufacturer to fix and enforce the re-sale price?

The Knowles Bill Ill-considered

The bill proposed by Mr. Knowles would appear to be an ill-considered one. To make it achieve the ends it aims at, he ought to make provision in it for a limitation of the manufacturer in fixing the price to the dealer this first of all. Then having fixed this, the fixed re-sale price to the consumer—can safely be left to the manufacturer and dealer to settle.

If, however, the law of the land shall undertake to meddle with a manufacturer's production and selling costs, the new state of things will be worse than that which now obtains. Costs of raw materials, labor, manufacturing, overhead, distribution, merchandising and advertising, will all have to come under regulation; and what manufacturer will stand for such a supervision and interference with his business?

Department Store Influences

The pronounced foes of price maintenance are not the retailers or the consumers—this is said advisedly, but the department stores. They delight to sell nationally advertised goods of standard quality with a knife in their hands. To cut the price of nationally advertised and standardized goods, either as a trade magnet or as an expedient to kill off altogether the competition of nationally advertised goods on which the consumer price is known, is their pleasure and bait.

Department stores are notoriously unfriendly to nationally advertised and branded goods, and, as a rule, handle them to the smallest possible extent. They prefer to sell their own private brands on which larger profits can be secured. The fact is that the big department stores are themselves becoming manufacturers on a very large scale—and this quite legitimately. Some large Canadian department stores, for example, in Canada own or control many factories; and to the extent that they make and sell their private brands, to this extent do they compete with and defeat the efforts of those other manufacturers who make standardized, identified goods and who employ newspaper and magazine and trade press publicity to create and maintain demand for their products.

The Need of Informed Opinion

Enough has been said now to enable business men to see that price maintenance is a subject of some magnitude and some importance; and that their direct interests are involved in the bill proposed by Mr. Knowles. It is hoped that the press of Canada may become aroused, and may assist in arousing others, to investigate thoroughly the big question of price maintenance. Also it is hoped that when the Knowles bill does come up for consideration it will be halted in its progress to permit of its complete examination by committee, and before which committee can and will appear all those with considered views to express, either pro or con.

HARDWARE AND METAL asks no man who reads this challenge to attention to agree or disagree too quickly with the views and propositions herein presented. Each reader, and, in particular, everyone who has power and purpose to shape opinion, should ponder the matters herein set forth and stressed, in order to get down to rock foundation. Then, having well-set views and knowledge, one will be able to inform and persuade others—with gain to himself and them.

Amendments to Compensation Act

ON Wednesday of this week the Hon. I. B. Lucas, Attorney-General for Ontario, placed before the House some proposed amendments to the Ontario Workmen's Compensation Act.

The chief innovation proposed in this Act was a provision for first aid in case of accident to cover a period of thirty days from the date of the accident. No specific amount of aid is suggested to cover the care of the injured working man for this time except that the provision calls for the fullest care. There is to be no limit to the amount of medical, surgical or hospital attendance during this time. The charges for this service are to be paid out of the accident fund. There is also a provision protecting the working man from any injustice on the part of the employer. It is provided that the working man shall not be required to contribute for medical attendance, either directly or indirectly, and a penalty is provided for any infringement of this clause.

Provision for Companies Maintaining First Aid Hospitals

Provision is made whereby this first-aid clause may be left in abeyance in the case of such industries as have made provisions covering these matters at least as inclusive as those proposed. This is left to the decision of the Compensation Board, who shall consider the opinions and wishes of both employer and employee.

Another new clause provided that the board should not follow the precedent laid down in English courts, which seemed in some cases to work out unjustly. It was, therefore, decided that these cases should be decided on the strict merits, on equity and justice, rather than on any set precedent.

Some Changes in Operation of Rate of Compensation

Some amendments were also made to section 31, which sets the scale of compensation. In the case of the death of a working man, the present clause calls for a pension for the widow and a monthly allowance of $5 for every child till they attain the age of 16 years. This clause has been enlarged to cover some contingencies that might arise. Should the widow die, the amount of allowance to the children would be doubled. In the case of an adopted child of the working man, it was decided that this child should receive the same treatment as the actual children of the deceased. Also in the case of a child who was an invalid or unable for any reason to care for itself.

How Business Men Made Fortunes

Two Men Who Have Made Their Aggressive Efforts to Reach New Customers Pay Notably—One is a Banker Who Started as a Newspaper Reporter, and the Other a Merchant Who Fought Failure For Seven Years Before He "Got Going"

Reproduced by courtesy of "System," the magazine of business.

FRANK VANDERLIP

WALL STREET thought James Stillman was crazy when he put Frank Vanderlip into a vice-presidency of the National City Bank. The young man had not had that kind of training which Wall Street then thought necessary for a bank officer. Wall Street is very conservative.

After he had sat at a desk in the old bank quarters for several days without a thing on earth to do, and without even a question being asked him, Vanderlip was somewhat inclined to agree with the opinion of Wall Street about the president. There seemed to be no room for him in any department; all the work was done and well done by the officers who were there ahead of him.

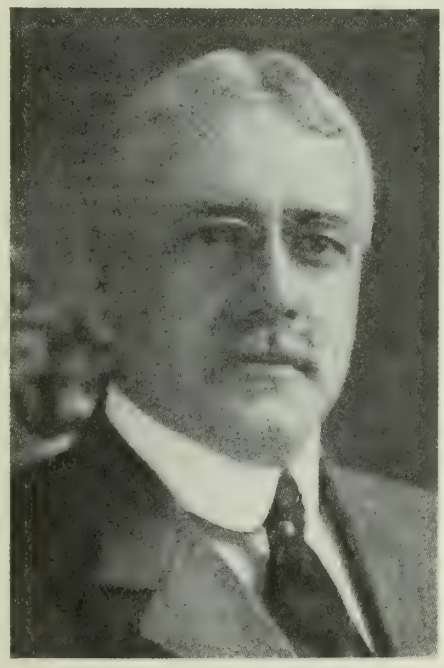
If you know anything of Mr. Vanderlip, you know that he cannot remain idle very long; the idea of drawing down a salary for no work did not impress him. He thought it might be a good idea to go after a little business—to sell banking.

But the National City Bank had never solicited new business—they airily told him that was not dignified banking. Many a man would have been crushed under such a load of solemn respectability and dutifully taken his place in the line. But Frank Vanderlip had not been long enough in banking to absorb its traditions. He held that banking was something more than money-lending—that it was a reciprocal business relation; he regarded the borrower as a customer and not as an alms seeker; the bank was a service and not an eleemosynary institution. He had the new idea of banking.

Before anyone quite knew what had happened, the new vice-president, who had no duties, had a big department of his own going. He was in the bond business, was getting new customers, and was making a lot of money for the bank in a line that they had never dreamed of.

When James Stillman left the presidency, Mr. Vanderlip was the live man of the bank and they elected him. Given a free hand, he built up an institution which is more than a bank. Following the principle that because a thing has always been done is no reason for saying that it is good, and because a thing has never been done is no reason for saying that it is bad, Mr. Vanderlip not only created a super-organization for the bank itself, but branched out in a dozen new directions, and now the bank is the parent for many subsidiary companies. The biggest of these is the American International Company, which aims to take the skill and the money of the United States to every part of the world. Mr. Vanderlip has an international viewpoint.

The Vanderlip rise has been phenomenal, but there has not been more than the usual amount of luck in it. The only luck that he ever had was in having his ability recognized in whatever job he happened to be. That is called luck only by those who do not bring ability to their jobs. And he has had his ability recognized because he always made ready, not for the job that he happened to be doing, but for some other job ahead. He brings knowledge to vision.



FRANK VANDERLIP,
President National City Bank, New York City.

An absolute insistence upon thorough knowledge and what amounts to a genius for promoting team work are the secrets of Mr. Vanderlip's achievements.

The Kind of Study That is Back of Vanderlip's Success

Back in 1885, when running a little newspaper in Aurora, Illinois, young Vanderlip met a professor and asked for some good reading. The professor recommended "Principles of Political Economy," by John Stuart Mill—not an easy book for the untrained mind. Vanderlip mastered that volume, and thus founded his knowledge of economics on which his banking is based; he followed with a long line of work on economics, money and banking, so that when he went up to Chicago, to take a reporter's place on a morning newspaper, he had a better economic grounding than most professors of the subject. It was this knowledge of the theory of banking that attracted Lyman J. Gage to him and caused him to give the young reporter a place in the Treasury Department.

When Mr. Vanderlip entered the National City Bank as a vice-president, he had absolutely no experience in practical banking.

"One man can't do everything—we have to pull together," is the idea with which Mr. Vanderlip goes at his work, and this is probably the reason that he manages to do so many things. When Lyman J. Gage was asked how the man put through so much, he said, "I don't know—Vanderlip is always doing things I never supposed he could do."

Three big changes have come into banking through Mr. Vanderlip—publicity, democracy, and vocational education. The old bank liked to remain a respectable mystery; Mr. Vanderlip wants all the publicity for his bank that he can obtain. He issues a magazine, sends out valuable bulletins on the state of the country's business, receives reporters at a stated time each day, and he and his vice-presidents preach their business doctrines at banquets and meetings far and wide. The National City Bank has as much information about business, country-wide and the world over, as the Department of Agriculture at Washington has of land and farming—and the information is all classified, filed and ready at instant hand. No one ever has to guess at things or to grope around in the Vanderlip system.

The democracy in banking means that little fellows receive just as much attention as big fellows; the bank's money is for those who can safely use it. Mr. Vanderlip believes in promoting business, and thus making new depositors not only in the United States, but all over the world; he has established branches in South America, Japan, China, the Philippines, India and Russia. If anyone has good business any-

where in the world, he is ready to receive it.

Preparing the Men Who Will Be Executives To-morrow

Mr. Vanderlip's complaint is that he can not get good men for the many places that must be filled—men trained to their jobs. And, therefore, he has established a banking school. Men may enter just before their junior year in college, and they receive instruction during the summer vacation. After graduation, they join the staff of the bank at a small salary, and are not only given three hours a day of practical instruction, but they are also moved around from department to department within the bank until they know the full details of management. Then they are ready to be sent out to any part of the world at a salary which steadily increases according to ability. There is nothing haphazard in the system; within a few years Mr. Vanderlip will have a large team of trained young men playing the American banking game in every part of the world.

It might well be imagined that Mr. Vanderlip is a busy man—he is, but he is not busy in a clerical way. He thinks that too many business men handicap themselves by attempting to do everything in person. His way is to qualify an assistant for the work that is in hand and go on to something bigger himself. His salary is said to be $100,000 a year—it might be twice that amount if he asked for the increase—and it is a simple matter of mathematics to determine just how much it would cost the bank to have him handle ordinary correspondence. Taking his time in the bank at a dollar a minute makes the personal attention to details sheer waste. But, his own time being so valuable, he is equally considerate of the time of other people, and he, therefore, has an intelligent information service by which an inquirer may be shifted at once to the right man in the right department and have his business properly attended to. That leaves the president free for the big affairs, and also gives the customer the prompt service to which Mr. Vanderlip thinks that he is entitled.

Most of his day is spent in talking, and a secretary makes notes of every conversation, so that the possibility of error is as far removed as it can be among human beings. And these talks are seldom long, but they are always thorough: a big, strong man of powerful personality and great charm, Mr. Vanderlip has a way of getting down to brass tacks within a very few seconds. The caller leaves with the impression that he has said all that he wanted to say, has heard all that he came to hear and has not been hurried, although the whole conversation has probably not taken ten minutes. Mr. Vanderlip has cut out the hopping from right foot to left foot that takes up so much of the time of men who say that they are always too busy for this or that. He never gives the impression of being busy—he is too well organized for that. SAMUEL CROWTHER.

FRANK M. LOW

This is merely to be a cursory glance through the scrap book of a man who built up a store with sales amounting to several hundred thousands of dollars from a beginning in a single cramped room about twenty-five by thirty feet. From the information which these clippings, booklets and similar material such as always accumulate in a scrap book will give us, and the explanations he might add if he sat beside us as we thumbed through it all, the chances are strongly in favor of our striking upon some of the methods with which he built his success in retailing.

First we will, of course, search out how he got his start. It will not take us long to find that he fought hard for seven long years, and then sold out with only $3,700 to show for these seven years. So his road was not an easy one—the description of how he managed to get over it to final success should be all the more interesting for that, as a matter of fact.

But we are running ahead of our story. A little rummaging through the clippings and the earlier records will show that his father was at one time in the clothing business, so Frank—Frank M. Low, of Portland, Maine—naturally enough persuaded Ira F. Clark, the foremost Portland merchant of his day, to make a place for him.

So Low got his first taste of retailing. He worked in the Clark store for several years, beginning with keeping the stock clean and steadily progressing.

But, like most of us, Low wanted to build something for himself. Of course, his particular ambition was to have a store—a clothing store—with "Frank M. Low" over it.

Low secured $3,000 from his father—he gave notes for every cent of it—and made this ambition of his a reality. This is the store that puts us ahead of our story—it struggled along for seven years, until Low finally sold it out. He covered all his obligations dollar by dollar, but had less than $4,000 to show for the years of work.

His real profit from this work was not to be measured by dollars, however. It was experience, and almost priceless experience, at that. Low quickly decided to put this experience to good use, and soon started a second store. It is this second store that he built into an unusual success, and it is the methods which he used in expanding it that we may find it worth while to study closely.

First of all, it is evident that Low has a knack for injecting personality into a business and for writing successful advertisements. Right from the start he began to use these knacks to good effect in pushing his new business ahead.

He spent so much advertising the "grand opening" of the new store that he actually found himself short of funds with which to fill the shelves in the little twenty-five by thirty sales room! His credit was limited in those days, so he struck upon the expedient of decorating the store generously with rented palms on the opening day and thereby overcoming the scarcity of stock.

"The stock consisted of palms and clothing about equally divided as to quantity," he says. "But those palms accomplished the desired result. The opening was a great success. Failure was crowded off the street and never given an opportunity to even glance within. And the first upward step toward success had been taken. So you can see that palms of the ordinary greenhouse variety were a successful factor in my case. At any rate, they afforded the setting that encouraged customers to spend enough to make my assistant and me so busy that we felt the business surely must attain a national scope. That first day turned the tide; business growth set in steadily."

From this point on Low's success in retailing continued. He held to his efforts to give his business a personality and to make his advertising distinctive—and progress was rapid.

Some of the advertisements we find among his clippings will serve very well to indicate the type of copy he found successful. Here is a characteristic one—set in a space two columns wide and about twelve inches deep, with the type matter in a narrow column not over an inch and a half wide, and ending in a big longhand "Low."

How Low Puts Himself Into His Advertisements

"Important. To-morrow is the last day of my business year. In appreciation of your liberal patronage, I shall conduct my business on this day solely for your benefit. Stocks all over the store will be priced on a wholesale basis, and broken lines will be priced with no regard for cost. The sale is for one day—Friday, the last day of my business year. The store opens at 8 a.m.: closes at 6 p.m. Avail yourself of this opportunity to stock up for many days to come at wholesale prices."

Another takes an entire page. The occasion for it was an outing to Montreal which he once gave his salesmen. The right half of this page advertisement is given over to half-tone cuts of the manager and the ten salesmen, set off by a decorative design. Each man's name, as

well as the department in which he worked, appears near his picture. The left half of the page carries this copy, reproduced in long hand:

"Shipped to Canada—Saturday, Jan. 30, closes my business year—it has been a most satisfactory showing: a gain of 20 per cent. over last year's record-breaker. Here are the boys who are more responsible for my success than any other factor. To-day they are my guests and we're seeing Montreal. To-morrow the store will open at 9 a.m. Be sure to read my ad. in the morning papers.—Frank M. Low."

An indication of the care with which Low worked out the "local color" of advertisements like this is furnished by the fact that he wrote the line referring to the sales force this way: "Here are the boys who are more responsible than for my success than any other factor," and then drew a line through the first "than."

Low also used some distinctive direct advertising. At one time he circulated a card six inches long by three and a half inches wide, which had been so perforated that a cord attached to it could be drawn through a series of perforations in a manner that would give a laundry record. An important share of Low's trade came from seafaring men, so he issued rather elaborate folders on marine clothing and uniforms for the United States Life Saving Service.

He also arranged to send the manager of his uniform department to all light-houses and life-saving stations within striking distance in a launch. He announced this man's coming to all who might be interested with a large post card carrying a half-tone cut of the launch and copy like this.

Some of the Advertisements That Have Been Most Effective

"Our Mr. L. B. Guptell, manager of our uniform department, will make his second visit to the lighthouse and life-saving trade, with a complete line of samples for these departments, this season as follows: Will leave Portland on July 20th in the above launch—the 'Ramona'—and run express to Bar Harbor; will visit a few lights between that port and Eastport up to August 1st, and will then work to the westward, visiting all lights and life-saving stations (weather permitting) along the Maine coast. Any attention you may show him will be appreciated by us."

As a New Year's greeting Low sent one year to his customers a sheet eleven inches wide and fifteen inches long. It was of a good grade of soft paper and clipped to the upper left-hand corner was Low's company's carefully engraved business card, with a neat monogram in red. The copy was as follows—headed by a large "Greetings" and a suitable decoration in red, preceded by an elaborate initial letter in red, and followed by "Frank M. Low" reproduced in long hand:

"We wish you a happy and prosperous New Year; and in appreciation of your good work in our behalf we're enclosing a lucky piece—good for 10 per cent. of your next purchase at our store amounting to five dollars or more. We've been thinking you have a friend whom you want to do a good turn. We're attaching one of our business cards in hopes you'll send him along. Sincerely, Frank M. Low."

Along with his advertising, Low, of course, developed some effective sales plans. One of them he called his "Three Day Anniversary Sale," and, since it marked the tenth anniversary of the establishment of his store, he returned the money on every tenth purchase and gave the goods free of charge. This idea has since been widely copied.

"The plan cost 14 per cent. of the sales," Low explains, "but it was good advertising. The store was jammed. And the sale, as we had hoped, gave buyers confidence in our word."

Not only did Low inject a definite personality into his business through his advertising and allied means, but he bound his employees so strongly to him that they reflected his store's personality to every customer.

He early adopted a policy of entertaining all his workers at the close of each business year and dividing a "dividend," or bonus, among them. Many of the clippings refer to these occasions. As the store grew, as much as $1,000 was distributed some years. Some times these entertainments took the form of banquets, at others local outings or trips to cities at considerable distances from Portland.

As an additional means of keeping his workers up to his standard, Low used bulletins typewritten on sheets of paper—about seven inches wide and twelve inches long—and signed "Low" with a blue pencil. Practically all of these bulletins are interesting, but there is space for only a few:

SALESMAN'S BULLETIN NO. 105.

An informal venison steak dinner to be tendered the salesmen—Cordes Restaurant, Wednesday, at 6.45. Remarks will be listened to from any salesman who cares to speak, and a pair of Regal shoes will be given to the man who makes the most valuable suggestion that is adopted for the good of the store.

Save your appetite for this event.

THE DAY AFTER.

When the writer invited criticism and suggestion over the venison last evening, he hardly expected such a perfect avalanche of good things.

I'm in a quandary as to who deserves the "Regals," but will make the award after the smoke clears away, say on or before November 1st.

SALESMEN'S BULLETIN NO. 136.

Here's an opportunity for you to win a pair of Regal shoes.

The salesman who keeps and conducts the best sales book from now until November 1st, will receive a pair of "Regals" free.

The points to be considered in awarding the prize are:

Accuracy	50
Having book in the office on or before 8.30 a.m.	10
Forgetting sales	20
Legibility	10
Money sent to office without sales slip	10

The two cashiers will record a black mark as any of these slip-ups occur, and then, at the end of the month, the general appearance of the books will be taken into consideration by two judges selected by Low.

SALESMEN'S BULLETIN NO. 120.

Lest we forget that our baby department carries the finest shoes in the world, and that every time we call a customer's attention to this fact we work for his interest as well as our own, I will present a pair of Regal shoes to the salesman who introduces the greatest number of customers to the baby department during the month of May—every sale made counting one score in his favor.

SALESMEN'S BULLETIN NO. 88.

Yes, I am sorry to say I've had complaints—not from the man who wanted to spend $20, but from the man who only wanted to spend ten cents. We can't afford to discriminate—the ten-cent customer of to-day is the $20 buyer of to-morrow if we throw him in "full measure" of attention with our "goods of quality." I'll furnish you more than enough of the latter to keep ahead of your stock of the former. I look for an improvement along these lines. I think Seiders a good man to watch—he jumps for an overall customer as quickly and cheerfully as he does for carriage trade. I've caught him doing it hundreds of times, and he delivers big chunks of civility every time. Yes!—Seiders gets a raise in the spring. I see things just as clearly as I do salesman No. 4 tipping the "boys" off that I had arrived this morning—to those who do right, that's hardly necessary.

SALESMEN'S BULLETIN NO. 30.

During the last six months, or maybe since further back than that, I've called upon the various heads of the different departments to advise me in selecting and buying goods. This is an arrangement whereby you gain a wider and more valuable experience and with all a great help, as well as a pleasure, to me.

Under these broader prevailing conditions it might be well for me to say at this time, lest in ignorance we err, that we as buyers must always remember our place and duty to the store and never in any way place ourselves, by accepting dinners, theatre tickets, or "presents," under obligation to traveling men. It is customary when a traveling man is desirous of making a "present" to a buyer to get permission from the firm by which the buyer is employed. Otherwise the traveling man is very probably dishonest in his intentions and you are accepting a bribe, thus placing yourself also in a false position.

Kindly bear this timely hint in mind in all your transactions with traveling men.

Since the space available is exhausted we shall have to close Low's scrap book here. If his methods have interested you at all, you will want the last line of this personality sketch to tell you just what they accomplished. They pushed his annual sales up into the hundreds of thousands before he disposed of his store at an attractive figure, increased the size of his store over 800 per cent., and expanded his business until its volume for one month far exceeded that secured during its first year.

E. L. IRON.

More Letters on the Association

The Need for Larger Membership Discussed by Secretary Macpherson — More "Boosting" and Less "Knocking" Demands Member—The Question of Mail Order Prices Discussed.

THE discussion on the future of the Ontario Retail Hardware and Stove Dealers' Association is growing in interest. A number of letters have been received during the week, notably one from Secretary Macpherson. These letters are reproduced herewith:

Mr. Macpherson takes up some important points, and his letter is well worth the consideration of all members.

The letter from Mr. Nash, of Wellington, raises a point with which HARDWARE AND METAL cannot agree. A frank discussion now on association matters, boosting where possible, knocking where necessary, will do more to make the association grow than anything. To accept the undoubted benefits that the association has conferred on members in the past as a reason for not discussing the possibility of building the Association up to a stage where greater benefits could be rendered would be to limit the future possibilities. HARDWARE AND METAL feels that no harm can be done by openly discussing Association matters with a view to stimulating the members to greater things; that, on the contrary, benefits are bound to result. Mr. Nash's loyalty to the Association is an object lesson. Why not get the Association on such a basis that an equal loyalty can be inculcated in every hardwareman in the province?

More Secrecy Needed

Editor HARDWARE AND METAL.

I have often read in your paper that retailers should attend the hardware convention and thresh out their trade problems. We all know that the advice is splendid, and untold benefits would result from such discussions. But, how I ask, can a member be expected to "open up" under conditions such as those prevailing at Hamilton? No attempt was made to keep representatives of manufacturers or wholesalers out of the meetings. At the last session of the retailers at least two manufacturers' representatives were present, sitting along with the retailers. And I know for a fact that a representative of one prominent manufacturer was present at every session. If we are going to hold meetings for the retailers, let us confine them to retail members of our Association.

OLD MEMBER.

Association Needs Boosting

Editor HARDWARE AND METAL,
Toronto.

Dear Sir,—In your issue of HARDWARE AND METAL two weeks ago you ask, What is wrong with the Hardware Association? My answer is that there are too many knockers instead of boosters of our Association. Although I could not get away to attend this year's convention, I thought it worth while to renew my membership, and I certainly got my money's worth when I received the new price lists sent in by our worthy secretary, Mr. Macpherson.

Let us all in future boost instead of knock, and I am sure the **non-members** in the hardware trade of Ontario will be seeking admission to this Association instead of hanging back.

Yours truly,
T. M. NASH.
Wellington, Ont.

From Past President Carter

Editor HARDWARE AND METAL,
Toronto, Ont.

Dear Sir:—

I was much interested in the communications appearing in last week's issue of HARDWARE AND METAL on page you have so kindly devoted to discussion of Association matters. In regard to friend Philips' article, I congratulate him on having the courage to back up his convictions by attaching his signature to same. At the same time I think it due to the officers and members of the Association, also to hardware trade in general, that he enlighten them, through your columns, as to where the officers of the Association were lacking in gumption in handling the paint case he mentions. As to party signing himself a "Former Member," would say had he used his boosting proclivities, instead of his knocking, at the inception of the Association, it might have developed in accordance with his ideas. However, the fact remains that, in spite of the knockers, the war and other drawbacks, the Association experienced a nice increase in membership last year, and Secretary Macpherson gave a service to its members that was worth many times the paltry $3 membership fee.

Yours very truly,
W. J. CARTER.
Picton, Ont.

Should Discuss Trade Problems

HARDWARE AND METAL,
Toronto, Canada.

Gentlemen:—

I think your suggestion for a discussion of the Hardware Association is a good one, and should be the means of getting the ball a-rolling to make our association a real factor in the trade. I am located in a town of about 6,000 population, and believe me I am up against some real problems. Our town and the surrounding country is flooded with mail order catalogues, and the Toronto mail order firms certainly go after business here. Along with a few of the other merchants in the town I have worked hard to offset the mail order competition, but they are no doubt making great headway. Large quantities of roofing, fencing and many other lines are shipped in here. Now, we use every means we know of to compete with the mail order houses, but we often run short of ideas. I attended the convention in Hamilton to try and secure new ideas. My railway and hotel expenses, membership, etc., cost about $35. Now I think that would have been a mighty good investment if I had been able to get some pointers at the convention meetings. But what happened? When the question of mail order competition came up, as a result of a question put in the box, one of the officers got up and said he thought the less we discussed mail order houses the better. Every time we discuss their methods we only advertise them, said the officer. The result was that very little discussion took place. I claim this is the wrong attitude to take. If we are to make progress, we must take up these important questions and discuss them. The mail order menace is a real one in this country today. If we cannot discuss their methods at our conventions, then where can we discuss them? The public is not admitted to the convention. How, then, can a discussion on mail order competition advertise the mail order houses? I am one member who was greatly disappointed in the last convention, and certainly will not spend the time or money to attend another, unless I know that the important trade problems are going to receive the thought and discussion they deserve.

Yours truly,
MEMBER.

Letter from Secretary Macpherson

Editor HARDWARE AND METAL:

Dear Sir:

Under the heading, "What is Wrong With the Association," in your issue of the 3rd inst., you open up a question which will benefit the Association if thoroughly discussed, provided the criticisms offered are of a constructive character, carrying suggestions which may lead to adoption of more positive

and aggressive action on the part of the Association in seeking and securing changes in trade practices which are burdensome and unfair to the average retail dealer.

However, before any effective work can be accomplished along these lines, we must have growth in our membership, until we have at least a majority of the hardware and stove dealers in the province on the roll. Then we will become just as strong in our sphere of action as the manufacturers or the wholesale jobbers' association are in theirs.

I was told the other day that the reason why the hardware dealers in a certain city held aloof from the Association was because the Association had not stopped the wholesalers selling goods at retail. I remarked that these dealers had evidently forgotten the adage, "The Lord helps those who help themselves." Now, the city stores are the ones who suffer most from this unfair practice. Have they tried to help themselves? Just look at the membership figures at the close of the year 1916: Toronto 18, Ottawa 5, London 0, Peterboro 2, Hamilton 9, and Guelph 1. I think the city dealers have not looked at the question in the proper light. I further think that with a numerically strong Association this question could be satisfactorily dealt with and the city dealers who suffer most would have the support of the balance of the membership in correcting this injustice. Then, again, by attending the convention they would have a voice in the management and conduct of the Association, which would materially assist in carrying out the objects for which we are associated. In turn, they could help the non-city members in doing away with the boxing and carting charges which have become onerous and should be included in the cost of the goods rather than a separate charge. I am glad to state that since the first of the year we have added 25 more members from the city of Toronto.

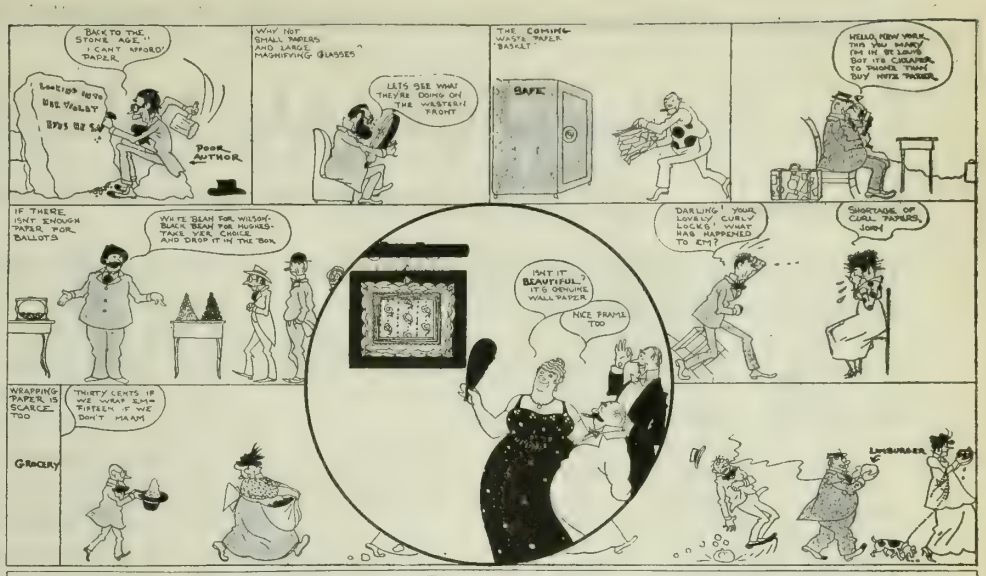
Now, Mr. Editor, I can assure you that the Association is all right. I have documentary evidence on my files from scores of members who claim the service of the past year was worth far more than the membership fee. Our membership is steadily increasing, showing 170 per cent. increase since the middle of 1915.

The membership fee is really too low, and only by a large increase in membership can our finances be put where we could undertake work which is now beyond us. Let every member put his shoulder to the wheel and we will double before next convention.

I quite agree with you that the recent convention meetings were disappointing, both in attendance and interest, and would, as one of the officers, welcome suggestions through your columns toward making the next convention full of interest and profit and one which members could not afford to miss.

I hope to see lots of letters on this question in your valuable columns and that many practicable suggestions will be offered.

Yours truly
W. F. Macpherson,
Secretary.



If the Paper Shortage Continues "Lemen in St. Louis Post-Dispatch."

Letter from the East

Editor, HARDWARE AND METAL, Toronto:

Gentlemen,—In your issue of March 3, on pages 33 and 34, "What is Wrong With the Association." I have read your article very carefully and am glad to know that you have opened the ball, and will look forward with a great deal of interest for other items. I notice in the fourth paragraph, you take up the matter of lines being pushed by departmental stores, and you state that the member or members who take these matters up, re lines that the departmental stores are pushing, should have information as to where the members can secure goods to retail at the same figure. This is something that the writer would be very glad to find out. For instance, where can the hardware men buy a steel range to compete with the one T. Eaton is advertising for $29.50, prepaid to your nearest railway station? I have tried several stove manufacturers and am unable to procure a range as up to date as this, less than $36. It is time, as you say, to lay a new keel.

If there is any reader of your paper who could give me any information re this, I would be very glad to have same. Also, I think, it is time that retail hardware men, not only in Ontario, but throughout Canada, should join forces and boycott the manufacturers who will sell to the departmental stores, who are using their towns as a dumping ground.

Automobile tire and accessory manufacturers are making a very strong effort to get the hardware men to handle their different lines, and if you take up Eaton's catalogue and compare prices on automobile tires, and the price the hardware dealer is asked to stick strictly to by the manufacturers, you naturally ask yourself the question, why are not the different departmental stores asked to do likewise, and when they don't, why don't the manufacturers cut them out the same as they would a small dealer, when they don't abide by the prices?

Yours very truly,
Walter S. Fairweather.
Sussex, N.B.

Montreal Notes

R. Misson, of the Sherwin-Williams Co., Montreal, was a visitor to Toronto this week.

G. M. Sullivan, of the U. S. Steel Products Co., was in Montreal this week-end.

W. G. Harris, president of the Canada Metal Co., Toronto, was in Montreal this week on business.

The splendid road map of Montreal and district, produced exclusively by the James Walker Hardware Co., Montreal, for their accessory business, is being used as a standard guide by the Montreal Boy Scouts, the Militia Department, McGill O.T.C., and is being reproduced in the Auto Road Guide of Canada.

Incorporations

Atlantic Pulpwoods, Ltd., have been incorporated at Quebec, with a capital of $500,000 to build and operate paper and pulp mills.

Dodge Brothers Motor Co. has been incorporated at Ottawa with a capital of $100,000 to manufacture and deal in motor cars and trucks, etc., at Windsor, Ont.

EDITORIAL COMMENT

HAVE you written that letter re association matters yet, Mr. Ontario Member?

* * *

NEXT week the Annual Spring Number—the biggest and best yet.

* * *

TOO much service is almost as bad as too little. Both lead in the direction where sheriffs and bailiffs lurk.

* * *

HERE'S a brand new role for good old John Bull—Caliph of Bagdad, to wit. He's capable of playing the part well too.

* * *

BAGDAD, Bapaume—perhaps Brussells next. John Bull may lose the first rounds of a fight but he always scores in the last.

* * *

HAS it occurred to you yet, Mr. Hardwareman, that the back yard garden idea is bound to bring a heavy demand for gardening tools?

TAX MAIL ORDER HOUSES

AT the annual meeting of the Provincial Development Commission of Prince Edward Island, the sub-committee on Agriculture introduced an interesting report, containing the following clause:—

> "We must co-operate with our merchants too. Co-operation must cover the whole field to be effective. It is a shame that there should be nothing done towards that end. We should be co-operating with the men who have made sacrifices and placed all their money, earned in a lifetime, in business. If we do something to show our appreciation of those men it would be of considerable advantage to us all. The mail order houses are taking hundreds of thousands of dollars from the country. We tax our agents that come around selling a few dollars' worth of stuff. How are we going to get at the mail order houses? We must support our local merchants or suffer ourselves. Let us co-operate and try to make the merchants understand it is for their own and our own good to get together. These are only a few hints thrown out, but the matters referred to are important. We passed resolutions at our several conventions here of the Central Farmers' Institute to be dealt with by the present Government or whatever Government may come after. These too may have their effect.

This shows the right spirit. In addition it displays an understanding of the close affinity of interest between the farmer and merchant—a point seldom appreciated or understood. The farmer needs the local dealer and is deliberately working harm to himself in helping to foster catalogue trading.

THE MEMBERSHIP OF THE ASSOCIATION

IN a letter appearing in this issue, Secretary Macpherson of the Ontario Retail Hardware and Stove Dealers' Association, raises the point that the desired quickening of activity in association matters can only be achieved with an increase in the membership. He is quite right in this respect, at least, that the future of the association depends upon the growth of the membership. At the same time the fact that increased activity and increased membership must necessarily go together, should be squarely faced. Any man who has identified himself with Association matters in any active degree will vouch for the difficulty that is met in securing new members. Mr. Macpherson who has worked harder and longer at this problem than anyone else, knows that the task of drawing in new members is very hard.

Why? Because the hardwaremen who are not members are not convinced that it would pay them, or that it would be worth their while to join. To get these men in as members, the Association must offer new inducements, new service. Otherwise it will be impossible to get as many new members as are desired. and needed. This is what is meant by increased association activity and increased membership going hand in hand.

This is the dual problem before the Association.

GETTING TOGETHER

ONE of the outstanding developments of the last year has been the desire of men in business to *learn*. It has been manifested in many ways, but most conspicuously in the willingness of retail merchants to get together and discuss matters of mutual interest. This has been particularly noticeable in the West. As this is written, the editor has before him no fewer than five newspaper clippings from five different points, each telling of meetings of business men at which questions of broad importance were discussed. At all these meetings the outstanding feature was the tendency shown to discuss such questions on the broadest basis; to "get down to brass tacks"; to look facts in the face. For instance, at one place the Board of Trade discusses the delivery question; at another the real value of advertising in reference to better service is emphatically endorsed; at still another place the merchants very unreservedly confessed their sins in the matter of loose credits and resolved to all do better in future.

The old idea of keeping away from your competitor, of hiding your methods and ideas, of refusing to come in the open with any discussion of trade problems—all this fortunately is passing away. Business men are finding that it pays to get together, to discuss matters openly and unreservedly. They are going to benefit by the change.

EVENTS IN THE TRADE

Obituary

Charlton, Ont.—The death occurred of Louis C. Wideman, who conducted a hardware store for many years.

Fire Losses

Arnprior, Ont.—Fire destroyed the hardware and furniture store of F. S. Rudd.

Death of Geo. F. McKay

New Glasgow, N.S., March 13.—The death occurred here of George Forrest McKay, at the age of 82 years. Mr. McKay saw and assisted in the founding of the Nova Scotia Steel and Coal Company and was its oldest director.

John Dawson Killed in Action

Corp. Robert John Dawson, of the P.P.C.L.I., has been killed in action. Corp Dawson went overseas with the 3rd University Company. Prior to enlisting he was engaged as a salesman for the Canadian Fairbanks-Morse Co., Front street, Toronto.

Business Changes

Hamilton, Ont.—Simpson & Martin, hardware merchants, have dissolved partnership, G. B. Martin continuing.

Herbert, Sask.—H. M. Klassen, hardware and lumber, has disposed of the lumber end of his business.

Grand Mere, Que.—Nealt & Nobert have dissolved partnership. P. C. Neault is continuing the business in the same stand.

B. A. Burke With Corning Glass Works

B. A. Burke, for 20 years associated with the American Metal Polish Co., who is well known to the Canadian hardware trade, has severed his connection with the company and will in future be identified with the Corning Glass Works, Corning, New York, in the marketing of their Pyrex Transparent Baking Ware. Mr. Burke will look after the interests of the company in Ontario, Quebec and the Eastern Provinces.

New Firms

Toronto, Ont.—M. Porter & Co., hardware and plumbing, have registered.

Mather, Man.—Hunter & Newton, hardware merchants, are opening a branch at Courtwright.

Ayer, Alta.—Ayer Hardware Co. has succeeded W. C. Hoskins.

Moore Park, Man.—J. H. Creighton, by Home Lumber Yards, Ltd.

Sinclair, Man.—W. H. Smith, hardware, has been succeeded by C. L. Smith, hardware merchant, has been succeeded

Personal

M. J. Beatty, of Beatty Bros., Fergus, Ont., has left for a trip to Montreal, St. John, and the Maritime Provinces generally.

H. A. Harrison has been appointed Toronto representative for Butterfield & Co., manufacturers of taps, dies, reamers, etc., Rock Island, P.Q., with headquarters in the Traders' Bank Building, Toronto. Goods will be carried in stock at this address.

Industrial

London, Ont.—The City Council have granted the McClary Mfg. Co., permission to lay a gas main to the city limits to connect with the Southern Counties Gas Co.'s line.

Montreal, Que.—The Steel Company of Canada has obtained a permit to erect a building on Notre Dame Street West, St. Joseph's Ward, to cost $1,200.

Three Rivers, Que.—The Mechanical Engineering Co., of Montreal, are building a new factory here to cost about $100,000. The plans include a large machine shop which will be equipped with new machinery.

Brantford, Ont.—Mickle, Dyment & Son have entered the toy industry and have completed a shipment to Toronto of a carload of new wooden construction model sets. Two local firms are now ousting imported toys from the Canadian market and preparing for the time when German products will again come into the market.

Toronto Personals

William Ough of Aurora, hardware merchant, spent a day in Toronto during the week.

Richard Blain, M.P., Brampton, Ont., was in Toronto during the week on a business trip.

William Toase, hardwareman of Caledon East, was in Toronto on a business trip during the week.

George Padget of Padget & Hay, hardwaremen of Agincourt, was in Toronto on business during the week. Mr. Padget's trips are not quite as frequent during the winter months as they are in summer as their motor truck makes access to the city easy. When the roads are good.

R. C. Misson of the Sherwin-William Company, Montreal, paid a visit to the Toronto branch on his return journey from Winnipeg where he has been making a trip in the interests of the company.

Duckpin League Formed

A Wholesale Hardware Duckpin League has ben formed in Montreal, the following firms being entered:—Caverhill Learmout Co.; L. H. Hebert Coy.; A. C. Leslie & Co., Ltd.; A. Prudhomme & Fils, Ltd.; Thos. Robertson & Coy., Ltd.

The following are the officers:—

President, J. F. Sibbald, A. C. Leslie & Co.; 2nd. Vice Presid., J. E. Anderson, Lewis Bros., Ltd.; Secretary, N. Hynes, Caverhill Learmont Co.; Treasurer, W. Peart, Thos. Robertson & Co., Ltd..

Committee:—J. Gratton, L. H. Hebert Ltd.; O. Manseau, A. Prudhomme, Fils; R. F. Cockburn, Caverhill Learmont & Co., Ltd.;

Games will be played on Windsor Alleys.

St. John, N.B., News

L. Dugal, M.L.A., hardware dealer, of Edmundston, N. B., who was re-ected in the recent New Brunswick general elections, when the Government was overturned, will, it is generally understood, become a member of the new Cabinet. Mr. Dugal's son, Louis, returned this week from Europe, having lost his right leg as the result of wounds received at the front.

The contract for the superstructure of the new Government railway grain elevator at St. John, has been awarded to the Fegles Bellows Engineering Company, of Winnipeg and Fort William. The work will begin about April 1, if the foundations are complete by that time, and the contractors expect to complete the structure by October.

A large number of delegates have signified their intention to be present at the third annual convention of the New Brunswick branch of the Retail Merchants' Association, which is to be held in St. John this week. Horace Chevrier, of Winnipeg, president of the Dominion Board, and other Dominion officials, will be among the speakers.

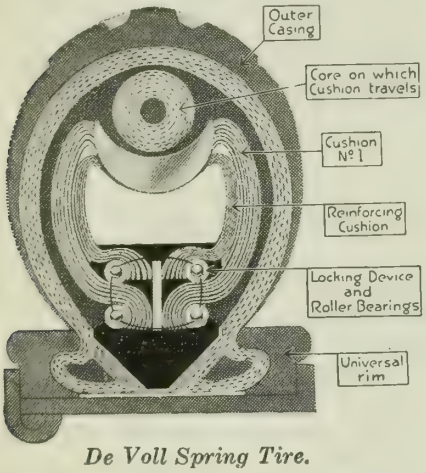
Santoline, Ltd., has been incorporated at Toronto with a capital of $40,000 to manufacture soap, greases and disinfectants, etc., at Toronto.

NEW HARDWARE GOODS

OFFERED TO CANADIAN HARDWAREMEN

DE VOLL SPRING TIRE

The American Spring Tire Company, 30 West Lake Street, Chicago, Ill., is now placing the DeVoll Spring Cushion Tire on the market. This spring cushion, the makers state, has been invented and developed not only to replace but to



De Voll Spring Tire.

surpass the air tube in all its features. This tire, the makers claim, offers all the advantages of the air tube and yet eliminates disadvantages, such as punctures, blow-outs, rim cutting, creeping delays and accidents caused therefrom. This tire is made to fit, without alteration, inside any new or old casing now on the market. The tire is composed of a series of Swedish steel springs made to fit inside of any outer casing. The spring cushions do not come in contact with the casings but are suspended on four roller bearings. The function of the roller bearing permits the tire to take the side thrust the same as the air tube. Each spring is a unit, free in its action, and at the same time firmly locked in a housing. The core on which the outer casing rests holds the casing to a narrow tread where the casing is thickest and can stand the greatest amount of wear and tear. This, it is claimed, makes the whole tire easier to run, steadies the car and causes the engine to run smoother. The cushions are so constructed that all friction is positively eliminated. Rusting is not possible as they are kept lubricated by a strip of brass placed between each spring leaf. In a test of a spring cushion for a tire, size 34 x 4, the maximum of 340 pounds to the unit was reached and as there are six units on the ground at the same time when the tire is in action, it carries a load of 2,040 pounds per tire, or 8,160 pounds to the car. It will give perfect action from 150 pounds to the above figure. The springs have a clock spring temper and, it is claimed, will not break.

LAWCO WINDOW REFRIGERATOR

The Lawco window refrigerator is being marketed by the F. H. Lawson Co., Cincinnati, Ohio. The refrigerator is made of heavily galvanized sheet steel thoroughly covered with a durable coating of pure aluminum bronze. Ventilation is provided, it is claimed, according to the most scientific principles and the entire refrigerator can be cleaned and scalded as frequently as the dictates of cleanliness and good health require.

The refrigerator rests on the outside window-sill with two wires securely fastening it to the window-frame. It can be furnished with or without swinging hinge.

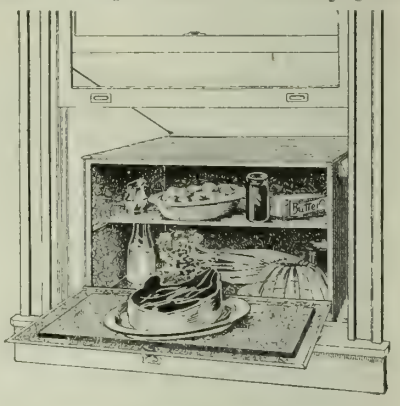
When open the door rests on the inside of the window-sill, making a wide, steady shelf. The makers also state that during the spring, fall and winter months the refrigerator without ice will keep the family provisions at the proper temperature, saving many times its cost in ice bills alone.

Stanley Picture Slides.

STANLEY PICTURE SLIDES

Two moving picture slides have just been prepared by the Stanley Works of New Britain, Conn., of which one is presented herewith, and will be sent on request to dealers who stock Stanley garage hardware.

Slide F1 pictures the Stanley garage



Lawco Window Refrigerator.

hardware window display. If a dealer will have this slide shown in his local moving picture theatres at the same time he has his garage hardware display in his windows, it is said, the attention of his customers will be attracted just that much more to his display, and the display will result in a proportional increase of sales.

The Stanley Works will announce shortly a series of electrotypes for dealers to use in connection with their newspaper advertisements. Two of these advertisements are planned for the dealer to use in calling the attention of his customers to his Stanley garage hardware window display.

Slide F2 advertises the Stanley garage door holder No. 1774.

For further information about these slides or the other Stanley garage hardware selling helps, write the Service Department, the Stanley Works, New Britain, Conn.

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

Iron and steel have both scored further advances in price during the week and it is reasonable to expect further advances in the manufactured products. Other advances have been made in the prices of strap and tee hinges, steel butts, currycombs, cutlery, borax, tackle blocks, loaded shells, coil chain, cross-cut saws, buck-saws and many other lines. One of the most important was a sudden and rather unexpected advance of 10c per lb. in Paris green, used extensively as an insecticide. Business continues good. The outlook for spring is very satisfactory. The chief difficulty of wholesalers is in securing supplies. Many shipments of badly-needed goods have gone astray and despite effort of the wholesalers and railroad officials, no trace of the goods can be found. In many cases full car-lots are lost, causing serious inconvenience to both wholesaler and retailer.

MONTREAL MARKETS

MONTREAL, March 15.—Iron and steel show advances this week, and the indications are that articles made from these products will advance still further. Some advances have been shown in shelf goods. The market appears to expect further price changes however, and in the event of the U.S.A. doing anything more definite in the war than has so far been done, the upward trend is likely to materialise quite quickly. A new and fresh demand for automobile accessories is noted this week, also an advance in gasoline not due to automobile demand yet. The approach of the opening of navigation is responsible for a quieter tone in the general demand for goods, but business is still brisk and looking to great activity when navigation does open.

Butts and Hinges Show Some Advances

SHELF GOODS.—There are fewer changes this week in shelf goods, but change sheet men in the large wholesale warehouses are anticipating a further series of advances. The symptoms of more trouble in this way are found in the iron and steel market which usually starts the ball rolling for all articles made of iron and steel, either upwards or downwards as the case may be, only markets seem to have forgotten how to go downwards since the war got fairly into its stride.

Curry Combs Again

Up go curry combs again. They have been advancing gaily by joyful little jumps and sometimes bigger ones for a good many months. The new "discount" is plus 25 on list.

Cutlery Up 5 Per Cent.

Advance cutlery five per cent. on all pocket goods and the retailers so doing will not lose money when making sales. Cutlery of all kinds is advancing steadily, and is very scarce in supply.

Carpenters' Pencils Scarce

There is a scarcity of "Tortoise" carpenters' pencils which is relieved slowly by new deliveries coming forward from the United States.

Wood Screws Scarce

Still the scarcity of wood screws persists, and there is small sign of relief to this aspect of the situation. Discounts are shown in current quotations.

Files Also Scarce

Munition files are scarce, but the ordinary sizes used in general work are not noticeably short in supply though no line of tools is in any condition of over-supply at present. File prices may advance before long it is believed.

Glue Very Scarce

The tremendous scarcity of glue is causing firms quite prominent in the line to buy in supplies wherever they can be found.

Corrugated Hinges Up

A ten per cent. advance in corrugated hinges is noted this week. In this the corrugated are not lonely.

Light and Heavy T. and Strap Also

Light and heavy T and strap hinges are also up in price this week. Their discount now is 20 and 10 which shows an upward movement decidedly.

Discounts on Butts

New discounts are announced this week on butts as follows:

No. 840, 17½ per cent.; No. 804, 20 and 10; No. 802, 25; No. 800, 15; No. 838, 17½; No. 842, 25; No. 844, 25; No. 810, 12½; No. 814, 12½; No. 830, 17½. This advance in butts was predicted recently in HARDWARE AND METAL.

Borax Advances

The price of borax has been advanced in Montreal by merchants in a large way of business, to 12½ cents a pound. Formerly 10 cents was charged.

Wood Tackle Blocks Up

The new discount on Wood tackle blocks is 35 off. This was formerly 45 off.

Builders' Hardware

Change list men are still busy with alterations on all lines of builders' hardware occasioned by the ten per cent. advance in effect now all over.

Auto Accessories Demanded; Tires Up

AUTOMOBILE ACCESSORIES.—A very marked demand for automobile accessories from the country districts and small cities has been noted by wholesalers in Montreal. The demand is not only active, but is showing call for very varied range of goods, and orders coming in are for as far forward as early fall. Advances in prices of the accessories made of steel are not at all unlikely as the season advances owing to the generally firm trend of affairs in the markets, and it was announced on the morning of the date of writing this report that automobile tires had advanced by five per cent. in the States, and would probably advance equally in Canada.

Bale Ties Advanced As Predicted

NAILS, WIRE, ETC.—No further changes are recorded in market conditions of nails and wire products for the current week, but the old familiar firmness maintains very markedly. Wire nails at $5.25 base, and all the usual lines of wire advanced according to the figures mentioned last week are good evidence of the firmness, and the advance in bale ties as predicted in last

week's HARDWARE AND METAL has duly taken place. Single loop bale ties quote as follows: No. 12 $5.80 per hundred pounds: No. 13, $5.90; No. 13½, $5.95; No. 14, $6.05; No. 15, $6.25; No. 16, $6.50. Cut hay wire is quoted now at per hundred pounds No. 9, $5.75; No. 10, $5.80; No. 11, $5.90; No. 12, $6.00; No. 13, $6.10; No. 13½, $6.10; No. 14, $6.25; No. 15, $6.50. Bright wire and hay wire prices as advanced were quoted last week, the bright wire base price being $5.50. Stove pipe wire is quoted at No. 18, $6.70, No. 19, $7.20. Further advances in nails, staples, and wire are expected. Steel advanced 35 cents per hundred pounds in Pittsburgh last Friday, according to reports received in Montreal.

Enamelware Brisk; Stoves, Etc., Quieter

STOVES, RANGES, ETC.—There is still a certain dullness in the market for stoves, ranges, and enamelled ware but indications of firmness for the future begin to show rather more definitely. The steel used in manufacture of stoves advanced half a cent a week ago, and there may be further movements this way making prospects of stove and range price advances for the fall trade. Meantime there is not a great deal of activity though with opening of navigation brisk business in all lines represented by the trade will take place. Enamelled ware is in similar condition as regards prices, firm, but with no actual changes made, and demand has been very good of late for both enamelled and galvanised ware. Maple season goods are being made by the principal factories in the stove, range, and enamelled ware line in Montreal and a considerable rush of demand for these goods is developing.

Steel and Iron Prices Advanced

IRON AND STEEL.—Advances went into effect this week on all the familiar lines of steel used in the hardware business. The extent of the advances is about twenty cents per hundred pounds. Conditions in the iron trade fully warrant the new quotations as there has been no alleviation of the situation regarding pig-iron, and the materials used in the manufacture of steel. Coal shortages, car shortages, and the impending war cloud over the United States have added to the firmness of tendency in all branches of the iron and steel industry. There is a marked scarcity of tungsten used in making tool steel, and the prices of high speed steel goods will probably be advanced. This will in turn affect other steel goods for the machinery to produce these will cost more to replace as wearing surfaces of tools give way under pressure of industrial activity. It looks like another period of advancing prices for iron and steel goods, but the position does not warrant predictions at present.

	Basis.
Common bar iron, per 100 lbs.	$ 3.60
Refined iron, per 100 lbs.	3.85
Horseshoe iron, per 100 lbs.	3.85
Norway iron	11.00
Mild steel	4.50
Band Steel	4.50
Sleigh shoe steel	4.50
Tire steel	4.70
Toe calk steel	5.40
Mining tool steel, per lb.	0.13½
Black Diamond tool steel, per lb.	0.14½
Spring steel	6.25
Single reeled machinery steel	6.25

Corrugated Sheets Are Now Priced Net

SHEETS, PLATES, ETC.—Prices of black sheets have advanced again this week, and there is marked scarcity of supply. Supplies of tinned iron are also short to the verge of famine in this line. It seems as if it would be almost impossible to obtain any of these now in large quantities. Charcoal tinplates are at practically nominal prices now, and it is hard to get any at all. Very few Canada plates are available at present, and prices are very firm. Galvanised sheets are in the firmest market, and quotations are made subject to possible delays in delivery for stocks in Montreal are small. Corrugated sheets are priced as quoted in current quotations but the 7½ per cent. discount is declared no longer operative to dealers in Montreal, the prices quoted being "straight" net prices. This material is now exceedingly scarce and supplies available are dwindling while new supplies are slow to arrive. Charcoal terne plates have advanced, also American cokes as noted in current quotations.

Ropes and Cordage May Go Higher

ROPES, TWINES, ETC. — While there has been no alteration in prices of the principal lines of rope and cordage familiar to the hardware trade, the odd lines of ropes and packings made of Italian and Russian hemp etc., are looking firmer, and indeed have actually advanced in the States. Canadian manufacturers have also firmed up their prices a shade or two on these lines which are not in very urgent demand in the trade. The main lines of rope and cordage are likely to advance still further, as primary market conditions are exceedingly firm, and show steadily increasing firmness of tendency. So far however, no new quotation lists have been issued on ropes. Binder twine prices are still unfixed and will not be out for some little time yet.

Gasoline and Coil Oil Advance One Cent

GASOLINE AND COAL OIL.—Once again gasoline and coal oil have advanced, the extent of the advance this week being a cent a gallon. The new prices went into effect on Tuesday morning. Gasoline now quotes in Montreal at 31½ cents to 32 cents a gallon and Royalite coal oil is 16 cents a gallon while Palacine is 19 cents a gallon. The reason for the advance is a proportionate advance in crude oil. Transportation difficulties make it necessary to use stocks carefully in Montreal at present there being enough but not too much of these oils available for business and industrial needs.

Old Metals in Quieter Condition

OLD METALS.—Demand has been rather less active for old metals, etc., in Montreal this week. Supplies have been adequate to meet all call, and prices maintain as quoted last week, when as will be recalled several advances were noted. The market for metals in general has been a little sluggish in tone of late, and the market for old materials has rather slackened in sympathy. A revival is anticipated should there be any definite action towards war by the United States in which case metals are likely to come into sharp markets again.

Tea lead	0.07	.....
Heavy lead pipe	0.09	.....
Yellow brass	0.16	.....
Red brass	0.21	0.21½
Light brass	0.11	.....
Heavy zinc	0.10	.....
Heavy copper	0.27	.....
Old cast iron, per gross ton.	20.00	21.00
Stove plate, per ton	11.75	.....
Old rubbers, boots and shoes	0. 8¼	.....
Overshoes, lumbermen's rubber boots	0. 6½	.....
Auto tires	0. 5½	.....
Bicycle tires	0. 2½	.....

Lead and Zinc Products Steady

LEAD, ZINC, ETC.—No changes have been made in the prices of the lead and zinc products this week. These materials are all in firm market but prices as quoted last week represent the range of quotations to the retailer. The metal markets were a trifle easier this week which has meant the maintenance of prices, following the advances of the previous week, but no falling back is evident nor any tendency to falling back in cost of the principal products listed.

Lead pipe, lb.	$0 16	....
Lead waste pipe, lb.	0 17	....
Lead traps and bends	Plus 10%	....

Solder, wiping, lb.	0 33	....
Solder, wire, lb.	....	0 52
Zinc sheets, per lb.	0 33	....

Ingot Metals in Quieter Market

INGOT METALS.—The market for the ingot metals has been quieter this

week, but lead and tin remain firmly priced, and there is not any very marked tenedency to fall off in price displayed by any metal. Opinion is however expressed that short of a further upheaval such as the active belligerence of the U.S.A. lead and the metals may not go higher.

Lead Found Firm

For small orders lead prices are a little up as compared with last week. Larger orders might find the market easier. Quotations are $12.25 to $13.50 and as high as $14. per hundred pounds. Smaller orders higher prices, but a discount prevails for cash on small orders.

Copper Hard to Get

There is a shortage of copper on the market, supplies coming in very slowly. Prices are shaded up a little for small orders being $40.50 to $41 per hundred. Larger orders would find quotations range from $36 to $39.

Tin Keeps Firm

While there is a slightly easier tendency in tin, the market is still fairly firm, and prices from $51 to $53 for large quantities, and $56 to $57 for smaller orders prevail.

Spelter Dull in Market

There has been a slight dropping off in spelter for the past week, and quotations $14 to $14.50 for small quantities, and a shade less than that for larger orders are recorded.

Antimony is Quiet

Antimony is also in quiet market with quotations ranging from $29.00 by one merchant quoting for large orders to $32 for smaller quantities.

Aluminum Lower

A slightly lower figure is quoted for aluminum, the price being $70 as against $72 per hundred pounds last week. Demand is light.

TORONTO MARKETS

TORONTO, March 15.—Wholesale hardware dealers are experiencing the most difficulty in getting their stocks replenished on orders that have been placed. They state there is more concern in this respect than there is in getting the goods delivered to their customers. Railroads have been accepting freight shipments a little more freely. Goods that have been shipped by the manufacturers often require a lot of tracing before their whereabouts is located. Some of the more notable advances during the week include iron and steel, wrought butts, strap and tee hinges, Paris green, corrugated strap hinges, coil chain, electric weld chain, loaded shot shells. Business has been very good during the week. Some wholesalers express surprise at the way business continues to keep up. They state they do not know where it is all coming from.

Tee and Strap Hinges Moved to Higher Levels

HINGES An advance of approximately 7 per cent. has been made in the price of heavy and light tee and strap hinges, through the changing of the discount for these goods. Where formerly the discount for both heavy and light tee and strap hinges was 30 and 5 per cent. it is now 20 and 10 per cent. Chest hinges No. 820 and 910 are now quoted at 25 per cent. off list. List prices on the tee and strap hinges will be found in the current quotations. Corrugated strap and tee hinges have also been advanced and the new net prices are as follows:

	Strap, per doz. prs.	Tee per doz. prs.
4-inch	$1.25	$1.60
5-inch	1.60	2.25
6-inch	2.15	2.70
8-inch	3.75	4.80
10-inch	5.40	7.80
12-inch	8.40	....

On the screw hook and strap hinge there has been no change.

Wrought Steel Butts Have Been Increased

BUTTS.—By the changing of the discounts on wrought steel butts an advance of approximately 5 per cent. has been made. Where the discount on No. 804 was formerly 30 and 5 per cent. off list it is now 20 and 10 per cent. On No. 840 the discount was formerly 25 per cent. and is now 17½ per cent. For No. 800 the discount is now 15 per cent. as compared with 20 and 5 per cent. formerly. On No. 810, which are table hinges, the new discount is 12½ per cent. as compared with 15½ per cent. formerly. No. 814 carries a discount of 12½ per cent. as compared with 15½ per cent. formerly. Following is the complete list of discounts:—

No. 800, 15%; No. 838, 17½%; No. 840, 17½%; No. 804, 20 and 10%; Nos. 810 and 814, 12½%; Nos. 802, 842, 844, 25%.

Coil Chain and Electric Weld Up

CHAINS.—A higher price is now being quoted on B.B. American coil chain, the new base price being $10.30 per 100 lbs. for ⅜ in. size. On the B.B. electric weld chain there has also been an advance amounting to 30c. per hundred on the base size. Three-eighths chain is now quoted at $6.30 per hundred pounds with the usual differential for smaller and larger sizes. On Lord Ward treble crane or dredge chain the prices are as follows: ⅜ in., $15 per 100 lbs.; 7-16 in., $13.75 per 100 lbs.; ½ in. $12.50; ⅝ in., $12.25; ¾ in., $12; ⅞ in. and 1 in., $11.75; 1⅛ and 1¼ in., $10.50.

Pulleys and Plated Silverware Higher

SHELF HARDWARE. — Advances have taken place in a number of lines of shelf hardware during the week. There is little cessation in the upward trend of prices as indicated by the lengthy lists that wholesale houses mark up each week. Among the lines that have advanced during the week are pulleys of various kinds, saw vises, gasoline torches.

Pulleys 10 Per Cent. Higher

There has been an approximate advance of 10 per cent. in japanned pulleys, comprising awning and screw pulleys. One size of the awning pulley that formerly sold for $1.20 is now quoted at $1.40.

Plated Silverware Increased

An advance of 10 per cent. has been made effective in the Community silverplate, applying more particularly to the Sheraton pattern. Dessert spoons that formerly sold for $6.35 are now quoted at $7.

Saw Vises Go Up

Increases in price have been made effective on saw vices, No. 103 now selling at $10 per dozen, No. 100 at $5.45 per dozen, No. 94 at $7.70 and No. 95 at $11.45 per dozen.

Gasoline Torches

Higher prices have been recorded on the Clayton & Lambert line of gasoline torches, the discount having been changed to 10 per cent. off list.

Valves Moved Higher

Discounts have been altered on Jenkins globe, angle and check valves, the new quotation being 5 per cent. off list. Penberthey globe, angle and check valves have also been changed to a similar discount. Gate valves in both patterns are now quoted at 10 per cent. off list.

Discount on Loaded Paper Shells Changed

SHOT SHELLS. — The discount on smokeless powder paper shells for Dominion, Remington Canadian make and equal grades has been changed to net list, which makes provision for an increase of 2½ per cent., the former discount being 2½ per cent. off list. Shells loaded with black powder remain the same as previously, at 10 per cent. off list.

Gasoline, Coal Oil and Lubricating Oils Up

GASOLINE, COAL OIL, LUBRICATING OILS.—A further advance all along the line has taken place in the various oil products. Gasoline and benzine have advanced 1c. per gallon and are now quoted at 30½c. and 31c. per gallon. Coal oil has been moved up a similar amount and Canadian prime white is now quoted at 15c. per gallon, Royalite at 15c., Palacine at 18c., Lampoline at 15c. and Electroline

at 18c. Castor oil in some instances is being quoted at 30c. per pound. Black oil for summer use is now quoted at 12c. and for winter use at 13½c. XXX machine oil is now quoted at 23c. per gallon. About the only grade that did not advance during the week is fuel oil, but advances in this product were recently recorded. The occurrence is somewhat unusual for the increase to be so general in all oil products. Usually there is a sliding upward from class to class with intervals between. This time, however, the advance was all along the line. The advance has been occasioned through the firmness in the primary market for the crude oil and the steadily increasing demand for the refined products. Still higher prices for gasoline are anticipated before the summer is far advanced.

Oil Heaters Advance 15 Per Cent. in Price

OIL HEATERS.—An advance of 15 per cent. has been made in the price of the Perfection oil heaters. Perfection No. 120 that formerly sold for $3.35 are now quoted at $3.85 each, which is an advance of 50c. On the No. 130 the new price is now $4.25 as compared with the former price of $4.25, while the No. 125 is now quoted at $3.80 as compared with $3.25 formerly. Coincident with the announcement of the new prices the numbers have been changed to distinguish the new and improved pattern that is being put out this year. Following are the new numbers with the old numbers in parenthesis:

No. 520 (120), each	$3.85
No. 525 (125), each	3.80
No. 530 (130), each	4.25
No. 560 (160), each	6.55
No. 630 (230), each	5.65
No. 660 (260), each	7.95

Discount on Pumps Has Been Changed

PUMPS.—Some manufacturers have changed the discount on pumps in certain instances and some are now quoted at 30 per cent. off list whereas the discount formerly was 35 per cent. all along the line. On cistern pumps the same differential is made and in some instances the pumps are quoted at 30 per cent. in some instances and 35 per cent. on other pumps. On set lengths the discount has been changed to 25 per cent., where formerly it was 35 per cent. On brass lined cylinders and brass body cylinders the discounts have remained unchanged at 25 per cent. off list for the former and 20 per cent. on the latter.

Readjustment in Prices of Oakum

OAKUM.—A readjustment in some oakum prices has been recorded during the week, in one instance a decline having been recorded. Clipper U.S. is now quoted at 17c. per pound as compared with 18c. recently. U.S. Navy (English) on the other hand has been advanced 1c. per pound and is now quoted at 17½c. Plumbers' spun oakum remains unchanged at 8c. to 8½c., best American at 20¾c. to 21c., U.S. Navy (American) at 20c. to 20.3c.

Eavetrough and Conductor Pipe Higher

EAVETROUGH, CONDUCTOR PIPE, CONDUCTOR ELBOWS.—An advance of approximately 8 per cent. has been made in the price of conductor pipe, eavetrough and eavetrough conductor elbows. The discount is now 30 per cent. off the list on these various lines as compared with 35 per cent. formerly. The reason for the advance is stated to be the high price of galvanized sheets and difficulty to obtain them. Demand is somewhat light at present as it is the off-season for most of these lines. Following are the list prices on the various lines:

PLAIN CONDUCTOR PIPE.

2 in., in 10-foot lengths	$ 8.00
3 inch	9.70
4 inch	12.80
5 inch	17.50
6 inch	21.30

O. G. EAVETROUGH.

8 inch	$ 6.90
10 inch	7.70
12 inch	9.10
15 inch	12.50

EAVETROUGH CONDUCTOR ELBOWS.

2 inch	$ 1.90
3 inch	2.20
4 inch	3.60
5 inch	9.00
6 inch	10.50

Above lists subject to 30% discount.

Nails Continue Firm; Advance Not General

NAILS, WIRE.—Although one of the large manufacturers of nails is quoting at higher prices on wire nails there has as yet not been a general movement toward higher levels. At this centre they are still quoted at $4.95 base. There is a firmness in the market, however, as there is also a firm market for all wire products. Prices of wire held steady during the week at the advance recorded one week ago.

Black Sheets Have Been Altered in Price

SHEETS, PLATES.—There has been a slight alteration in the price of black sheets in certain instances. On gauges No. 12, 14 and 16 increases from 10c. to 30c have been recorded, but in the heavier gauges a decline of 15c. has been made effective in certain quarters. There is, however, a range in the market with a tendency to firmness and an inclination to advance prices in the near future. The market for the most part holds at $6 for No. 10 gauge and $6.15 for No. 28 gauge. There is strong probability that prices will be advanced in the near future. Following is the range in the market:

	Per 100 Lbs.	
No. 10 gauge	$6.00	$....
No. 12 gauge	6.10	6.20
No. 14 gauge	5.80	6.10
No. 16 gauge	5.90	6.15
Nos. 18-20 gauge	5.95	5.80
Nos. 22-24 gauge	6.00	5.85
No. 26 gauge	6.05	5.90
No. 28 gauge	6.15	6.00
No. 29 gauge	....	6.10
¼-inch (boiler plates)	6.25	....

BOILER TUBES.—Boiler tubes are in firm market owing to the advances that have taken place in the Chicago and Pittsburg destricts, where an advance of 10 per cent. has been made by dealers during the week. Local dealers state tubes are now selling in the United States at higher figures than they are in Canada, where it is necessary to pay freight and duty. There is a strong probability that local dealers will advance their prices in the near future.

Iron and Steel Advance 25c Hundred

IRON AND STEEL.—With the general firmness in the market for iron and steel there has been a movement toward higher levels during the week and an advance of 25c. has been made effective quite generally. Common bar iron is now quoted at $4.25 base, common bar steel at $4.50, refined iron at $4.65, angles at $5. There has been an exceptionally good demand, purchasers for the most part wanting to buy out of stock for immediately delivery. In the face of the demand and the difficulty to get stock there is a continued firmness in the market even at the recent advance. Following are the quotations:

	Per 100 lbs.	
Common bar iron	$	$ 4.25
Common bar steel	....	4.50
Refined iron	....	4.65
Angles, base	....	5.00
Horseshoe iron	....	4.50
Norway iron	7.50	9.00
Mild steels	....	4.50
Tire steel	....	4.70
Toe calk steel	....	5.15
Sleigh shoe steel	....	4.75
Band steel	....	4.75
Spring steel	....	6.00
Mining tool steel	17.00	18.00
Sheet cast steel	25.00	35.00

Old Materials Show Tendency to Weakness

OLD MATERIALS.—There has been a tendency toward weakness in the market for old materials during the week. The demand has not been as heavy as in recent weeks and the condition is manifested in the easier tone prevailing. There have been no actual declines with the exception of old rubbers, boots and shoes, which are now quoted at 8½c per pound, which represents a decline of ¼c. Following are the prices being paid by dealers:—

	Per lb.	
Tea lead	$ 0.06½	.....
Heavy lead pipe	0.09½	.....
Yellow brass	0.17	.....
Red brass	0.22	.....
Light brass	0.10	.....
Heavy zinc	0.09½	.....
Heavy copper	0.29½	.....
Old cast iron, per ton	16.00	.....
Stove plate, per ton	14.50	.....
Old rubbers, boots & shoes	0.08½	.....
Overshoes, lumbermen's rubber boots	0.06½	.....
Bicycle tires	0.02½	.....
Auto tires	0.06	.....

Lead Products Are Having Good Run

LEAD PRODUCTS.—Although there is a slightly easier feeling in the primary market for pig lead during the week there has been no change in lead products locally. The pig lead market shows a tendency to fluctuation from day to day. During the week it was quoted as high as \$10.62½ at New York, but dropped down to \$10 per hundred for spot on Wednesday. There has been a good demand locally for all lead and zinc products and prices have remained stationary during the week.

Lead pipe, lb.	\$0.16	....
Lead waste pipe, lb.	0.17	....
Lead traps and bends	10% on list	
Lead wool, lb.	0.15	....
Lead sheets, 3 lbs. sq. ft.	0.15¾	....
Lead sheets, 3½ lbs. sq. ft.	0.15¾	....
Lead sheets, 4 to 6 lbs. sq. ft.	0.15½	....

Cut sheets, ¾c lb. extra and cut sheets to size, 1c lb. extra.

Solder, guaranteed, lb.	0.34	....
Solder, strictly, lb.	0.32¼	....
Solder, commercial, lb.	0.31¾	....
Solder, wiping, lb.	0.31½	0.32
Solder, wire, lb.	0.35	....
Zinc sheets, per lb.	0.25	....

Hemp Cordage Goes Up 4c Per Pound

CORDAGE.—An advance of 4c. per pound has been made in the various classes of hemp cordage. This rope is principally used by boats and shipping interests and includes ratline, hawsers and lanyards, marline, houseline and hambroline, yacht marline, deep sea line. In the tarred ratline the base price for ⅝ inch and larger is 40c. per pound. For the tarred bolt rope used as hawsers and lanyards the price is now 42c. per pound for the base size of ⅝ inch. Tarred marline, houseline and hambroline is also quoted at 42c. per pound for ⅝ inch. Tarred yacht marline has been increased to 54c. per pound. Untarred hemp rope of ⅝ inch diameter and larger is now 44c. per pound, halyards or deep sea line is also 44c per ⅝ inch, while white polished halyard rope is 30c. per pound base. Italian hemp rope of ⅝ inch diameter and larger has been increased to 44c. per pound, an advance of 4c. Packings have been increased 2c. per pound, hemp now selling at 30c per pound, Italian hemp packing No. 1 is quoted at 38c., Italian No. 2 is qpoted at 30c. and square braided packing at 32c. All goods in balls and hanks are now quoted 1c per pound extra instead of ½c. per pound as formerly. Cordage companies are now filling spring orders, in some cases deliveries are almost completed. This is earlier than usual as dealers realized the necessity of getting their goods well beforehand if they did not want to run chances of being caught without stock when the demand starts in the spring. Binder twine prices have not yet been announced, but are expected some time this month. Everything points to much higher prices for binder twine than have ever prevailed before.

Oil Stove Demand Has Started Early

STOVES, ENAMELWARE. — Manufacturers report that oil stoves are going as fast as they can make them with shipments being forwarded as soon as the goods are manufactured. The oil stove business has already started and in this respect is earlier than usual. Merchants have considered it advisable to get their stocks in as early as possible owing to the uncertainty that might be connected with delivery later in the season. The demand for gas ranges is lighter at present than it has been recently. Manufacturers anticipate as the season advances there will be a worse shortage of materials. Enamelware of all kinds is in firm market with a good demand which is causing present stocks to dwindle.

Foundry Pig Iron Will Be Available Soon

PIG IRON.—The situation in the pig iron market is slowly improving on account of the more favorable weather conditions and better transportation facilities. Foundries will now be able to get supplies of coke and pig iron and thus extend operations. The pig iron market in the U.S. is firmer and prices on some grades have advanced. Production is increasing and coke prices are easier.

The Steel Co. of Canada is again operating both furnaces, and will soon have supplies of foundry pig iron on the market. No prices are as yet available.

INGOT METALS. — The situation in the metal market has not changed much during the past week. Owing to the unsettled outlook, business is dull, any pronounced activity is not looked for until the political situation clears up. That is to say, if war were declared between the United States and Germany, it would relieve the present tension and an active market would result. The feature of the market is the continued advance in copper which has touched a new high level. Quotations on other metals are unchanged but firm. Business locally is very good, but a scarcity of copper is reported.

COPPER.—The copper situation shows very little change, although the price has advanced and is still nominal. The metal is very scarce for all deliveries over the first half. Copper has advanced 1c. and is quoted at 40c. per pound for lake and electrolytic, and 39c. for castings copper.

TIN.—The market is quieter but prices continue firm and unchanged. The market is still being affected by the submarine menace, but not so much as formerly. Supplies of tin continue to come across in steady volume, but the demand is small. Local quotations, 53c. to 55c. per pound.

SPELTER.—The situation in the spelter market is unchanged and the price stationary. Local price, 13½c. to 16c lb.

LEAD.—The market is well sold ahead, there being very little lead left for March or April delivery. The market continues strong and prices unchanged at 12½c. to 13c. per pound.

ANTIMONY.—There is still some scarcity of antimony, but the market is easier and unchanged at 35c. per pound.

ALUMINUM.—The demand for aluminum has improved but supplies are lower. The market is firm and unchanged at 68c. per pound.

LONDON MARKETS

LONDON, Ont., March 15.—Prices of hardware continue to advance. There is a scarcity of many lines and it will become more acute with the advent of spring and the consequent spring demand for supplies. Business has been fair during the week. The outlook for spring is excellent.

Bar Iron and Steel Advance Further

Bar iron has scored another advance and is now quoted at \$4 base. Bar steel has advanced to \$4.25 base.

Hinges and Butts Go Higher

Steel butts, tee and strap hinges, shelf brackets have all advanced approximately 10 per cent. New net prices have not been issued at the time of writing.

Wire Products Score 25c Advance

As intimated in another report in HARDWARE AND METAL last week wire products have in several lines advanced 25c per 100 lbs.

O and A Wire Up

Oiled and annealed wire has advanced 25c per 100 lbs. to a new base of \$5.50, making net prices as follows:

Per 100 pouns: No. 10, \$5.66; No. 11, \$5.72; No. 12, \$5.80; 14 hay bailing \$5.90.

Stove Pipe Wire Up

An advance of 25c per 100 lbs. has gone into effect on stove pipe wire making new prices as follows:—No. 18, \$6.70 per 100 lbs.; No. 19, \$7.20 per 100 lbs.; small lots 8c lb.

Wire Nails Unchanged

Wire nails are decidedly firm but unchanged in price. Price locally for wire nails is \$4.95 base, and \$4.70 base for cut nails.

Fence Wire Unchanged

No change has been made so far in prices of fence wire, which remain un-

changed as follows per 100 lbs:—

Barb, $4.65; No. 9 galvanised $4.25; No. 12 galvanised, $4.45; No. 13 galvanized, $4.55; No. 9 coiled spring, $4.30.

Saws, Sets, Handles Advanced in Price

Cross cut saws, handles and sets have been advanced in price, new prices on X cut saw handles follow:—No. 3, $3.30 doz.; No. 4, $3.00 doz.; No. 5, $4.50 doz.; Lion one man, $3.30 doz.

Cross cut saw sets have also been moved upwards. Lincoln saw sets are quoted at $6.70 doz. Whiting pattern sets are now $4.75 doz.

Quotations on some lines of saws follow:—No. 0. Racer 5 ft., $3.75 each; improved racer 5½ ft., $4.35 each; Premier 6 ft,. $5 each.

Buck Saws Up 5 Per Cent.

An advance of 5 per cent. has gone into effect on buck saws making new net prices as follows:—

Happy medium, $6.85 doz.; whiting pride, $7.20 doz.; new century, $8.25 doz.; Prince Rupert, $9.05 doz.

Linseed Oil Firm in Price

Linseed oil is very firm in price at present, with a fair demand. Prices in effect are as follows:—

	Raw.	Boiled
1 to 2 bbl., per gal. ...	$1.40	$1.43
3 to 5 bbl., per gal. ...	1.39	1.42
6 to 9 bbl., per gal. ...	1.37	1.40

Turpentine is unchanged at 78c per Imp. gal. for single barrel lots, and 77c per Imp. gal. for 2 to 4 bbl. lots.

Five gallon lots are quoted at 85c Imp. gallon.

Quotations on Spring Lines

Local merchants and those in the surrounding country look for a large volume of spring business. Prices prevailing on some spring lines are as follows:

Poultry netting, Canadian 1 and 2 in. mesh, 30-10 per cent.

Screen cloth, painted, 100 ft., $2.75; painted 50 ft., $2.80; bronze $14c sq. ft.; harvest tools, 40 per cent.; spades and shovels, 1sts, 35-10 per cent.; 2nds., 35 per cent.; 4th., 20 per cent.

WINNIPEG MARKETS

WINNIPEG, March 15.—The big feature of the week's market is the further advance in price on the various lines of wire. Annealed, bright, tinned, galvanized and plain twist all show increases over former quotations. Wrought iron pipe and fittings, wrought, cast and malleable are also included in the lines affected, as well as saddlery, hardware, snaps, buckles and rings, with Paris Green and linseed oil showing big increases.

Paris Green Goes Still Higher

New prices issued on Paris Green two weeks ago represented a considerable increase over last year's figures and the present advance of 10 cents per lb. recalls to mind the shortage prevailing last summer and the high prices asked by those retailers fortunate enough to have a stock. In these stores retail prices attained to the $1 per lb. figure, which certainly showed a nice profit. The new prices as represented by to-day's advance are: ½ lb. pkgs., 61c. per lb.; 1 lb. pkgs., 59c. per lb.

Oil Goes Higher

After a considerable period of quiet linseed oil is again in the limelight this week with an advance of five cents per gallon. This advance has threatened for some time now and was predicted in these columns on more than one occasion. No shortage, due to conditions in the States, is reported as yet, but the unsatisfactory state of affairs now prevailing in the South has undoubtedly hastened this advance in price, and may result in further increases being put into effect in the very near future. Quotations based on this increase are: Raw, $1.40 per gal., bbl. lots; boiled, $1.43 per gal., bbl. lots.

The local market on turpentine shows no change and prices are holding at quotations below:

Per gal.: 85c., bbl. lots; 88c., ½ bbl. lots; 90c., 5 gal. to 1 gal. lots.

Wire Products Make Further Advances

The advance recorded in annealed wire, bale ties and bright tinned wire is 25c. to 30c. per 100 lbs., according to gauge and follows closely on the heels of a similar increase a couple of weeks ago. New prices are as follows:

Annealed: 9, $6.20; 10, $6.25; 11, $6.32; 12, $6.40; 14, $6.60; 15, $6.75; 16, $6.90 per 100 lbs.

Bale Ties: Ft. William, $6.55; Winnipeg, $6.95 per 100 lbs.

Bright Tinners. 0-9, 06.40; 10, $6.46; 11, $6.52; 12, $6.60; 13, 6.70; 14, $6.80; 15, $6.95; 16, $7.10 per 100 lbs.

Plain Twist Wire: Ft. William, $4.35; Winnipeg, $4.75 per 100 lbs.

After several weeks of inactivity galvanized wire has also advanced, the new prices representing an advance of about 50c. per 100 lbs. This results in the following quotations being now made:

Plain Galvanized: 6, 7, 8, $6.20; 10, $5.25; 11, $6.25; 13, $5.50; 14, $6.55; 15. $6.70; 16, $6.90;9, Ft. William, $4.85; Wpg., $5.25 per 100 lbs.; 12, Ft. William, $5.10; Wpg., $5.50 per 100 lbs.

Coil Spring Wire: 9. Fort William, $4.90; Wpg., $5.30 per 100 lbs.; 12, Fort William, $5.15; Wpg., $5.55 per 100 lbs.

Iron Pipe Prices Further Advanced

The recent advances in wrought iron pipe though small have been pretty regular, with the result that to-day's quotations are at an extremely high level. Another increase of about 2½% goes into effect immediately, which brings best available figures to this high mark:

Black: ¼, $4.55; ⅜, $4.64; ½, $6.08; ¾, $7.52; 1, $11.12; 1¼, $15.03; 1½, $18; 2, $24.21; 2½, $38.25; 3, $50.04; 3½, $62.28; 4, $73.80; 4½, $91.80; 5, $107.10; 6, $139 per 100 ft.

Galvanized: ¼, $6.98; ⅜, $7.07; ½, $7.83; ¾, $9.95; 1, $14.67; 1¼, $19.89; 1½, $23.76; 2, $31.95; 2½, $50.58; 3, $$66.15 per 100 ft.

Pipe Fittings and Coppers Advanced

All classes of fittings have also undergone a revision in price and new quotations represent advances in all cases. Cast, malleable and wrought fittings are each affected.

The situation in the paper market is by no means improved, and although no change has been made in the price of Kraft wrapping paper for some time back, this has been due in a large measure to large stocks being on hand. The advance, then, which is in evidence in the price given below comes hardly as a surprise and marks another high water level. To day's quotation is 11¼c. per lb.

Soldering coppers are now being quoted at prices shown below, which represent an increase over former figures:

Per lb.: 3 lbs. and over, 66c.; 2½ lbs., 67c.; 2 lbs., 68c.; 1½ lbs., 69c.; 1 lb. 72c.

Bells Higher For Next Fall Trade

Prices are now available for sleigh bells for fall shipment and these quotations represent higher prices all the way through. The present cost of leather would undoubtedly influence the price of all strapped lines and the price of brass and bell metal is not showing any signs of decreasing, so present figures seem quite justified.

During the week, revised discounts have been issued on bit stock drills, blacksmiths' drills and jobbers' drills and needless to say the tendency has been upward. The new discounts are as noted herewith:

Bit stock, No. 108, 35%; Blacksmiths' ½ in. round shank, 30%; jobbers No. 105, 30%.

Sadlery Lines Go To Higher Levels

Another advance in the various saddlery lines is recorded for the week. The new prices on lines familiar to the trade being as follows:

Screw Cockeyes: per doz., 465 x 1¼, 57c.; 1½, 66c.; 1¾, 81c.; 2, $1.02.

Snaps: Gross: 422 x ½, $4.80; ⅝, $4.80; ¾, $4.80; ⅞, $5.20; 1, $5.60; 290 x ¾, ⅞, 1, $5; 1¼, $8.65; 1½, $9.60; 1¾, $10.60; 2, $12.

Roller Breast Snaps: Per Doz., 439 x 1½, $2.30; 1¾, $2.50; 2, $2.65.

Carriage Hardware Higher

Carriage and wagon hardware has also increased in price as will be seen by the items mentioned below. Whiffltree cockeyes, tips, couplings, ferrules and clevises and buggy wrenches are now selling at the advanced price of 20c. per lb. Whiffltree hooks and centers and neck yoke centre and end irons have also come in for revision and new prices represent an advance of about 7½%.

Miscellaneous Advances

Other lines which have come in for revision during the week are noted below.

LePage's glue shows an advance for the largest size package—no change being made in the 1 oz. tubes or 1 oz. and 2 oz. bottles. Present quotations are being made at:

1 oz. tubes, 90c.; 1 oz. bottles, 90c.; 2 oz. bottles, $1.80; ½ pt. tins, $3.60; 1 pt. tins, $5.60; 1 quart, $9.

Butter Bowls Advanced

Maple butter bowls are now being quoted as follows:

Per doz.: 13 in., $3.75; 15 in., $5.50; 17 in., $12.50; 19 in., $18; 21 in., $22.20.

Wrenches Go Higher

Along with all lines of other wrenches, the combination nut and pipe wrenches have advanced in price, the new figures being as follows:

Short nut, polished, per doz.: 43 x 10, $20.70; 12, $23.40; 15, $33.30.

Long nut, polished, per doz.: 45 x 10, $22.75; 12, $25.65; 15, $36.45.

Revised Prices

These lines have also come in for revision as noted in quotations given herewith:

Hay Rack Clamps, per doz.: 1, $18.50; 2, $20.

Stewart Handy Workers, $12.50 each.

WEEKLY PAINT MARKETS

(Continued from page 44.)

per pound. Finest orange gum shellac is quoted on the local market at 63c to 69c and finest white gum at 65c to 69c. Prices quoted during the week represent an advance of 5c to 10c per pound. Shellac varnish in gallon tins has accordingly increased in price and pure white is now quoted at $3.50 to $3.60 per gallo as compared with recent quotations of $2.90 to $3.25. Pure orange varnish shellac is now quoted at $3.25 to $3.50 per gallon which represents a considerable increase.

Mixed Paint Trade Continues Satisfactory

MIXED PAINTS.—With the firm position of all raw materials that enter into the manufacture of paint there is a disposition in some quarters to anticipate higher prices for mixed paints. It is pointed out that the conditions of manufacture warrant an advance but whether it will be made in the near future remains doubtful. Higher prices might have the effect of shutting off demand and manufacturers are not anxious to retard what otherwise gives promise of a good season. Reports of sales continue very satisfactory.

AMENDMENTS TO COMPENSATION ACT

(Continued from page 26.)

the time limit should not apply, but the allowance should be continued for a period during which the working man, had he lived, could reasonably have been expected to provide for its needs.

Employees and Executive Officers May Come Under Act

The original Act provided that employers who accepted all the hazards of the business might themselves go on the pay roll. There was no provision, however, made for the case of executive officers. These have now been put on the same footing as the employers.

There is also a provision covering the case of working men employed in Ontario and resident in that province, who go temporarily to work in the Province of Quebec. In these instances they do not forfeit their protection under the Act.

In addition to paying the salaries of the Compensation Board, the Government under the new Act may also contribute $100,000 towards the expenses.

CATALOGUES AND BOOKLETS

5,000 Facts About Canada

The 1917 issue of "5,000 Facts About Canada," has just been issued by the Canada Facts Publishing Co., 588 Huron street, Toronto, Ont. The book, consisting of 75 pages, was compiled by Frank Yeigh, and contains a wealth of information about Canada, its provinces, cities, industrial pursuits, railway and business facts, etc. Copies can be secured for 25c.

U.S. IN WAR WOULD BOOST PRICES

From *Hardware Age*

The question of knowing what to do in a business way under present conditions is still beset with that perplexity which has clouded the future ever since the beginning of the European war. So counsel is to be had only from such experience as we may glean from the past, and the unrestrained use of common sense.

In the beginning it is evident, solely from a business point of view, that the uncertainty at this writing as to whether we shall ultimately drift into war is the most potent and depressing factor in the situation. As long as this uncertainty exists, caution will prevail and business enterprise halt as to commitments for more than immediate and present needs. Anticipation is usually worse than realization, and once the tension is relieved there will be a new impetus given to business activities.

Should war come, as now seems almost inevitable, the entrance of the Government into the market in a vast way as a buyer will have a pronounced effect upon both prices and production in nearly all lines. This will be especially true in all metals, and already lead and copper are high and strong in anticipation of such a demand.

There will likewise be a great and immediate demand not only for munitions of war, but for all manner of accoutrements as well. Everything made of canvas and leather will respond to the sudden impulse of abnormal demand, and will be high-priced and hard to obtain. Most munition and arms factories will probably be engaged in Government work, so that the commercial supply of rifles, revolvers and metallic ammunition will be correspondingly decreased. They are scarce enough at present when it comes to getting orders filled promptly, and it seems the part of wisdom for the dealer to provide at once for at least a reasonable portion of these goods that usually sell best in the fall. Loaded shells will probably not be so difficult to obtain, as the machinery making them is not fitted for manufacturing ammunition for war uses.

It may be well likewise to provide with reasonable preparedness for things of leather and canvas, for as high-priced and scarce as they now are, they will probably be scarcer and higher-priced before peace in Europe comes. It seems likely that the demand for builders' hardware and carpenters' tools will continue, for building commitments are already made, and it is the part of economy to carry them through. This will probably be true of machinists' and mechanics' tools, for at present there is nothing in sight to more than temporarily check manufacturing activity.

The continuation of industrial activity will to some extent offset still further advances in prices by maintaining the purchasing power of the many. In agricultural districts there will be no probable decline in the prices of farm products until new crops are harvested. Even then the likelihood is still for remunerative prices of all agricultural staples, because of the abnormal demand caused by the war. Yet even though the outlook is apparently for a continuation of present demand and of even higher prices for some months to come, it is well to make provision for the future only in moderation, bearing in mind that it is always the unexpected that happens, and that it is quite impossible that next fall may see the beginning of the end and the ushering in of the inevitable readjustment.

The Signal Motor Truck Co., of Canada, Ltd., has been incorporated at Toronto with a capital of $50,000 to manufacture motor trucks and automobiles at Toronto.

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, March 15.—In a paint market, which is full of difficult conditions, and has been for months, Paris green appears this week as the sensation item. Paris green prices advanced suddenly last Friday by 10c a pound. The new season's prices, in fact, had hardly been well announced before need for alteration arrived at a bound in extra cost of materials and complications of kindred type to those besetting all manufacturing industries at present. In other respects, the paint market is much as it was last week, only linseed oil is seriously scarce now, and some manufacturers are conserving turpentine as if a shortage of this also were expected, though there is no definite news to that effect, and indeed the primary market is a shade weaker. Whiting has advanced in some quarters, but putty is unchanged. Glass will no doubt go higher. Painters' sundries and brushes are all in firm and advancing market, some of the finer brushes especially so.

Paris Green Prices Up Ten Cents a Lb.

PARIS GREEN.—Owing to the higher cost of materials used in the manufacture, and to the many contributing causes found in the state of the markets and transportation, etc., to-day, prices of Paris green have been advanced by 10c per pound, and present prices at that prevail only subject to prior sale. The market is very firm indeed for this product, and, though the advance is considerable, it may not be the last. Montreal prices of Paris green are a quarter of a cent less per pound than the Toronto prices, due to difference in transportation cost. Prices for 100-lb. drums, Munro's and Canada Paint, Paris green are now $54.75 f.o.b. Montreal, Bergers $55.50, with other prices in proportion as given in current quotations.

Turpentine Shows A Local Firmness

TURPENTINE.—There is a tendency in Montreal this week to conserve supplies of turpentine. As one manufacturer observed, "It would not be good policy for us to make a small profit on the sale of a raw material which we may urgently need ourselves in manufacture later on." Not that there has been any word of any forthcoming shortage in turpentine; indeed, the primary market news is rather calculated to ease the market than otherwise, but just that transportation is so uncertain, that paint manufacturers prefer to conserve stocks. They have had trying experiences of late in all raw material markets. Prices quoted on turpentine this week are for one-barrel lots only, and while, as mentioned, the primary market hardly justifies any advance in turpentine quotations for the one-barrel lots this week are 80c, 82c, and up to 85c per Imperial gallon, with no one apparently very anxious to part with stocks.

Linseed Oil is Seriously Scarce

LINSEED OIL.—There is unfortunately no improvement this week in the situation affecting linseed oil. The crushers having done their utmost to secure new supplies of flaxseed, are still persistently persuading transportation facilities to improve, but so far the improvements noted have not done much to help linseed oil. At present it is frankly admitted by crushers that the situation has reached a serious enough stage. While the first difficulties were bad enough, crushers had fair stocks, and were able to tide along successfully taking care of orders placed before the shortage became evident. This state of affairs was kept going as long as business skill could keep it going, and, while there was anxiety regarding the future, no one was seriously inconvenienced for the immediate present. Now, however, unless there are better supplies of seed and steady supplies delivered rapidly serious inconvenience is likely to be caused. No one is quoting linseed oil for general market, but the nominal value of linseed oil raw is $1.42 a gallon, and for boiled $1.45. One firm in Montreal is congratulating its luck on securing 500 barrels of badly needed linseed oil from England. This consignment escaped the perils of war by sea, and is arriving in Montreal as fast as congested railways will let it come. But it is doubtful if a single cask of it will be for sale except as a favor to valued business friends.

White Lead in Oil Remains Very Firm

WHITE LEAD IN OIL.—Although the market for linseed oil is simply non-existent, and though dry white lead has been steadily firm of late and the metal markets show no very pronounced tendencies towards easier quotations, white lead in oil is not altered in price upwards this week, and seems to be stationary as regards market figures for the time being. There is not any very sharp demand, and one firm at least is not at all anxious to sell white lead in oil. "We prefer to sell mixed paints than the materials from which mixed paints are made during the present difficulties as regards supplies of raw materials," is the opinion expressed. The price quoted in Montreal this week is still $14.80 per 100 lbs. in one ton lots, and $15.10 for less than ton lots.

Mixed Paints Very Firm in Tendency

MIXED PAINTS.—It would not be at all surprising if mixed paints advanced in price before long. No one who has paid any attention at all to the trend of the markets for raw materials can fail to have noticed that prices of raw materials have gone far ahead of their quotations when the latest advance in paint prices was made known in the fall of last year. Transportation troubles such as have since prevailed were then undreamt of. Metal prices such as even now prevail were hardly thought likely. The near famine in linseed oil was not expected, though a pessimist might have predicted it in a blue moment, and would have been very properly squelched for depressing his community. Now all the almost unbelievable difficulties that have beset the paint manufacturing business really happened, and are still happening. Consequently nobody need grumble or feel aggrieved if paint prices advance even before the sorting order business of the present spring season is disposed of. Nothing definite has been done as yet—at time of writing—but there will be wisdom in preparedness as regards paint supplies.

Whiting is Firmer; Putty is Unchanged

GLASS AND PUTTY.—There is no alteration as yet in the price of glass

$ $$ $$$$$$

following the distinctly strong tendency of the market indicated last week. Undoubtedly, however, glass for all general purposes is going to cost more in Montreal. The effect of the recent advances in the United States is sure to be felt practically in all Canadian centres concerned, though there is a difference between Quebec and Ontario in regard to the price of glass as those in the trade are aware. Putty prices are unchanged for the current week, the quotations being still $3.10 per 100 pounds for bulk in casks. Whiting has, however, gone firmer this week, being quoted now at $1.75 per 100 pounds in barrels for ordinary, and $1.85 for gilders. These prices in contrast to the 60c figure familiar before the war, look fairly tall, but may not even represent the top of the market at that. With linseed oil where it is and whiting thus advancing, there are prospects of higher-priced putty.

TORONTO

TORONTO, March 15.—There has been a continued good demand for paint products during the week. Manufacturers express their satisfaction at the way the spring trade continues to shape up. There is little trouble being experienced in getting orders, the greatest trouble lying in getting the raw materials. Linseed oil is still in narrow compass as the crushers are unable to get sufficient supplies of seed to keep their mills running the way they would if the seed were plentiful. Prices on linseed oil showed a grading downward in certain instances and upwards in other quarters. Turpentine was quoted lower by some dealers. White lead in oil held steady in price. Shellac was again advanced for both the gum and the varnish shellac in time. Paris green made a big upward movement during the week, the advance being 10c per pounds, or almost 25 per cent.

Linseed Oil Prices Inclined Slightly Lower

LINSEED OIL.—There has been a shifting of the cards during the week so far as price quotations on linseed oil are concerned. In one instance the price was moved lower while in another instance the quotations were 5c per gallon higher during the week. When this exchange of position had been made the result was that the high quotation of the week was 1c below the high quotation of last week and the lowest quotation of the week was 1c higher than the lowest last week. There is little improvement in the situation so far as getting seed is concerned. Crushers have been securing small quantities but the amount is insufficient to meet the demand. Paint manufacturers have been buying quite heavily for the manufacture of their product and heavier deliveries of oil are expected to be made in April and May if sufficient quantities of seed can be secured. There was an easier tone to the seed market in Winnipeg during the first part of the present week, the net decline at the close on Wednesday of this week as compared with Wednesday of last week being 4¼c. There was, however, a strong market for the seed on Thursday, Friday and Saturday of last week when the high point of $2.65 per bushel was reached for the cash article. Inspections of cars at Winnipeg were heavy during the week which indicates a considerable movement of the seed. The total inspections for the week in review was 123 cars as compared with 82 the previous week. This would seem to indicate that the seed is moving more freely. Much of this undoubtedly goes to the United States. The domestic demand for oil cake is fair with no prospect of finding an outlet through export. Demand for oil during the week has been fairly good.

	Raw, Per gal.	Boiled, Per gal.
1 to 2 barrels	$1.40—$1.44	$1.43—$1.47
3 to 5 barrels	1.39— 1.43	1.42— 1.46
6 to 9 barrels	1.38— 1.42	1.41— 1.45

Turpentine Shows Some Decline in Week

TURPENTINE.—There has been an easier tendency in turpentine during the week in certain quarters with prices quoted 2c below the low figure of last week, making the range in single barrel lots from 75c per gallon. In the primary market at Savannah there was a decline of 3½c per gallon during the week on sales that were made, but there was very little buying or selling in that market. The fact that there is no export business from the South at the present is acting as a bearish feature in the market. The submarine activity is operating to keep ships on this side the Atlantic. Great Britain is fairly well supplied with turpentine stocks now which will meet her needs, it is estimated, until about November next. In the face of this feeling of security there was a decline in the London market of three shillings during the week. Receipts of turpentine in the South for the year 1916-17 are heavier as compared with the previous season by almost 40,000 casks. From April 1, 1916, to March 8, 1917, the receipts this year were 309,328 casks as compared with 270,163 casks for the same time during the previous year. Locally there has been a fair demand for turpentine. A car arrived in the city during the week and was taken up readily.

	Per Imp. Gallon
1 barrel lots	$0.75—$0.78
2 to 4 barrels	0.74— 0.77
5-gallon lots	0.80— 0.85

White Lead Market Continues Steady

WHITE LEAD IN OIL.—The market for white lead in oil continues in a firm position although prices remain unchanged during the week. Considerably higher prices were paid for pig lead in the primary market at New York during the week, but at the time of writing it was quoted on the same basis as one week ago, namely, $10 per hundred. On Thursday of last week it was quoted as high as $10.62½ for spot lead but the price settled down to the $10 basis during the first part of the present week. Linseed oil remains in a firm position with high prices prevailing and this is reflected in the position of white lead in oil. Quotations remain unchanged during the week at $15.30 per 100 pounds, in small lots and $15 in ton lots.

Paris Green Takes Jump of 10c Pound

PARIS GREEN.—A big advance in the price of Paris green was recorded during the week when 10c per pound was added to the opening quotations recently announced. This advance is equivalent to almost 25 per cent. over the opening price. In the 100-lb. drums where the price was formerly $45 per hundred pounds it is now $54. Similar advances have been made all along the line for all the various makes. The increase is attributed to the high cost of the raw materials. Following are the quotations:

	Munro's	C.P. Co.	Berger's
600-lb. bbls.	$	$52.75	$54.50
250-lb. kegs	54.00	54.00	54.75
100-lb. drums	55.00	55.00	55.75
50-lb. drums	55.00	55.00	55.75
25-lb. drums	55.25	55.25	56.00
1-lb. pkgs. 100s	57.25	57.25	58.00
½-lb. pkgs. 200s	59.25	59.25	60.00
1-lb. tins 100s	58.25	58.25	59.00

Difficulty in Getting Glass Stocks Replenished

GLASS AND PUTTY.—There is a continued firmness in the glass market and importers are finding it difficult to replenish their stocks from the United States, more particularly in plate glass. One wholesale house reported that they have had stocks on the way from the United States for three months. In window glass there is a fairly good local demand, wth discounts ranging from 10 to 15 per cent. The discount of 15 per cent. is the one more generally quoted. Putty prices have remained unchanged during the week at $3.40 per hundred pounds in bulk casks and $3.85 per hundred in 100-lb. drums.

Shellac Prices Moved Up Again

SHELLAC.—With considerable higher prices in the primary markets for shellac the local market reflected the firmness and prices were moved higher. Gum shellac of TN grade is quoted in New York at 52c per pound while the local quotations run from 55c to 66c

B-H Paint Ensures Good Sales

Handling paint which is recognized by the public as the best that money can buy, places the B-H paint dealer in a distinctive class in his locality.

When particular people want painting done, they specify B-H English Paint. They know when they use it they are getting a paint which is absolutely guaranteed.

B-H "ENGLISH" PAINT
70% Pure White Lead
30% Pure White Zinc
100% Pure Paint

This tested formula produces a paint which has maximum covering capacity, penetration and durability.

Our materials are selected with such exacting care, and we use such thorough methods of manufacture, that we cannot fail to make every can live up to its reputation of excellence.

In localities where we are not represented, we would be pleased to hear from a progressive merchant.

Re Gauges and Prices of Sheets.

Prices which follow on black and galvanized sheets are purely nominal. The market has reached a state where prices are quoted only on application and for immediate acceptance.

On account of it being practically impossible to secure galvanized sheets from England, owing to the war, American mills have decided that they will no longer roll the English gauges to meet this competition. However, they will continue to roll at 10¾ oz., which will be known as such or a 30 gauge, and will take the place of the former English 28 gauge.

SHEETS (BLACK)

	Montreal 100 lbs.	Toronto 100 lbs.
10 gauge	6 20	6.00-6.05
12 gauge	6 30	6.10-6.10

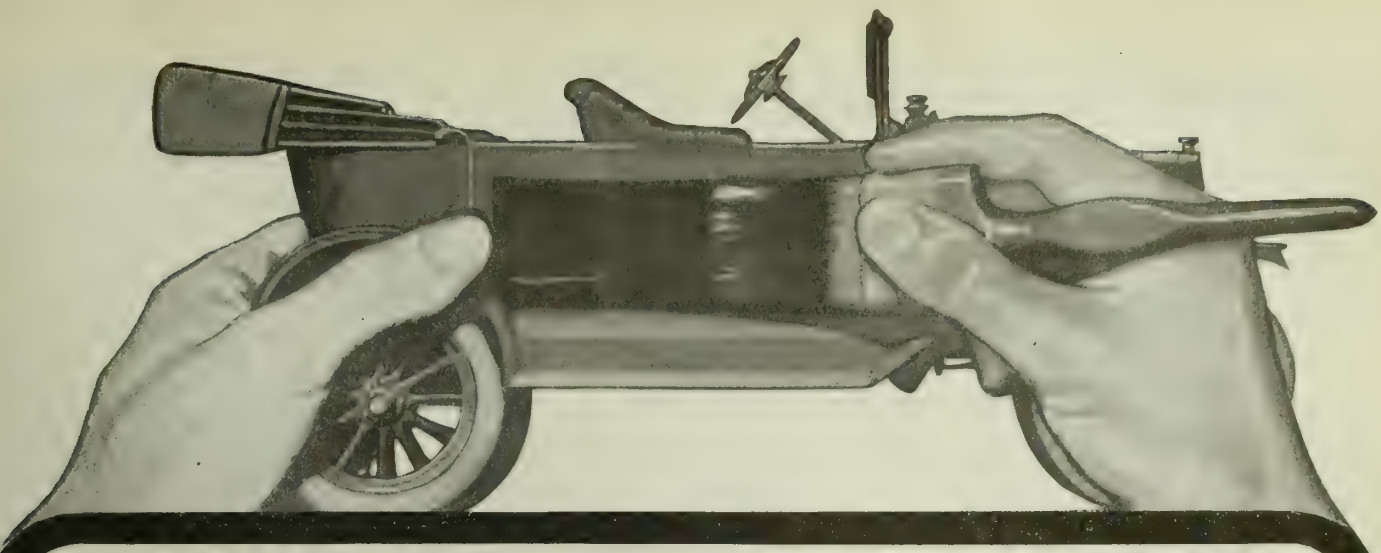
SOLDERING COPPERS.

Base, per lb., 63c cents.



Paint Your Ford for $1.25

This is the slogan that's being flashed all over the Dominion in big, national magazines, through the mails and in the dealer's windows.

It has created a sensation in the Paint Trade.

Paint your Ford for $1.25. Hard for some auto owners to believe, you'll say. But it's true. One quart of Glidden Auto Finish Black which you sell for $1.25, at a good profit, will more than cover any medium-size car. It will give a finish like new — brilliant, tough and lasting.

Only a short time is required for application, and in less than 48 hours the car is ready for use. Think of the sales possibilities. There's nothing better for carriages and buggies.

Thousands of new cars the world over are finished with Glidden Varnishes. Glidden workmen know auto finishing requirements. There's no experimenting necessary. They know what is needed to do the trick.

This Glidden performance means good business for you. There are five sensible colors besides black in the line. All good sellers, all good profit-makers.

Write for Our Special Offers

We have prepared four special offers for the purpose of introducing this new member of the Glidden Family. These offers all include the complete line of Glidden Auto Varnishes, together with our quick-selling advertising features. One of them will surely fit your requirements.

Drop us a line for further details. Do this to-day, because the present prices are subject to change and there's much for you to gain by early action.

The Glidden Varnish Company, Limited

Toronto, Canada

Polar Cub
Electric Fan

REG. U.S. PAT. OFF.

$7.50

Making a Good Thing Better

Polar Cub was the **first** low-priced fan. It "led the procession" by proving the vast sales field for an individual fan at a price within the reach of everybody.

This year Polar Cub is without question the **best** low-priced fan. It has been improved and perfected in every detail. It gives much bigger value than the previous models. But the price remains $7.50! And it will be advertised on a bigger scale than ever before—in **The Saturday Evening Post, Collier's, Literary Digest, and System.**

Here are the 1917 improvements:

- **Two speeds and stop.**
- **Die-cast frame (57 fewer parts).**
- **Bearings are integral part of die-casting.**
- **Cannot get out of alignment.**
- **Guard spot-welded and practically unbreakable.**
- **Fan adjustable to any angle.**
- **Hook on base for attaching to wall if desired.**
- **Equipped with 8-foot cord and plug.**
- **Blade diameter, 6 inches; height of fan, 8 inches; net weight, 3 lbs. 5 oz.**

Trade discounts as follows:

Less than 6 fans .....$5.00 each
Six fans and over .....$3.75 each
Terms: 2-10-30 f.o.b. New Haven.

Full freight allowed.

Fans packed 6 and 12 to the package. Upon request we furnish free, striking sales-making store display material.

Order Early. We have largely increased our production facilities, but despite this, the demand will exceed the supply.

So place your order now. If further information is wanted, write us.

WA-KO-VER STAIN FOR FLOORS AND INTERIOR FINISH

Is essentially a colored varnish of such remarkable toughness and elasticity, that wood treated with it may dent under a blow, but the finish will give with it without cracking.

WA-KO-VER STAIN does not cover up the natural beauty of the wood, but rather emphasizes the grain and imparts any desired effect.

Any article finished with these stains may be washed with soap and water without impairing the brilliancy of the finish.

Are we represented in your town? If not, write for our exclusive agency proposition. *It stands in a class by itself as a profit-maker.*

"I don't know why I ever stopped subscribing to HARDWARE AND METAL," says an ex-hardwareman who has been in the real estate business for the past six years.

"I am thinking of getting back into hardware again, so you may enter my subscription.

"I have always had a warm spot in my heart for HARDWARE AND METAL, because I made a lot of money through it.

"The best deal I ever made was the result of a prediction in HARDWARE AND METAL, that the price of pig-iron would advance shortly.

"I immediately placed a big order for stoves with one of HARDWARE AND METAL'S advertisers, just in time to take advantage of a heavy increase in the price of stoves.

"I could tell you of many other profitable deals that HARDWARE AND METAL helped me to make, but this was the best one."

If interested, tear out this page and keep with letters to be answered.

It's "High Standard"

The high grade consumer and the high grade painter are two mighty good people to have as firm friends for your store. You can have them just as easy as not by giving them Lowe Brothers' "High Standard Paints." Hitch up with Lowe Brothers' organization and you get complete advertising service and co-operation from us that will open your eyes—to say nothing of the highest grade Paint that science and skill can make.

Let us send you particulars of our Proposition.

Lowe Brothers LIMITED TORONTO

Lyon Paint & Glass Co., Limited Winnipeg

One Sale Leads to Many Others

When you sell one of these machines you make your customer an enthusiastic advertiser of washing machines in general and of the **"London" No. 3** in particular.

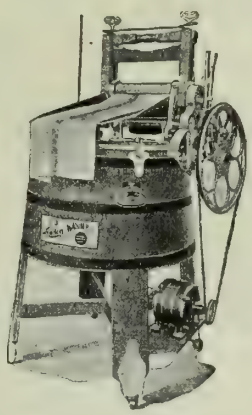
The

London No. 3 Electric Washer

is efficient, practical, durable and economical. It has machine-cut gears. It has the very best Electric Motor specially made for the purpose. It has a Lovell Wringer made from best live rubber.

Many homes in cities where female labor is scarce are buying these high-grade and complete washers, the wife and daughters themselves being compelled to do the work. A little effort on your part will succeed in introducing this fine washer into many homes.

Drop us a card for catalog and full particulars.



London No. 3 Electric

CANE'S CLOTHES PINS

Not "Just Clothes Pins"

"Just Clothes Pins" will not describe **Star Brand** Clothes Pins. These are different—better. While they cost no more than "just clothes pins," they give superior value.

Always right in shape—right in length, and correct in count and will not injure the clothes.

Get a supply of these superior clothes pins from your jobber at no extra cost.

Perhaps You Are a Careful and Close Buyer

IT may be an ingrained caution. It may be that you have been "bitten" once or twice, and so are "shy." It may be that it is a developed habit—a measure and method of self-protection. But no matter why you may be a hard man to sell to, is not this true:

> That many things bought by you, and now greatly esteemed, were stoutly resisted by you when the salesman brought them to your attention for the first time?

For example, a cash-carrier system, cash-recording system, typewriter, computing scale, plate glass windows, prism lighting, show-cases, loose-leaf systems—and almost everything else in common use nowadays by merchants, are resisted when they are first presented. But later, when they are bought, and when they have been given time to demonstrate their value, why, you could not induce the merchant to do without them.

All this leads up to this point:

> Suppose we urge you to read THE FINANCIAL POST each week—to subscribe for it for a year at a cost of $3.00 (52 issues), there is just a chance that you would resist the suggestion—not so much because of the $3.00, but because "you don't see it."

Now the regular reading of THE POST will make you see your own and the Nation's Business in a bigger way, and by adding to your power to see things pertaining to Money and Business in a clearer, larger way, you will be a stronger man for the business in which you are engaged now. If you can grow to a stronger business man at a cost in money of $3.00 a year, the chances are that you will not hesitate to pay the $3.00.

Nothing that you can read outside the trade paper serving your field of business is so much worth while as the reading of a first-class business paper. The Business Outlook will help you in your business:

> Will tell you when to get ready for poor business conditions, when to watch your collections with unusual care, when to buy sparingly, and when to prepare for big business. It will also help you with your banker. Will probably save you money in exchange on your cheques and drafts, because you understand the movements of money.

At any rate, we ask you to take the first necessary step in the direction of the larger business world which lies about you and close up to you and which is vitally connected with your affairs. We ask you to sign and return the form below, confident that you will be glad afterwards.

Sales Agents:
Manitoba, Bissett & Webb, Limited, Winnipeg; British Columbia, McPherson & Teetzel, Vancouver.

FORGETTING

One of the things we all do well is to **forget.**

Names that were household words yesterday are gone to-day.

Because people knew your Name and your Line a year ago it is no sign they do to-day. They forget easily.

Keep yourself in the public mind by advertising. It is just as important to make old friends remember as it is to win new friends. Advertising does both.

I.N.C. NICKEL

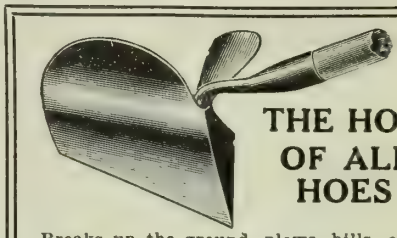
WHOLESALE DEALERS SELL THEM



THE HOE OF ALL HOES

Breaks up the ground, plows, hills, cuts weeds and cultivates the soil and does the work in half the time, and better, easier and more satisfactorily.

Manufactured by

SCHOENER MFG. COMPANY
St. Cloud, Minn.
Eastern Canadian Distributors:
Louis A. Larson, Ottawa.
Western Canadian Distributors:
Merrick-Anderson Co., Winnipeg, Man.

MYERS TANK PUMPS

EASIEST TO OPERATE

The Patented Cog Gear Head, as used on Myers Tank Pumps saves one-third of the operating power.

The valves are each located under a removable, individual cap, where they can be easily reached.

The purchaser buys the most service when he buys a Myers Tank Pump. Write for booklet.

FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTRE. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability. Made for Brace—made for machine. Packed singly—packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Order through your jobber to-day.

More Dollars

You can make "Dollars Grow" out of your *spare time.* Spare-time efforts have made hundreds of dollars for MacLean Representatives. To-day there are in Canada, men and women, who find that our proposition worked for an hour or two daily provides for many of the added luxuries of life. You supply us the time,—we'll supply you the money. Write for full particulars.

Condensed or "Want" Advertisements

There is always someone, somewhere, who is looking for just such a proposition as you have to offer—and it is more than likely that he is a hardwareman and a subscriber to HARDWARE AND METAL. Let an advertisement on this page bring you together.

RATES (payable in advance): 2 cents per word first insertion, 1c per word subsequent insertion. An additional charge of 5 cents for each insertion is made when Box Number is required. Each figure counts as one word.

SITUATION VACANT

WANTED — HARDWARE CLERK, GOOD salesman. State experience and salary wanted. Apply Box 51, Meyronne, Sask.

A FIRST-CLASS TINSMITH — STEADY work; also a man of two or three years' experience; references required; state wages wanted. Box 424, Hardware and Metal, Toronto.

WANTED—THOROUGHLY EXPERIENCED hardware man for general store in Saskatchewan town. Must be a good aggressive salesman. State age, experience fully, nationality, church connection, whether married or single, and salary expected. Must be total abstainer from liquor and tobacco. Box 438 Hardware and Metal.

AGENCIES WANTED

THE SUREST WAY FOR THE MANUFACturers' agent to connect with good live firms, is to tell the manufacturers who read Hardware and Metal, all about his ability to sell their goods. Try an advertisement on the Condensed Ad. Page of Hardware and Metal, under this heading.

STORE EQUIPMENT FOR SALE

YOU MUST HAVE A LOT OF OLD FIXtures around the store which are no longer of any value to you, but would prove very useful to someone else in the hardware business. Find a purchaser for this equipment through an advertisement on Hardware and Metal's Condensed Ad. Page.

FIFTY DOLLARS TIED UP IN OLD FIXtures that you are no longer using would make a lot of money for you if invested in stock and turned over three or four times a year. Get your money out, by selling the fixtures to one of Hardware and Metal's readers who may be looking for exactly what you have to offer.

PAPER BALERS

THERE IS MONEY IN USING AND SELLing the Jewell Paper Baler. It is the only low-priced, efficient baler on the market. Every hardware store should use one. Splendid side line for one line traveller in each territory. General Sales Co., Stair Bldg., Toronto.

SITUATIONS WANTED

EXPERIENCED HARDWARE MAN OPEN for position—one able of taking charge or representing any hardware, paint or steel company on the road. Box 442, Hardware and Metal.

HARDWARE CLERK, SEVEN YEARS' EXperience in retail store; good window dresser and card writer. Will be open for position May 1st. Western position preferred. Box 443, Hardware and Metal, Toronto.

YOUNG MAN EXPERT TRAINING AND long practical experience, familiar with price detail and buying, desires a responsible position with jobber or manufacturer. $1,800 to $2,000 to start and good opportunity. Address Box 437 Hardware and Metal.

BY CAPABLE YOUNG MAN AS MANAGER of retail hardware store, with option of buying. First-class references, good salesman, and one who guarantees results. Box 445, Hardware and Metal, Toronto.

THE "CHANGING TIME" IS GETTING near. There are many firms who have vacancies on their sales or office staffs to fill during the next few months. If you want to qualify for some of these vacancies, tell your story briefly in a Condensed Advertisement, and try it out in Hardware and Metal. A twenty-five word advertisement may land you a permanent position with splendid prospects.

ADDING TYPEWRITERS WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited. Room 314, Stair Building, Toronto.

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Ltd. Supplied by the trade throughout Canada. (tf)

DOUBLE YOUR FLOOR SPACE — BY INstalling an Otis-Fenson hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B." Otis-Fenson Elevator Co., Toronto.

IF YOUR HARDWARE BUSINESS IS FOR sale, who is more likely to buy it than a hardware man, be he merchant, clerk, or traveller? It is only hardware men who read Hardware and Metal, and a condensed advertisement in this paper offering your business for sale, will put you in touch only with the people who will be most interested.

SIGNS AND SHOW CARDS

GLASS, WOODEN AND BRASS SIGNS. W. H. Stevenson, Stevenson Bldg., Toronto.

THE "WANT" AD.

The "want ad." has grown from a little used force in business life into one of the great necessitities of the present day.

Business men nowadays turn to the "want ad." as a matter of course for a hundred small services.

The "want ad." gets work for workers and workers for work.

It gets clerks for employers and finds employers for clerks. It brings together buyer and seller, and enables them to do business though they may be thousands of miles apart.

The "want ad." is the great force in the small affairs and incidents of daily life.

Want Ads.

Try it out

If you want a buyer for your business, or have a situation to fill or want a situation, send us a Condensed Advertisement. There is someone who is looking for a proposition such as yours. For two cents a word you can speak across the continent with a condensed advertisement in this paper.

One Inch Space $1.00 Per Issue on Yearly Order.

PEERLESS PERFECTION

Absolute Security

WHEN you go away for a day or turn in for the night, *you are certain* your stock is locked in—they can't get over, under or through the spaces—a perfect fence for hilly or uneven ground, through streams; protects poultry, ducks, geese, sheep and hogs. Can't sag or break down and will turn an unruly horse.

Peerless Perfection Fencing

is made of best heavy Open Hearth steel fence wire, the impurities burned out and all the strength and toughness left in. Makes the fence elastic and springy. It will not snap or break under sudden shocks or quick atmospheric changes. Our method of galvanizing prevents rust and the coating will not flake, peel or chip off. Every intersection is securely clamped with the famous Peerless Lock.

Send for catalog. It also describes our farm gates, poultry fencing and ornamental fencing.

Dealers nearly everywhere. Agents wanted in unassigned territory.

The Banwell-Hoxie Wire Fence Co., Ltd.

WINNIPEG, MAN. HAMILTON, ONT.

PEERLESS THE ALL AROUND FENCE

A Salesman Always on the Job

IT is the constant dropping that wears the stone away. It is the constant knocking at the door of attention and favor that in the end gives you ready access to the good-will of buyers of your merchandise.

You can keep up a constant knocking—a bid for attention, a reminder of yourself, a spokesman of your message—this by using regularly

The FARMER'S MAGAZINE

No man whose customers and should-be customers are farmers should be absent from their attention. Their will and purpose to buy may mature at any time. The salesman on the spot stands the best chance to get the order.

All this you know, but—do you live up to the behest of your knowledge?

Let us tell you more about **The Farmer's Magazine** in a special letter.

N.B.—Objectionable advertising not accepted. Both editorial and advertising columns are closely censored to keep them clean and decent.

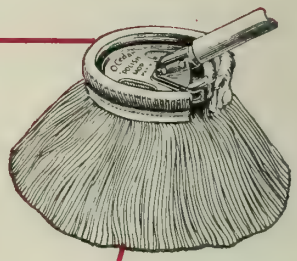
Important Announcement

Re O-Cedar Polish Mops



LAST November we announced the withdrawal of some of our lines in O-Cedar Polish Mops. We agreed and fully intended not to drop these omitted lines from our series until we had given our jobbers a chance to complete the filling of such orders as they had already taken, or might take, in the immediate future. Our recent fire has upset all these good intentions. We find that the containers for these odd sizes have been completely destroyed—and if we were to place an order now with the tin manufacturer we could not get delivery for many months, which will make it too late for us to accomplish any good by filling these orders.

We, therefore, have to announce that sizes of O-Cedar Polish Mop announced for omission some months ago, are now permanently omitted. The sizes we now make are No. 1 and No. 3, retailing at $1.50 each.

O-Cedar Polish Mop

CHANNELL CHEMICAL COMPANY, LIMITED

369 SORAUREN AVENUE, TORONTO

A Procession that Never Ends

A visitor to a large factory was personally conducted over the whole establishment, and was visibly impressed by the vast organization and output.

Addressing the President of the Company, he said, "It is all truly wonderful—but what are you going to do when every person has one of these articles?"

The President gravely replied that he would have to give serious consideration to that point, which had not occurred to him before.

"By the way," he asked, "what calling do you follow?" "I am a school teacher," was the reply. "Then," said the President, "what are you going to do when all the children grow up?"

The connection is obvious!

Horse Collar Pad

With Exclusive Features

Nothing will discount the value of a horse to its owner like a sore shoulder. To insure the shoulder of a horse keeping in good condition, TAPATCO BRAND Collar Pads cannot be too highly recommended.

TAPATCO BRAND Pads are made of an excellent grade of Cotton Drill, which gives the Pad long endurance against heavy wear, and they are filled with our own specially prepared composite stuffing material.

EXCLUSIVE PATENT

We have recently added a new feature, which is one of the greatest improvements that has been made in the manufacture of Sweat Pads since they have been on the market, viz.—our new patented staple and felt reinforcing device for attaching the hooks to the Pad. This prevents the hooks from pulling off easily, even where the fabric has been weakened by long use. **This form of attachment is found only on Pads manufactured by us.**

With our long years of experience devoted to the manufacture of Pads, we feel in offering you TAPATCO BRAND Pads, we are giving the best that money and experience can produce.

ORDER THROUGH YOUR JOBBER

They are made in Brown and White, or in Solid Old Gold with red felt edge. Furnished in 10", 11" or 12", width and sizes from 18" to 25".

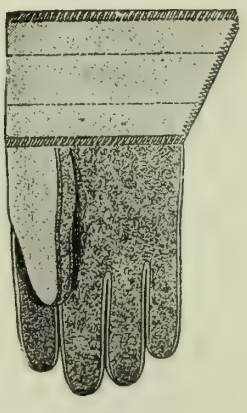
Strong Call for TAPATCO Cotton Gloves

This is the time of the year when the call is doubly strong for Cotton Gloves. Men, women, boys and girls bring these gloves into constant use with the opening of Spring. They use them in the garden, they use them in the garage, they use them in the barn, they use them everywhere.

This army of workers, the country over, want a good glove, a glove that will stand big wear. Sell them the TAPATCO BRAND, the tried and reliable glove. Once used, it is always demanded.



The price at which the Glove sells, combined with its quality and reputation for wearing, makes the TAPATCO BRAND an easy seller. They are made in Band Top, Knit Wrist and Gauntlet Styles, light, medium and heavy weight. Jersey gloves and mitts in Oxford, Tan and Slate. We also make a leatherette-faced glove that is a winner everywhere.

The TAPATCO BRAND has the quality, the appearance and all the merits required to make it a big and steady seller. Stock up with this line of Cotton Gloves, and you are sure of good returns. Give the TAPATCO BRAND lines prominence, it will mean good profits, and pull other sales. Order through your jobber.

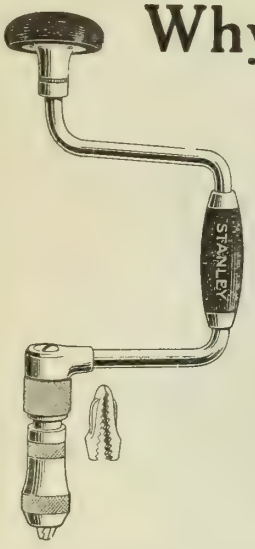
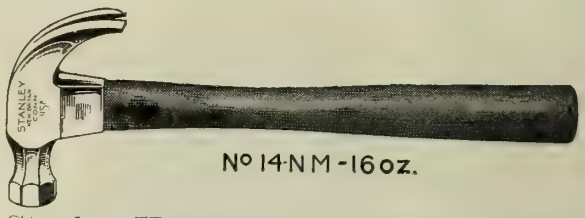
SKILLED MECHANICS ORDER STANLEY TOOLS BY NAME

Why Waste Time Offering Substitutes?

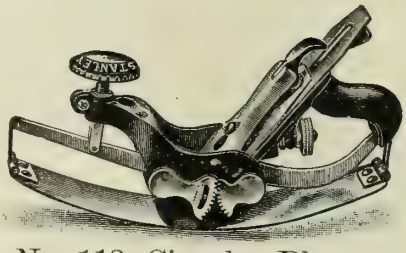


To build up a sound, permanent tool business, we advise carrying the great, leading lines made by "Stanley," at Roxton Pond, Que., and New Britain, Conn.

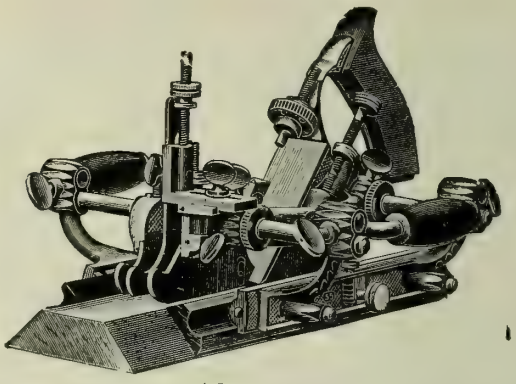


Stanley Hammers are properly hung. The right tool for a particular carpenter.

The concealed ratchet brace No. 921, mechanically perfect, beautifully finished; a most dependable tool.

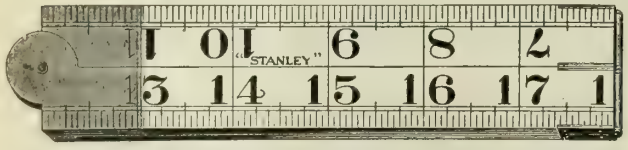


No. 113. Circular Plane, accurately adjusted.

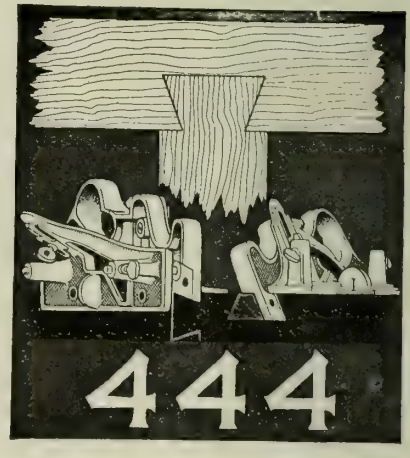


No.444 Plane is for making dovetail, tongue and groove. A most useful woodworkers' tool.

Almost every carpenter must have a Stanley Universal Plane.



It will pay you to sell Stanley Rules. They are as perfect as rules can be, and satisfy the most exacting mechanic.



A TOOL THAT'S STAMPED **STANLEY** IS THE BEST OF IT'S KIND

The Stanley Breast Drills with steel frames, the Stanley Hurwood Screwdrivers are the best to be had at the price.

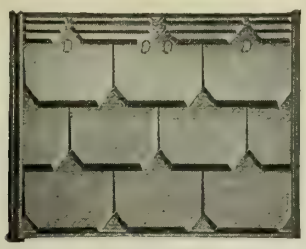
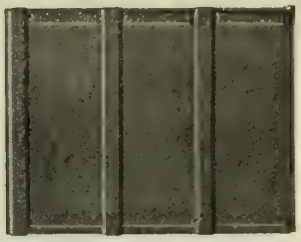
Rock-Faced Brick Metallic Siding



"Eastlake" Metallic Shingles, patented April, 1885; March, 1887; Jan. and July, 1894; Oct., 1900.



"Manitoba" Metallic Siding.

SHEET METAL BUILDING MATERIALS

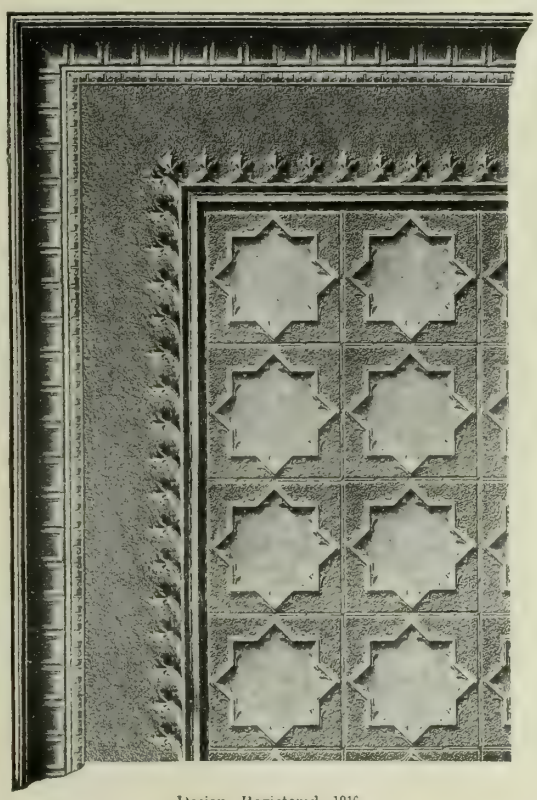
There's big business ahead in Sheet Metal Building Materials. There are new barns and garages being put up and old ones being renovated, besides buildings of every other description on which Sheet Metal can be used to advantage.

The dealer can push sales of Sheet Metal on the strength of the fire-proof merits of sheet metal covering. It is an economical method of reducing fire insurance rates, and gives buildings a handsome appearance.

Metallic Roofing Tiles

We carry an extensive line of Metallic Roofing Tiles. They are made in Diamond, Gothic and Spanish Patterns, the latter being the biggest seller. Our Metallic Tiles and Shingles have stood the test of years. Dealers who know our make never hesitate to recommend them for all purposes.

ATTRACTIVE DURABLE PROFITABLE



Design Registered 1916
Metallic Ceiling.

When the dealer sells "M R Co." lines he is sure of giving his customer excellent value for his money. "Quality First" is the undeviating policy we adhere to. Our materials are made to last. They have a fine appearance too. In our Catalogue are illustrated hundreds of designs. They include all the popular patterns and there is no taste that cannot be suited from this varied assortment. It is the most complete on the market.

Appeals to Buyer Instantly

There is good profit for you in handling our "Ceiling and Wall Plates, Cornices and Mouldings." They are so simply laid and so handsome and durable they appeal to the purchaser as soon as shown. They are interchangeable, and beautiful designs can be worked out with no trouble.

Why not add this profitable line to your business? It's a live wire line. Your inquiry is solicited. Send for our Catalogues, which contain a galaxy of attractive designs and valuable information about our products.

Maintaining Accuracy on Inside Measurements

When grinding inside diameters, the progress of the work can be checked up properly only if fine measuring instruments of great accuracy are used.

To insure the necessary degree of accuracy on internal grinding, practical machinists use the Starrett Inside Micrometer. This serviceable tool assures accuracy from 2 to 32 inches, depending upon the various lengths of rods used. Standard gages or rings are furnished to slip under the collars to extend the rods.

Contact surfaces are hardened, and provisions made to adjust for wear. The auxiliary handle is very handy in taking measurements in deep holes and other places where this micrometer could not otherwise be used. It accompanies sets only when ordered.

Study the Starrett catalog No. 21MA and become familiar with the uses for this micrometer and other tools which are not familiar to you. Complete knowledge of the Starret line of 2100 styles and sizes of fine tools will help you in making sales. Write for copy to-day.

Quality

THE leader in every industry, to maintain his lead, must safeguard the quality of his products.—Rigid inspection and careful supervision are important factors.—To products of iron and steel this principle applies with tremendous force.—It means safety, security and stability.—We safeguard the quality of our products, believing quality will be recognized long after the price is forgotten.

Service

OUR customers must be served. One of the dominating factors in any successful business is Service.—We succeed only through the good will and good wish of the people we serve.—This thought permeates our entire Organization, from the President down.—Our employees feel the sense of responsibility this principle implies; and each one directs his efforts to maintain the high standard of service we aim to render.

Big Ben

A *Westclox* Alarm

In Canada $3.50

A sky high material market, increased duty and war tax, have made it necessary to raise Big Ben's Canadian price to $3.50.

Big Ben set himself a big task. When material prices began to climb, he decided to absorb the increase as long as possible. Everything he used advanced, but the economy of larger output, and shop savings here and there enabled him to hold his price and maintain his quality.

He couldn't overcome added duty and war tax. His loyal friends in Canada could not absorb a greater increase in cost, so he raised his price fifty cents.

In every Big Ben advertisement appearing in Canada and the States, the $3.50 price is quoted.

Since November tenth all Big Ben shipped from the factory have been fitted with $3.50 tags.

Dealers who have Big Ben in stock may secure $3.50 tags from our Toronto Office, 58-64 Wellington St. W.

Big Ben has done his share. He's notified the public, he's changed his price ticket, he's made it easy for you to standardize the new price.

Big Ben is oversold. Deliveries are slow. The new price is easy to get.

La Salle, Ill., U.S.A. **Western Clock Co.** Makers of *Westclox*

IF it is your desire to offer the best vacuum cleaner that can be manufactured —sell the

OHIO ELECTRIC

SUCTION CLEANER

It is a deep-cleaning machine, not only picks up all the dirt and threads, but also all fine dust, moth eggs and disease germs right out of the rugs, wall coverings, upholsteries and tapestries.

We have standardized the Ohio by eliminating all the non-essentials. Nothing has been adopted but which has been found practical in the hands of our customers.

The high-grade construction ensures you against being continually called upon to replace defective parts.

We look at it this way—the Better the Ohio the Larger our sales.

We have a splendid dealers' proposition. Write for it to-day.

In High Esteem Because of Merit

Sheer Merit has made it possible for Hoyt Metals to reach all parts of the civilized world at an annual turnover of more than 5,000,000 dollars.

From the figures of Hoyt's annual turnover you will get an idea of the popularity of Hoyt's metal. You will also understand that there is a tremendous and efficient selling force and organization promoting the sales of Hoyt's Metals. Behind the merit and promoting power of Hoyt's metals there is the benefit of over 40 years' experience. This gives Hoyt's Metals a superiority that sets the standard which others strive to emulate.

Let Sheer Merit induce your use of Hoyt Metals.

We would like you to have our catalog and further particulars. Write, asking us to send both.

How About Automobile Accessories?

Almost every good hardware store will handle Automobile Accessories this year. How about your accessories department? Of course you want Tires and Brake Lining, Spark Plugs and Spot Lights, but don't forget the Tools.

Men who pay thousands of dollars for good automobiles don't try to save pennies in buying tools. They want tools that are as good as their cars. Tools that can be depended on in emergencies.

We make a first class line of automobile tools as well as complete sets of tools for automobiles or motorcycles. They are good selling items, and better still, they are giving satisfaction to users.

The "PATRICIA"

with the Silver Mound

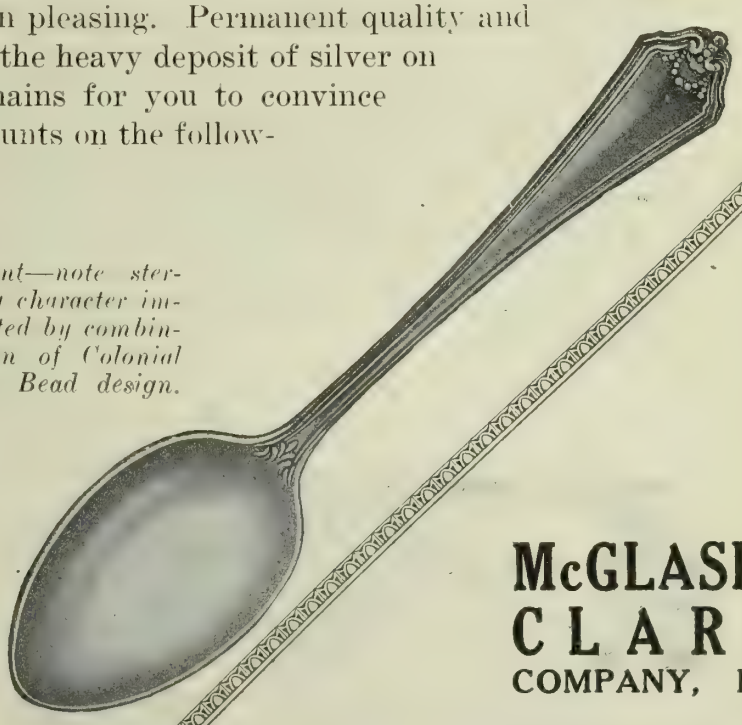
Back — Note the position of the sterling silver mound, which prevents wear.

A New Low-Priced Ware That Gives Long Service

Perhaps you are still hesitating about our latest production. Here is our assurance once more that the "Patricia" line offers a really saleable ware at a moderate price. The service value of the sterling silver mound on back of all spoons and forks is indisputable.

The design is beyond question pleasing. Permanent quality and durability are obtained from the heavy deposit of silver on an 18% nickel base. It remains for you to convince yourself, by writing for discounts on the following:

1 Doz. Tea Spoons	$4.75
1 Doz. Dessert Spoons	8.50
1 Doz. Table Spoons	9.50
1 Doz. Dessert Forks	8.50
1 Doz. Medium Forks	9.50
1 only Sugar Shell	.75
1 only Butter Knife	.90
1 only Berry Spoon	2.00
1 only Meat Fork	1.25
1 Doz. Dessert Knives	7.50
1 Doz. Medium Knives	8.00



Front—note sterling character imparted by combination of Colonial and Bead design.

Start Your Tool Season By Sending for These Books

Canada needs tools this year as she never needed them before. Needs them in her factories of peace and war supplies. Needs them in her homes and helps to economy and patriotic saving.

Are you going to take full advantage of this unusual tool year? Let us help you put your tool department on a war footing so you will be thoroughly prepared.

Our handbook "How to Sell Tools" and the "Star," our monthly Sales Service Bulletin, point the way to easier sales, more sales and sales with more profit in them. They tell you how to reduce your selling costs, meet stiff competition and speed up your turnover. They show you how to make more money in tools.

Send to-day for "How to Sell Tools" handbook and get on our mailing list for the "Star." We'll send you besides our book of Selling Helps and tell you some of the definite ways in which Millers Falls co-operation will help you.

Tool selling success is important to you. The season will soon be here. Write us now.

Star Power Blades have a metal-cutting efficiency that helps give the munition maker a larger output at a smaller manufacturing cost. And Star Hand Blades have had this same leading quality since hack saw blades were first made. Star blades mean a bigger blade business for every dealer who keeps them. Are you a "Star" dealer?

OVER 115,000 MOTOR CARS IN CANADA

This tremendous new market has been created for you within the last few years. Are you taking advantage of it?

All through 1917 these cars will be rolling up mileage, using up lubricating oils and other motor car accessories.

The Imperial Oil Company, Limited, is helping hardware dealers throughout Canada to get a share of this motor car business. It is advertising POLARINE MOTOR OIL more extensively than ever in newspapers, motoring magazines and farm papers from Coast to Coast. It is advertising GARGOYLE MOBILOILS in the best motoring magazines in Canada. Signs, booklets, circulars, movie slides, etc., are available for your use in pushing these high grade lubricants.

POLARINE is now supplied in two grades called POLARINE and POLARINE HEAVY.

GARGOYLE MOBILOILS are supplied in four grades for engine lubrication and are sold by a chart of recommendations to insure the use of the correct grade.

By handling POLARINE or GARGOYLE MOBILOILS you are enabled to make from 33 1-3 per cent. profit and up, depending upon the quantity you sell.

This is your opportunity to join with hundreds of other hardware dealers in the profits and permanent patrons which will result from your co-operation in the handling of these products.

Please write us at 56 Church Street, Toronto, for complete information.

The IMPERIAL OIL COMPANY Limited

BRANCHES IN ALL CITIES

BRITISH MADE

—not made British

British Made

implies that the origin of the goods is British. If a spark plug is *assembled* in England from component parts manufactured abroad, is it "British Made," *or is it "Made British"?*

In conception, as also in design and execution, *"Sphinx" Plugs* are the production of *one factory*, and embody just those qualities of efficiency and endurance associated with the best traditions of British Manufacture. *"Sphinx" Plugs* will always be replaced free of cost should faults of workmanship or material be found in them.

"Sphinx" Plugs are made in various patterns to suit all types of engines.

May we send you further particulars? We will gladly do so on receipt of your request.

"Watch My 1917 Sales"

Says This La Crosse Dealer

In 1915 the Fred Dittman Hardware Company made a profit of $200.00 with the Evinrude—the first season they handled it. Last year they boosted their profits to $280.00. This year with prospects better than ever, they're aiming at the $400.00 mark. And we know they are going to hit the mark. Dealers who handle

EVINRUDE
DETACHABLE ROWBOAT & CANOE MOTORS

generally do. Some two thousand of them are setting a new mark this year. They're getting ready now for a big season, and we're going to help them with real shoulder-to-the-wheel co-operation that produces actual sales.

Let us help you, too. Get our attractive proposition to dealers. Figure your profits and, at your most conservative estimate you'll find it a proposition well worth tying to. Write for it to-day.

EVINRUDE MOTOR CO.

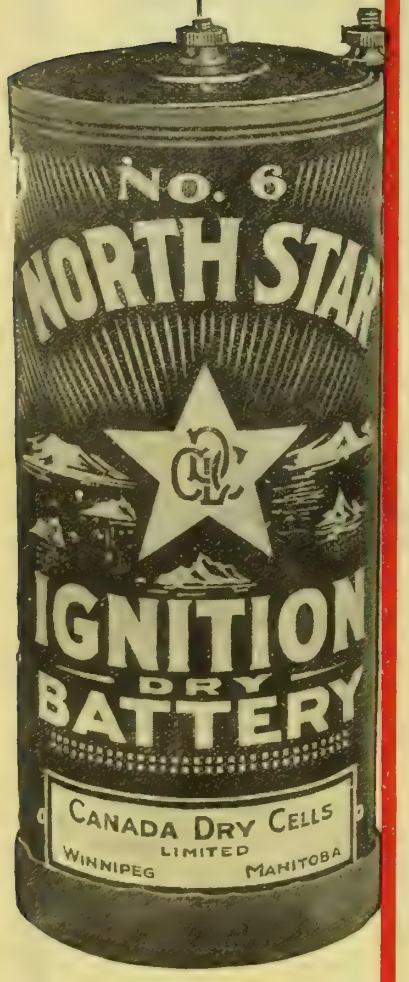
Over 80,000 sold. Used by 25 Governments

Distributing Branches: **E. Drolet, Montreal. A. R. Williams Machinery Co., Toronto. Capt. A. A. Sears, Victoria, B C.**



Hitch Your Wagon to the "North Star"

The North Star to the mariner and astronomer represents stability; its position is basic and dependable. It remains steadfast.

When choosing the name "North Star" as a trade mark, the significance of the North Star in the heavens was in mind. It has been the aim of this factory to live up to the name, through Quality and Service. Retailers and users of North Star batteries will bear testimony to the fact that they have not failed them, but have given reliable service.

"North Star" BATTERIES

The North Star battery is good to sell because of its quick, full-powered, lasting qualities. Your business is requested on the merits of the goods themselves. If the batteries being made in Canada —Western Canada—has any appeal to you, it is mentioned as a fact, and not as an argument. The goods themselves must measure up to your satisfaction to weld a bond between us.

Order from your jobber, or give us his name.

46 Years Doing Two Things Well

1—Putting Honest Quality Into Merchandise

IVER JOHNSON

2—Telling the Public About It

A 46-year-old reputation for building quality into Iver Johnson products would be an ample foundation stone for a very handsome business.

But simply making the best bicycles, motorcycles, revolvers and shotguns did not satisfy us. We realized that for dealers to capitalize the name Iver Johnson to the full we must tell America's millions about our products.

So from the beginning we adopted the policy of taking the public into our confidence.

What has been the result of our consistent policy of National advertising?

The public takes a lot for granted when the name "Iver Johnson" is branded on merchandise. It takes for granted that an Iver Johnson Revolver is the safest small firearm made; that an Iver Johnson Bicycle is the best and easiest riding bicycle on the market; that an Iver Johnson Shotgun is the best obtainable value for the price.

It is no idle phrase to say that Iver Johnson products are the EASIEST SELLING quality products of their kind in the world.

Send for Catalogs on Bicycles, Motorcycles and Firearms.

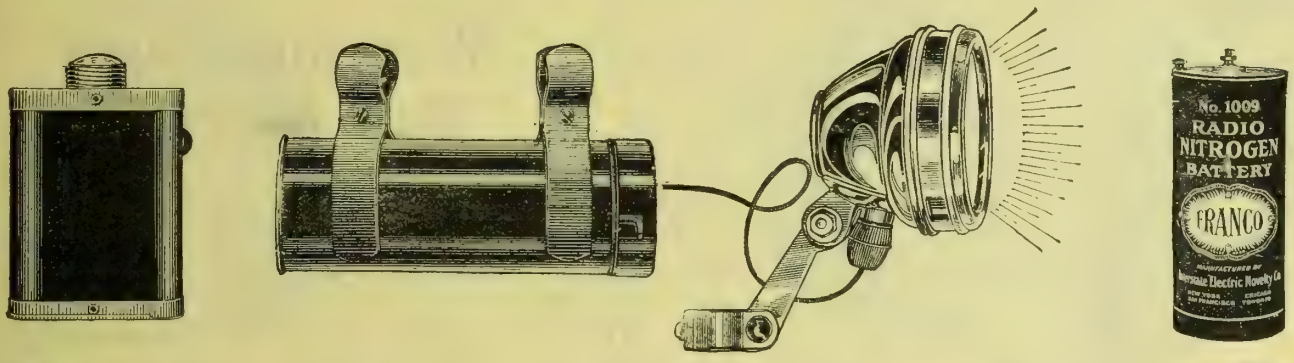
FRANCO
TRADE MARK

Flashlights

For Motorists

Cyclists and Motor Boat Owners



WINNERS
of the
GOLD MEDAL
at the
Panama-Pacific Exposition

Better satisfaction, longer life of battery and stronger light cannot be obtained anywhere—and they cost no more than others.

"Franco" Flashlights are not like ordinary flashlights—they have patented features that no other makers dare use. The **"Franco"** fibre case is one of these features—giving **Franco** Flashlights an advantage above all other makes. Let an ordinary flashlight come into contact with metal and it will short circuit—in other words, the metal will cause a contact with the battery, and the battery will burn out—then you'll wonder what is wrong.

A **"Franco"** fibre case battery around anywhere and it will never short-circuit on you. This is a feature that all motorists, cyclists, and motor boat owners should be familiar with. Remember, a **"Franco"** flashlight is short-circuit proof. This feature alone, regardless of the better light, longer service and fool-proof workmanship of **"Franco"** flashlights is reason for insisting on getting none but **"Franco"** Flashlights. Ask for **"Franco"** Flashlights and be safe. You can get **"Franco"** Products from most hardware dealers. Write us direct if your dealer can't supply you.

WIRING MATERIAL

That Brings Repeat Orders

Spring-time means a Busy Time for those Hardware Dealers who have ample stocks of electric wiring material.

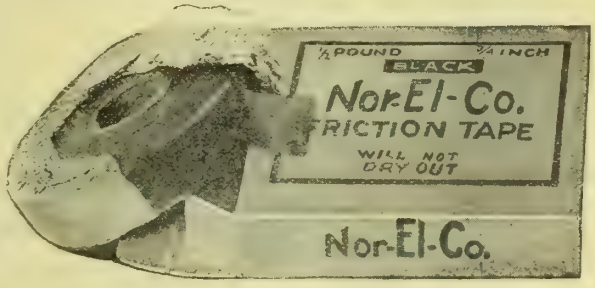
Our nearest house can make immediate shipment of Sockets, Switches, Lamps, Batteries, Bells, Buzzers, Irons, Toasters, Flashlights, Automobile Accessories, etc. Every line we carry is absolutely dependable and is backed by the Northern Electric guarantee for quality.

Two lines of Wiring Material, which are recommended for your consideration, when repleting your stock for your Spring trade, are

Northern Electric Soldering Material

Northern Electric Soldering Material has the uniform working qualities that are demanded by the trade and is universally acknowledged to be an even-flowing, smooth and from every standpoint, as economical a brand as any at present on the market. The principle is scientifically correct. It affords a clean, even flux for all electrical connections, and is guaranteed against chemical changes and deteriorations regardless of weather conditions.

N.E. Soldering Material is put up in convenient-sized containers. The paste comes in 2, 4 and 8-ounce boxes, and 1 and 5-pound pails—while the Soldering Salts are put up in ½, 1 and 5-pound bottles.



Northern Electric Friction Tape

is a closely woven tape, having exceptional sticking qualities. It is suitable for all work where a strong tape is required. Guaranteed not to dry out in six months, if kept in original package. Comes in half-pound cartons and one-ounce rolls. Runs 117 feet to the pound.

Complete Stocks of Electrical Supplies are carried at each of our Distributing Houses. Order your supplies from our nearest House.

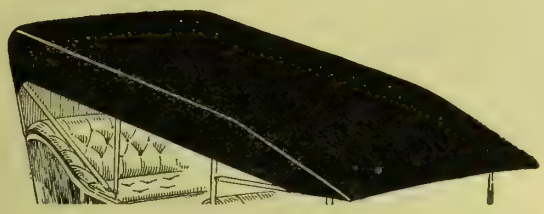
Auto Tops Made NEW

For $2.50 Instead of $50.00



$1.85 worth of Rub-R-Tite made this three-year-old top as good looking and as waterproof as new—saving the cost, to say nothing of the bother and inconvenience of putting on a new top.

A season's wear usually makes an auto's top shabby and somewhat porous if not leaky. That condition can be remedied and the top re-waterproofed and refinished—whether mohair, pantasote, rubber or imitation rubber.

RUB-R-TITE

Auto Top Waterproofing and Dressing

is a pliable, waterproof preservative for any auto top, new or old. It is the best kind of first-aid to neglected or leaky tops, renewing the appearance and durability of the material. It is quickly and efficiently applied by anyone and its low cost means a new top at a 95% saving.

HERCULES
Smokeless Shotgun
POWDERS

At this end of the shell is the name of the powder. Ask for and look for

INFALLIBLE

A Story of Importance to You

YOU can't know too much about the shells you carry in stock. The information you should have is easy to obtain for it is told on the shell itself. The two ends give the story—a story that is important to you because *it is important to your customers.*

On the base you will of course find the name of the maker and loader from whom you order the shell. At the other end, on the top wad, are printed the size and quantity of shot, the quantity of powder and, last but not least—*the name of the powder.*

Hercules Infallible Smokeless Shotgun Powder, may be obtained in any standard make of shell. Undoubtedly the names of the shells you carry in stock are given in the column to the right.

The next time you order shotgun shells it will pay you to specify that they be loaded with Infallible Powder. The cost of the shells will be the same and you will make sure that you are selling your customers as good powders as can be made, in their favorite brand of shells.

If you are not familiar with the advertising service which we give to retail hardware and sporting goods houses it will pay you to drop us a postal asking about it.

On this end is the name of the maker. Hercules Smokeless Shotgun Powders may be obtained in shells made by the following:

Now here is your old friend dressed up in new form, specially put up for your car-owning customers who want their cars neat, clean and shining, without tiresome work or much expense. You ought to get acquainted with

AUTO LIQUID VENEER

There is no limit to the business that you can do on this article. You can make a *big thing* out of it. Just think, you can make a dirty, mud-freckled car shine like new without a spot or stain in ten minutes' time. You eliminate 90% of your car washing with all its sloppy, tedious work, and big garage charges.

Take warning! Soap and water will surely ruin the finish of your car, as it will your piano. The varnish needs reviving; it needs to be kept from drying out. It needs Liquid Veneer, which feeds it and keeps it *glossy* and *clean* indefinitely. There is no comparison, nothing that can equal Liquid Veneer.

And so simple! Just spray it on in a fine mist. Then wipe dry with a piece of cheese cloth. No scratching, no oily film. The one preparation that gives absolute satisfaction, or money back.

Auto Liquid Veneer is a winner. Send for full particulars to-day.

Dealers: A Big Opportunity

THE AUTO SPRAY OUTFIT

consists of a 50c brass finished sprayer and a $1.00 32-ounce bottle of Liquid Veneer, both packed in an attractive display carton. This outfit retails for $1.50. A tremendous national advertising campaign is now under way. Will you be prepared?

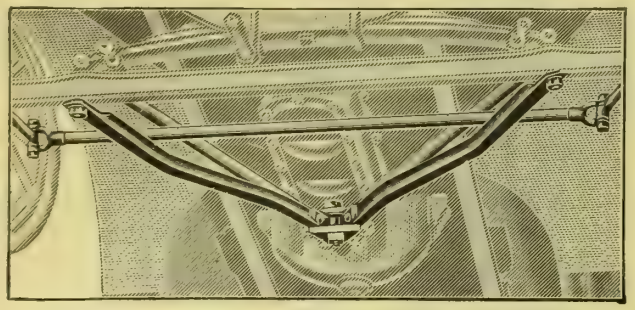
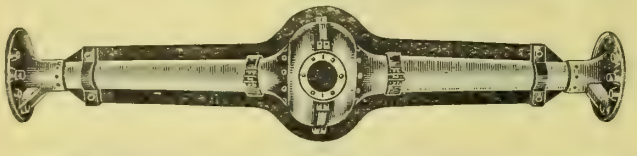
Three Auto Accessories For the Rocky Roads of Western Canada

EASILY SOLD TO YOUR CUSTOMERS WHO OWN FORD AUTOMOBILES.





FIRST—*Sub-Radius Rod*—Keeps front axle in perfect line, and stops vibration of front axle, giving the steadiness to the steering wheel which heavier cars have. Essential for rutted roads.

SECOND—*Rear Axle Truss*—Prevents rear axle housing either sagging or being thrown out of line. The housing is liable to give way on country roads, which means a new set of housing, new gears, and a lot of labor. They can be put on in ten minutes. No extra fittings, no holes to drill. Small cost. Made entirely of steel—no castings to break.

THIRD—*Running Board Truss*—For stiffening running board and fenders. Also prevent fenders splitting at corners, thus prevent rattling. Built of channel steel, one piece. No extra bolts or machine work required.

Write for particulars, or ask your jobber. He carries them.

EQUIP THE GUARD!

The Night Watchman's Story

"After I rang my box at midnight, back of the old freight shed, I walked up the spur track and there he was, under the shipping platform, touching a match to a pile of excelsior. I covered him with my COLT and made him come along. He's a tough character—the police have him now—and if it had not been for my COLT this place would have gone up in smoke last night."

Dealers:

Industries all over the country are increasing their guard. THIS MEANS MORE FIRE ARM SALES.

You want to get your share of this business. Would it not be a good idea to mail employers of watchmen in your locality a special circular?

We will supply the circulars—any quantity—with your name and address thereon.

Watch-Case Style Speedler Control.

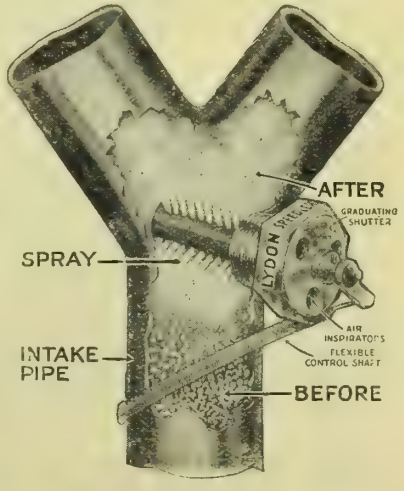
The Speedler

"Less Gas—More Mileage"

When your customer is buying gasoline, put it up to him this way:

"That you have a device that is guaranteed to save him from 20 to 40% of the gasoline consumption per mile on any automobile now built. A Speedler will enable him to travel from four to five miles on the same amount of gasoline he now uses to travel three."

The Speedler is a neat, scientifically designed air spray, which screws into the intake manifold above the carburetor. It is easily attached to any car.



THE SPEEDLER

Saves Gasoline—Gives More Mileage—Increases Engine Power—Acts as Emergency Air Brake—Is a Decarbonizer—Makes Engine Cool.

TRY ONE ON YOUR OWN CAR

If interested, tear out this page and keep with letters to be answered.

STERLING FURNACE

Gives the Heat and Saves the Fuel

The STERLING is up-to-date because of its high efficiency and simplicity of operation. When it comes right down to giving bang-up good service, you can bank your last dollar on the STERLING.

The **Heat Retaining Apron** encircling the fire pot in the STERLING is a new departure in Furnace construction, and increases its efficiency from 30% to 40%. All the heat radiated from the fire pot is held inside the Furnace until the passing air absorbs it and carries it into the rooms. Because of the increased length of the air chamber, which is from 12 to 14 inches longer than most other Furnaces, the velocity of the air is increased, thus preventing it from becoming overheated and making possible the passage of the largest volume of air.

The outside appearance of the STERLING is classy and striking, but the **real Furnace** is inside the Casing. It is constructed on common sense principles to get the best kind of heat from the least amount of fuel.

It costs less to install a STERLING Furnace because you can do the job quickly and easily, there is hand room for every operation.

Drop a card for catlog and full particulars. The **STERLING AGENCY** means increased business and larger profits.

You Can Sell Ten Times More Than We Can Make

THE range trade never faced a success so gigantic.

The "new" Lighter Day range is a sensation. It captures all womankind.

It IS NEW—new from the blue and white enamel to the brick-lined fire-box. Take a note of its many marvels. All are new. All exclusive. All strengthen its mighty appeal to womankind.

It goes many steps further even than the original Lighter Day range.

You know the high-oven range is here to stay. You want to stock it. And won't you stock the latest, most wonderful-selling proposition the range-dealer ever encountered?

Every woman will know of this revolution in kitchen comfort. It is a sensational invention—and will be advertised in a sensational way.

Within a month two-and-a-half million (2,500,000) will be thoroughly familiar with the marvels of this "new" Lighter Day range.

You will be easily able to sell ten times more ranges than we can supply you.

A broadside in newspaper publicity, outstripping all former range publicity achievements, will stir the interests of every woman in Canada.

Followed by bang-up, sales-clinching literature and a constant curtain-of-fire in the leading women's magazines!

WE ARE READY TO SHIP NOW

Get your orders away to-day. Order to your limit. The "new" Lighter Day can be purchased CHEAPER NOW than at any time in the coming twelve months.

There is a knock-out hanger ready to link up your store with the advertising.

Women are going to buy the "new" Lighter Day on sight. You are going to harrass us—you can sell ten times more than we can make.

Get your orders in now. Get stocked up with the latest Lighter Day range.

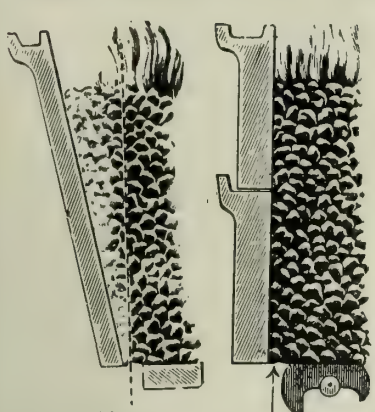
IMPROVED Canadian Air Warmer



The ordinary tapering, solid caldron fire-pot, showing how ashes lodge and accumulate, interfering with both radiation and combustion.

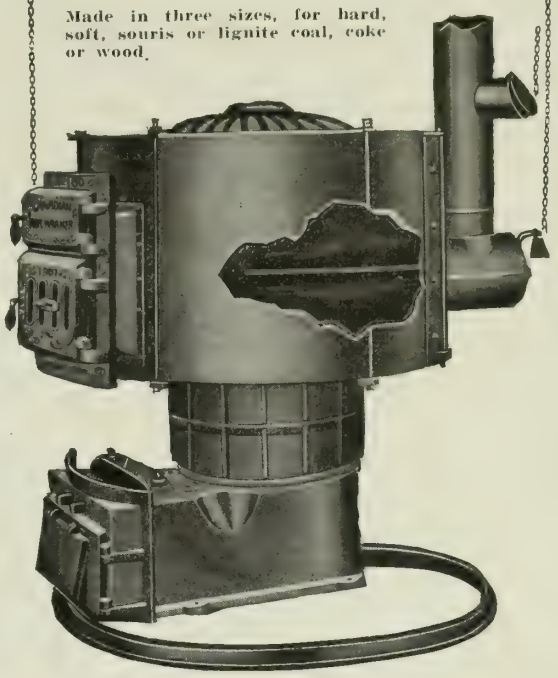
The two-section perpendicular fire-pot of the Canadian Air Warmer with fuel therein clean, bright and active.

The improved design of the Canadian Air Warmer embraces a feature that puts it in a class by itself above the ordinary furnace.

Accompanying illustration makes clear the difference in construction and operation of the Sectional Perpendicular Fire-pot of the Improved Canadian Air Warmers and the ordinary solid caldron, tapering fire-pots commonly in use.

It has double fuel doors, reversible flue with long fire travel, single cast iron back pipe, direct and indirect draft damper operated from front, large ash-pit, heavy sheet iron combustion chamber, radiator and air flues, cast iron upper and lower deck castings. Fuel doors don't become hot and radiate heat in cellar. Smoke exit is at back of combustion chamber.

Made in three sizes, for hard, soft, souris or lignite coal, coke or wood.



Approved by Practical Men

ST. LAWRENCE
STEEL RANGE

Sell one of these kitchen beauties and you pave the way for increased range sales. The housewife delights in showing it to her neighbors—then it is talked about, advertised and wanted by many.

It is not only superbly ornamental, but it's of superior practical utility, possessing all modern devices associated with high-class ranges, besides its own exclusive features.

Loose nickel-plated trimmings. Front hinged or lift top. Large and serviceable ash pan.

Bodies made of best quality polished steel sheets. Parts coming in contact with fire protected with heavy asbestos millboard. Oven of good size. Heat circulates around and against oven linings; oven door can be readily removed.

Grates genuine revolving pattern, and removable by simply turning a button. Fire box ends, fronts and backs interchangeable. Wood grate supplied if required; linings cast iron.
Tops made in sections for interchanging; nickeled parts loose and easily removable.

High closet, good size, and fitted with drop door. Dampers easily operated and control heat perfectly. Powerful waterfront of great capacity. Extra large cooking top.

Full particulars on request.

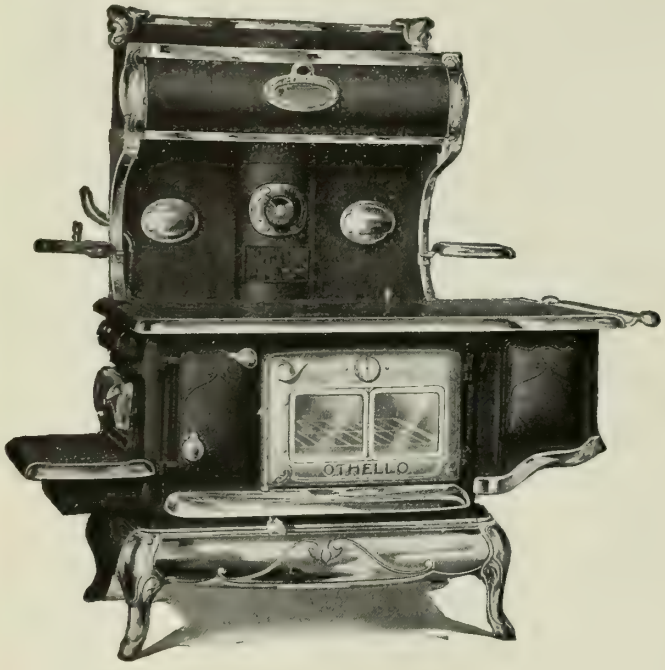
Bake All Day With One Firepot of Coal

We guarantee that the

"OTHELLO" TREASURE

Cast Iron Range will bake all day with one firepot of coal.

A most important point to be considered in a range is its baking capabilities. We have satisfied ourselves beyond all doubt, and hundreds of users all over Canada testify with us that the "OTHELLO" is a marvel for baking.



Reservoir—High Closet and Glass Oven Door.

The Most Economical Range in Burning Fuel on the Market.

A FEW SPECIFICATIONS:

Large Deep Firebox, with straight sides and ends, which are **Interlocking** and **Interchangeable.**

Oven is well ventilated

Oven is fitted with patent cold rolled **Steel Bottom,** which ensures quick and even baking—and a saving of fuel.

Tile Back comes in two designs—either Ivory or Green Tiles.

Special Wood Lining, takes wood 28 inches long.

Top is burnished or polished. No need for black-leading.

Thermometer on every range.
Reservoir is large and made of copper.
Two Sizes—9-19 and 9-21, with six 9-inch covers. Oven of 9-21 is 22 x 20 x 13.

☞ Owing to War conditions, in consequence of which restriction of production of Stoves and Ranges is unavoidable, we are obliged to offer the line of "TREASURE" Stoves and Ranges in fewer finishes and styles than as heretofore Catalogued.

New Price List is in the Printer's hands, and will shortly be ready for distribution, when same will be mailed to Agents for "TREASURE" Stoves and Ranges, who may rely upon getting shipments and service on all lines Catalogued.

All orders entrusted to us will receive our most careful attention.

The D. Moore Company, Limited

HAMILTON, ONTARIO

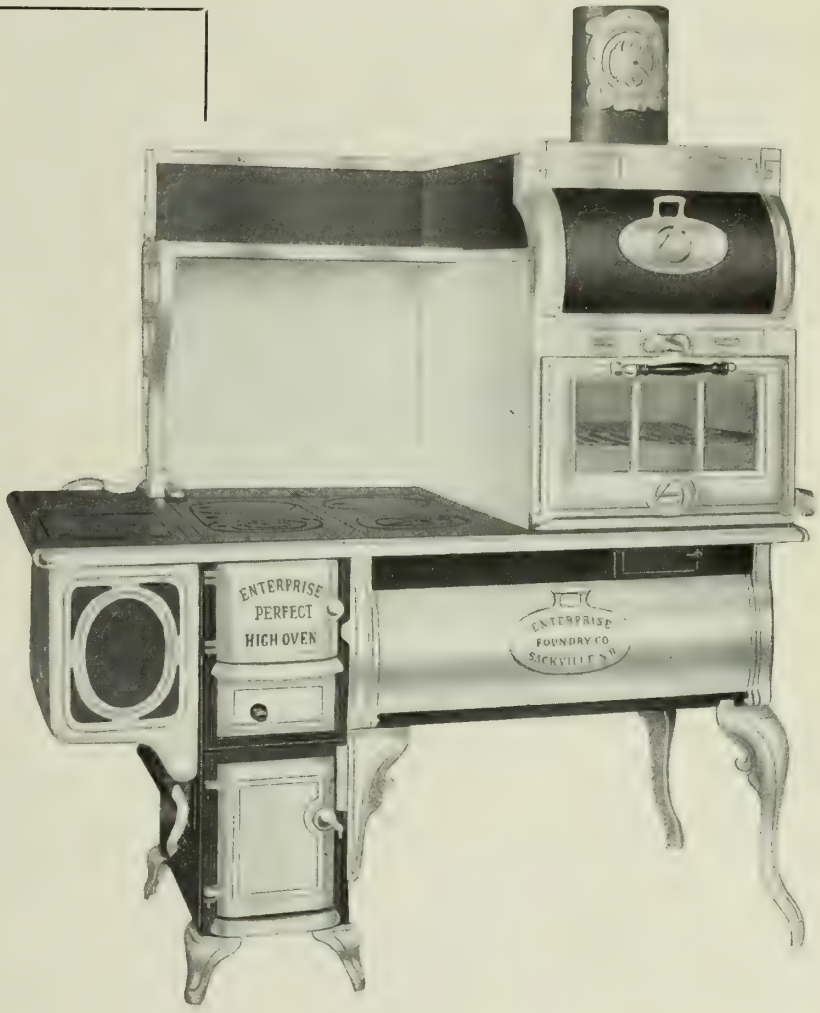
LARGEST EXCLUSIVE MANUFACTURERS OF STOVES AND RANGES IN CANADA.

THE MARK

OF QUALITY

If interested, tear out this page and keep with letters to be answered.

There's Big Money in the Agency for *THIS---*



MANY novel features, as well as its simplicity and ease of operation, mark a new era in range construction and put new life in range demand.

Burns any kind of fuel, and will do more work with less fuel than any other range made, because it has double the oven capacity of the ordinary range. Each oven is 20 inches square and works perfectly. Both ovens have perfectly smooth walls and floors, and the joints being airtight, there is not the least trouble in keeping them beautifully clean.

Each oven door is fitted with thermometer, and made to drop level with the oven bottom; in addition to which the lower of "DAYLIGHT OVEN" is fitted with specially tempered glass, and is just the right height for easy operation. The BACK surrounding the cooking surface is of white Porcelain Enamel, 19 inches high. This not only presents a beautiful appearance, but can be kept perfectly clean, and is the most sanitary finish that can be procured. The SHELF above this back leaves plenty of space below for pots, etc.

The Enterprise Perfect Double High Oven Range

The RESERVOIR IS DETACHABLE. It simply hooks on, and can be attached or detached in an instant. It is made of Heavy Sheet Copper and holds 9 Imperial gallons.

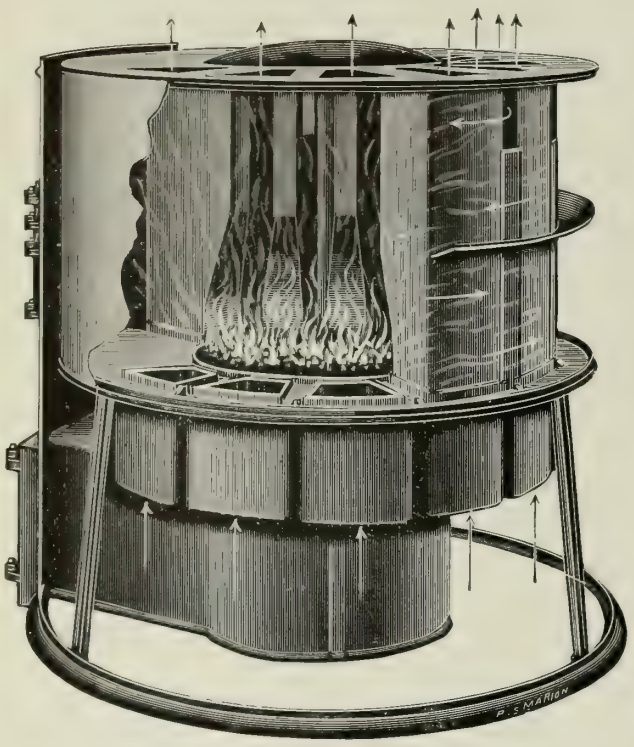
The FLUES are large and of the simplest construction, ensuring easy operation, and will not clog with the dirtiest fuel. The CLEAN-OUT DOORS are so placed that the flues can be easily cleaned from the front.

Secure the Agency for this Wonderful Range for your locality and write to-day for a copy of our New 104-page illustrated Catalog, just out, showing one of the finest and most complete lines of ranges and furnaces made in Canada.

The Enterprise Foundry Company

SACKVILLE, N.B.

If interested, tear out this page and keep with letters to be answered.



THE RECORD
Calorific Warm Air Heat Producer

The furnace that is different from all others, as it is the heaviest and most substantial furnace ever produced, as instead of the ordinary steel radiator it has a row of heavy cast iron tubes standing over the fire pot, around which the fire circulates and the air passes up the center. The tubes are easily heated, as a small amount of gas escaping from the coal or fuel heats the cast iron tubes through which the air passes, causing a constant flow of warm air, which heats the building steadily at a low cost.

The tubes are set up in cup joints, which makes the furnace gas-tight. A heavy cast iron door frame extends from the bottom to the top of the furnace. It has an extremely heavy fire pot. The ash pit is large and roomy, and there is no rods to burn off. In fact, it is the only furnace on the market that will satisfactorily heat a large hall, church, school, or modern home, and it is made in four sizes: 8-18, 8-21, 8-24 and 8-30, and has a heating capacity from 40,000 to 140,000 cubic feet.

We are also manufacturers of the ADMIRAL, EQUATOR, CHINOOK AND TORRID hot air furnaces, and a complete line of wood and combination furnaces, and we will be pleased to send you catalogue and quote you prices at any time.

Record Steel and Cast Ranges

We are also manufacturers of medium and high-priced steel and cast ranges, a sample of which we are showing here, and they are the best because they have stood the test for the past 66 years. We also manufacture a line of bush ranges, cast and wood cooks a large line of elevated oven ranges, hot blasts, oak heaters, globe heaters, Franklins, parlor and hall stoves. A large line of steel and cast iron box stoves. Also a large line of Farmer and Ruhman boilers and hollow ware.

Send us a card for our catalogue and price list and secure the agency for the largest line of stoves, ranges and furnaces manufactured in Canada.

Why buy from two or three firms when we can supply you with any thing you may require?

Cuspidor
2 sizes

Why Indurated Ware
Is Justly Claimed To Be Superior!

INDURATED WARE is Wood Pulp moulded under enormous hydraulic pressure and baked at extreme heat.

A patent double-dipping process gives the Finish, which makes the Ware of a Glossy, Rich Appearance, and makes it Impervious to liquids.

Indurated Ware is seamless—cannot fall apart, shrink or become watersoaked. As you see, we make tubs, pails, washboards, cuspidors, etc., of this ware, as well as other articles not illustrated here.

Write to us, or ask Our Traveller for catalogue.

Butter Pail for Delivery and Storage Purposes

General Utility Pail

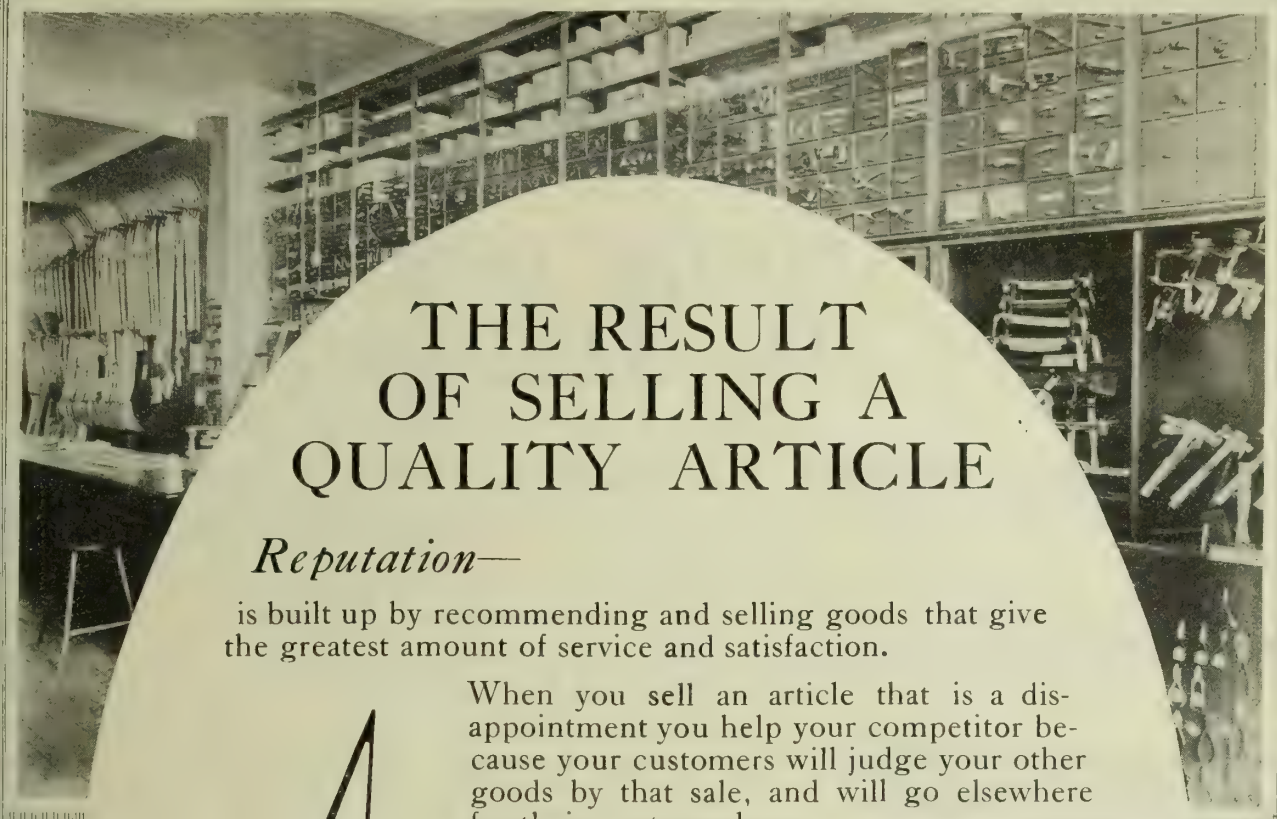
Pigeon Nest

Just now Fibreware is enjoying unprecedented popularity, owing to the high price of zinc, tin and galvanized iron. Why not take advantage of the demand created for this ware and share in the profits? *Fibreware is not a mere War-Time substitute—it is the ware of to-day and all to-morrows. Fibreware is here to stay.*

EDDY

ESTABLISHED A.D. 1851.

ARE YOU HANDLING OUR NEW "SILENT 5's"? NO AFTER GLOW!



THE RESULT OF SELLING A QUALITY ARTICLE

Reputation—

is built up by recommending and selling goods that give the greatest amount of service and satisfaction.

When you sell an article that is a disappointment you help your competitor because your customers will judge your other goods by that sale, and will go elsewhere for their next purchases.

Make your slogan "quality and service" and you will surely get the "cream" of the hardware trade, besides high-grade goods do not cost any more to handle, bring you in a large volume of business, decrease your overhead, and increase your profits.

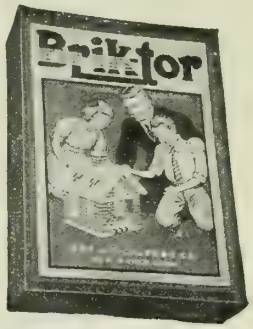
Gilbert Electrical Sets

The whole science of electricity is now within the reach of boys. Gilbert Electrical Sets are complete, practical electrical outfits. The boy can build his own motor, can generate electricity, operate electric models, install electric lights, push buttons, electric buzzers, door bells, etc.

No toys offer a boy such fun and interest and instruct him to such a great extent as these Gilbert Electrical Sets. With each set is included a Manual of Instructions, written in plain boy language, and minutely illustrated. By following its directions any boy can learn the fundamentals of electricity. Four outfits, ranging from $1.50 to $15.00, and a chance for the dealer to sell the boy our electrical accessories after he has purchased an outfit.



Brik-tor

The Toy for Young Architects.

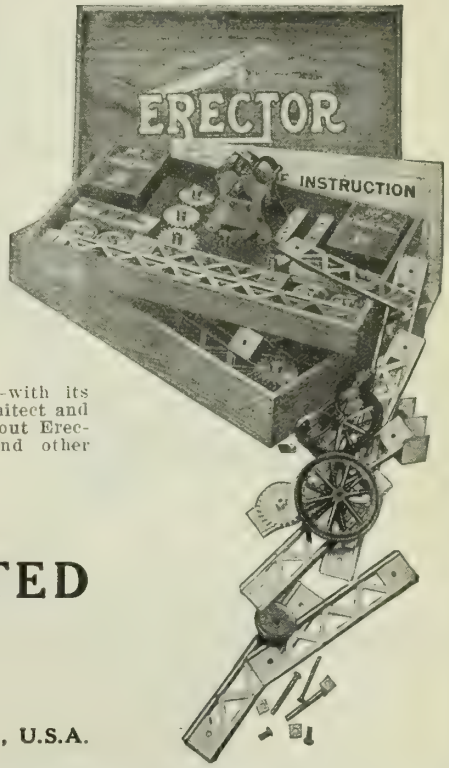
Here is a popular Gilbert Toy used for bricking-in and completing structures made with Erector and other construction toys. It is a further development along the lines of miniature construction — very popular with young architects.

GILBERT TOYS

ATTRACTIVE---DURABLE---PROFITABLE

Gilbert Toys offer the dealer a good, worth-while profit, and they are so linked up by Nature, by our big advertising, and by the Gilbert Institute of Erector Engineering—with its diplomas that all boys covet, that the sale of one generally means the sale of some other Gilbert Toy.

These toys are backed up by the biggest of toy advertising campaigns—a campaign that creates sales—and by the best store service ever furnished dealers.



ERECTOR REG. U.S. PAT. OFF.

THE TOY LIKE STRUCTURAL STEEL

No construction toy has ever "caught on" and sold in such quantities as Erector—with its square girders like real structural steel. With this toy the boy becomes a young architect and engineer. There will always be a big demand for Erector Sets, both with and without Erector Motors, especially as Erector offers the boy the opportunity of a Diploma and other rewards in the Gilbert Engineering Institute.

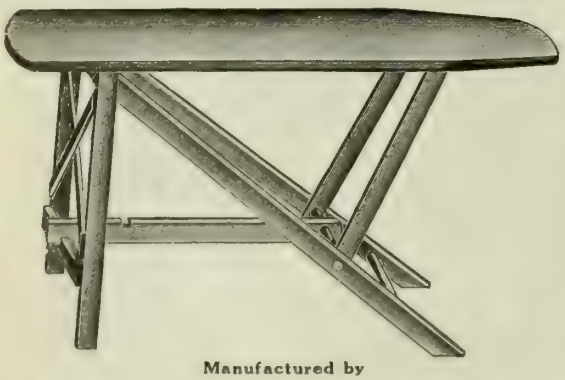
Daisy Ironing Stand

Made from selected lumber and guaranteed to be one of the most rigid on the market.



McFarlane's Roped Extension Ladder

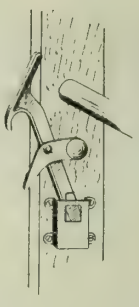
This ladder has been our big seller for years. It can be taken apart and used as single ladders. It is self-hooking and self-releasing; is very light and strong, being reinforced with wire cable, let into a groove on the back of the ladder.

The ladder is spread at the bottom to correspond with the length.

Made of Clear Pine and B.C. Fir. Malleable Iron Castings, Rock Elm rungs and nailed together.

Stock Sizes

20, 24, 26, 28, 30. 32, 36, 40, 44 feet. 2 section style, 46 ft.; 60 ft. 3 section style.



THE utility and extra value of McFarlane Line make them popular sellers and trade builders. There is no dissatisfaction with customers. Our values leave a nice profit for dealers.

We specialize on Ladders, Verandah and Lawn Furniture and make a dandy line of Wash Boards, Ironing Stands, Sleighs, Etc.

Our goods can be secured from reliable jobbers.

McFarlane's Household Step Ladder

This step ladder is the cheapest ladder that we are making. We consider it the best ladder on the market to-day for the price. It is made of B.C. Fir and nailed together. The casting on this ladder is a one-piece, pressed steel casting and is securely fastened to the sides and top. The rack on the ladder is always up when the ladder is closed, and horizontal when in use.

Stock sizes, 4 to 8 feet.

The Best Lantern Ever Devised For Use Around And In The Barn, House, Field, Garage, Woods, Camp, Boat, Shop!

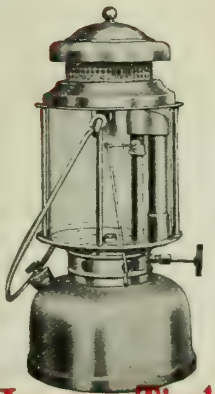
Thousands of farmers, campers, miners, fishermen, watchmen, storekeepers, factories, blacksmiths, all kinds of men in all kinds of work have bought these famous lanterns during the past three years.

Just imagine it! This lantern gives *as much light as 25 ordinary lanterns or lamps combined!* Simply floods the whole surroundings with brilliant white light. 300 *Candle Power!*

Simple! No wicks to trim. No chimneys to clean. Not a particle of odor or smoke! Anyone can operate it with success. And safe! Why, you can carry it along through the fiercest wind or snow storm and it will burn on steadily—brilliantly lighting you on your way.

Jobbers

We Guarantee Our Goods to Sell and Stay Sold



About 12 inches high! Light—weighs only 3½ pounds! Gives powerful white light! One quart gasoline or kerosene operates lantern for from 10 to 16 hours.

The Storm King 300 C.P. Incandescent Lantern

This incandescent lantern is made to last—to give good service for years and years. It is made of extra heavy metal—beautifully nickel-plated. Every part is built extra strong — most simple. Hasn't got a lot of "gew-gaws" to "get out of whack." You can light it as easy as you can any ordinary lantern. You can adjust it to as dim or as bright a light as you wish—just as simple as turning down a wick on an ordinary "coal oil lamp."

It's a really wonderful lantern. If it wasn't we could not have sold the tens of thousands of them that we have sold. Everyone who buys one is delighted with it. Everyone who sells it finds that more and more people want a Storm King all the while.

Housewives No Longer Tied Up In a Hot Kitchen On Ironing Days! This Invention Enables Them To Do The Ironing Out On The Cool Porch!

—or out under the shady trees in the back yard—wherever they will.

No more slaving over an ironing board in a stifling kitchen. No more running back and forth from a hot stove with hot, heavy irons! With a Comfort Two-Point Gasoline Flat Iron (Self-Heating) you aren't even tied down to the length of an electric feed cord, as you would be if you used an electric iron. Furthermore, a Comfort heats in about one-tenth of the time it takes to get an electric iron at ironing heat.

And low in operating cost! Merely costs one-half cent per hour! A half teaspoonful of alcohol generates the iron in 30 seconds. Three-quarters of a pint of gasoline "runs" the flat iron for *five* (5) full hours! Why, that is a whole lot cheaper than keeping the range going to do one day's ironing—to say nothing of the difference in labor and discomfort.

The thousands of housewives who now own Comfort Flat Irons know what it is to really enjoy comfort on ironing day—to keep cool and fresh despite a "big day's ironing." Thousands of other women—housewives—should become acquainted with the

Comfort Two-Point Gasoline Flat-Iron

All that is needed is to show the Comfort and the result will be that scores and scores of people will want one—and will buy one.

The Comfort is a fine looking self-heating flat iron as well as one that *acts* fine. It weighs 6½ pounds—and is constructed of the finest materials, with parts heavily nickel-plated. Every part is interchangeable. Its entire design is beautifully simple. No danger of clogging or of failing to operate. A special extension needle keeps the orifice free of dirt at all times.

An iron that we guarantee to the limit—just as *we guarantee every article we make*—a flat iron that needs but to be introduced in your community to sell by dozen after dozen.

Dealers:—Order samples through your Jobber or direct subject to return if unsatisfactory.

Jobbers:—No better selling article exists than the Storm King Lantern and Comfort Iron. Send for details and samples.

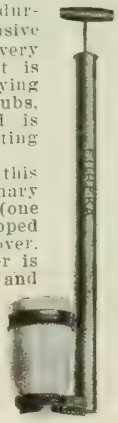
Garden Implements
That Are Profitable To Handle

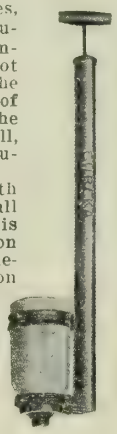
We aim for repeat orders in the manufacture of our goods. They are of the highest standard and they are made very profitable for the dealer to handle. You are certain to do good business with these lines.

Eureka Glass Tank Sprayer



This is a reliable, durable and inexpensive sprayer and has a very neat appearance. It is excellent for spraying potatoes, small shrubs, and live stock, and is used for disinfecting poultry houses.
The receptacle of this sprayer is an ordinary Crown Fruit Jar (one quart size), equipped with a heavy zinc cover. The pump cylinder is made from I.X. tin, and is considerably longer than the ordinary glass tank sprayer. The solution comes into contact with zinc and brass only, which will not easily corrode, thus giving longer service.

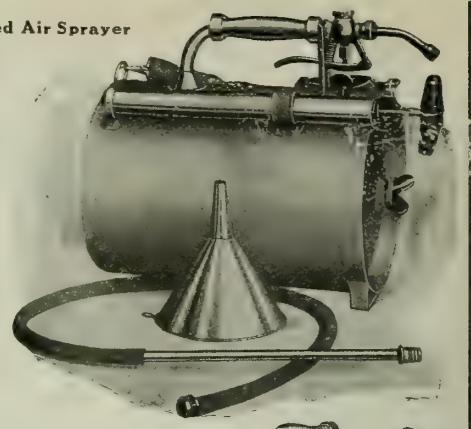
Eureka Continuous Sprayer



As the name implies, The Eureka Continuous Sprayer, is so constructed that it not only sprays on the downward stroke of the plunger, but on the upward stroke as well, thus causing a continuous mist-like spray.
Sprayer is fitted with a 3-16 inch brass ball check valve which is positive in its action and practically indestructible. A solution tank is made from heavy I. X. tin, and is so constructed that it will not turn over when filling. Capacity one quart. It is a general purpose sprayer.

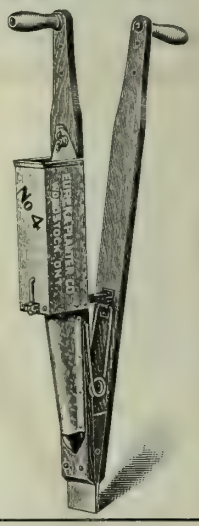
The Eureka Planter Co.
Limited
Woodstock, Ontario

Fountain Compressed Air Sprayer



There are no complex or intricate parts in the Eureka Fountain Compressed Air Sprayer. It is both positive and automatic in action and is easily operated by having the automatic controlling valve directly in front of the handle and the controlling lever under the handle.
This valve and lever will save the cost of the sprayer in making a given amount of solution do so much work. One filling and one minute spraying will spray 2,000 plants. None is wasted. Lever cuts off instantly at operator's will.

Eureka Corn Planter



Eureka Corn Planters are made in one and two-hand styles, well finished, light and durable, positive and accurate in action. A seed guard adjustable by a nut outside the hopper determines the number of kernels to be dropped in each hill. No matter what position the steel slide (which slides back and forth on the hopper base) is held, only one lot of seed can pass into the jaws at one time. A flat steel spring is used in place of the cheap brushes used on ordinary planters, which constantly wear out.

BEAVER BOARD
FOR BETTER WALLS & CEILINGS

Build Beaver Board Business
And It Will Build Business For You

Selling paint sells brushes. Selling safety razors brings orders for blades. Every hammer calls for nails.

Just so with Beaver Board. Every time you sell an order of this sturdy wall and ceiling board you'll have a call for paints, varnishes, nails, screws, and other building hardware.

Beaver Board sales are invariably followed by sales of other products you carry. They foretell building or repairing activities that mean much good business for you.

Why not get this Beaver Board business as well as the business that follows? Other merchants in neighboring towns are doing it. They'll tell you that Beaver Board story.

Let us send you their names.

The Complete Quality Line of

FAULTLESS CASTERS

2500 different sizes and styles comprise a line that will meet the various demands of your customers —every kind of finish, every kind of wheel, every size socket, for ALL kinds of furniture.

SPECIAL NOTICE

We received the Gold Medal, Highest Award at St. Louis in 1904, and at San Francisco in 1915, on "Furniture Casters of All Types."

Faultless Caster Company

EVANSVILLE, INDIANA

"Move the FAULTLESS Way."

THEIR MONEY-SAVING PARTNER

An Army of Merchants Use the "Champion"

and while using it they SMILE—and grow PROSPEROUS. There's a REASON, several in fact. No more book-keeping drudgery or the necessity of spending evening hours in straightening out tangled accounts. No more losses due to forgotten charges. No more annoying disputes with customers over amount owed because with the "CHAMPION" system they know from day to day the exact amount of their indebtedness.

The "CHAMPION" is more than an account register. It is a COMPLETE SYSTEM that takes care of EVERY TRANSACTION in a merchant's business—CASH SALES—MONEY RECEIVED ON ACCOUNT—CREDIT SALES and MONEY PAID OUT. The "CHAMPION" accountant does it BETTER, QUICKER and in a more satisfactory manner than is possible with the old method of keeping books, or with ordinary account registers. Nothing complicated about the "CHAMPION." So simple a child can grasp its details.

METAL CONSTRUCTION—FIREPROOF—HANDSOME IN APPEARANCE.

Fill out coupon —return to us and we will give you complete information regarding the style "CHAMPION" ACCOUNTANT best suited to your business.

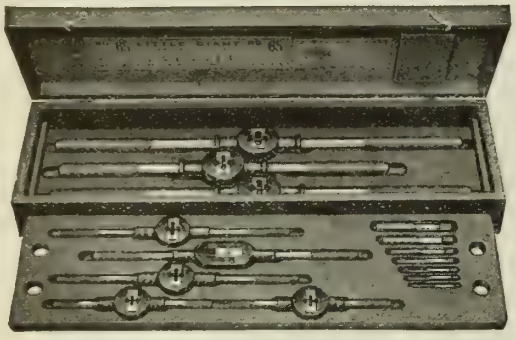
Little Giant

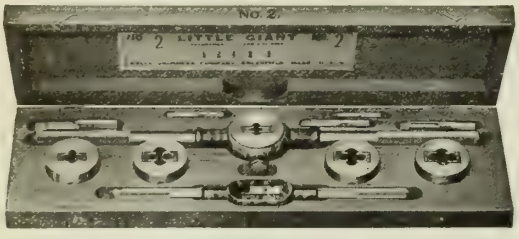
Screw Plates

are a profitable line to handle. Our line includes assortments of Taps and Dies for mechanics, plumbers, automobile owners, garages and repair shops, blacksmiths, millwrights, gas and steam fitters, electrical conduit workers, farms and ranches, construction camps and mining companies. These are your best customers and people with whom you deal every day. They all require screw cutting tools, reamers, etc. You can reach them and please them and hold their patronage with Little Giant Screw Plates.



FULL MOUNTED ASSORTMENTS

A stock for each die. Indispensable where more than one workman has to use the set.



SINGLE STOCKED ASSORTMENTS

The Little Giant Die is free and easy-cutting. It is adjustable, and can be reversed in the collet so as to cut close to the shoulder if desired.

COMBINATION ASSORTMENTS

Both U.S. Standard and S.A.E. Standard Dies and Taps for each cutting size. Avoids the expense of buying a separate outfit for each thread standard and the consequent duplication of Stocks and Tap Wrenches.

Our Service
to Dealers

does not end with the shipping of the goods from our factory. We help the dealer sell them, realizing that his customers are our customers as well. To this end, we furnish dealers with attractive envelope stuffers imprinted with their name and address, in quantities as desired. These can be enclosed with monthly statements at no cost to the dealer or can be mailed separately to prospective customers.

If interested, write for prices, catalog, etc.

The Irwin Auger Bit Company now offers a line of augers with a Japan finish in addition to their line of augers with a high polish. These Japanned augers, especially the ship augers, offer exceptional values for work in rough or heavy timber.

In comparing net prices on these augers, as well as on the complete line of Irwin wood boring tools, it should not be forgotten that the list prices of Irwin bits remains unchanged. The company will continue to maintain the list prices that were universally adopted in 1905. These lists are printed in Catalog No. 10 which also contains information about auger bits that is of especial value.

PREPAREDNESS

TO THE HARDWARE TRADE

Are You Prepared to Supply

the farmers—your customers—with their Farm Fencing this Spring?

IF NOT—can you afford to take a chance on losing your connection with your customers? "Mail-Order-Houses" and "Manufacturers-selling-direct" (manufacturers who supply "Mail-Order-Houses" are in the same class from a dealer's standpoint), are anxious to get your customers, and the bait they use is "low prices on Farm Fence," realizing that fencing represents the farmers' largest yearly expenditure and that he—the farmer—your customer—does more talking about Fencing before he buys than any other article he purchases.

THE "IDEAL" SPECIAL SALES PLAN OF SELLING FARM FENCE will interest you—will allow you to compete with "Mail-Order-Houses." No investments—no handling—no collections, and you make a profit on every roll.

The "Ideal" line is complete—37 different styles of Farm Fence, 6 styles Ornamental Lawn Fence, all sizes Farm, Stock and Lawn Gates, all other products that go with Fencing as Steel Fence Posts, Fence Tools, Coiled Wire, Barb Wire, etc.

Co-operate with us—who sell Ideal Fence "through-the-dealer-only"—in convincing the farmer—your customer—that you—his local dealer—can supply him with a better quality of fence at just as favorable a price as any "Mail-Order-House."

Full particulars sent on request.

W. A. Fraser has come back

YOU remember W. A. Fraser, the brilliant Canadian author of "Mooswa," "Thoroughbreds," "Blood Lilies," and other good stories of India and Canada? Latterly Mr. Fraser's literary activity has been in repose, but now he has arranged to provide **MacLean's Magazine** with a brand new series of short stories, the first of which, "A WANDERING MUMMY," is a fine tale of the Canadian West, with an East Indian strand woven into it. It appears in the April **MacLean's.**

Canada is producing some very good short-story writers—new ones that is. We have Stringer, McFarlane, Sullivan, Leacock, Miss Laut, Roberts, Seton, Parker, O'Higgins, Patullo, L. M. Montgomery, et al, of international fame; and a new lot breaking into the greater light. One of these newer writers is

Hopkins Moorhouse, who is "coming strong." Mr. Moorhouse is a Manitoban, and to the April MacLean's he contributes The Centre of Gravity, "corking good stuff," to use the language of the Editor. This is the first of a series of stories featuring Andy Doolin, a "character," keeper of a saloon. These stories are of the boom days in British Columbia's gold mining history, days when Jim Crotty, Dutch McGee, and The Parson, desperadoes all, made life a catchy thing and stirring.

Mary Gaunt, a new contributor to MacLean's, has in the April Number a short story, At the Arrow Forks, a tale of the Yukon. Miss Gaunt is a British woman who knows her Canada well—from sojourn, visit and study.

James B. Hendryx is a well-known writer whose 90,000-word serial story begins in the April MacLean's, The Gun-Brand, is of the Peace River Country, and is of gun-runners, Indians, whiskey, a Hudson's Bay Company post, voyageurs, and a dream of a girl.

Agnes C. Laut, H. F. Gadsby and W. A. Craick are contributors to the April MacLean's. Each contributes a special article of great and immediate interest. For example, MISS AGNES C. LAUT, a wonderful woman, writes of the war situation as found in the United States, and in its relation to Canada. H. F. GADSBY writes of the Canadian Senate—a judicial article on a subject of ever-growing political interest. W. A. CRAICK'S contribution is Motor Roads of Canada, and is concerned with motor-touring in Canada. His article is well illustrated.

Now, these are just a part of the contents of

MACLEAN'S for April

THEY suffice, however, to give you a good idea of the distinctive Canadian character and appeal of MacLean's, and to let you and others see that in MacLean's one gets his money's worth and more, whether it be mere entertainment that is sought, or something informative, stimulating and timely concerning Canada life, interests, thought and politics.

Push the Small Garden Scheme

A Special Feature for the Spring Campaign—Make a Strong Effort to Push Garden Tools, Etc.—Where Patriotism and Profit go Hand in Hand—Some Practical Suggestions.

IT is not often that patriotism and profit go hand in hand. It is not often that the merchant has a ready-made handle to use in launching a bigger-than-ever spring campaign.

The retail hardwareman is in this enviable position at the present time.

Everyone knows of the campaign that has been launched by the various legislative bodies to induce people, city people particularly, to go in for what is generally termed "backyard gardening." It is felt to be a national need for the production of foodstuffs in Canada to be increased. For two reasons: To enable Canada to send larger supplies to the Mother Country; and to mitigate conditions and help bring down food prices in Canada. The objects of the move are well outlined in the introduction to a pamphlet of hints issued by S. C. Johnston, of the Ontario Department of Agriculture, in which he says:—

"At no time in many years has the necessity and importance of the home vegetable garden been so clearly demonstrated as this year. Our country is face to face with a situation which necessitates the increasing of our food supplies by every means at our command. Vegetables as well as other foodstuffs must be given careful consideration as they form an important part in the every day diet of most individuals. Every city and town dweller has the opportunity to help in this great work, in that there are hundreds of available plots now practically unproductive, which could grow vegetables. To be able to secure fresh, crisp vegetables should in itself be reason enough to make us help along this movement, but in addition the saving makes it of the greatest importance.

"Vegetables should form a more important position in the daily food of the average human being for they possess qualities which should ensure their use in much larger quantities than is the custom at the present time. In these times of stress when the energies of all people are being devoted to further the cause of justice and right, the securing of a supply of vegetables should commend itself to the average householder in our towns and cities. A more instructive pursuit than growing vegetables in the backyard cannot be found, for by commencing with a small plot devoted to their culture a wonder lesson unfolds itself before our eyes as we watch the vagaries of nature in her work, and a broader and more intelligent view of the simple phases of life appear before us."

The men who formerly spent the spring evenings with pipe and evening paper are going to be out in the backyard, wielding the spade.

A Big Response

It can be taken for granted that there will be a general response. Already, in fact, there are proofs of this: Men who never before thought of turning a sod on their property are talking in terms of seeds and potato bugs. Mr. Cityman is literally preparing to peel off his coat and get busy as soon as the weather permits.

The reason for this is not hard to determine. Every Canadian man, be he ever so old, and fat, and weighed down with responsibility, has a guilty feeling that he is not at the front. No matter how good his reason is for not being in uniform—age, physical disability, responsibility, what you will—he yet feels keenly at the back of his mind the fact that the greatest crisis, the most terrible tragedy in the world's history, finds him a spectator. He cannot go to the front, but any chance to do something, to stand sacrifice of some kind, finds him doubly eager.

Well, here is one opportunity. More food is needed. The Government suggests that the city man turn in and raise vegetables in his back yard. It is a comparatively small thing, but it savors of patriotism. Consequently, the lawyer, the office man, the mechanic,

are ready to take the suggestion up to the utmost of their power.

What it Means

It means this: In every city and town of the Dominion this spring the spaces formerly sacred to the tomato can and the broken hoop are going to be turned into productive plots. The men who formerly spent the spring evenings with pipe and evening paper are going to be out in the backyard wielding the spade. It means that there is going to be a most remarkable demand for everything that goes with gardening—garden tools of all descriptions, seeds, netting, wire, sprayers, hose, etc.

That is the point that will perhaps appeal most to the hardwareman. The movement certainly promises to create a huge demand for goods that can only be secured at the hardware store. For this reason it will pay the dealer to make a special effort to push sales in these lines. At the same time, however, there is the additional incentive to action that lies in the fact that it is practical patriotism to do so. Every advertisement of garden tools, every selling talk, every window display, means just so much more weight behind the Government campaign. This is one case where Patriotism and Profit are almost synonymous terms.

The Campaign

And now for a few suggestions as to the campaign.

It is felt to be a national need for production of food stuffs to be increased.

In the first place, it should start at once. The householder is making up his mind right now as to the part he is going to play in this backyard production scheme. Now, then, is the time to get him interested in a garden cultivator, a spade, extra lengths of hose, etc.

It goes without saying that newspaper advertising is a necessary part of this campaign. It is probable that the local paper is carrying an advertisement from the Government urging the gardening plan. Go to the publisher and find when this ad. is to appear. Then contract with him for space in that issue on the same page as the Government ad.; if possible, get space immediately under it.

Result: John Stayathome reads the Government appeal and gets worked up into a regular white heat of enthusiasm on the question of gardening; decides to do his "bit" out in the backyard, to help crush the Kaiser by creating cab

The picture to the left shows a city man engaged in spraying bushes. The picture at the right gives an idea of the decorative effect which can be secured by planting flowers around the home. It should be borne in mind that those who take up the backyard gardening idea will succeed in beautifying their property as well as raising vegetables.

bages; lets his eye descend the column and sees that Wideawake & Co., hardware dealers, are offering an especially complete line of gardening tools—everything he needs, in fact. The outcome is too obvious to mention. If Wideawake & Co. and John Stayathome do not get together in the matter of a new spade, an extra length of hose, a supply of seeds and a cultivator, it is because some other part of the store campaign has been overlooked.

Send Out Circulars

It would also be good business, for some merchants at least, to circularize the locality on this same question. A neat folder, giving full description of lines carried and prices—don't forget the prices—would be the means of creating a wide demand.

Here is a suggestion: The pamphlet referred to above is "A Vegetable Garden for Every Home," and is issued by the Ontario Department of Agriculture. It contains a great amount of information designed to help the amateur gardener who, as is well known, requires a great amount of help if he is going to raise anything worth while. The instructions given cover soil preparation, planting, thinning, cultivation, watering, transplanting, securing extra crops, and a wide range of information on each vegetable, its peculiarities and possibilities. The pamphlet, in other words, is a very valuable one for the plodding amateur.

It is probable that an enterprising merchant could induce the department to supply him with a certain number of these. Then he could send them out to a select list of prospects with a folder of his own attached, giving information on garden tools, etc.

Once again—Patriotism and Profit going hand in hand.

And the Windows Also

A very important point also in connection with the campaign will be the use of the store windows. The advantages to be derived from this source of publicity are so obvious that it is not necessary to labor the point. Every progressive hardware dealer will, as a matter of course, arrange a number of garden tool displays.

It would be advisable to link the displays up with the Government campaign to some extent at least. This might be done by the use of cards, something after this order—"Do Your Bit," "Help Feed the Country," "You Can't Use a Rifle—Use a Spade."

Your Accounts are Yours---Collect Them

Through Being Negligent With Some Customers Merchants Have Allowed Big Sums to Accumulate on Their Books—One Farmer Offered to Lend Money to Merchant to Whom He Owed Money.

AN instance has been brought to attention during the past week where a hardware merchant had actually been offered the loan of money by a farmer who was owing him an account. This farmer had been owing an account at the hardware store for some time. When pressed by a letter from the hardware merchant telling him that he really needed the money to pay his accounts the farmer came to the store to talk it over. "Do you really need the money?" asked the farmer. "If you do I will have to sell a steer or colt or something else in order to get the money." On being told by the hardware merchant that he was actually in need of the money to meet his accounts and that if he did not get his money from his customers he had to borrow the money from the bank and pay six per cent. interest. "I will lend you $2,000 at six per cent," came from the farmer.

Here was an actual instance that was told a HARDWARE AND METAL representative while making calls in Ontario. The section is one in which there are many wealthy farmers—it is one of the best agricultural districts in Ontario, as a matter of fact. Yet the merchants have allowed farmers to get in the habit of running accounts and paying for them when it suited their own sweet will. One merchant has as much as $200,000 on his books in this district. It is not because the farmers cannot pay but because they do not feel inclined to pay. The merchant in many instances has come to be classed in the same category with the country newspaper that keeps on sending the paper to the subscriber but never gets any subscription money.

Collection Letters

This condition of affairs suggests that the hardware merchant should see to it that his customers pay promptly or if they do not he should have a definite promise when they would pay and see to it that they live up to their agreement. The first step in this direction is the sending out of the monthly statement with promptness. If the statement is not heeded it should be followed shortly with a letter insisting with courtesy and firmness that the account should be paid. Elsewhere in this issue under the heading of "Effective Advertising Methods" a form letter is given as a suggestion for a letter to be used in collection work.

Of course some customers owe accounts so long that it has been a chronic habit with them. If a kindly and courteous attitude will not bring the money for the account there should be no hesitancy in taking sterner methods. One of the most successful hardware merchants in a small Ontario town says he never scruples about taking a case into court if he has exhausted all reasonable means to get the customer to pay. He says he finds that he has never lost trade because he adopted such methods. Another hardware merchant says he has come to the conclusion that he will use the courts more generally if he is unable to get the customer to pay in any other way. But first of all there should be a consistent, tactful effort to get the customer to come across, without the necessity of resorting to the courts.

Shortening of Credits

HARDWARE AND METAL has during the past few months repeatedly directed attention to a noticeable development in trade matters—the shortening of credits.

Manufacturers and wholesalers have found it necessary to shorten credit terms and it seems an assured fact that the future, instead of witnessing a return to previous conditions, will see the tendency to stricter terms more and more accentuated. It has become a positive necessity. The more or less free and easy finance of the days of hectic prosperity will never again be possible.

To the retail merchant this means only one thing. He must in turn shorten the terms of credit that he allows his customers. It is quite safe to assert that the average merchant is altogether too lenient or too negligent in the matter of collections. He is inclined to let things slide, probably because he is afraid of offending his customers. In every locality there are well to do farmers, for instance, with comfortable bank balances who let their bills at the hardware store run on until they seem like the brook which "runs on forever." A few customers like this and the hardwareman, in order to keep things going, has perhaps to go to the bank for funds. He is paid over the money which his farmer customers have deposited there—money rightly his own. He pays six per cent. for it and the farmer only gets three per cent. of that. This is good

(Continued on page 121.)

Accessories

James & Reid Sold 80 Cars sories so Large That New Had to be Opened Methods Adopted

Top illustration shows a view in general hardware section. Lower shows exterior view of store. The photographer had some difficulty in taking these views and they hardly do justice to the store, which is one of the largest and roomiest hardware stores in Canada.

WHEN you approach the hardware store of James & Reid, at Perth, Ont., you are rather surprised to note a full-size automobile in one of the show windows. But when you enter the store you see a touring car, much bigger than the one in the window.

A touring car of modern make is not a small object, and in the average store would be rather inclined to overwhelm everything but the wall space. Not so in the James & Reid store, however. The store is so wide and roomy that, despite its size, this car is in nowise in the way. Moreover, this display added to the smaller car that occupies one of the show windows is an effective method of featuring one of the great activities of the store. One of the members of the firm devotes almost his entire time to the sale of cars and accessories. That his time is profitably employed is manifest from the fact that during the past year the company has sold eighty cars.

Selling Cars a Means of Encouraging Trade

Selling cars is unquestionably a profitable business, and the firm has found it so. Not only that, but it has opened up vistas of further opportunity. When a man owns a car, it is rather apt to become his pet extravagance. There are improvements to be added, incidental requirements that he feels he must have, so that large as the actual car trade is, it is only part of the business to be considered. The firm has realized this fact, and has felt that here was a real opportunity. The auto accessory trade was begun some time ago rather as an experiment, but it has long outgrown that stage. Outgrown, too, the modest quarters that were originally given to this department. When the HARDWARE AND METAL representative visited the store, this department was being rearranged, so it was impossible to get a picture of it. Counters were being removed and ample quarters prepared to take care of this growing business. The matter of convenience for customers was considered, too, and with this consideration there came also the idea of the strategic position for such a department. Facing on the side street were the oil and gasoline pumps. When a car owner stopped to fill up his car, he entered the store from the side door to pay for the purchase. With the old arrangement this led him only through a department given over to general hardware. The members of the firm, considering the need for enlarged quarters, were struck with the idea, that the way to encourage the sale of automobile accessories was to keep them in front of the man who actually owned a car. Therefore, this separate department was moved over to a location adjoining this side entrance. Now the owner entering to pay for his gasoline is brought face to face with show cases containing everything that the heart of the most rabid auto enthusiast could desire. Here you have a good combination. The man who in the nature of things is always a potential buyer, and the things that in all likelihood he would most like to buy. This accessory end of the business has grown to large proportions.

But their activities in the automobile end of the business have gone even farther than this.

Selling Service With a Car

A car is a thing that even with the best of care needs considerable looking after, and this is an item that is rather apt to influence a man who is buying a car. Therefore, the garage has been one of the most successful fields of automobile salesmanship. James & Reid looked at this idea from a different angle, but they arrived at the same conclusion That a man to sell cars to advantage, must also sell service in that particular line. The firm figure that they are in this car selling business for good, and consequently the service end of the business is one that cannot be neglected, if these activities are to be brought to the highest degree of success. Therefore, they have just completed a modern garage, near the main store, which is capable of handling all the business arising out of the car selling end, as well as being something of a trade puller on its own account. They figure that with the added service this end of their business is going to be materially increased during the coming year.

The Outside Man and the Store

The man who gets out in the country among the farmers is bound to form friendships that are of inestimable benefit to any firm. That is another phase to the automobile selling end. The man

Outgrow Dept.

Last Year — Sale of Acces- and Larger Department — Business Getting by Successful Firms.

who sells cars is a representative of the firm, and as such keeps that firm constantly before the outside public.

James & Reid have realized this, and have indirectly felt the effect. Indirectly, because a man who sells 80 cars in a year—and in this case the sales have all been made by one man—is not likely to have much spare time to do any other kind of selling. He is, however, conversant with the country, with the people and their various needs, and is in a position to give information that may prove invaluable to the other selling end. So valuable has this assistance proved, that it has suggested to the members of the firm the still wider advantages that might accrue were the outside man not so fully occupied with one line. It is the intention of the company, therefore, in the coming summer to put another man out on the road to go about the country discovering the farmers' needs and supplying them. Keeping in touch with the man who is planning new buildings, and, therefore, being the first on the ground to supply his needs. In this way it is hoped that the general business may be still further enlarged.

Not that this field of operation has been neglected in the past, but merely to improve on an already efficient organization. This is the backbone of the success of the business, the constant reaching out for some method or agency to improve the service that they are already giving the public.

Making Business By Increasing the Demand

For instance, in the past the firm has sold almost large quantities of such commodities, as paint, cement, sewer pipe, and similar lines. They believe that there is a still wider field for salesmanship in these very lines. Not in the way of depriving competitive firms of their trade, but in actually increasing the consumption. It is felt that there are opportunities for educative salesmanship along these lines that might double the present existing demands. This is work for the outside man.

James & Reid, Perth, Ont., offer an excellent example of what can be done to make a hardware store a real force in the community.

For many years this store has been located in this town, and never a year has passed that has not shown some advances in equipment or method that has tended to make it a still more important factor in the business life of the community.

The store and its associated activities have reached such a pitch of success that the members of the firm might be pardoned for more or less resting on their oars. This is not the case, however. They are as alive to the beckoning opportunity now as they have ever been, and there seems no limit to the scope of their activities, nor to their ingenuity in ferreting out new methods of adding to their already splendid trade.

The top view shows an excellent display rack near the front of the James & Reid store. On the rack or display table is shown a wide range of kitchen utensils which will interest the housewife. A few lines of toys are also on display. The display tables and racks are exceptionally long ones and provide room for a large display of crockery ware, dishes, etc. To the rear of the display table is shown a large motor car. The James & Reid store is a very large one, allowing not only room for displaying automobiles in the store, but also in the store window. The lower view shows the garage erected to take care of the firm's ever-growing automobile and accessory trade.

The Selling Force of Bright Surroundings

One reason for their success is unquestionably their attractive quarters, for it is folly to discount the selling value of a bright, roomy, attractive store,—a store adapted to the needs of the trade

there carried on, and capable of making the best of the goods displayed.

The photos printed herewith are far from doing justice to the store. The show windows at the front in the exterior view do not seem of any particular size, yet when this picture was taken there was a full-sized automobile in the window. In another picture will be noted a full-sized touring car that occupies a position to the centre and rear of the store. Despite the size of this car there is no hint of crowding, and one of the main impressions left by the store is one of general roominess.

Some Descriptive Remarks

On the left of the store as one enters is the department for general hardware. Walls lined from floor to ceiling with drawers of varying size, containing every item of this branch of the hardware trade. The carefully-arranged samples on the faces of these boxes make an exceedingly attractive display. Every drawer is readily reached by a ladder that runs at right angles to the wall. A clerk can, therefore, pull out any drawer without endangering his neck.

The nail bins occupy a convenient location under one of the counters to the rear of the store. They open outward, so that the customer can see them. Farther down again on this side is the paint department, equipped in every particular to meet the needs of town and country trade.

The other side of the store is given over to the display of bench tools, cutlery, etc., while at the rear is the automobile accessory department that has been previously dealt with.

Featuring the Sundries, a Business Bringer

Down the centre of the store runs a double line of tables with shelves in the centre. Here is gathered the store's display of sundries, and they are a varied assortment. China, glass, crockery, toys, and last, but not least, those multitudinous little articles that cannot be grouped under any one name that yet are a great item of trade; little kitchen accessories, small bits of hardware in every-day use; in fact, a thousand-and-one things to attract the customer. Items of small value, yet which bulk large in the aggregate. These are all displayed in separate trays. The shelves above the tables serve to break the flatness of this display, and permit the showing of toys and china and many household requisites.

The general offices of the store are at the rear of the right-hand side, and are large, bright and airy. Over this office at the height of the landing shown in one of the pictures is the private office of the members of the firm; this is not enclosed in the front, and gives a free view of the whole expanse of the store.

Rest Room for Customers

The second floor is given over to the ladies' rest room, and to a stove and tin and graniteware department. This is described at some length elsewhere, as it belongs more particularly to the special activities of the store than to a general description.

As is, of course, obvious with a store doing such a business, there is an immense stock handled; the surplus of this stock is stored on the third floor and in the basement.

There are certain lines of farmers' tools, plow castings and similar lines that this store has always featured. To achieve the best results in this line they have adopted the policy of making them themselves, so that in connection with the store is a large and well-equipped machine shop that supplies the firm with a fair number of the more imperatively needed articles of trade.

But turning from this general outline of the store and its activities, it may be of interest and value to consider some of the more pronounced interests of the store—interests that have crystallized into unusually and aggressive methods of business.

The Children's Influence in Trade

For instance, many merchants have overlooked the influence of children as a drawing force. Not so this firm, however, and George James, one of the partners in the firm, when asked what was the most effective advertising scheme that they had ever adopted, unhesitatingly replied that it was their bid for the children's trade at Christmas time.

At the Christmas season the firm makes a special effort to enlist the interest of the younger folk. A full line of toys is stocked, and, in fact, everything that can be thought of to delight the eye of children.

This is no haphazard scheme, but a carefully thought out campaign. The scheme in itself is not new, but it is comparatively new as associated with a hardware store. It is the arrival of Santa Claus to take up his headquarters in the store.

For two months prior to the holiday season the local papers bear articles telling of the start of Santa Claus from the North Pole, on his long journey to the store. Day after day this campaign is kept up. Despatches in telegraph form tell of the adventures of the kindly saint on his journey southward. Short despatches on real telegraph blanks are posted in the windows of the store. The children all over the district follow these advertisements with breathless interest. Finally the great day arrives, and the papers bear the great news that on such and such a train Santa Claus will arrive. He does arrive, too, from a station down the line garbed in the well-known costume that any child would recognize at half a glance. There to meet him is a great tally-ho, accompanied by a band, accompanied also by the whole juvenile population of the whole county. It is a fact that last Christmas there were people there who had driven twenty miles to be present at the event.

Display of incubators, hoovers, brooders, drinking fountains, hoopers, and other poultry supplies.

Poultry Supplies Prove Profitable Line

London Hardware Firm is Making a Success of Catering to Poultry Fanciers—Carries a Good Stock of Incubators, Etc. in the Store—A Good Sale of Miscellaneous Lines.

TO SELL twelve hundred dollars' worth of incubators during the first year a firm handled the line would seem like an unusually good record. And yet, O'Dell & Mitchell, of London, Ont., accomplished this the first year they started to feature poultry supplies. The O'Dell & Mitchell store is located close to the London market where the farmers bring in their produce, two or three days a week. The show windows of the store face the market, and naturally are extensively used to feature goods in which the farmer is interested. The accompanying illustration shows one of the windows containing a display of poultry supplies. Interviewed by HARDWARE AND METAL the proprietors could not give any special reason why they had met with such success in selling poultry supplies, except that they kept the goods well to the front of the store and had used aggressive salesmanship methods—which after all counts most in business nowadays.

It was found that there was a sale for incubators, not only to farmers, but to citizens and others who in some cases went into poultry raising on an extensive scale and in other cases more as a hobby. A study of the needs of the community disclosed the fact that there was a demand for incubators at varying prices. The result was that those carried in stock range in price from the ordinary cheaper lines up to $50.

By displaying the goods in a prominent location near the front of the store, the curiosity of many interested customers was aroused. When it was found that a customer was interested, every effort was made to explain in detail the construction of the incubators carried in stock, superior qualities claimed by the manufacturer, and reasons why a good incubator will pay for itself in a short time. By persistent, hard and intelligent work on the part of the proprietors and sales staff the incubators began to move, and as is usually the case, one satisfied customer brings another. The results obtained were even greater than had been anticipated for the first year in handling a new line. But the sales did not stop at incubators. There are a great many other lines in which the poultry raiser or fancier is interested. Not a few of these lines, for instance poultry netting, are part of the regular stock of a hardware store. The man who fixes up chicken runs, coops, etc., needs many small articles of hardware. Going back to the lines commonly termed poultry appliances. O'Dell & Mitchell found that they were able to work up a good sale not only for incubators, but also for brooders, hovers, chick shelters, thermometers, egg testers, food hoppers, grit and shell boxes, fountains, leg bands, and numerous other lines needed by their customers. These lines of miscellaneous goods are given equal prominence with incubators and are always on display.

There is also a good sale for such lines as oyster shell and grit and many other products for poultry.

Catalogs Helpful.

Catalogs supplied by the manufacturer have proven very helpful in building up the sales of poultry supplies. These catalogs bear the imprint of O'Dell & Mitchell, hardware, London, Ont., on the front page. They feature in the catalog a great many lines of goods in addition to incubators. When a prospect shows interest in poultry supplies he is given a copy of the catalog and is assured that orders can be filled on short notice. One of the chief reasons, however, why the firm has been able to make such a success of selling poultry supplies is that a representative line of the goods is carried in stock—customers can see the goods in the store, examine them and have their merits explained, and when a sale is made, quick delivery.

Counter Check Books.

One form of publicity used is inexpensive and yet effective. On all counter checks or sales slips is shown a list of products in which the company specializes, and for which it has the agency. The list includes, among other things, poultry supplies, saparators, incubators and roofing. In this way every customer receiving a salesslip can hardly help but see the list of products in which the firm specializes.

O'Dell & Mitchell run a motor delivery. They have found it much more satisfactory than the old horse system. Deliveries can be made in quicker time, and this fits in with the policy of the firm which is to give customers the best possible service.

On left is the store of W. Hanna & Son, Port Carling, Ont.—a popular summer resort.

Two Branch Stores Success-

W. Hanna & Son, Port Carling(Ont., Run Two Supply Different Points—Boats Fitted up as General Customers Await Arrival of Boats and —Groceries, Hardware and

RUNNING retail stores in boats seems a rather unusual way of doing business, that is, when applied to hardware, groceries and dry goods. And still there are communities in Canada which can only be served efficiently in this manner. For upwards of 25 years W. Hanna & Sons, Port Carling, Ont., have been catering to the needs of settlers, tourists and summer cottagers in the Muskoka Lakes district, by means of supply boats fitted up as small general stores.

On the right of the upper illustration accompanying the article, two boats are shown. These boat-stores, conducted by W. Hanna & Son, sail on Lakes Rosseau, Joseph and Muskoka. They carry stocks of groceries, hardware and dry goods. The groceries are displayed on shelves, after the same manner as in an ordinary grocery store. Dry goods and hardware are likewise displayed. There is also a butcher on each boat, but the butcher shop is not exactly a branch of the Hanna business. The butcher rents space on the boats, and has a commission arrangement with the firm regarding sales. Fresh meat is carried on each boat.

During the summer months Hanna & Son conduct a bakery and fresh confectionery is also carried on the boats.

How Trade is Secured

In order to keep two boats such as these on a paying basis, a considerable amount of trade is necessary. In the first place there are a fairly large number of settlers or permanent residents in the districts served from the hardware store. The population of the district, however, is greatly augmented during the summer months by the arrival of hundreds of tourists, some of whom live at hotels scattered through the lake's district, and many others who take up residence during the summer in their summer residences, large numbers of which are located on the many beautiful islands in the lakes district.

With the influx during the early summer of hundreds of people, there is a big increase in the demands for goods such as would be found in the average general store. As might be expected there is a big increase in the demand for foodstuffs. Those owning summer homes purchase paint, gardening tools, lawn and flower gardening tools, and dozens of articles used in brightening up the summer home and in improving the grounds surrounding it. A great many of these people own canoes, rowboats or motor boats, and visit the Hanna store at Port Carling for supplies, The Hanna store during the summer is always a busy one. At the store, which by the way may be seen at the left of the large upper illustration shown with this article, everything is carried from picture post cards to hardware. An attempt is made to carry a complete stock of all the settler, camper or summer cottager is likely to need. Fishing tackle is a good selling line. There is a good demand for ammunition. Sporting goods such as tennis goods, etc., are also in good demand during the summer months. A great many people of wealth who own splendid summer houses on the islands take great pride in having modern conveniences and in improving their summer homes and surroundings. The result is a good demand for many lines of hardware.

Locks at Port Carling, near the Hanna store.

Views at Port Carling. On the right are two supply boats run by W. Hanna & Son, Port Carling, Ont.

fully Conducted on Boats

Boats During the Summer—Two Trips Weekly to Forty Stores—Each Boat Carries Three Clerks — Make Purchases Same as in Land Store Dry Goods Carried.

How the Boats Run

The floating stores or supply boats have a good many ports of call. There are three routes, with 40 places to be called upon. Two trips are made per week to each place. On each boat there is a captain, engineer and 3 clerks. The length of the visit to each part depends largely upon the requirements of the customers. In some cases a half hour is sufficient, while in others it takes an hour or more to wait on the customers and supply their needs. The customers know the day and hour at which the supply boat will call. A boat that calls say at 1 o'clock on Wednesday will call again at the same time on Saturday of the same week. By having all customers well-informed as to the time of arrivals of the boats very little time is lost unnecessarily. Owing to the regularity of the boat's visits customers are generally awaiting its arrival. They then go aboard and are waited upon by the clerks in the same manner that they would be served if visiting at the firm's store. Orders for groceries, dry goods, hardware, meat, or confectionery, are taken in the usual way and customers carry their purchase away with them.

Mostly Cash Trade

Most of the customers pay cash for their orders, and this system of doing business is encouraged by the firm. There are, of course, a number of credit accounts, but these are allowed only to customers of approved credit standing.

Quite frequently special orders are taken on the boats for goods not ordinairly carried in stock. The order is turned in to the store at Port Carling. From their the order is sent on to the wholesaler or manufacturer. Delivery is then made by boat on the first trip following the arrival of the goods at the store.

Hanna & Son have always endeavored to give their customers the best possible service and this is no doubt responsible to some extent at least, for the splendid connection they have formed, and for the good measure of success which it is theirs to enjoy. They try as far as is practicable, to give a city store service to the summer cottager, or the settler who is located far from the large cities or towns. They try to give high grade service not only in the quality of the goods sold, but also in expediency of delivery.

The town of Port Carling has a population of about 390. It is about 20 miles from Gravenhurst and the same distance from Bracebridge.

Wharf at Port Carling, Ont.

YOUR ACCOUNTS ARE YOURS,— COLLECT THEM

(Continued from page 115).

business for the bank; it is good enough for the farmer; but it is very bad business for the merchant and for the wholesaler again behind him.

It is becoming more and more a matter of dire necessity. The merchant must shorten credits with his customers; or, as a possible alternative, charge interest on overdue accounts. As HARDWARE AND METAL has often pointed out, sound financing can be built only on a solid foundation of active collection methods.

Reconstructing to Meet Emergency

Outbreak of War Cut Off Trade in Builders' Supplies—Necessitated Taking on Other Lines—Factory Trade, Paint and Seeds Among New Lines. Moved Paint Department to Front

EVERY now and then in business there comes a time when some line hitherto considered one of the best money-getters, for one reason or another ceases to be effective. At least such is the opinion of George Mathewson, of Queen Street East, Toronto. About every three years, sometimes more often, Mr. Mathewson thinks the hardware man must be ready to reconstruct his business ideas to meet some new emergency. As an instance of this idea, Mr. Mathewson cited his own case. Since going into business he has more or less featured builders' hardware, until of late years this line had become a very considerable item of his business. A large stock of this line was carried, and all the sails trimmed to catch the varying breezes of the builders' trade.

Then out of a clear sky the war broke loose, money became scarce, and building was practically at a standstill, with the result that one of the largest and most profitable lines became practically a dead letter.

What can be done in a situation such as this? It is impossible to sit calmly down and await the revival of this trade, a trade that has been more or less stagnant now for nearly three years, and may continue to be so for some time. Under ordinary conditions steps might be taken to stimulate a declining trade, but when world conditions are at the back of the decline, extraordinary methods are necessary. There is only one thing to be done and that is to branch out into some new phase of activity to take the place of this lost trade.

A New and Promising Field

Mr. Mathewson looked about him to find some field of operation that might be expected to offer a promising field. The result of this investigation was to bring forcibly to his attention the fact that the same conditions that had so disastrously affected the building trade had put new life into other lines of business. In the district in which Mr. Mathewson does business there are a large number of big factories, working night and day, most of them turning out war material of one sort and another. Here was the field of action that Mr. Mathewson required. Moreover, he was helped by the fact that his tinshop department that has always been a feature with him, had already given him an introduction to most of these factories. He had done tin and iron work for them, without any particular effort to draw their other trade; in fact, the abundance of this trade has been more or less an outcome of the war in any event, and thus dovetailed in admirably with the loss in another line. Every effort was made to get all this work that was to be had from the factories, with the result that this department of the store is working to its full capacity and the extent of the work is only limited by the ability to get the men to do it.

Meeting the Needs of the Factory a Profitable Trade

This work gave the required introduction and from that the scope was pushed farther and farther afield till it covered the whole of the factory needs. The needs of factories were interviewed, every enquiry relative to the galvanized iron work, etc., was used as an opportunity to suggest other factory needs. By degrees, the demands grew and the stock increased. Now every need of the factory: drills, set screws, bolts, pipe

Interior view of Mathewson's Hardware showing paint department which has been moved to the front of the store.

and pipe fittings, and the hundred and one other needs are always available. This idea has been dinned into the minds of those responsible for putting the factory work through. They know that their needs can be met at Mathewson's, and Mathewson's is only a short distance away. There is little wonder, then, that this new line of activity has helped to make up for the decline in the other lines.

True, there are some difficulties. It has been hard at all times to keep a stock complete. Certain lines have been very difficult to get, but it has always been possible in some way to obtain these goods, and no effort has been spared in seeing that the orders at all times are filled. Moreover, this new line of activity has entailed a considerable increase in the amount of stock that must be carried. It has been possible, of course, to curtail the builders' supply lines to a considerable extent, but even with this curtailment, Mr. Mathewson estimates that his stock has been increased about 20 per cent., which has naturally entailed a very considerable outlay. On the other hand, this element has put new life into the business and has shown a margin of profit that has more than justified this extra outlay.

The factory trade has been a good friend to Mr. Mathewson, but he does not count upon it as a lifelong friend. It may fail, indeed, it is very probable that with the end of the war its golden days will be over. There will still, however, be a good trade to be found in these goods; there will moreover be a return to the building lines, and Mr. Mathewson has been careful not to lose his hold on this trade, and then there is the wide vista of the lines to which some particular circumstance may lend an added value.

It is not meant to infer from the foregoing remarks that Mr. Mathewson is specializing in any one line. He himself states that the sale of general hardware is the backbone of his business. His business is of a general nature, but the specialty lines and the specialized needs are given the fullest attention.

Making the Most of the Paint Trade

Among the other things that Mr. Mathewson lays stress upon is paint. Paint is a line that can always be depended on. Every hardware merchant sells paint. But some, like Mr. Mathewson, sell more than others, and there is a good reason. To begin with, he keeps it before the public. March is a good month to start in. Mr. Mathewson is featuring this line, both in his store windows and interior. His argument for doing so is that the public need to have their attention focused on a line for some time. Make them think of it now, even if they don't buy, and then when they get ready to buy they will in all probability remember. From early in March one show window is devoted to the display of paint, and it sells paint, in any time of the year a good window display will sell it, is Mr. Mathewson's firm belief. But there are ways of making it more saleable and one of these is price cards. Put your price on an article and you will greatly increase the sale, is Mr. Mathewson's contention.

Many people have erroneous ideas about the price of goods and do not purchase because they believe they will entail a greater cost than is actually the case. They probably will not enquire of the merchant because they know that will lay them open to arguments from the merchant that might lead them into expenditures that they do not wish to undertake. On the other hand, people would purchase some quantity of goods at least.

Putting the Paint Department Forward Doubles Sales

Nor is this all. Mr. Mathewson has found the location of the paint department a great feature in the trade. Formerly the paint department of the store occupied a small section at the back. One side near the front was given over to the sale of tin and agateware. This line occupied a very great amount of space, and was not proving particularly profitable. For this reason it was decided to discontinue the line.

This decision left almost one side of the store bare of goods. It was decided to move this paint department to the front and give it a real show. The move proved a very wise one. The first thing that catches the customer's eye on entering the store is the long display of paint tins, and the attractive display of brushes, all plainly marked.

Now, everyone knows that a hardware store sells paint, and every person who wanted paint might reasonably be expected to ask for it if it was wanted That would seem a reasonable viewpoint yet the actual fact remains that given this new and more prominent place in the store, where it was one of the first things to catch the eye, practically doubled the sales. There is no other reason for the improvement in this line, for the paint display window and similar methods of fostering trade have always been part of Mr. Mathewson's policy.

One rather novel line for a hardware store is a show case for garden seeds. It doesn't take up much room, and it doesn't require much attention or actual selling. It is just there before the store's customers, with its own suggestion. A very fair profit can be made by a small investment and a minimum of trouble.

Stoves are another line that are featured by the store and prove a profitable source of revenue, and every effort is made to keep them constantly selling. In the nature of things, however, these are more or less of a seasonable line, but in the moving months when the housekeeper is open to the suggestion of home improvements, they prove a very successful item of business.

Play Safe in Selling

EVERY retailer to-day is paying a great deal of attention to his buying. But of almost equal importance is the matter of selling. The merchant who has not already done so, should immediately analyse his business affairs and ascertain whether or not he is securing a safe margin of profit.

The safe margin of profit that did duty in 1914-1915, because it covered the normal expenses of that period, and the low levels that poor business enforced in 1914-1915, are being discarded by many shrewd merchants as no longer a safe-basis for marking their goods for spring. 1917.

It has been found in a number of stores during the past few months, that merchants have been content to maintain the mark-up of previous years, even in cases where foresight persuaded them to lay in stocks that now are 40, 50 or 75 per cent. more valuable, at the current market basis.

They declare that so long as the low-priced goods last, "we intend to give our customers the advantage," that they will "appreciate" this treatment, and "stick" by the merchant even under the more unfavorable conditions of higher prices later.

The "gratitude" of the buying public may or not be a negotiable quantity when, later on, their "gratitude" has nothing substantial to feed upon.

At a time when declining markets will be the inevitable postlude to assured negotiations for peace, will the "gratitude" of the buying public, that was generated by low selling prices in 1915 and 1916, step in and uphold the merchant with a normal margin, when his competitor decides to sell on the new low-cost basis.

Play safe now: start with your Spring prices in the creation of a reserve to meet whatever is to come. If you don't need it late this year, Lloyds will not charge much to guarantee that you will in 1918.

Spring Window Display Suggestions

How Seasonable Displays Can be Arranged — Some of the Lines Which Make Good Displays—Suggestions on Window Trimming From an Expert.

SPRING is the one season of the year when hardware merchants and their clerks should be on their tip-toes after business—unless they are dead ones.

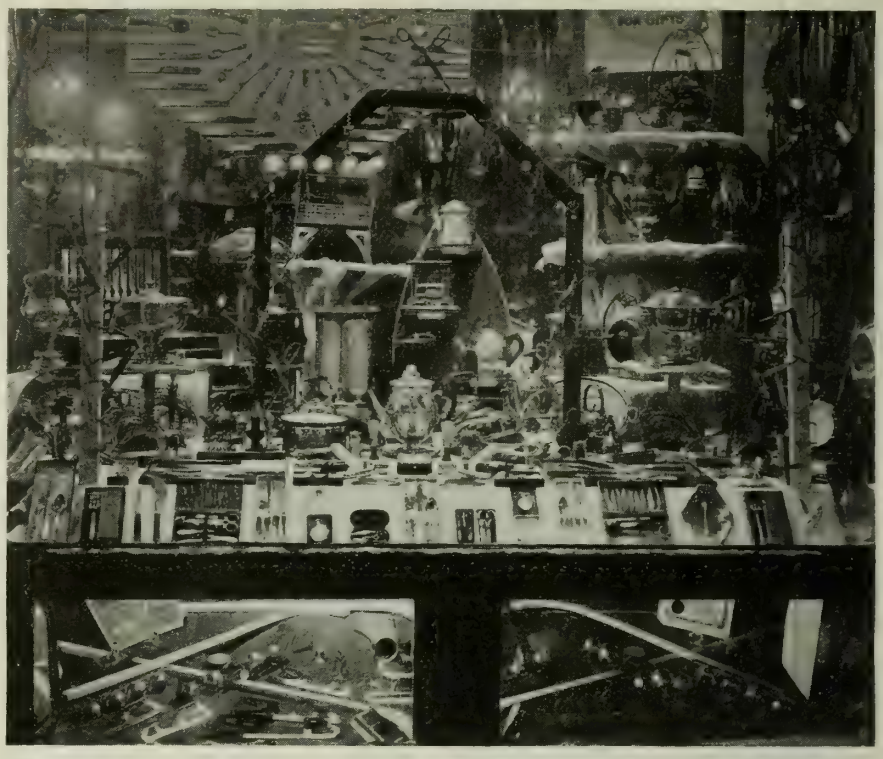
With the opening of spring, the hardware store becomes a place of renewed activity. Following the quieter period of winter, there comes activity created by the needs of the public—gardening tools, paint, lawn tools, poultry supplies, building materials, and a thousand-and-one other things. There is also the desire of the hardware merchant to make hay while the sun shines, for if he does not push sales in the spring, he misses the biggest and best opportunity of the year.

If all legitimate business-getters are not used during the spring months, then for each business-getter neglected by the merchant there is a certain monetary loss.

Elsewhere in this issue of HARDWARE AND METAL there are undoubtedly articles dealing with a number of phases of spring selling. In this article I propose to confine my remarks to one phase of spring salesmanship—window displays. The subject window displays has been hashed and rehashed so often by writers in trade papers, speakers at conventions and others that it is sometimes looked upon as a "chestnut," and so it is so far as some merchants are concerned. But on the other hand, it is one of the livest propositions so far as the up-to-date merchants are concerned. The average merchant undoubtedly pays more rental for his window display space than for any other space of corresponding size in his store. He should, therefore, make it the most profitable—in other words, it should produce greater profits. The store interior is seen only by those who enter the store. The store windows are seen, or should be, by everyone who passes the store. The window is the silent salesman on the street—it quietly introduces the merchant to the public. The nature of the introduction, whether favorable or otherwise, will depend largely upon the impression created by the window display.

Seasonable Displays

Seasonable window displays can be arranged by the hardware dealer as well as the grocer, dry goods man, or any other merchant. At one time it was said that hardware windows were more neglected than those of any other line of business. Such is not the case to-day. The hardware windows to-day compare favorably with, and in a great many cases surpass in selling power the window displays of merchants engaged in other lines.



Philbin & Co., Montreal, Que., in whose store the above display appeared are located on a busy thoroughfare, where show windows occupy expensive space. Philbin & Co. believe in showing a very wide range of goods at one time, and do not allow any waste space in the main show window. Below the main show window are two smaller windows, forming part of the store front. A close examination of the above illustration will disclose a large assortment of hardware goods.

One of the first essentials is to have a well-painted store front. It is rather amusing to see a paint window display in a hardware store window, with literature urging the public to paint, when on looking around you observe that the store front itself needs paint about as badly as anything in town. A well-painted store front makes your place of business look better—more inviting; and it encourages other merchants along the street to brighten up their store fronts. The town with a poor and unpainted store front is generally a dead one.

Garden Tools

One of the early windows should be a garden tool window. Get the public interested in gardening early in the season. One customer will bring another. Very often a dozen or more people in one block will take up gardening simply because one of the neighbors down the street started to put in a garden. The gardening fever, like the measles, soon spreads, and every amateur gardener started means more business and profits for the hardware merchant.

A case of seeds, if you sell them, will make a good centre for a gardening tool window. Spades, rakes, hoes, garden trowels, chalk lines, sprinklers, weeders, and many other tools can be worked into a garden tool display. Interest can be added by securing some sod or earth and arranging it in attractive form to catch the eye of the passer-by.

Lawn Tool Window

A covering of sod makes a good ground-work for a window display of lawn tools, showing such lines as lawn mowers, rakes, weeders, hose, hose reels, sprinklers, nozzles, shears, etc. Price tickets will create greater interest on the part of prospective customers. In arranging displays of this kind it is advisable to show a sample of each line carried in stock, so as to display a representative line of your goods both as to variety and range of prices.

Spring Paint Windows

The spring paint window display—or, as it should be series of displays—should prove one of the most interesting

to the window trimmers. Nine out of every ten householders are interested in painting during the spring months. Paint is required for the home, inside and out, verandahs, summer houses and cottages, boats, canoes, furniture, fences, floors, walls and innumerable other purposes. Ready-mixed paints are required in huge quantities. Then the paint sundries should be big sellers. Varnish stains, stove pipe enamel, aluminum and gold bronze, verandah furniture paint, screen paint and many other paint products can be sold in big quantities—if their sale is pushed. There are very few hardware merchants who could not by a little extra effort, almost double their sales of paint sundries—and incidentally double their profits.

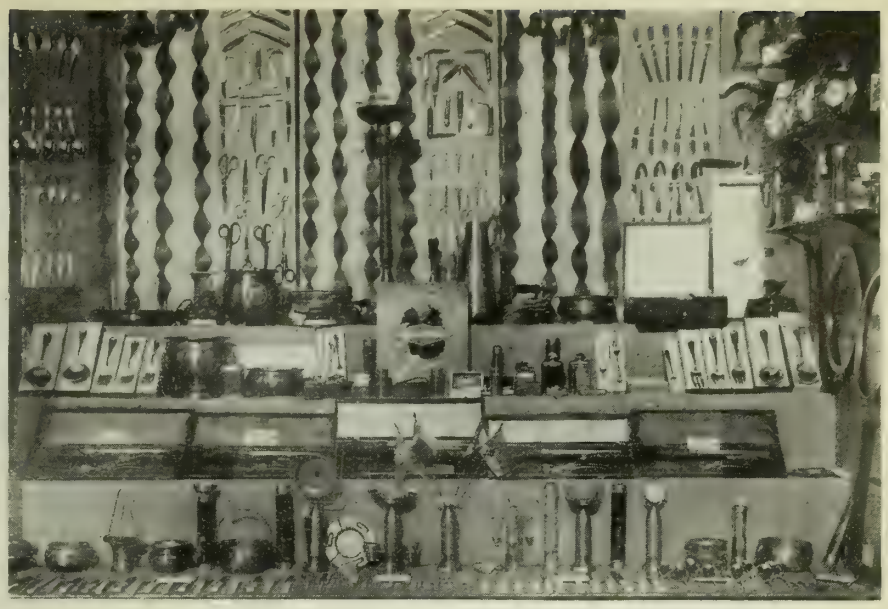
Paint manufacturers supply an abundance of good live advertising matter, display cards, etc., for use in window displays. This matter, if used intelligently, will assist the window trimmer to arrange good displays at practically no cost, except time.

Poultry Supplies

In the spring the chicken fancier is in the market for poultry wire and many other hardware lines. The writer knows of one man who last spring started to keep chickens, as a hobby. His account with the hardware merchant for the first six weeks on supplies alone amounted to $35. Every hardware store carries in stock many lines which appeal to the chicken fancier.

House-cleaning Supplies

In the spring the housewife's fancy turns to thoughts of house-cleaning, and also to the store which features the house-cleaning supplies which it has to offer. Here is where the hardware merchant is in a position to secure the cream of the business—profitable business, too. Just think of the house-cleaning goods found in a modern hardware store—dustless mops and dusters, furniture varnishes and polishes, carpet sweepers, vacuum cleaners, carpet whips, brooms, cleaning powders, mops, step ladders, wallpaper, window brushes, cleaners, tubs, pails and many other lines too numerous to mention. On these lines you make the money or the profits which offset to some extent your losses on nails and other heavy lines which are frequently sold at a loss. House-cleaning goods carry good profits, are turned quickly, and do not require a very heavy outlay for stock. This line is one of the "A1" profit-makers for department stores, and on smaller lines for the syndicate stores. But if you want to be successful with this line you must keep it well to the front—let the people know that you have the goods, and that you are there ready to serve them.

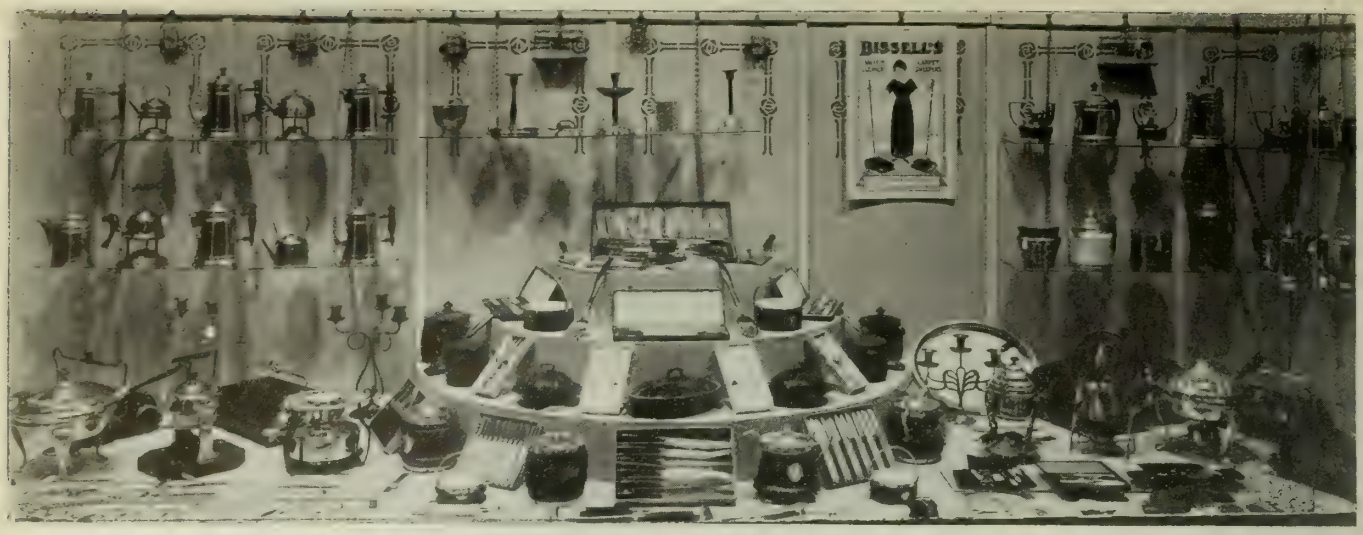


The above is a good example of a representative assortment of cutlery and hardware novelties effectively displayed in a small and narrow window. This display appeared in the store of Rutherford & Kayser, Simcoe, Ont.

Mechanics' Tools

During the spring, carpenters, machinists and other mechanics are frequently called upon to do work which requires new tools or the replacement of old ones. One of the best mediums of publicity for pushing the sale of tools is the show window. Tool displays are

This display shows how an effective background can be made by using wall board. This effect could be used to splendid advantage in a spring paint window display.



A very plain but effective lay-out. This arrangement with glass shelves suspended by chains could be worked out in paint window displays or in showing other lines. The background is made of wall board. The step arrangement in the middle of the window can be made at little or no expense, and on short notice. The above display appeared in the show window of Dunlap Bros. & Co., Amherst, N.S.

seasonable at almost any time of the year, but there are some tools, such as those used in building, fencing, repair work on farm implements and machinery, etc., which are in special demand during the spring.

Auto Supplies

Then there is the auto owner. In many districts in Canada most of the cars have been "laid up" during the winter, and are brought forth by their owners in the spring. The motorist as a general rule requires many accessories and other supplies when starting his car for the season.

The foregoing are only a few of many suggestions that could be made at present for spring window displays. Other suggestions covered in greater detail will be offered through this paper during the next few weeks.

There are some clerks who are rather timid when it is suggested that they arrange a window trim. This soon disappears after a little practice. The beginner can secure many ideas for following window trims as they appear in this paper. Cut out each reproduction as it appears, and save them up for future reference.

Building Successful Displays

At a convention of display men held in New York some time ago one of the speakers, John T. Witsil, of Brentano's book store, New York, gave some practical advice on window trimming, which, if followed, will assist the window trimmer in solving various problems which arise from time to time. His address was in part as follows:

"Window displays viewed from their construction may be grouped as an idea, a design, a picture, or a story.

"We will suppose a book is brought to us and the orders are given to make a window display of it. First of all, the reason for putting it into the window is to attract to it, to make people consider it, to cause them to stop for a moment in their walk up or down town, forget what is on their mind at the time, and cause them to come into the store and ask about it. To accomplish this what would you do? Will you create an idea, or make a design, or construct a picture, or tell a story? What will be the best thing to do with the book in question, taking event, circumstance, material and purpose for the display into consideration?

"I will give some personal experiences better to explain what I mean. When the book, 'Cab 44,' was brought to us and we decided to make a window display of it, we took the book, examined it, considered the things just mentioned, and built a window which made a hit. A wooden frame was made, upon which the books were put; the jackets were cut so as to spell out the letters about three feet high and eight inches wide, 'Cab 44.' This was an idea. Incidentally the publishers of this book, to back up our efforts while the display was on, secured an old cab, painted it yellow, the color of the cab in the story, dressed the horse in yellow harness and the driver in yellow clothes, had the number 44 painted in large black letters all over the cab, and directed the driver to drive slowly up and down Fifth Avenue.

"He did. No, I should say, he did not. Failing to secure some kind of a street-advertising license he was arrested and wound up in jail. I have never been able to determine the guilt or the innocence of the publishers. Intentional or not, it was a good advertisement.

"Several months ago we made a window display of a book called 'The Man of Iron.' It is a story of the Franco-Prussian War of 1870. I placed several French and German flags in the window to attract attention and then went home and prayed all night that some wild man would heave a brick through the window. Such an opportunity for publicity was too good. No brick went through.

"When a book called 'It Happened in Egypt' was brought to us, and considered for a window display, the examination of the book showed many possibilities for display, either as an idea, design, picture or story, but due to other things that were to go into the window, the fact of an idea, a picture, or story had to be dismissed. This book was published in the spring, just at the time when many people were considering the Southern Mediterranean trip, and as many of these people walk to their offices in the morning, south on Fifth Avenue, as a matter of exercise, the books were put in the window with all striking features of the arrangement facing north, to catch the eye of those walking south. This was a design.

"Recently the chiefs of fire departments of the larger and important cities of the world held a convention in the City of New York. Those attending came from almost all quarters of the globe. At infinite effort and trouble we gathered together many articles of intense interest relative to the history of fires and fire-fighting, photographs of noted fire chiefs, models of fire-fighting appliances and specimens of headgear and material used by the fire departments and brigades of other countries as well as our own. All these things and a complete collection of practically all books in print that had any bearing on the subject were displayed, crowned by a grouping of the flags of all nations. All this greatly interested the people who passed by, and brought many into the

store and warmed the hearts of the visiting chiefs. This was a picture.

"To explain what I mean by a 'story window,' I will describe a recent display of a prominent playing-card manufacturer. This window was to tell the passerby that in all the world there were no playing-cards like the ones made by him.

"First, scattered over the floor of the window were playing-cards, in and out of boxes. Five shapely plaster-of-paris arms held in daintily poised fingers a hand of cards; one hand held the cards used in an Italian game, another those used in a German game, another those used in a Chinese game, and so on. In the centre of the window was a large globe of the world slowly revolving. Above this, with widespread wings and outstretched neck, was a large eagle, holding in its beak a set of the playing cards made by this concern, and a sign telling all who looked, 'In all the world no cards like these.' This was a 'story window.'

Dennison's Elaborate Showing

"A more recent example of a story window was made by Dennison's, the paper-tag manufacturers, in one of their Fifth Avenue windows.

"The window was fitted up as a kitchen, showing a large range. On the stove was a pot used for stewing fruit. In the pot was a large stirring-ladle. Above the pot were several rows of shelves, and on these shelves were glass fruit-jars. In the jars were different kinds of fruits, and on each jar was pasted a paper label and printed thereon was the name of the fruit contained in the jar.

"Now, Dennison's do not sell stoves, nor iron pots, nor spoons, nor fruit, nor fruit-jars. But they do sell what the display subtly made very emphatic through the story it told, and that was printed paper labels to past on fruit-jars.

"I do not know that I can give any better ideas of what window displays are or should be than to describe these displays as I have. You must decide the best thing to do with the material you want to show. Each one of these four windows of ours was successful, in that it brought people into the store to purchase the books displayed.

"As for the method of building a window and the personal requirements; first of all the window-dresser must be one who can handle a hammer and saw as well as being able to build a bridge out of toothpicks, and no matter what happens and how much he sweats, no matter what the burdens of suggestions, or demands are, he must not get discouraged. He must be prepared for anything. A little swearing now and then will serve to relieve the strain.

"I am frequently being advised, when I hesitate for a moment or two in an endeavor to think just what to do, by something like this: 'Oh, it is easy! Just make a pile of them in the centre and build the other things around.' Sure, it's easy! So easy that if we get away from the store before one o'clock we are lucky.

"Eliminate as many corners in your window as possible. By this I mean that the window that is oblong or square, with four right angles, is easier to work with than one that has obtuse angles, or has injected into its construction pillars, either square or round, that add to the number of angles that have to be taken care of to enable you to get the best effect."

Revolution Will Help Develop Trade

Canadian Manufacturers Urged to Communicate With Russians — Revolution Hastens Development of This Nation of 200,000,000—Gives Added Value to Governmental Efforts to Foster Trade.

THE spectacular but none the less highly practical revolution has focused anew the already aroused attention of the world on that sphinx of modern European civilization — Russia.

The promise of increased activity in all departments of Russian military and industrial life held forth by the turn events have taken, indicate the necessity of a more thorough comprehension by Canadians of Russian aims and needs, if we as an industrial nation are to benefit by the new turn of affairs.

An instrument to effect this end lies at hand. The Russian Purchasing Commission of which Col. Kovaleff is the head, opened offices a few weeks ago in the Standard Bank Building at Ottawa for the purpose of getting in closer touch with those Canadian manufacturers who desire to trade with Russia. HARDWARE AND METAL understands that this was done as a result of strong representations made by the Canadian Government, to the Russian Government.

Seeking Manufacturers

The announced policy of the Commission is to get in active touch with all classes of manufacturers. The Department of Trade and Commerce is also co-operating to this end.

Although the Commission is mostly concerned for the present with the needs of the army, the latter are so diverse and so dependent upon adequate supplies for all kinds of industrial activity that all of the principal manufacturing interests may expect to find a market here. And when peace comes the current of trade will very naturally flow in the normal channels of commerce again. So the present offers a rare opportunity for laying the foundations of a big trade on the soundest of foundations with two great governments giving their fullest support.

Hardware Lines Strong

HARDWARE AND METAL understands that after agricultural machinery, machine tools and associated lines offer the best demand, and the hope is expressed that this fact will be taken into consideration in the plans of Canadian manufacturers of such lines. However, even in hardware the demand is not confined to this class of goods. In a country of 200,000,000 people more notable for agriculture than manufacturing and who as a nation are just beginning to awaken and feel their muscles so to speak, there is bound to be a big market in all the regular lines. The fact that a huge railroad development is part of the after-the-war development now planned is in itself the basis of the most optimistic hopes

"Do in Rome"

Those closely in touch with the situation however, are most emphatic in stating that if we are to get and hold our share of the trade offering, we must now plan to develop relations along lines that suit the Russians and most distinctly not the Canadians. In other words our representatives must be sent there: (some are already there) men who already know or who are prepared to learn the language and who will even more readily study the customs of the country and adapt themselves to same. A keenly sympathetic view point is thought to be the most essential part of this relation; that is a friendly and uncritical attitude must be indulged in.

German Russia

Otherwise the country will again re-

Cracking Up One Idea in Advertising

Thorough Belief in Limiting Ads. to a Single Point, and Hammering it in — Use of Illustrations and Prices—Has Over 150 Changes in a Year—Getting Outside Help to Avoid Sameness—Giving "Layout" to the Printer.

Written for Hardware and Metal by Manager and Ad. Writer in successful Hardware Store.

WHAT I might call my first principle in advertising is a "single idea" ad.—that is, emphasizing a single article or a single group in each ad. I crack up one thing a day, and I find it pays far beyond the other style of advertising that loads up on a dozen or a score of lines.

If you concentrate on one article, your ad., to my mind, is far more impressive. The reader remembers one thing, where he wouldn't a dozen, and he's more likely to call on you for it if it catches his fancy.

Some merchants say, "Oh, I can't afford to give up my whole space to one thing; it isn't worth it. Why, that would only give me a chance on six articles a week."

Three Changes a Week

But carry it farther, and it gives you over 300 a year, or, as I apply this rule, I have an agreement with the paper for three changes a week, and that means over 150 times a year. Of course, where a store has only a weekly paper, there is not the same chance.

Connects Item With Firm

This use of one idea doesn't mean, either, that you are before the public only once for each line in a year. Take garden tools, for instance. I play up this line, say, two or three nights in succession. My ad. reads: **GARDEN TOOLS**—at the top, and, say, **MACLEAN HARDWARE CO.** at the bottom. The two ideas run together in the mind of the reader, and weeks afterwards a man or woman who wants garden tools says, consciously or unconsciously, "GARDEN TOOLS MACLEAN HARDWARE CO."

The single idea appearing in an ad. lives far longer in the memory than if you had a dozen or more contained in a small space.

Each Stands Out Better

It is obvious, too, that the one-article principle allows of far greater display for it than if there were half a dozen; hence it stands up and stands out more strongly in the paper.

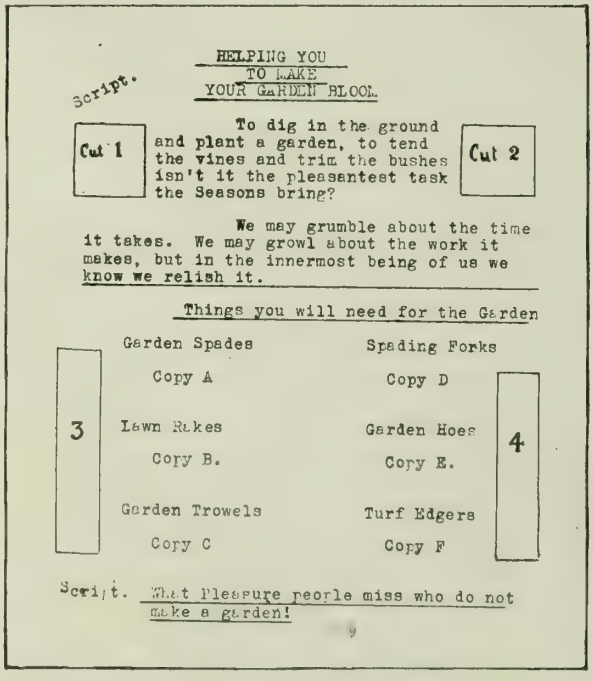
Now to illustrate this idea: Here is one ad. before me, with the two words in large display type (36 point), SCREEN DOORS, covering the 2-col. width of my ad. That stands out as the most prominent idea in the whole page of the paper. (I use the same position each day, by the way, on a local news page.) In connection with this are five illustrations: one with $1.25 under one; $1.75, $2.25 and $2.50, and 25c to 45c under a window screen in the centre.

Persuasive Introductions

Nothing else except screens, for door and window.

At the top I used this introduction:

Now is the time to put on the screens—in one line; and Don't wait until the flies come. Put them on now and keep them out—in the next two lines.



Layout for the Printer

This serves as a guide to the newspaper and should be made out with every ad., underlining what you want displayed, numbering the cuts as well as indicating positions. The four cuts are HARDWARE AND METAL *electros and the writer of the article declared they made a big improvement over a similar ad. used the year before.*

Then follows a description:

Our doors are made of Selected Pine, 4-inch Stiles. Grained Quartered Oak. All Doors shown Varnished except $1.25. Only the best quality of wire cloth used.

Under this is a display heading: **Window Screens,** and below the cut of these, descriptive matter. Under this is a small display line: **We sell wire cloth,** with the sizes following.

At the bottom just above the name of the firm are the words in script: **The above prices include fittings for hanging.**

Take another ad., dealing only with wringers and washing machines. The introduction to these was the expression:

Everything to Make Wash Day Easy
Mop Wringer

and then a cut of a wringer at the left side and a washing machine on the right-hand side, and down below at the left again, a regular clothes wringer cut and descriptive matter.

Now, here, let me enforce three points in which I am a very strong believer; Live Descriptive Matter, Cuts and Prices.

Live Descriptive Matter

1. The first is one of the points the big department stores and the Mail Order houses can teach most of us: they use very attractive descriptions of their goods; not only praising them in general terms, but going into details such as every customer would be anxious to know before he decided to buy. We are apt to let it go with vague phrases: "Fine," "excellent," "best in the market," "durable," "model of cheapness," etc. All these things mean nothing. What counts, it seems to me, in an ad. is what counts in selling; bring out the reasons why they should buy this particular article in preference to any other.

To illustrate:

Outstanding Point of Wringer

Take this same ad. on making wash-day easy. Here is a special brand of washing machine,

the ——. (I suppose HARDWARE AND METAL would object if I gave the name here.) What point stands out on this, different perhaps from other wringers? I try to point out in this way: "**A big improvement on the old style. It has a permanent iron-bound rigid wringer stand which any wringer fits.**"

Following this, I use an argument for buying a washer; perhaps, indeed, it would have been better to have used the general argument first:

"No labor-saving device has brought more relief from the drudgery of household work than a good washer."

In the case of the wringers, I note: "The backbone of a clothes wringer is the Quality of its rolls. The wringer illustrated has a 3-year guarantee."

Two "Household" Lines

One day I featured a couple of lines under the display heading in caps:

Useful Household Articles.

The two articles chosen for the ad. were an Aluminum Clothes Sprayer and Cherry Seeders.

The descriptive matter with the former was:

Fits any ordinary bottle. For dampening clothes, sprinkling floors, or spraying delicate plants, 10c.

As for the other, the ad. said:

Takes the stone out perfectly and quickly, and does not spoil the shape of the fruit. Quickest and best little Household Seeder on the market. Price, 15c.

And I added, in smaller type, this invitation:

Ladies will do well to visit our Kitchenware Department. We have many useful and labor-saving devices.

Two Lines of "Fire Sets"

At a later period of the year we were showing Fire Sets, and our ad. ran under a display head: **Grate Fires.** The gengeneral introduction, to work up the reader's interest, ran thus:

Grate Fires

Are a real home joy at this season, and are much enhanced by attractive fireplace furnishings. Our showing is extensive, and novel designs, beautifully finished, are a feature.

There followed the two items: **Fire Sets** and **Brass Coal Hods,** in each case a description being given, and the price, $5.50, $6.00, $6.50, and $8.50 for the one, and $5.50, $6.00 and $7.50 for the other.

So with the most commonplace article I try to pick out the features that distinguish this, the "taking points," as the travellers call them.

Cuts Make Ads. Snappy

2. As to the use of cuts in ads., I have no two views on that. For me, it is cuts every time, if you can get them. I have tried out an ad. without them one year, and put them in next year, and been almost surprised at the life that a single cut gave to the old ad. As a matter of fact, a cut, I think, carries three or four times the weight of reading matter. We have only to consider the Mail Order catalogues to appreciate this; they are loaded with cuts, and they are very, very seductive.

AD. WRITER'S SUGGESTIONS

1. Keep to one idea in each ad., not necessarily a single article, but articles that suit that idea, e.g., "Garden Tools."
2. Repeat the ad. once or twice, for emphasis, but get in a new one on an average of three times a week.
3. Use a good cut whenever you can.
4. Under it put descriptive matter containing best "talking points" about that article,—just as a salesman might.
5. Play up prices whenever possible.
6. Lay out your ad. for the printer.
7. Keep the same position in the paper next local news.
8. Have a prominent type for the firm name, and use the same all the time to make it familiar to the public.
9. Get some one else now and then to write up an ad., so that the ad. won't be simply "you" all the time.

Used "H. and M." Electros

You will be interested in one point here in which HARDWARE AND METAL is concerned. Two years ago I made out an ad. to run just before the 24th of May, and headed it: "**A Popular Holiday Programme for Mr. Householder.**"

Then I broke up the next line with three sub-headings:

Cut the Grass.
Dig the Beds.
And Trim the Bushes.

So far, so good, but I had no cuts to fit into the garden spades, lawn rakes, garden trowels, and so forth, in my list of garden tools, and my ad. went in without any cuts.

Had Relative Write Ad.

Next year there were two radical changes in my 24th of May garden ad.; in the meantime I had secured four electros from the HARDWARE AND METAL service, and a relative of mine was visiting me, and I handed the subject over to her.

The result was a great improvement on my previous year's ad., both in wording and in the use of the illustrations.

I do not want my ads. to represent my ideas all the time; whenever I can I try to get suggestions from others for phrases and arguments.

Invariably Quote Prices

3. As to prices: quote them whenever you can. They answer an instinctive question of every reader—one of the most important, as well as satisfying ones: "How much is it?"

The price often decides the sale, and an attractive price is often your best salesman. Don't be afraid to quote prices, lest your competitor will see them, or your would-be customer tries next door and gets a lower one. It's up to you to be able to give as good value as your rival; and, in any case, quoting prices serves to inspire confidence in you as a same-price-to-all store—another of the strong points, by the way, of department and Mail Order advertising.

Not, Perhaps, on Enamelware

Let me raise one point here where there seems to me to be an exception to this rule created by the phenomenal conditions since the war began. You may have laid in a lot of enamelware and be able to sell that dish for 85 or 90 cents, where it was 75c before, while I did not, and must get, $1.25 to clear me. In this case I would not favor playing up my $1.25 price. But these are exceptions.

Fix "Layout" Yourself

Let me close with a suggestion that you do not leave the make-up of the ad. to the judgment of the printer; lay it out yourself first. You know what you want displayed better than he; where the cut should go, what style is best; and if not, it would be well to practise on it. I am illustrating a layout here, the one that my visitor fixed up for me, and the one, too, with HARDWARE AND METAL cuts.

LAYOUT OF SCREEN AD.

The layout of the screen ad. looks like this:

Introduction

SCREEN DOORS

Cut No. 1 **Matter** **Cut No. 2**

WINDOW SCREENS

Front Seats for Leading Spring Sellers

How Peterborough Stores Shift Goods Front or Back to Suit Season's Demands — Paints, Garden Tools, Coal Oil Cookers, House-cleaning Lines—Making Three-fold Combination of Show Cases, Windows and Ads.

THE hardware men of Peterborough fully appreciate the opportunities that lie before a carefully planned spring and summer campaign. In their own city there will be, as in all parts of Canada, the impetus felt towards the cultivation of the "back yard" as a consequence of the scarcity in vegetables this past winter. This livening of interest undoubtedly will call for a much greater demand for garden tools and Peterborough merchants are preparing to meet this.

The "Clean Up" and "Paint Up" campaigns will be to the fore as in previous years; then there is the appeal for the business of farmers for their farming tools and other needs that summer brings upon them when the harvest starts. Two others, one already begun by Kingan's, as will be seen by the window that appears in this issue, a sale of muskrat traps, and the pushing of coal oil heaters for camps, and coal oil burners for kitchens, in city and in country alike, in the face of high coal and wood costs, will be referred to in their order later on.

The Spring Campaign.

Yes, the spring and summer campaign of 1917 is perhaps richer than for many years in its possibilities, and in connection with the visit of a staff member of HARDWARE AND METAL to this city a number of points that came up in conversation with its hardware merchants are illustrated herein, in spring views of store interior, window displays and newspaper advertising.

Enamelware Always on Deck.

Let us go together into one store, a view of which is shown, and we see two points of seasonable importance. All along the right hand side from the entrance for some distance back run shelves of enamelware. The manager, Mr. "Bob" Matchett who, by the way, eschews the "Mr." back from the war since the death of the owner of the store, Mr. Higgins counts that enamelware display as one of the strong features of this store, which has a big farmers' trade. The prominent position of these goods, well displayed, is one of the best selling mediums in this store.

Paint Display on Long Table at Door.

Of more immediate spring interest is a display fixture that was just being completed as HARDWARE AND METAL called. This was a table about 12 feet long with tiers for a display of paint. Underneath are pails, a big selling item in this district. Mr. Matchett pointed out that last year there were two smaller tables used that did not show up the goods as well and gave no room underneath for the quick-selling pails.

Working in with this was a paint window which will give place, or be used in connection with, varnishes and other "Paint-up" necessaries.

A little farther back and to the left were washing machines, hand and power, the latter "low pressure," to suit Peterborough waterworks conditions.

Bringing Up the Coal Oil Stoves.

Immediately to the rear of the paint section is a long line of stoves, the balance of the winter stock. These will be set farther to the rear very shortly and the oil stoves will replace them towards the front—both the heater and the cooking stove.

Coal and Wood Being so High.

"We expect to do a much bigger business than last year in both of these," "Bob" Matchett declared. "One reason is that as they become better known they get a stronger hold on people, but another special argument in their favor this year is the very high cost of coal and wood. We are going to push our sales vigorously this spring and summer, and will make use of our windows very often. We will show two or three, a cooker, 3-burner or 2-burner, or both, with the oven and probably set up a little heater near it. We found our coal oil stove windows were great sellers last year."

At Kingan's store there is quick action in taking advantage of seasonable sellers. The city, as many are aware, is the centre or rather the entrance to the Kawartha Lakes district, and there is a heavy summer tourist trade, to boarding houses, private summer cottages, and modest tenters, which in the fall changes to a very considerable crusade of hunters.

The show cases at the front of the store are changed constantly to fit into the ranging seasons. Now it is paints and varnishes, now fishing tackle or sporting goods, now, ammunition, and at times displays are made of mechanics' tools.

Windows as Best Sellers.

But it is in his two windows that Mr. Latimer, the manager of the store, places his supreme faith as selling agencies.

"There is in Peterborough a large transient element; not only of summer visitors and fall hunters, but mechanics and other factory workmen who shift

This is a housecleaning window of the Peterborough Hardware Co., of brushes only—and a broom—which made a strong impression, in a similar way to their ads.—in featuring one idea. A display of this nature also suggests an extensive stock from which to choose. Note the two semi-circular forms used as a background and at the side, above the mirror.

This is a view of Higgins hardware store in Peterborough, taken for this issue and showing a new stand for paints, a long table with tiers, for showing paint, and a space underneath for pails. Along the wall is enamelware, which is kept there all the year.

from here to somewhere else. Hence our windows count for more than anything else for publicity purposes. We fit them up with garden tools one time, with varnishes, with fishing gear, with hunting requirements, guns, ammunition, etc., and now as you see we have a window playing up traps for catching muskrats. Whenever possible we try to get in a touch that will make the goods seem in their natural surroundings''—and a reference to the window shown elsewhere in this issue will bear this out

Along this same line was another window used some time ago in Peterborough, where a rustic fence was shown as a background, and a deer standing in the gateway with real boughs above his antlers. The goods, guns, and ammunition, were set out in front.

Wheelbarrows, Rakes, Hose, etc.

Sometimes Peterborough windows show wheelbarrows, rakes, watering cans, hose, etc., for a selling of garden tools.

Only one of the stores visited is a regular newspaper advertiser, the Peterborough Hardware Co., and some comments on their ads. are given in connection with the illustrations of these.

Kept His Show Cases Unchanged.

While on the subject of windows and ads, there might be introduced here a statement by the manager of a hardware store to the writer recently. He was referring to a change in his system of show case displays.

''A traveler for a show case company came in here the other day and remarked, 'Why you've the same stuff in your cases here that you had when I was here before. Why don't you change them?'

''It never struck me that way before. We wouldn't have thought of keeping our windows the same, week in and week out, nor our ads., but here we were, with the same show cases for months at a time. Why shouldn't there be the same reason for changing them that there was for the windows and ads?

Change Cases With Windows.

''So we have adopted a new policy and if we show garden tools in our window, we dress up our show cases in the same way as to strike the notice of our customers twice instead of once. With ammunition in the window, we have a display in one or two cases inside, and often we have one window of one line, and show cases of the same goods, and on the opposite side we have cases fitting with the other window. Our ads. feature these goods at the same time, so we work in a combination of three selling forces—windows, ads., and show cases.''

IN a paper read before the American Electro Chemical Society, by Messrs. E. A. and L. T. Richardson, it is stated that copper bearing steels are without doubt more resistant to corrosion than Bessemer and open-hearth steels, or than the commercially pure irons or copper bearing irons, but pure iron is better than steel. The addition of about 0.25 per cent. copper to Bessemer or open-hearth steel results in an increased resistance of 300 or 400 per cent. The addition of copper to pure iron also results in an increased resistance to corrosion, but to no such an extent as the addition of a similar amount of steel. The addition of about 0.25 per cent. copper to a commercially pure iron results in the useful life being increased by about 20 per cent.

Retailers Need Follow Up-System

First Necessary to Have a Desirable List to Whom Advertising Material Can be Mailed —Form Letters and Follow-up Letters Can be Made to Have Strong Appeal —Newspaper Advertising One of a Number—Ads. Run by Retail Hardware Firms.

THERE are many forms of advertising which the average merchant thinks of only in a general sort of way but which if made a part of his business-getting policy would undoubtedly net him increased profits. When a merchant thinks of publicity he usually has in mind newspaper advertising, circular advertising, window displays or displays in the store interior. These are a very essential basis for the publicity campaign. But around these forms there should be a follow-up system that goes after the prospects in a scientific manner. For instance to make the advertising by circular or letter there should be a mailing list of selected names who are prospects worthy of expending postage on. There are from letters that will greatly assist in keeping the public advised of certain business items that will be of interest to them. Third, there are follow-up letters. Fourth, there are letter enclosures. A very valuable part of any business is to be able to use the mailing for collection purposes. Then when the publicity has brought inquiry it is still a further development to get the sale made, "putting it across," as theatrical parlance would say. These various items will be treated briefly under their separate divisions.

Compiling a Mailing List

A mailing list worthy of the name must be more than a mere collection of names. It should be an accumulation of those individuals who have an unquestionable use for your goods, can be influenced by your business appeal, and should be your customers. It should be a compact record of your prospective buyers. It should be the raw material out of which you are to make sales. Have this definition constantly in mind as you go about the work of putting names on your mailing list. Apply the acid test and let only those which show latent business opportunities be included. There are some aggressive hardware merchants who already have their mailing lists carefully compiled. One merchant in particular used the list to advantage in a fall campaign for the selling of stoves. The most advantageous way to keep this mailing list is on a card index system. It can be started in a small way and as the work develops the cards can be added. But how to get this selected list of names is a pertinent question. For retail stores in general the following list of sources will be valuable suggestion. Merchants may be able to add to the list as the particular needs of the community suggest. This list might be divided into present customers and prospective customers as follows:

Present Customers.

Charge Accounts on Ledgers.
Delivery records.
Alteration and repair records.
Payments made by check.

Lists of prospective customers could be secured from the following sources:

Rural mail lists.
Members of clubs, lodges, etc.
City and telephone directories.
Property owners' and taxpayers' lists.
Guessing and voting contests.
Exchange with non-competitors.
Payroll sheets.
County and city employees.
Automobile owners.

Form Letters

A "Form letter" is a letter designed to carry a message to a number of people in such a manner that it will receive the attention due a personal communication. It provides the one simple method by which you can communicate with a large number of people in a semi-personal way. In writing a form letter first get the central idea about which all other facts are to revolve. One idea to a letter is generally enough. If too many points are brought in the reader is confused. Decide what you want your letter to accomplish. If you want it to sell wire fence, bear in mind that you are dispensing wire fence, and not writing briefs on business life. Safety first in letter writing, consists in sticking to the main idea. Following is a form letter built around the idea of a hardwareman's sympathetic interest in his customer's welfare. Though an original letter it is conventional, it has no especial eccentricities and tells a warm, human story with a business basis:

"Dear Mr. Blank:

You probably have some precious little lives in your keeping. As a father you do the right thing by your kiddies.

A garden planted this spring will provide your children with wholesome vegetables. Food of the right kind will give your children plump bodies, pink skins and bright, active brains.

To make gardening effective all you need is a spade, a rake, a hoe and some seeds. We carry the ———— brand of garden tools, than which there is none better made. Our seeds are from the ———— Seed Company. They have the reputation that they grow.

And what is good for the children is also good for the grown-ups. If the little tots get wholesome body-building material from your own garden, surely grown-ups will be benefited in like measure. Besides you will find the time well spent as a healthful recreation.

We press the sale of our garden tools and seeds upon you because we know that to benefit our customers we will also benefit. With the best of good wishes."

This is but one letter form. Every hardwareman could design letters that would apply to other items in his hardware stock.

Follow-Up Letters

The first requisite for success in any follow-up letter is a warm trail. The

Advertisement of Cowan's Hardware, London, Ont., showing a telling display and an appeal to the farming class.

hound cannot catch rabbits where none exist. The trail may be supplied by enquiries developed through newspaper advertising, form letters, salesmen's reports, personal investigation, special mailing lists compiled to reach certain classes of prospects who should normally be interested in the product to be sold. The real follow-up begins only when it is know that a prospect may actually be reached. The failure of many follow-up campaigns may be traced to the fact that hunting is not good where there is no trail. Mailing lists are worthless unless they reach prospects—merely reaching people will not produce profits.

In one important particular only, the sales-letter differs from salesmanship by word of mouth—the spoken word is at all times subject to revision, explanation and correction, but the word once sent out in a letter is irrevocable, and cannot be changed. The salesman can afford to be spontaneous and frame his talk in accordance with the prospect's outspoken objections. The follow-up must foresee these objections. Before they arise and prepare carefully worded answers to all of them. The work of the salesman can be done on the spot. The work of the follow-up must be done weeks and months in advance if it is to be successful. It has been said by a noted St. Louis business man that "the success of any business man is 90 per cent. horse sense." That is all there is to writing follow-up letters. A business letter is not a political oration, and does not run to figures of speech. It is intended to be you on paper—your conversation, your arguments, your appeal, just as you would make it in plain words to a prospective customer in your place of business. And it takes time to convince on paper just as it does by the mouth. No sane, sensible business man would expect his salesman to land big business continually with the few words that can be typewritten on a sheet of letter paper. He expects his salesmen to talk volumes, and is satisfied if they land the business. But that same well-balanced business man will often send out one single letter, that could be spoken orally in three minutes, and expect it to bring results that hours of sales talk could not get."

As a concrete instance of the way follow-up letters work out. In one wide-wake little town, lives a man who has built up a world-wide business selling moth-proof cedar chests by mail. His opening letter sent in reponse to inquiries is chatty with southern atmosphere, and covers naturally all points of appeal. The second talks of the economy in the possession of a cedar chest, and speaks of its preservative value. The third tells principally of his trial offer. The fourth discusses cedar chests as a gift. The last letter is a complete and snappy summing up of all the arguments used before. This series always produces results. The point is that they are interesting—therefore they are read—and while the prospect is reading, the manufacturer is building up a desire for a cedar chest.

While the above case applies to one manufactured line and applies to the mail order business the same principle can be applied by any merchant in his own district with the added advantage that the customer can come into the store and look the goods over without the necessity of sending them by mail.

Letter Enclosures

A "letter-enclosure" should be made just as important a factor in getting business as a booklet, catalogue or advertisement, the only difference being in the method of its circulation. A great many sales have been made, and just as many lost, through the principal matter enclosed with correspondence. Irrevelant stuffing of the enevelope with a mass of "dope" does not tend towards sales results. The properly put letter which also contains an attractive enclosure is sure to get double attention and it will stand a better chance of being read if it is really worth reading. Then after the letter is thrown away or filed or forgotten, that bright and pleasing blotter, if it is kept, with its message from the advertiser stays with the prospective customer. Enclosures might take the form of booklets, leaflets, form letters, folders, calendars, posters, price lists, discount sheets, announcements.

Making Collections by Mail

While the primary function of the collector is to get the money, the ways and means of doing it must be carefully considered in order that the tree may not be damaged in gathering the crop. There exists between the debtor and creditor a bond of mutual interest and obligation which works to the advantage of both, if faithfully observed and respected. You should insist courteously, kindly, but none the less firmly not only upon payment of your accounts but upon payment when due. Avoid threatening letters until you have tried every other way. Suggest rather than urge—don't be too arbitrary—you can't afford it. One of the things having an important bearing on this result—and one that is frequently disregarded—is a prompt mailing of statements on the first of the month. Following is a form of letter which might be used after the statements are mailed and a sufficient time has elapsed for the merchant to be sure the customer is somewhat slow. This letter is firm without being offensive. And what is more to the point, it has been used most effectively by a prominent retailer noted for his success in making collections:

"Dear Sir:

You notice that the enclosed statement is a little past due. It's so easy to let matters of this kind slip one's attention, that we feel sure you'll be grateful to us for calling your attention to it. We're so sure you simply overlooked this that we suggest that you attend to

(Continued on page 142).

How Lead Products are Made

Lead Pipe Appears to Grow by Itself, and Lead Traps to Writhe Themselves Into Being—The Making of Lead Plate Described—The Manufacture of Wire Solder and Lead Foil Described.

From information gathered in a visit to the plant of the Canada Metal Co., Toronto, by a Hardware and Metal Representative

THESE are modern days, and probably the bath room is the very best evidence of this modernity. Now lead pipe is just as essential to a bathroom as is a piece of soap probably more so. You were brought face to face with it every day. You could safely venture the guess however, that out of every thousand persons who have seen a lead pipe about 50 per cent. would not have the very faintest idea as to how they were made. Probably 97 per cent. of the remainder would have a dim idea flickering about in their brain, that because they were made of lead they must be moulded in some way. That leaves one person in a thousand, who possibly like the writer has had the opportunity of visiting a modern metal plant, and can therefore look down from a lofty pinnacle on the others who either know nothing, or who know something that is not so.

There is hardly a hardware man or hardware clerk in the country who does not almost daily sell lead products, pipes, plates or solder. It looks therefore as though there might be a certain interest for the hardware man in some discussion of the ways these lead products are made.

Watching Lead Pipe Grow Before Your Eyes

Take lead pipe for instance. In one of the illustrations is shown a lead pipe machine in operation. The machine is not a particular imposing affair, but there is something very mysterious for the novice in the way in which the lead pipe simply seems to sprout out of the top of the machine. Lead pipe simply grows before your eyes without any particular activity on the part of the workmen at the machine to give any semblance of reason for the growth.

The explanation of this seeming phenomenon is simple enough. The machine simply consists of a reservoir for holding molten lead which is kept heated in the small furnace seen in the cut beside the press, and is fed into reservoir as required. The bottom of this machine is a hydraulic press that forces the molten lead through a die. This die permits the lead to pour past only in the form of a tube. The lead passing through the confined space is cooled and solidified and gradually ejected through the die opening in the top of the machine.

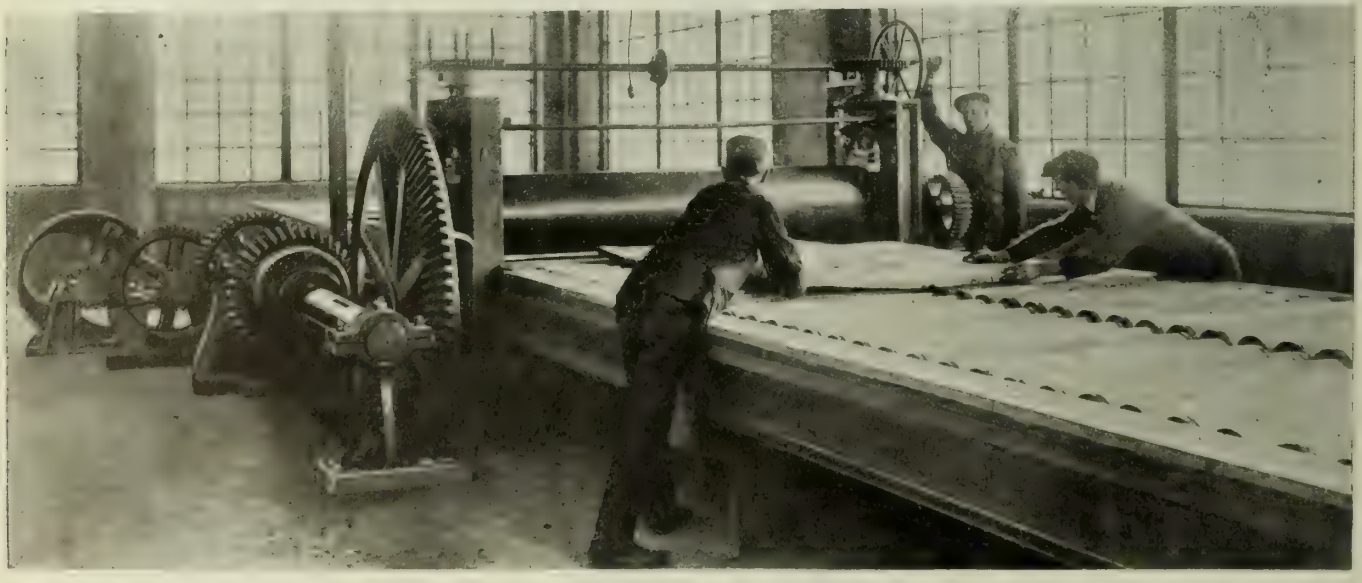
The machine illustrated herewith is disgorging a pipe a full 12 inches in diameter, probably the largest type of lead pipe made. A 12 foot length of the pipe weighs 542 lbs. This same machine by the substitution of a different type of die can be made to produce a 32 cord pipe probably the smallest lead pipe made, something smaller than the average telegraph wire with an opening about 1-32 of an inch in diameter. It is easily seen then that these machines are capable of an enormous number of uses. As a matter of actual business practice of course it would not be entirely a paying proposition to have to make these numerous changes, so a goodly number of machines are used to make certain definite styles of pipe.

Difference Between Lead Pipe and Waste Pipe

Technically lead pipe is sold in rolls of approximately 175 pounds. It runs in calibre from ¼ inch to 3 inch and in four grades, light, medium, strong and extra strong. The difference in these grades is a difference of wall thickness which naturally makes a material difference in weight, for instance, a one-inch pipe would weigh 5, 6, 7, and 8 pounds per yard for these different grades, owing to the different thicknesses of wall.

In what is known as lead waste pipe a different system of handling is adopted. Because these pipes average as a rule larger in size running from 1¼ inches to 12 inches in diameter it is not generally feasible to sell this pipe in roll. For one reason the weight would be too great. The system with the waste pipe is to sell it in eight foot lengths, which is the standard size for waste pipe.

These lengths are simply cut off with



Rolling sheet lead from the original casting. From the casting shown it might be rolled out to some 20 feet in length.

a saw as they come from the machine a standard being set above the machine so that the cutter can see when the required length has been reached.

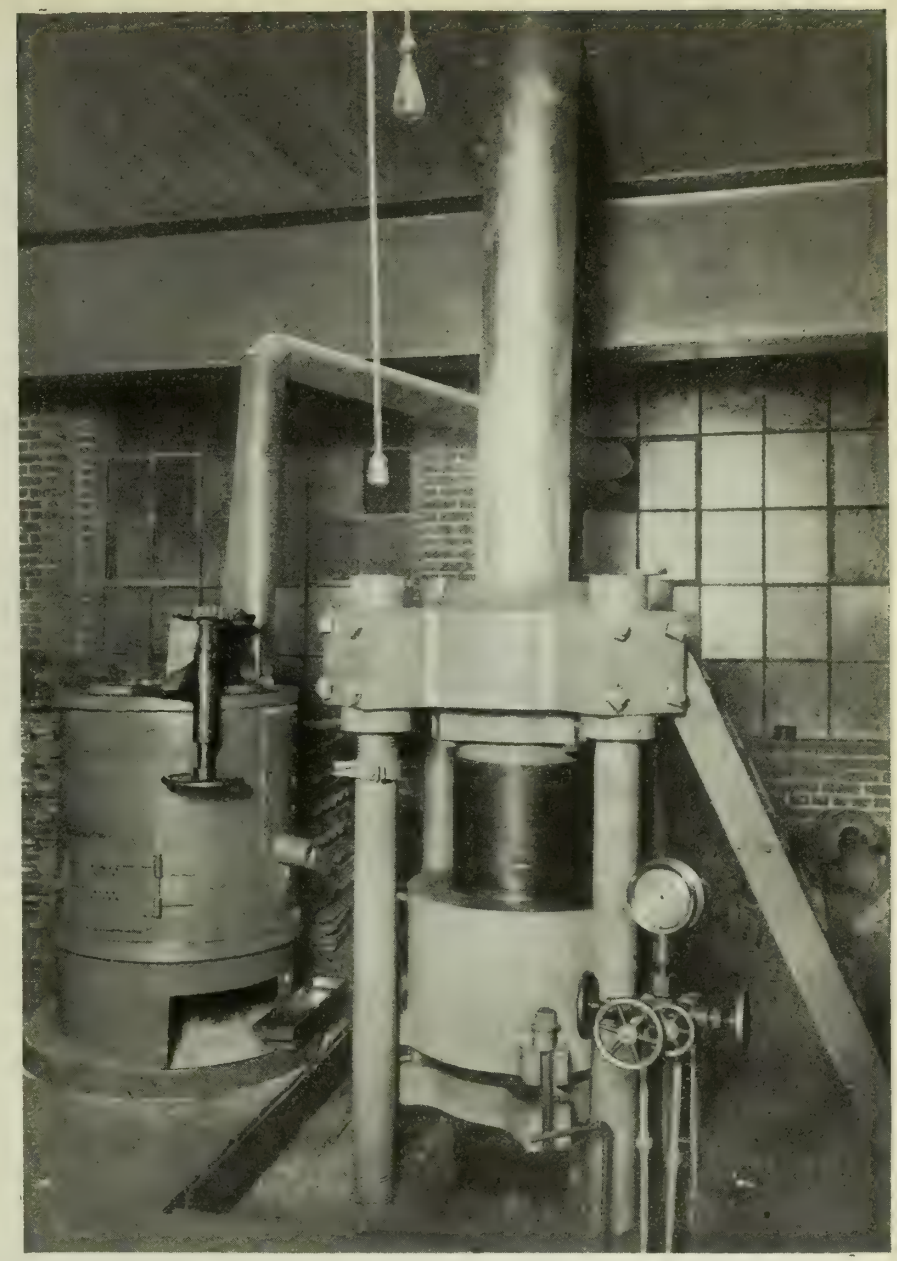
The Making of Lead Traps

Everyone has noted the peculiar turn on the waste pipes of wash basins. Probably it took some kind of a leak or a stoppage to focus your attention upon this particular item, but there are always enough of these in a lifetime to assure the fact that everyone will have at least one good look at the traps, usually a very good and careful examination too, lying uncomfortably on one's back.

Don't get the idea that the plumber twists this pipe out of pure contrariness, it is twisted for a purpose and it is twisted long before the plumber gets it.

It has been described how the lead pipe sprouts from the top of the machine. In making these traps the outcoming lead pipe behaves more like an annoyed snake than anything else. The machine in which these are made though working on the same principle as the one described above is somewhat different in shape. The two big drums that appear in the illustration lie at each side of the mouth of the machine, if such it may be called. Instead of one hydraulic press driving the molten lead from below, there are two such presses one driving from below the other driving from the side. These two presses are controlled by a lever in the hands of a workman at the side of the machine.

After the molten lead has cooled to a certain temperature for it must be at a certain temperature if the pipe is to be properly made, this temperature being shown by a gauge in front of the leverman, the lever is pulled in one direction, this sets the first press in motion. Pressure is brought to bear on the molten lead and the pipe begins to grow above the machine. When about a foot of this has been produced the lever is again moved the straight pressure shut off and the lateral press comes into operation, at once the pipe seemingly by itself begins to turn over in a hoop. When the particular curve required for the trap that is being made has been reached, the straight pressure is again applied and the lateral pressure shut off and the trap grows straight out again. When it has grown about a foot above the machine another workman deftly saws it off above the machine, and the trap except for the opening in the bottom which is later affixed by hand, is completed. There are six different forms of traps known as the "Full S", "⅜ S" "½ S" or "P. trap," "running trap," "running V," and the "Bag trap." In addition to these, there are bends. All these varieties can be made at will by the operator, by a manipulation of the different pressures. It is a simple enough process as described. But to stand and watch this lead pipe to all appearances just shaping itself into the shapes desired, gives one the strange impression of having watched a thing manufacture itself.



Lead Pipe-making Machine—a 12-foot length of the 12-inch pipe shown at the head of the machine weighs 546 pounds. The machine at the side is the crucible for melting the lead.

The Making of Wire Solder

Everyone is familiar with the long sticks of plumbers solder, but the solder in wire form is not possibly so well known though it is extensively used by canners, electricians and munition makers. For this latter work a special high-grade is employed.

This solder strange as it may seem is made in a similar way to lead pipe. indeed by the substitution of different dies even the machine illustrated as making a 12 inch lead pipe could be adapted to making wire solder. By means of the hydraulic press this solder material is forced through the small die and comes out a long thin wire. The only difference is that in place of one wire being made at a time, the writer saw 18 wires all being produced by the one machine at the same time. These wires are carried up to the roof and over rollers which conduct them to a row or drums where they gradually collect. Once there is a sufficient amount collected the drum is taken to a machine which winds the solder in reels. At least the lighter wire solders for electricians and glaziers are so handled, either in ten pound spools, 25 pound coils or 100 pound reels. The heavier

canners' solder comes in triangular square, oval, small oval and round shapes, and is packed in 100 pound cases or 250 pound kegs.

Making Sheet Lead

There is still another interesting phase to this metal manufacturing business the making of sheet lead. Here again there is no great complexity in the process though there is an infinite demand for care in producing the different grades of sheeting, and the different sheeting alloys. For instance in making antimonial sheet lead, in which a large business is done with British Columbia, great difficulty is experienced because of the intense hardness introduced into the metal by the presence of the antimony. Under these conditions the most minute care is required in rolling to see that exact pressure is maintained otherwise the whole texture of the metal will be destroyed.

Lead First Cast in Heavy Plate

But to start with the process of sheet lead making. In the rolling room there is a huge caldron in which the pig lead is melted.

When this lead has become a molten mass the wheel governing the spout of the caldron is turned and the lead is poured out into a mould that casts a block of lead about four feet wide, six feet long and two inches thick. This is the rough material from which the sheet lead is rolled.

When this block has cooled sufficiently it is placed on the long tramway, the floor of which is a series of rollers, that feed the block between the immense rollers. The process of rolling out these sheets takes time as only so much pressure can be exerted with every rolling. A gauge with an indicating needle shows just now much pressure is being applied, and with this pressure increased as the plate moves back and forth through the rollers the comparatively small sheet is ironed out into one immensely larger The exact size of a sheet will of course vary with the thickness but a sheet of say 1-16 of an inch in thickness, and weighing 4 pounds to the square foot would range roughly 5 feet by some 20 feet. It is a notable fact with lead that while under pressure it stretches remarkably in length, it changes very little in width.

How the Sheet is Sized for Market

When the sheet has been rolled out into the required thickness, the rough edges are trimmed and it is then ready to be cut up into required sizes. It used to be the custom when a plumber needed a flashing of sheet lead, for him to send in to the shop and have it specially cut for him. In this way every order meant a special cutting, and of course materially increased both the cost of the work and the wastage. Now these flashings are cut in lengths of varying width; 17, 18, 19 20 and 22 inches are the standard widths, with a length of some 140 inches. The plumber finds the width that suits him best and buys the roll. In that way he can use what he needs and knows exactly what amount he has left. In this way the item of wastage is reduced to a minimum. The plumber cuts the sheet as he needs it, not a difficult matter as the lighter sheets will tear like cotton.

Of course there is a great variety of weight and thickness in this sheet lead ranging from 1-60 inch which weighs 1 pound to the square foot to 1 inch in width with a weight of 60 pounds to the square foot.

Lead Tin and Aluminum Foil

There is another variation of this lead sheeting, and that is the still finer grades of sheeting that go under the name of foils. This lead foil is familiar to everyone in the well known form of package tea covering.

While made on different machines and rolled from considerably smaller castings the operation of making lead foil is an exact duplicate of the process of lead sheet making. The only difference is that it is rolled to an almost microscopic thinness. Foil is made of tin, lead and aluminum, in each case the actual process of operation is similar, but owing to the different textures of these varying metals, they each require separate treatment. Lead will stand a greater degree of pressure, for instance, than the harder tin and aluminum, and so the gauging of the pressure required is a very delicate part of the operation of making foil.

The intricate composition of the metals and combination of metals requires a very thorough understanding of the raw material. That there may be no flaws creep into the manufacture that are avoidable, a very complete laboratory is maintained where the different metals and amalgams and alloys are examined and their peculiarities established. In this way the very last word in scientific knowledge goes hand in hand with the latest mechanical equipment, in producing a product as nearly perfect as human skill and ingenuity can make it.

"Let There Be Light"

How a Hardwareman Brought Electric Power to His Community—Public Spirit Led Him Into Undertaking Which Worked Out Well in Regard to His Business—The Story of a Brisk Outside Campaign

Jos. H. Bundy.

THIS is the day of the outside man. The old idea that the executive, the manager, the business man is an important personage who sits behind a mahogany desk and has his underlings go out to interview customers has long since been discarded. To-day, the manager gives as much of his detail to assistants as he safely can, cleans up his desk and gets out! He goes out and calls on his customers, meets his competitors, keeps in touch with business development, and **acquires an outside viewpoint on his own business.**

It has sometimes been said that the retail merchant should not leave his place of business; that he can do better by staying on the job and seeing that customers get a good service. There is something to be said for this, if the merchant's outside efforts consist purely and simply of canvassing tours to sell certain lines of goods that he is carrying. Opinions differ on this policy that has been termed "outside salesmanship." But there are other lines of endeavor that a merchant can take when he sallies out among his townsmen—lines that react in a practical way on the business that comes to the store. Listen, for instance, to the story of Joseph H. Bundy.

He Wanted Power

Mr. Bundy is a hardwareman located at Pickering, Ontario. He does a good business, a substantial portion of which

is with the farmers from the surrounding district. But Mr. Bundy was not entirely satisfied, either with the business he was doing or with Pickering itself. Pickering was limited in its possibilities of growth and development by the fact that it lacked electric power. The nearest power available was in the town of Whitby. Now, if a small place has ambitions toward growth there is only about one thing to be done and that is to get a live industry or two. A new factory means new population, which means business for new stores or more business for old ones. Get a new sawmill or a furniture factory or a canning concern located, and after a while there are more people in the stores, more automobiles passing through, a brisker, brighter air generally.

But what chance had Pickering of landing new industries when there was no electric power to offer? Exactly the chance that the town off the railway line had fifty years ago. To be brief, no chance.

Mr. Bundy realized this and it worried him on two scores. In the first place he was a patriotic Pickeringian and did not like to see his home town stranded by the side of the broad highway of Progress. In the second place, he realized that the growth of his own store was bound up, more or less closely, with the growth of Pickering.

So Joseph H. Bundy started out, as a first step, to get electric power into Pickering.

A Tour of the Township

He got into touch with the Hydro-Electric Commission at Toronto and secured the necessary authorization. Then he started out to tour the country on a campaign for power. This was in 1915, when business was more or less quiet in the store anyway. While he was out on his trips he left the store in charge of his clerk, who was capable of keeping everything running smoothly in the absence of his "chief."

Mr. Bundy used a motor car and canvassed the township thoroughly, from one end to the other. He saw every farmer within its confines and painted the advantages of electrical energy to such good advantage that he secured contracts from the majority of those he waited upon. In all, he got contracts from 250 farmers, selling a total amount of 1,500 horse-power.

This was indeed a remarkable record for one man. With the amount of business thus assured, Mr. Bundy was able to bring the Hydro-Electric system into the township and town of Pickering.

This is rather a bald narrative of a most unusual performance. For a merchant to keep his business running smoothly and at the same time conduct a campaign successfully for the whole welfare of his community, is a record performance. After this achievement, Joseph H. Bundy does not need any recommendations on the score of his ability as a salesman. His record speaks for itself.

Store of J. H. Bundy, in Pickering, Ont., a town of 900 population.

Other Business Came

Of course, the advantages that he reaped from his campaign were not confined to the successful issue of the power scheme. He established his connection with the farmers of the township more firmly than ever. His tour brought him into close personal touch with them. He called at their homes, had his meals with them, and got on a footing of real personal friendliness. They recognized that he was giving his time and his energies to a public cause in a more or less disinterested way. They appreciated what he was dong.

Joseph H. Bundy's name will always be associated with the successful campaign for power. In years to come when the farmers of Pickering township do all their churning by power, and milk their cows in their brilliantly lighted barns, they will associate the comfort they get out of it all and the increased efficiency of their results with the name of Joseph H. Bundy. If there is any gratitude in the human make, this enterprising hardwareman has earned for himself a heritage for the future in the shape of a vastly increased good will.

However, he got tangible results as well. After getting the men he called upon duly signed up on the power question, he had an admirable opportunity to sell a little hardware on the side. And he did so. Often he sold material connected more or less directly with the advent of power. In one home he sold an electric stove and five radiators. Similar sales, sometimes on a smaller scale, were a fairly regular feature of his tour. And, of course, he was able to line up business in straight hardware lines—fencing, binder twine, paint, etc.

When Power Comes

The culmination of his efforts will be seen this spring when the power is to be officially turned on. Mr. Bundy is planning to take advantage of this by handling a full line of electric goods. He is confident that there will be a brisk demand for all such lines as electric irons, toasters, heating appliances, stoves, etc. At any rate he is going extensively into these lines and intends to push them. He also plans to handle electric fixtures which should prove an eminently successful line.

Some Are Neutral.

An American just returned from Europe tells this story:

While riding from London to Liverpool in a railway coach it happened that he was alone in the compartment with an Englishman, who appeared to be deeply engrossed in the war news of one of the papers.

Thinking to start conversation, he said, in good old American slang, "Some fight, eh?"

"Yes, and some don't!" was the reply.

Display Space Made to Pay Dividends

How Merchants Have Made Money By Re-arranging Stock and Displays—Spring the Best Time to Make Profit Out of Displays—Good Advice From Manufacturer.

Written for Hardware and Metal by Thos. E. Hunt.

EARLY in June last year the writer entered a hardware store and asked to be shown an ice cream freezer. After a moments thought the clerk went to the back of the store and from under a large tool display rack produced a 3 quart freezer, dusty and somewhat dirty in appearance. "This is the first call we have had for a freezer this season," said the clerk, in a half apologetic manner. "We should have them on display up at the front of the store," he added, brushing the dust off with a feather duster and scattering it through the air. "It is a good machine," he said, "even though it does look rather dusty. As I only wanted a 2 quart machine I asked him if he did not have a smaller size. "Yes" he replied, at the same time digging in under the display rack and pulling forth another freezer, smaller in size but just as dirty looking and without a handle or crank attached. Another dive under the rack and he produced a crank which he forthwith proceeed to attach to the freezer, and which he only succeeded in doing after having considerable difficulty in adjusting a nut—difficulty he said at last, that was caused by a left hand thread. By this time I was becoming impatient owing a scarcity of time at my command, and as the clerk did not know the price, I told him I would try and call back later– result a sale lost.

Common Occurrence

The foregoing is not at all out of the ordinary. It is typical of happenings which take place almost daily in some stores. What is the reason for such apparent neglect? The chief reason is that many retailers do not make a study of the charges which should be made in stock displays to meet the needs of the changing seasons. Furthermore the merchants very often do not stop to figure out which parts of the store are most suitable for the display of certain lines of goods. Very, very often whether or not a merchant makes a success of a line, largely depends upon the position he gives it in the store.

Seasonable goods are frequently kept at the back of the store and have to be asked for. If the store is a long one the majority of customers never get beyond the centre of it. On this account all goods shown at the rear, whether seasonable or not are rarely seen by the bulk of the customers who visit the store.

The retailer who has made a study of modern merchandising, who has adopted the ideas suggested by the trade papers, and who has followed the methods of the large and successful department stores, is familiar, with certain principles which enable him to determine more or less scientifically where best to display goods in his store. In the first place rapid sellers should be in the front of the store. Goods which can be turned over quickly and carry a good margin of profit, should always be among those to receive first consideration.

The old proverb, "Goods well displayed are half sold" still holds good. Sales will drag if you "hide your goods under a bushel."

Poor sellers and out-of-season goods should be given a less prominent place. But in giving these goods a less prominent place, care must be taken not to hide them altogether.

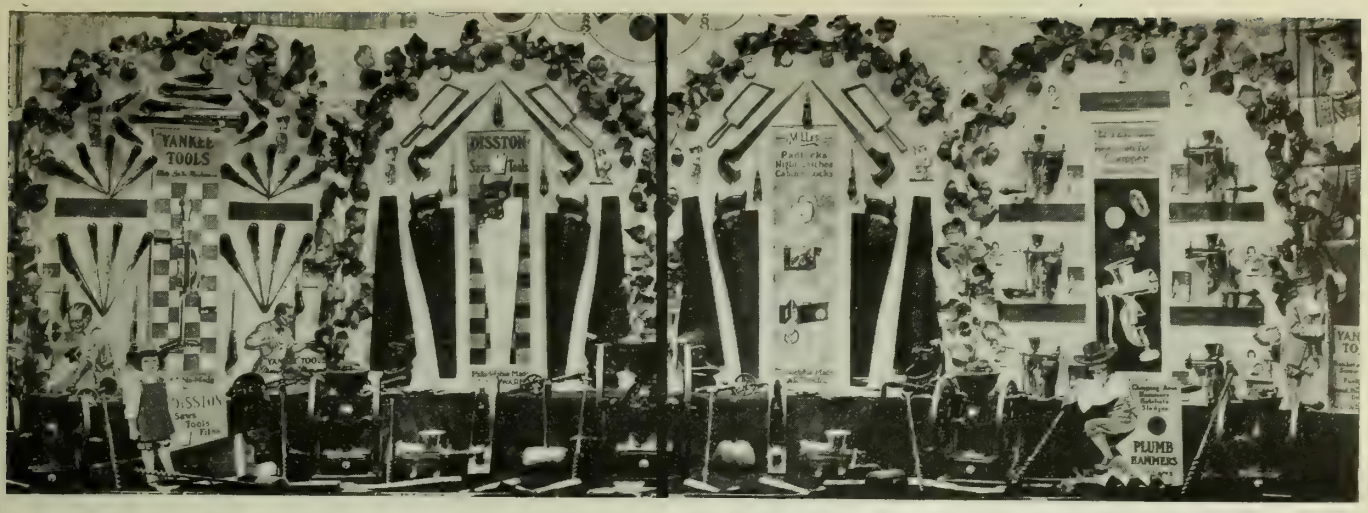
Clever merchandisers, such as the department and syndicate stores very often surprise their customers by shifting departments. In this way, goods that have been shifted from their accustomed place are brought into renewed prominence.

A writer in a recent issue of Printers' Ink in referring to the methods of some of the most successful merchandise stated that if a store is large, a favorite trick is to show the same line in various places in the building. If the thing moves slowly, this often stimulates the sale. If it is an item that turns rapidly, this frequently increases the turnover. If a product sticks on the shelves, the good store manager will keep moving it around from place to place until it seems to meet with the favor of his patrons. Occasionally a thing that will not sell one place will sell in another. Nearly all lines should be shown up in front at some time in the year.

Merchandise has news value. The weather, local events and dozens of other things influence its sale. The live dealer reads his newspaper for tips on what to feature. For instance, the fact that a fraternal order is about to convene in the city makes it advisable that certain items be shifted to the front.

Effective Use of Empty Windows

A hustling clothing merchant, in looking over the newspaper one evening, noticed that several stores in various parts of the city were for rent. The next day he went around to see them, and picked out five or six that were in suitable locations. He then called on the owners and made them a proposition, wherein he was to pay for the use of the windows until the stores were rented. The clothier's next move was to put a display in each of the rented windows. In one was put hosiery; in another, rain-



Window displays such as the above pay splendid divdends. The neat and practical arrangement of the tools will attract the eye of the mechanic. There is no evidence of overcrowding. The display was arranged by H. W. Parr, for the Fawcett Hardware Co., Saskatoon, Sask.

coats, and so on. Some such sign as this was shown:

"We rented this window so as to give the people over on this street some idea of the elaborate stock of neckwear on sale in our store."

This stunt was the talk of the city, and how it did bring into prominence the merchandise displayed in these extra windows. The story is told here because it shows the possibilities in this subject.

These principles and many others similar to them are fairly well known, but they are not always put into practice. Thousands of retailers never think of moving a department. It occupies the same old position year after year, regardless of the season, the change in styles or the vogue of the merchandise. Go into a number of stores in January and note how many of them still have Christmas goods in the front ranks of the display. How many dealers let summer wares linger in the front of the store until well into the fall! How few take advantage of a rainy day to show umbrellas near the front door or of a hot day to display appropriate merchandise on the most conspicuous counters! The live merchant is constantly changing his display to suit the weather, local events, the seasons, new stock arrivals and many other things. While making frequent, extensive changes in the arrangement of a store is not always advisable, the progressive dealer is making slight alterations almost daily.

Good Advice from One Manufacturer's Representative

This subject is of throbbing interest to manufacturers, but what can they do about it? Can they do anything to secure a better position for their goods in the dealer's store? The best answer to that question is to say that some concerns are doing it. Salesmen in their daily intimate contact with merchants have a fine opportunity to show their customers how the stock could be arranged to better selling advantage. Many stories could be told of how salesmen are doing this very thing on their own initiative and often without the knowledge of their employers. The representative of a candy manufacturer had been trying to interest a druggist in his line. "Nothing doing, son," said the pill-dispenser. "Candy is a dead one. Look at all the space I'm giving it and my sales hardly ever amount to enough to be worth talking about. I'm thinking of throwing the stuff out entirely."

"Let me give you some advice," said the salesman. "Your candy case is in the darkest and most inaccessible corner of the store. You can't expect it to sell. Put it where everybody will see it. I would suggest beside the entrance as a good place. You have that museum of gift goods there now. I'll bet a hat you don't sell an article a week out of the collection. Candy sells on sight. At this time of the year a larger portion of your patrons are more interested in confections than in gift merchandise. Let's transpose the cases and I know you'll have an order for me the next time I get around."

The suggested change was made, and as a direct result of it the daily candy sales of that merchant leaped five hundred per cent.

The incident illustrates what salesmen can do in showing the retailer the value of scientific stock arrangement.

The proprietor of a restaurant stocked a small line of cigars. He had them displayed in an attractive case, but still sales did not amount to anything. He had about decided to discontinue this sideline when he happened to mention his problem to the buyer of a department store, who had been in the habit of eating his lunches at the place. "Well, it is no wonder, Mike, you are not selling any," said the buyer. "Why have you got that case off there by itself? Move it over here next to the cash register. Put a neat little tray on it, and have your cashier place all change in this tray. You will find that many of your men patrons will take cigars instead of their change."

There was nothing unusually clever about that man's suggestion. It was just selling sense, but why had not the concern that induced the restauranteur to put in cigars told him something about the methods that would enable him to do a satisfactory business?

When a certain retailer came to the city on a buying trip, he complained to the sales manager of one of the houses from whom he bought that his turnover was too small. "I suppose the merchandise in the front of my store turns eight or nine times a year, but the stuff in the back of the room only turns about once, or perhaps twice," he said. "I often thought of renting a store one-third the size and of cutting down my stock proportionately. I believe I would do just as much business, and at a greatly reduced expense."

"I don't think it will be necessary for you to do that," said the sales manager. "I believe the thing for you to do is to make the back of your store just as inviting as it is possible. Put it in apple-pie order. I'll wager anything within reason that right now the front of the store is three times as attractive as the rear. Thinking that not many customers go there, you have got into the habit of neglecting the store from the center back. Be as particular about the appearance of the rear as of the front. Furthermore, I would suggest that you have 'something doing' in the back of

(Continued on page 141.)

Concrete Work on a Railroad

How a Large Road is Being Constructed With a Remarkably Wide Use of Reinforced Concrete—The Engineering Phases—A Matter of Considerable Interest to Hardwaremen.

HARDWAREMEN have so direct an interest in everything pertaining to the use of concrete that the following article by R. P. Crawford, reprinted from the Scientific American, will well repay the time devoted to its perusal, Mr. Crawford deals with the concreting of a railroad as follows:—

The important role that concrete can be made to play in the maintenance of a railway right of way is being demonstrated by the Burlington railroad. Not only is that road making heavy use of reinforced concrete construction, but it is also demonstrating how the work can be done efficiently and, most of all, economically. The plan embraces important steps looking forward to a rapid extension in the uses of concrete by American railroads as well as a standardization of product. The concrete gang along the right of way has been done away with to a large extent and the major part of the work for the entire system has been concentrated at plants maintained at Galesburg, Ill., Hannibal, Mo., and Havelock, Neb.

One of the problems that confronts the engineering department of every railroad is the construction and installation of bridges and other improvements along the right of way. Especially was it true that in the case of concrete projects practically all of the work had to be done on the spot. Under the new plan a large part of the work is done at one of the factories and a bridge can be shipped out practically complete, only the construction incidental to its installation being done along the right of way. In other words the job comes to the factory instead of the factory going to the job. Heavy savings are being effected by standardizing the work and a bridge erected under the new system costs substantially less than it would have a number of years ago, despite the advances in price of material.

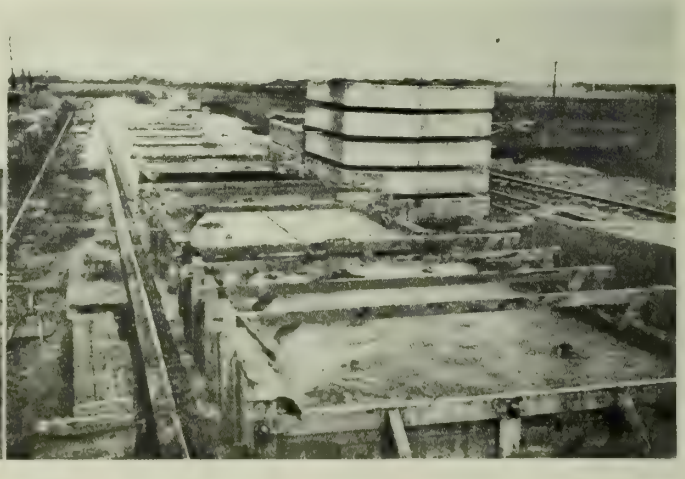
Bridge decks and bridge slabs in standard sizes, as well as piling to go with them, watering troughs for stock yards along the way, concrete fence posts and even curbing for the depot platforms are being turned out. When one considers that a reinforced concrete fence post can be manufactured for about twenty-two cents, or practically the same as a wooden post, the efficiency involved in the plan is apparent. A maximum force of twelve men in the factory at Havelock can in a year's time turn out, among other things, about 50,000 fence posts, 300 bridge slabs and 10,000 feet of platform curbing, not to mention enough water troughs to meet all the railroad's stock yard requirements west of the Missouri River. And it must be remembered that most of the work can be done only during the warm season of the year.

Reinforced concrete slabs and piling for the small bridges are kept on hand in standard sizes and can be supplied to any point along the line on short notice. The slabs which form the bridge floors come in 14 ft., 16 ft. and 20 ft. lengths. In reality they are huge blocks of reinforced concrete. Each unit is 7 feet wide, and two of them are placed side by side to attain the 14 ft. width of the standard single-track bridge. Each slab has a 6 inch parapet on one side, insuring a parapet on each side of the bridge. Ties are laid on a series of concrete slabs and the rails on top of these. The whole is filled in with gravel, giving the bridge the appearance of being part of the regular roadbed. The ballast on the bridge makes the track much easier riding and to the uninitiated the fact that a bridge is being crossed is not noticeable without a look out of the car window. Here another innovation comes into effect. Whereas, in the past the bridges have been maintained by special bridge men, now the regular track men are made responsible for their condition. The piling for the bridges is manufactured in standard lengths of from 14 to 30 feet, and practically an entire bridge is shipped out ready to be installed.

Besides the slabs for the small bridges, concrete decks are also manufactured for the flooring of steel bridges. These are 5 x 14 feet in size, each slab extending clear across a single track bridge. Ties are laid on the slabs and filled in with ballast the same as in the case of the smaller bridges. Naturally there is a much smaller demand for this sort of slab, since there are comparatively few long bridges.

While most railroads are now adopting the concrete bridge, a good share of them maintain the concrete gang along the line as a solution of the problem.

General view of the railroad concreting yard at Havelock, Neb. The cars in the foreground carry molds for concrete water-troughs.



The corner of the yard where the huge slabs for the standardized concrete bridges are made. A pile of finished slabs is seen at the right.

Traveling crane unloading sand in concrete yard.

This means that a much longer time is taken for the work and with several such jobs going on a much larger force of men is required for concrete work. Under the new system there still remains considerable work to be done in installing the bridge and in some cases the old plan of building a bridge on the spot has to be resorted to on account of peculiar conditions involved.

The concrete plant at Havelock occupies a space about five blocks long and 60 feet wide. One frame building is devoted to the manufacture of fence posts and another building to making concrete watering troughs. The heavier work, such as the manufacture of reinforced concrete slabs, is done out of doors during the warm season. An overhead crane extends across the entire plant, running on a railway with one rail at each side of the concrete yard. In that way the loading upon cars of bridge slabs, some of which weigh twenty-six tons, is easily accomplished. The concrete mixer for the outdoor work is mounted upon a platform extending across the line of moulds and running on rails at either side. In that way the mixer can easily be transferred to any part of the yard where it is desired to work.

The building devoted to the manufacture of watering troughs, of course, has its own concrete mixer. A system of narrow gauge tracks with little cars carrying the trough moulds connects the building with the outside yard. When the manufacture of a trough has been completed, it is run out of the building on one of the cars and deposited in the yard. In that way all the trouble of handling them by hand is practically done away with. The concrete trough is a marked improvement over the old wooden trough and affords sanitary drinking conditions for the stock being transported over the road.

Practically all of the concrete fence posts are made at the plant at Havelock. This part of the work is done in speedy fashion with a specially devised machine. The top of this machine is surmounted by a huge funnel. The concrete mixture is elevated in tiny buckets on an endless chain to the top and dumped into the funnel. The fence post molds are set in a revolving holder below. As each mold comes underneath the funnel enough of the mixture to fill it is admitted. Another mold then comes underneath the funnel and is filled in the same manner, while the completed posts are being removed from the machine and laid away in their molds to harden.

Thanks to the Burlington railroad, the grounds surrounding the country depots have their cement curbing the same as a city street. In the past this curbing usually was of wood or stone. The concrete curbing is now manufactured in sections at the concrete plants and then supplied to the different stations all ready to be installed. The sections are fastened together with steel dowel pins. To install them it is only necessary to dig a trench, set the sections in it and then bank the earth up again, a simple process in comparison with the usual mode of laying concrete curbing, which requires a gang of concrete workers to each job.

In many ways the entire programme of concrete manufacture might be known as an effort to fireproof the right of way, since most of these articles largely take the place of wood. One does not have to look very far back into the past to recount tragedies that occurred when a bridge burned out. Wooden bridges have already been discarded on a good share of the roads, and the substitution of concrete with a ballasted roadbed has removed one of the terrors of railroading. Likewise the use of concrete fence posts represents the elimination of another fire risk.

It is not yet possible to say how satisfactory all of the work will prove in the test of years. Generally speaking it costs little more to turn out a piece of work in concrete than wood, and, if present tests can be relied upon as indicative of the future, the life of the concrete structures will be very much longer. Experiments are being made from time to time in the utilization of concrete for other work along the right of way and time only will tell the ultimate extent to which it may be used.

DISPLAY SPACE MADE TO PAY DIVIDENDS

(Continued from page 139.)

your place of business all the time. Transfer some of your livest sellers to that section for a few days at a time. When you hold a sale, put a sprinkling of the best values in the rear. When you have a demonstrator working in the store, station her toward the back. In a word, do something to compel people to visit those rear departments. It is a problem in strategy and there is more than one way of solving it."

There are any number of merchants craving practical advice, such as this sales executive gave.

Department Store Uses Vacant Stores

In the City of Toronto the largest department store in Canada is showing goods in the show windows of vacant stores. These vacant stores are located some distance away from the department store itself. In one store window you will see a display of coal or gas stoves; in another window a display of rugs and carpets; still another has a display of sewing or washing machines. Along with each display are neat signs stating that the display was arranged by the big department store.

The Merchants Opportunity

Spring offers the best opportunities for the hardware merchant to make the best use of his display cases, windows and the store interior generally. Every foot of space in your store should make a profit for you. There are many changes you could make right now, that would help you to sell more goods at a profit. Why not make them.

Almost a Match for the Irish.

"Dose Irish make me sick, alvays talking about vat gread fighders dey are" said a Teutonic resident of Hoboken, with great contempt. "Vhy, at Minna's vedding der odder nighd dot drunken Mike O'Hooligan butted in, und me und mein bruder und mein cousin Fritz und mein frient Louie Hartmann—vhy, ve pretty near kicked him oudt of der house!"

EDITORIAL COMMENT

MAY Woodrow-Wilson prove to be the man to put the fist in Pacifist.

* * *

IT SEEMS to be all off with the Romanoffs. In fact, it's a bad year for absolute monarchs.

* * *

THE German idea of the freedom of the seas is to keep them free of the ships of all other nations.

* * *

NOW WE have a new definition for the word "slacker"—the city man who doesn't plant his backyard.

* * *

THE conspirators who planned to kill Lloyd-George by driving a poisoned nail in his shoe may have thought that he, like Achilles, was vulnerable only in the heel.

* * *

BUSINESS has been perhaps a little too good. People have been buying too readily. It may be better all around when a greater effort has to be made to sell.

* * *

THE DISCUSSION on the affairs of the Ontario Association is "warming up." This is a favorable sign. It shows that a real interest exists.

DO YOUR PART

IT has been found impossible to give space in this issue to a further discussion of the affairs of the Ontario Retail Hardware and Stove Dealers' Association, although some excellent and interesting letters have been received. These will appear next week.

HARDWARE AND METAL desires to point out, however, that any loyal members of the Association who feel that the discussion was started through a desire to "knock," are entirely wrong. The discussion was inaugurated solely with the idea of creating wider interest, of finding the cure for certain acknowledged weaknesses, of evoking practical suggestions for increased service to the members. It is a "boost" for the Association to thus openly and frankly discuss plans for its future welfare. Only good can come out of the discussion.

So far the discussion has been a little disappointing in one respect. The practical suggestions for increased service have not been forthcoming. Some ideas have been advanced, it is true; but HARDWARE AND METAL feels that this phase of the matter has not been given as much thought as is necessary. Officers and members should give thought to the possibility of new service, turning over such suggestions as they may have and submitting them for general discussion. Don't be afraid to put your ideas in the form of a letter and don't decide to do it next week. Do it now.

Now is the time to get a practical programme for the coming year definitely outlined. If through the columns of HARDWARE AND METAL, the members express their views and ideas, the officers will have something tangible to work upon. It is a duty that each individual member should accept as his own to thus assist the officers.

A "SERVICE" NUMBER

BEHIND the plans that the editors of HARDWARE AND METAL laid for this issue was the one idea of rendering service. The object of the Annual Spring Number has always been to present ideas that would assist the retailer in the handling of spring trade. This object has been developed further perhaps in the present issue than in any previous number. Much careful research lies behind the articles herewith presented, and it is felt that the issue can be strongly recommended to every hardwareman. It is well worth careful study.

Special mention may be made of the article by John C. Kirkwood, outlining plans for a spring paint campaign. This is something distinctly new and decidedly practical. Not only does Mr. Kirkwood discuss all phases of the spring campaign, but he suggests ideas that are new and novel. He goes still further and explains how these ideas could be put into effect, what they would cost and how they would probably work out. This article is perhaps the most complete ever written on this subject.

Mention might also be made here of the leading article which puts forward a timely suggestion. The spring always brings a big demand for gardening tools and similar lines, but this year, with backyard gardening put forward as a part of patriotic duty, the importance of trade in these lines has been very considerably magnified. Whether or not the suggestions advanced in this article can be applied in every case, the outstanding point is that every hardware dealer should be preparing now for an exceptionally brisk trade.

The spring numbers of HARDWARE AND METAL are produced with the idea of giving the trade a source of ready reference. They are printed so that a busy hardwareman may hang his copy up beside his desk and turn to it whenever he wants any information. In this connection it may be pointed out that

not only will the articles prove of benefit at all stages of the spring campaign, but that the advertisements constitute a splendid source of reference also.

ANOTHER BLOW AT TRADING STAMPS

THE FISHER Company that owns and operates a chain of fifty stores in the city of Cleveland, has discontinued the use of trading stamps. The reason given is that it interferes with the policy of the company to fix the lowest possible price for commodities. This is an unexpected voice in the chorus against the Trading Stamp evil. In Canada Trading stamps are illegal. Despite that fact there are agencies at work floating schemes of a similar nature. Among these is the Railway Script with its alluring suggestion "Travel for Nothing." Even where it is not actually illegal, every such scheme is actually taking your money for nothing. The instance given above is sufficient authority for the statement that the Trading Stamp does not bring business.

SAVING COST OF DELIVERY

MUCH is written and said and thought on the subject of the magic word "service." A great deal of it is pure gold. Plenty of it is nonsense.

Unquestionably the subject has been overdone with the result that many ideas with reference to service, which are quite impracticable, have been put into practice and have worked out to the detriment of those who have tried them. Service has, in some directions, been overdone. So much "new-fangled" service has been attempted that merchants have thrown their profits away in a literal orgy of customer pampering.

Take the matter of deliveries. The idea that too much service cannot be given has led some merchants to so extend their delivery facilities that they have burdened themselves with an unbearably heavy expense. It is not uncommon to find in one small town some half dozen merchants maintaining delivery wagons and motor trucks to cover the same ground where there has not been enough business to keep more than two rigs busy. Duplication has been a heavy drain on store profits and it is pleasing to find a public body like the Board of Trade at Cobourg openly advocating a lessening of delivery service—particularly pleasing because a Board of Trade represents the public as well as the business man. The secretary estimated that the cost of delivery amounted to $15,000, and could be done as efficiently for $5,000 if there was a proper system of delivery at specified hours. The result of this would be $10,000 for the merchants and customers.

This is not intended as an argument in favor of centralized delivery systems. It is meant to call attention to the fact that a merchant can overdo service in the matter of delivery and that it is a department where a careful estimate of cost and efficiency should be made in their relation to each other.

ORGANIZATION FOR WAR

A VERY striking article by Professor Stephen Leacock, published by the National Service Board, has been distributed throughout the country. It deals with the need for economy and for proper organization of all man-power and national resources. He outlines the gravity of the situation and contends that, in order to do our share to win this war, we in Canada must be prepared to conduct it with the full strength that we have. This would mean "that every part of the fighting power, the labor and the resources of the country were being used towards a single end. Each man would either be fighting or engaged in providing materials of war, food, clothes and transport for those that were fighting." . . "In place of this," he continues, "look about us. Thousands, tens of thousands, millions of our men, women and children are engaged in silly and idle services or in production that is for mere luxuries and comfort. . . Such people, though they work fourteen hours a day, are but mere drones in the hive as far as the work is concerned. Every crippled soldier that comes home and looks upon our so-called busy streets feels this by instinct with something, perhaps, like hatred in his heart."

Prof. Leacock's argument, in brief, is for national organization, for the utilization of man power, for thrift. Whether the drastic steps he advocates could be put into effect by any measure short of universal conscription is a question. Certainly, however, his article accomplishes one very important result—the result perhaps that the writer had in mind—it makes one think long and earnestly.

IS TRADE COMMISSION NEEDED?

EFFORTS are being put forth by the Retail Merchants' Association and several branches of the Wholesalers' Associations, to assist in securing the appointment of an Inland Trade Commission. The duties of the proposed commission were outlined in HARDWARE AND METAL two weeks ago. It is claimed that a properly constituted commission should be formed, composed of three men in whom the public, and the trade in general, have confidence, and who would be capable of investigating commercial subjects.

An Inland Trade Commission, if composed of business men, experienced commercially and free from all political or party influences, could undoubtedly do effective work in eliminating many of the evils which now exist in trade circles. It is quite evident, from recent experiences, that the men at Ottawa who are now trying to handle trade matters, especialy those in the Department of Labor, know little or nothing about commercial problems.

AUTO ACCESSORIES OUTGROW DEPARTMENT

(Continued from page 118.

There were close to three thousand children and their accompanying parents at the last Christmas gathering. The street in front of the store was packed when the tally-ho pulled up in front of the store. Lines of men guarded the front of the store to prevent the frantically joyful children from making quick entry into the store by way of the show windows.

Santa Claus entered and was given a regal seat in the midst of the world of toys. Then the doors were thrown open and the long line of children passed in to shake the hand of Santa Claus, and each in turn to receive a little present from him, then on past the long line of toy-laden tables and out through the rear entrance. Over a thousand of these presents were given away last Christmas.

Making the Children Your Advertisees

What was the result, Mr. James was asked.

"Well," he replied, "one result is that the kids in this section certainly know the James & Reid store. Incidentally we do a big business in toys, and we are planning to do a bigger one next year. But that isn't all. When the youngsters come to town they are just bound to come here, and, of course, the grown folks come with them. In that way we have a chance to sell many people that probably would never come to our store, possibly never come to Perth at all were it not for this Santa Claus campaign. I tell you it pays to have the children rooting for you. They are great folk to bring trade your way. We have found this plan the best one to bring actual results that we have ever tried, and we have used it four years now, each year with some improvements added to keep up the interest. The people get the habit of talking about our store to the children, and when they come to town and want anything they are more than apt to drop in here to see if we havn't got it. And in most lines we do try to have it.

The Ladies' Rest Room to Attract the Woman's Trade

"We make a bid for the ladies' trade, too. That has proved a good idea for us." The HARDWARE AND METAL representative was shown the ladies' rest room on the second floor. A bright, airy room, with comfortable chairs, a writing table, and every modern convenience for the feminine customers of the store. In this room attractive show cases, unobtrusively arranged, contain silverware and other articles to attract the attention of this branch of the store's patrons. Here also is the best modern equipment for displaying wallpaper, one of the lines that the store features. On this floor adjoining the rest room is the kitchen ware department, also stoves and ranges, and everything of a nature to attract the woman buyer. Young lady clerks are employed to attend to this branch of the trade, and have proved eminently satisfactory.

James & Reid set a high standard for service in the smaller towns and cities that should prove a strong incentive to other merchants to follow in their footsteps, and thus to prove the financial benefit that will accrue to the merchant who gives to his customers the maximum of merchandising service.

REVOLUTION WILL HELP DEVELOP TRADE

(Continued from page 127.

turn to the German industrial fold. The hold of the Germans in the Russian social fabric is very strong as the developments leading up to the revolution indicate.

It is stated that the ordinary importers cannot be depended upon to perform adequate service of the kind needed. Direct representation is necessary.

Business standards are said to be very high in Russia; a repudiated debt being much less common than with us. Banking facilities are rather cumbersome to our eyes but the word of the individual merchant is everywhere accepted there at its face value.

The Resolution

In the light of the past it may safely be assumed that the new broom will sweep clean, that the "dark forces" so often referred to will disappear from Holy Russia and that she will now enter on a new era of development. The next great world movement will, according to all the great economists centre in the Pacific. That being the case even tho' no other causes existed warrant the belief that Russia will be a chief actor in the drama. Will Canada with her long Pacific coast line sit supine or will her manufacturers seize this first great opportunity to get their place in the Pacific?

To Keep On Buying

One of the officials of the Russian War Purchase Office recently established at Ottawa, declared that he knows nothing about the trouble in Russia.

"We had no intimation that it was coming, and we do not know how it came." He said that while he dreaded changing horses amidst stream, still he hoped the change might prove a stimulus to aggressive war operations on the Russian front. "We expect on this continent to keep on buying as usual."

RETAILERS NEED FOLLOW-UP SYSTEM

(Continued from page 133).

it now, before it is laid aside to take up other matters that claim your attention. We shall appreciate your attention to it now.

We've got some fine goods here to show when you can find time to look at them, such as oil heaters, ranges, paints, washers, wringers, etc."

Newspaper Advertising Is Effective

Newspaper advertising is an item in which considerable money can be squandered each year without getting returns. All advertising has one advantage: it keeps the name of the firm before the public. There is much benefit to be had through this. But it is not utilizing the advertising space to the best advantage to get this single benefit. It should be made a real news feature of any newspaper, and the merchant can make it bring him increased trade if carried out along the lines of interesting reading material. Two of the biggest factors that go to make an advertisement attractive are the illustrations and the prices. The eye can take in at a glance what the advertisement is about and the price will enlighten the would-be purchaser as to what it will cost him to become owner of the article in question. There is an appeal to the imagination and an appeal to the pocketbook. It is necessary to get his attention first of all through these means. The next step will be an inspection of the goods themselves. If they come up to what he is led to believe they are the sale becomes an easy matter. In this respect it is therefore well to give as much descriptive matter as possible without overstating the merits of the goods. Herewith are reproduced some advertisements that "pull" through their illustrations and because some descriptive matter and the prices are given. In the advertisement of the Baxter Hardware Company it will be noted that a very effective one is arranged with illustrations of goods for which a steady sale throughout the year should be had. Prices are also given and no doubt is left in this respect. In the advertisement of the Purdon Hardware Company there is an appeal through the seasonableness of the goods for the spring trade. The numerous illustrations greatly add to the pulling power and the prices are there. In the advertisement of the Cowan Hardware a strong appeal is made to a particular section of the community—a section that looms large in the trade of most hardware stores. This is but an illustration of how little advertised goods can be made a basis of real interest.

Taking Goods on Consignment

Legal Phases of the Question—Retailer Must be Careful What Arrangement He Makes in Accepting the Goods—If the Manufacturer Goes Bankrupt — If the Retailer Does

By WALTER E. LEAR

Registered in accordance with the Copyright Act by W. E. Lear.

EDITOR'S NOTE.—*Have you ever taken in goods on consignment and had difficulty in straightening matters out afterward? For instance, have you had difficulty in getting the manufacturer to take back such of the supply as you were unable to dispose of? Have you suffered loss by fire and experienced difficulty in getting the insurance side settled because of damage to uninsured consignment stock? Probably every merchant at some time or other has faced some angle of this question. Mr. Lear's article, therefore, will be of special interest.*

"GOOD morning, Mr. Merchant. I am Mr. Windjamber, representing the the Great Windjambing Manufacturing Company, Ltd. I have here samples of our latest product, the 'Windjamber double-back action peanut cracker,' and I would like to load you up with a car lot or two."

All our readers know the rest of the story off by heart. They have heard it over and over again, and told in as many different ways as different windjambers have called upon them. Nowadays a merchant seldom lets a windjamber load him up with a lot of any kind of "extra specials," notwithstanding the solemn warning that the "moss of antiquity" will soon envine his business, if he does not lay in a full line of Windjamber's latest products.

While the modern store is no longer decorated with the famous checkerboard, the ash box and chair warmers, likewise the modern windjamber has adopted new methods of working off his goods. When the merchant refuses to buy, the modern windjamber, like the Good Samaritan, offers to help the merchant out of the utter ruin which awaits him, by leaving a quantity of his "Coney Island red-hots" with the merchant, to be sold on commission. New bait often catches a fish.

Now the question arises, what are the legal rights and liabilities of the merchant if he bites the hook? In the first place, the merchant does not buy the goods, therefore he does not own them. He simply has the right to sell them for the owner; he is, in fact, only an agent of the owner; therefore, the law applicable is that of principal and agent. Whenever a dispute arises between the principal owner and the agent merchant, it must be decided according to the terms of the agreement entered into between the parties.

As no two of these consignment agreements are the same, it is impossible for me to give you definite advice regarding them. However, I hope to give you some general advice which will be useful to you in such cases. Some agreements are verbal only. These are always unsatisfactory to both parties, and in case of dispute, a judge will have to decide on

WALTER E. LEAR.

the oral evidence of the parties. It is better by far to put your agreements in writing, but here let me warn the merchant that the printed contracts, carried by the different windjambers, have all been drafted by expert lawyers, and you may rest assured that the interests of the principal owner have not been overlooked. They are all made to look perfectly fair and reasonable, but before you sign one I would advise you to step around the corner and consult your solicitor. Any lawyer can keep you out of trouble, but it takes a mighty good one to get you out of a bad bargain after you have entered into it in writing.

These printed contracts are often unreasonable. While in all cases of taking goods for sale on consignment the merchant should keep accurate account of all goods received and sold, and should remit promptly in accordance with his agreement with the principal owner, still some of these agreements provide that in case the merchant fails so to do, then the principal owner has the right to treat the consignment as an actual sale and demand payment in full for the entire consignment. Then the merchant finds that he has bought a lot of goods which he never intended to buy.

Question of Insurance

The question of insurance may also become a burden to the merchant. Many consignment agreements provide that the merchant will insure the goods on consignment. An ordinary merchant will reason with himself that he carries sufficient insurance, but most policies do not cover goods belonging to a person other than the insured. In case of fire the merchant finds that the goods he had on consignment were not covered by his insurance, and, as they were destroyed, he has to pay for them out of his own pocket. A good plan for the merchant to adopt would be to tell the principal owner to insure the goods himself if he wants them insured.

Some consignment agreements provide that in case the agent merchant becomes insolvent or makes an assignment for benefit of creditors, then the principal owner may elect to treat the consignment as a sale and rank on the estate as a creditor. In case the principal owner were in deep water, or if the liabilities of the agent merchant were not great, and if the goods were invoiced at a high price, then it might be profitable for the principal owner to elect to become a creditor. In such case the agent merchant may be placed in a much worse position than he had anticipated.

Agitation for Registration

Notwithstanding the care with which many of these consignment agreements have been prepared, there is an agitation in favor of seeking legislation, providing for the registration of them in the same manner as chattel mortgages are recorded. I think that merchants will be well advised if they oppose any such legislation. Consignment vendors have already more protection under the law than to my mind seems fair. Their goods cannot be seized for the debts of the agent merchant, and in case of an assignment for benefit of creditors, they can take their goods out of the stock. This should not be permitted. They

An X-Ray System of Accounting

Series of Forms That Are Simple but Provide Accurate Information About Your Business—Daily Records of Sales, Expenses, Profits and Stocks—Making Out Inventory on Paper Each Week.

CLEANING the Augean stables is perhaps the most familiar of the renowned "Labors" of Hercules. History—or tradition—does not make it clear whether Hercules could qualify as a bookkeeper or not. If he were alive to-day we are confident that he would account it as Labor the Eighth, if he were set the task of preparing a set of forms to suit all, or even a majority of hardware merchants.

It is in no wise with a purpose of laying claim to furnishing a universal remedy or panacea that the system appearing below is presented to retail merchants. The best we need aver as to any system, we do as to this: that it contains points of excellence that we believe will repay adoption by a wide circle of our readers. There undoubtedly will be a feeling that it goes too much into details in its daily records of stock on hand, profits, percentages, inventory, etc. If so, work it on a weekly basis, or a monthly, as most do. The foundation for any one of the three is provided. So with other points. Take out of them what you think best; it is what one might call a Unit System. You can take a little, half, most of it, or all of it, as seems fitted to the nature of your business.

Three Bookkeeping Forms

The system appearing here was installed in a store after a careful study of its needs and an examination into many existing systems. It is composed mainly of three forms, ruled as illustrated, filling two pages, 22 x 14 inches. These forms are ruled on both sides, and each page is filled out for five weeks, thus allowing a full month's record. Each sheet, therefore, is sufficient for two months, and thirty, bound together, are enough for five years.

Four Useful Recording Tickets

With these are used four "tickets," printed on cardboard or thick paper, each 4½ x 3 inches; a Stock Ticket, a Purchasing Ticket, a Paid Out Ticket, and a Loss and Gain Ticket. It may be advisable to describe these first before proceeding to the main "bookkeeping" forms.

Records of Stock, S.P., Profit, Etc.

The "**Stock Ticket**" is used to record every article purchased through the regular channels of supplies, entering the name of the article purchased, from whom purchased, quantity, the date, the cost, the selling price, the profit and the per cent. of profit. There is also space at the bottom for "Remarks." In entering the cost, selling price and profit, the entire amount is entered. That is, if we were entering an article which cost us $15 per dozen, and was to be retailed at $1.75 each, and there were 5 dozen in the lot, the cost would be entered—**Cost, $75.00; Selling Price, $105.00; Profit, $30.00; Per cent, 29 4/7.** Every article is entered upon a stock ticket just as soon as the invoice is received and O.K'd by the stock-keeper.

ARTICLES	

These are three separate tickets of calendered paper or cardboard, each 4½ in. x 3 in., used by heads of departments in larger stores and by clerks, as well, in smaller. They all serve to help in keeping accurate records and avoiding waste. A fourth card, of green board, is identical with the stock ticket, except that the word "for whom purchased" is used instead of "from whom purchased." The uses are described in this article.

Some stores are content to enter all invoices in detail in the Stock Purchase, or Invoice Book, filling out the selling price, per cent., etc., at the time.

For Reference in Buying Again

"The stock tickets are of a great help in buying," we were informed. "They are filed alphabetically, and can be very easily referred to when wishing to place an order for some article. By referring to these stock tickets we can tell the exact quantity of an article we have sold during a certain period and order accordingly, thereby eliminating the danger of over-buying. In case we have been stocked on some article, and have been forced in selling some at a reduced price in order to clean up, the loss ticket which was made out for this reduction in price is filed with the stock recording this purchase, and when placing an order for that particular article at some future date, the presence of that loss ticket makes us more careful in placing our order to eliminate all loss possible.

Where to Buy to Best Advantage

"These stock tickets also keep us posted where we can buy to the best advantage. By referring to them we can very easily tell from which firm we were able to get the best price, etc. They also show us whether the article was satisfactory or not. When an article proves satisfactory to our trade and worthy of our consideration when re-ordering, this is recorded in the space for "Remarks," and it is given first consideration when re-ordering. But should the article prove unsatisfactory, this is also recorded and that particular article is shunned when re-ordering."

Special Purchase for a Customer

The "**Purchasing Ticket**" is a special one, used to record every purchase that is not purchased through the regular channels of supplies. "For instance," says the merchant who runs this system, "we offer our customers special service; we offer to get for them any articles in our line which we do not carry in stock, and this purchasing ticket is used to record this purchase. These tickets are the same as the stock tickets, with the exception that they read 'For Whom Purchased' instead of 'From Whom Purchased.'' They are also a different color; this is because they are filed with the stock tickets and help us to more readily find them if it is ever necessary to refer to a purchase of this sort.

Petty Expenses

The **'Paid-out Ticket'** is used to record every cent paid out for expenses. The ticket is filled out with the name of the person making the paid-out, what expense account it is to be charged to, the date, the amount, and the article for which it is spent. These are deposited in the register, and each evening they are gathered up and charged to the expense account, as provided for in our 'Daily Record of Expenses.' This gives us a record of every cent paid out and for what it was spent.

"It also eliminates the useless expenditure of the store money by the clerks, for they must make out a ticket for every cent that they pay out. Often where the clerks have the authority to pay out money for necessary things needed at the store, such as paper, tacks, etc., used in trimming the window, and various articles needed about every retail store, they overdo the thing, and sometimes spend money uselessly; but if they are required to make out a record of all money they spend, they are not so liberal with the spending of the store money."

"Loss and Gain" Tickets

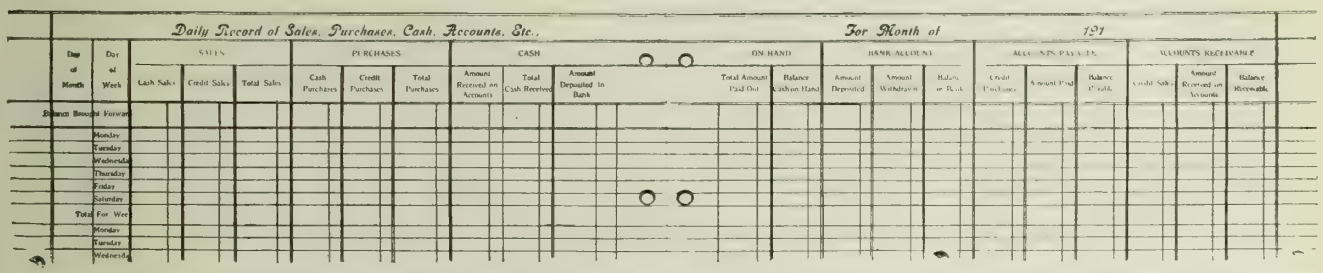
The loss and gain tickets may arouse some opposition. It may be said that in a large stock items recording individual reductions would entail too much labor. Most department heads are content, when reducing "slow" sellers, to put in a "Reduction Slip," as it is called, containing one bulk sum, covering all individual reductions in any one line. What we would like to impress, however, is the advisability of using these reduction slips in some form or other, both to keep the "stock record" straight, and also to be able to refer to lines that have proved weak before reordering for another season. Here is the explanation of these "loss and gain" tickets as given to us.

"The "Loss and Gain Tickets", we are told "are used to record every loss and gain that may occur. These tickets are printed upon light weight paper, and put up in pamphlet form and each clerk carries a package of them with him at all times, and is required to make out a ticket for every loss or gain occurring with him during the day. Losses will occur through depreciation, spoiled or damaged goods, through reductions made for a special sale or for reductions made to parties making large purchases, etc. Gains occur through the advance in price of some articles, discounts rebates and miscellaneous, the sale of boxes, etc. Articles such as these costing the store nothing should be recorded a gain when sold for any amount. All goods are entered upon the stock ticket at the regular retail price at the time they were received and should they be sold for a less figure, or a greater figure, for any reason, it should be recorded as a loss or gain as the case may be. These tickets are deposited in a box provided for that purpose and then are gathered up each evening and entered in the correct column provided in the "Daily Record of Losses and Gains."

Details as to Articles

"In entering a loss or gain the ticket is filled out with the name of the article upon which has been either a loss or gain, the quantity, the date, the cause, the regular selling price, the amount received, if any, and the amount of loss or gain as the case may be. Always drawing a line through the word "Gain" if recording a loss and vice versa if recording a gain. The regular selling price is always recorded and not the cost, for every article that comes into the store to be resold has been entered upon a stock ticket and sold at the retail price prevailing at the time it is received, and it is upon the selling price we must base our losses and gains, this will be made clear when we get farther into the working of this system."

Daily Record of Sales, Purchases, Cash, Etc.



A very clear method of keeping track of details of your business. The double page does for a whole month. Explanation in this article.

NOW for the main forms. First of all the "daily record of sales, purchases, cash on hand, bank account, accounts payable and accounts receivable". With this we know just how our business stands at the end of each day. In starting a new page in this system at the beginning of the first of each month, we carry forward in the line marked "balance brought forward" the different amounts which we wish to carry forward from month to month. Sales and purchases are never carried forward from one month to the next, but are only carried to the end of the month, and then at the end of the year the total amount of sales of each month are added together giving us the total amount of sales for the year, also the total amount of purchases, giving us the total amount of merchandise purchased during the year. But the balance of cash on hand (cash in the cash drawer) at the beginning of the month is carried forward, also the balance in bank, balance of accounts payable and accounts payable and accounts receivable. If the month comes in on Tuesday, we start with the first line marked Tuesday and number down the page for the dates of the month in the column provided for that purpose.

Recording Cash and Record Sales

Under the heading of "Sales" the cash sales are recorded in the cash column each day as they are taken for the register reading each evening. The credit sales are recorded in the credit sales column as they are taken from the charge slips, which are made out for every charge sale. This gives us the amount of both the cash and credit sales for each day. Then these two figures are added together and entered in the total sales column giving us the total amount of business done on that particular day. These figures are totaled at the end of each week and entered on the line marked "total for week," giving us the total for each week, then there is a grand total for the month

which is set down on the line marked Total for Month, at the bottom of each page.

Cash and Credit Purchases

Under the heading "Purchases" all cash purchases are entered in the cash purchase column. When merchandise is paid for by cash it is entered upon one of the purchasing tickets and put in the register and each evening taken out and entered in the cash purchase column. The credit purchases are all purchases made through the regular channels of supplies and paid for by check when due, and they are recorded on the stock tickets and added together each evening and entered in the credit purchase column. The cash and credit purchases are then added together and set down in the total purchases column. Purchases are totaled at the end of each week and month the same as the sales, giving us the total amount of goods purchased during the year.

Under the heading of "**Cash on Hand**" is recorded the amount received on accounts, as shown by the register, in the Rec'd on Acct. column. The total amount of cash received for the day, including amount received on accounts and cash sales, is entered in the Total Cach Received column. The amount deposited in the bank each day is entered in the Amt. Deposited in Bank column, and the total amount paid out for expenses and cash purchases, etc., is entered in the Total Amount Paid Out column, then the total amount of cash received is added to the balance cash on hand of the preceding day and then deducting the amount paid out plus the amount deposited gives us the total amount of cash on hand with which we shall start business the next day.

Under the heading of "**Bank Account**" is recorded the amount deposited that day, also the amount withdrawn, each in the column provided for that purpose, adding the amount deposited to the balance in bank on the preceding day, and from that amount deducting the amount withdrawn, gives us the total amount remaining in the bank, which is entered in the column for "**Balance in Bank.**" This keeps us posted on just how we stand each day in regard to our bank account.

Purchases, and Balance of Debts

Under the heading of "**Accounts Payable**" is entered the amount of credit purchases as received in the Credit Purchase Column, for that day, also the amount paid on accounts as shown by the check stubs. Adding the amount of the credit purchases for the day to the balance of accounts payable for the preceding day and deducting the amount paid gives us the balance payable and this is entered in the "Balance Accounts Payable" column. We know at the end of each day just what we owe.

Then with our record of "**Accounts Receivable**" we know just how much we have out on the books at the end of each day. By entering the amount of credit sales and adding this amount to the balance of accounts receivable for the day before and deducting the amount received on accounts leaves us the total amount due us at the end of every day. We are able to know each day whether we are allowing our book accounts to grow too large without any extra efforts.

A rather unusual method of daily stock records, with profits. This could be changed to a weekly or monthly record.

NOW with the "**Daily Record of Stock**" form we are able to know just what our per cent. of gross profit is averaging, and what the retail value of our stock is each day, etc.

"In starting this system of accounts," the explanation is given "we first took an inventory, getting both the cost and retail price of the stock on hand. The cost as shown by the inventory was entered in the Total Cost column under the heading Cost on the line marked Balance Forward. The retail price was entered in the column Total Selling Price under the heading of Selling Price on line marked Balance Forward. Then each day the cost and retail price of all articles purchased as taken from the Stock and Purchasing Tickets is entered in the column marked Purchases under both headings, the cost of purchases under heading Cost and the retail price under heading Selling Price. Each of these amounts are added to the total amount for the preceding day and entered in the total amount column provided under both headings. The total amount is carried forward every day, until the time of the next inventory and as we take inventory every four months, this amount is carried forward until that time. When totaled for the four months, it gives us the cost of all merchandise purchased during that time, including stock on hand at the beginning of the four months, also the amount that stock should have brought us had it all been sold and sold at the price intended on the stock ticket when it was entered. Then by taking our second inventory at the end of the four months, taking both the cost and the retail price as before, and then by taking the cost of goods now on hand from the total amount as shown by the "Total Cost" column gives us the exact cost of merchandise sold during the four months, and by taking the entire retail price of stock on hand from the amount as shown by the total selling price column gives us the amount the goods sold should have sold for. This amount plus the gains and minus the losses should equal the total amount of sales for the four months. The difference between the cost of merchandise sold and the selling price which it should have brought, plus the gains and minus all losses and expenses should be the actual net profit for the four months. If this amount does not correspond with the actual net profit, if it should be larger than the amount we

actually received, then the difference occurs through forgotten charges or stolen goods. (These two figures should and will correspond if everything is right).

"In taking inventory all goods are taken at what they actually cost, and not their market value for all advances and declines have been entered as losses and gains.

The Daily Profits

"You will also notice that our system will show us just what our per cent. of gross profit is running each day. This is done by entering under the heading of "Gross Profit" the total cost as shown by the total selling price column subtracting the cost from the selling prices gives us the gross profit, this amount is entered in the "Gross Profit" column. This amount represents the total gross profit that will be made on all goods purchased to date including goods on hand at start. By dividing the amount of gross profit by the total selling price will give us the per cent. of gross profit as it is running from day to day. With this system we are able to set a figure which we wish to represent the per cent. of gross profit we wish to make and can tell each day just how we are succeeding. Under the old system we had no way of telling just what our per cent. of gross profit was running, until we took our inventory at the end of the four months. Now should our per cent. of gross profit drop below the figure set, we can by putting some special efforts on the more profitable articles bring it back to normal.

Value of Stock on Hand

"With this system, we also can tell the retail value of stock on the stock on hand at the end of each day. In the column marked Selling Price of Stock under heading Stock on Hand is entered the total selling price, as shown by the total selling price column under heading Selling Price plus the gains and minus the losses. In the column marked Sales is entered the total sales for the day. Then this amount (total sales) is subtracted from the amount in the preceding column giving the retail value of stock on hand at the end of the day, this is entered in the column marked Balance Stock on Hand, keeping us posted on the value of our stock from day to day. To find the approximate value of that stock at cost, we take the per cent. of gross profit as shown by the Per Cent. Column and deduct this amount from the balance of stock on hand and this will give us the approximate value at cost.

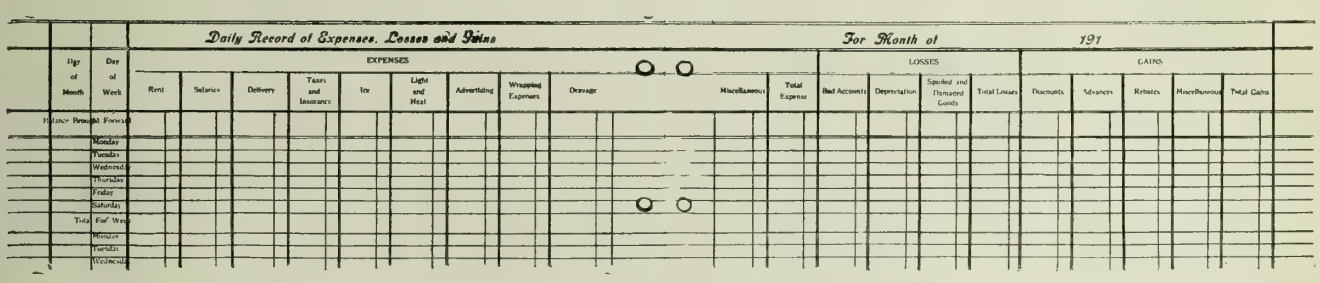
"To illustrate; let us say that our stock record showed us that the retail value of our stock to-day was $15,000.00 and that our per cent. of profit was running 33 1-3 per cent. and we wish to know the approximate cost of that stock, we take 33 1-3 per cent. of $15,000.00 which is $5,000.00 and deducting that amount from $15,000.00 we find that the approximate value at cost is $10,000.00. Under the heading of Net Profit we enter the amount of gross profit as shown by the Gross Profit column and the total amount of losses and expenses and then this amount is subtracted from the total gross profit, and the remainder is entered in the column marked Balance Gross Profit.

Net Profit Column

In the next column is entered the total gains and this is added to the balance gross profit and entered in the Net Profit column and this amount represents the net profit that should have been made on all goods purchased to date including goods on hand at the time of starting. This amount is carried forward each month and at the end of the four months, this amount minus gross profit the goods on hand at the end of the four months should make, should be the actual net profit for the four months.

"The net profit as carried forward each day does not represent the net profit for that day nor up to that time, for we may have sold up to that time the more profitable articles, yet it would have been based upon the average per-cent. of gross profit, but it is merely carried forward as a record."

Daily Record of Expenses



Each sheet of this (covering two pages) is sufficient for one month's record. The article describes just how each column is figured out.

WITH the Daily Record of Expenses, Losses and Gains, we are able to keep an accurate record of all expenses, etc. Under the heading of Expenses we have our expenses divided into nine separate accounts, keeping us posted on just what we are spending our money for, and also letting us know just how much we are spending for each expense and should any one certain expense grow larger than what we think it should, we can tell it and try to cut down that particular expense, each one being entered in the correct column as provided.

Under the heading of Losses, all losses are recorded as shown by the loss tickets each day. Under the heading of Gains all gains are entered as shown by the gain tickets each day.

CREDIT MAN'S HARD LINES

When the credit man makes a mistake it is good night, says the Pittsburgh "Credit Bulletin." But when a plumber makes a mistake he charges twice for it; when the lawyer makes a mistake it's just what he wanted, because he has a chance to try the case again; when the carpenter makes a mistake it's just what he expected, because the chances are ten to one he never learned his trade; when a doctor makes a mistake nobody knows the difference, and when an electrician makes a mistake he blames it on the induction, the meaning of which nobody knows. But the poor credit man has no excuse.

If you are an employer, give the returned soldiers a fair show. It may take a little time for them to get their bearings. Have patience with them and encourage them.

Does It Pay to Issue Catalogues?

Experience of a Hardware Merchant Who Issued a 48-Page Catalog—Unsettled State of Markets Cause of Disturbance—Some Direct Results

Based on an interview by Hardware and Metal representative with R. Hawkins, Smiths Falls, Ont.

Page from tool section of catalog.

"WOULD it pay me to issue a catalog?" is a question that has been asked repeatedly by many retail hardware merchants. The success of the large mail order houses in soliciting trade through catalogs has been so pronounced, and in a few instances so overwhelmingly in evidence, that many retailers believe the catalog method of soliciting business is an ideal one. At first thought the plan seems like a good one. Three or four large concerns in Canada have built up national connections through their catalogs. Why can't the retailer do the same thing on a smaller scale, issue a catalog particularly suited for the community in which he does business, and cash in on it?

There are many people who claim that the mail order way of doing business is a splendid one, and so it is, for those who are into it in the right manner. Much is heard about the concerns that have made a huge success of the mail order business. But comparatively little or nothing is heard of the many, many concerns which have tried to start up in the mail order game, have invested a few hundred, or more often a few thousand dollars, and then gave it up in disgust. Most of the big mail order houses, now nationally known, had their ups and downs, their losses and disappointments, before they arrived at the road to success.

One of the chief reasons why few retail firms issue catalogs is that they feel they cannot feature leaders at the low prices quoted by the large catalog houses. Then there is the work of compiling the catalog, the cost of publishing and mailing it.

The big mail order house catalog contains everything from hair-pins to harness. Every person in the farmer's family is interested in the big catalog. It features clothing, jewellry, foodstuffs, sporting goods, hardware, drugs and almost everything needed in and around the home. The hardwareman's catalog must of necessity feature only the goods carried in the hardware store, although the stock in a modern hardware store to-day is much more varied than the stock of ten years ago.

Then there is the lack of precedent. Many retailers have issued catalogs but have not been able to tell whether or not the catalogs have paid for themselves.

Just prior to the outbreak of the war the question of retail catalogs was receiving a great deal of attention in Canada. This was particularly true regarding the retail hardware trade. During 1913 and 1914 a number of retailers issued catalogs for local distribution. It was almost impossible to determine whether or not the catalogs were a success. In most cases the issuance of the catalog was a first attempt and it was hoped that although the first attempt did not bring forth the desired results, more definite returns would be secured from future editions.

The plans of many retailers however were frustrated by the outbreak of the war. Prices advanced with such alarming rapidity that quotations in a catalog one week, would be of little or no use the following week. On this account many retailers who contemplated issuing catalogs in the spring of 1915, abandoned the idea.

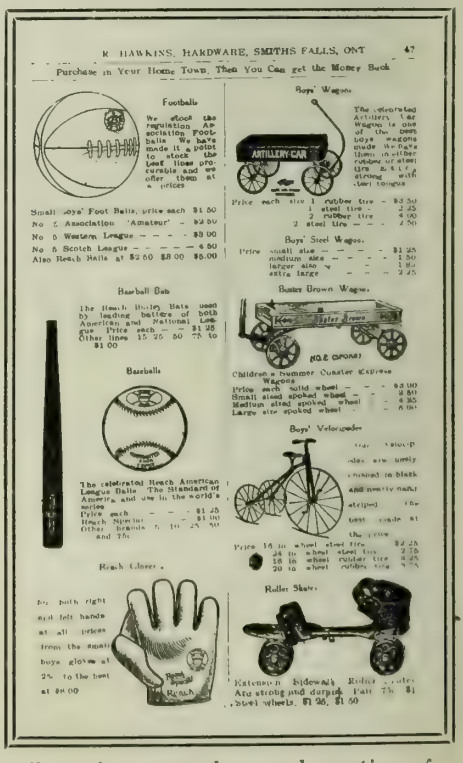
Retailer Issued Catalog

HARDWARE AND METAL ran across one retailer who issued a catalog in the spring of 1915, or to be exact in March 1915. R. Hawkins, a hardware merchant of Smith's Falls, Ont., issued a 48 page illustrated catalog. Prices were given on all goods featured in the catlog. Reproductions of four pages from the catalog reproduced here will give the reader an idea of how the cuts, descriptions, prices, etc., were aranged.

Mr. Hawkins has not issued a catalog, since March 1915, not because he has lost faith in the project, but because of the great fluctuations that are taking place almost daily in the hardware trade, such, a catalog now-a-days would be a dead letter before it was well off the press. For that reason Mr. Hawkins has discontinued the practice but it is only a temporary discontinuance, and when conditions again become normal, he expects again to take up the idea.

No Great Expense Entailed

As this is a system that many other merchants might be interested in imitating when trade conditions become more normal, it might be interesting to note some of the methods Mr. Hawkins adopted in getting out this catalog. As an item of expense it was not a very heavy item. Probably $100 would cover every expense connected with the venture, Mr. Hawkins thought. The cata-



Page from sporting goods section of catalog.

log was gotten out by a firm who make a speciallty of such work and consequently the printing item was reduced to a minimum. Then he found that manufacturers were very generous in helping in such a scheme, and in many instances supplied cuts of their product that helped to brighten up the pages and make them readable and generally attractive.

Making the Catalog a Household Need

As everyone knows however, most booklets and price lists have a short shift unless they have more than mere catalog qualities to recommend them. They are thrown away and neglected, and often when goods are wanted and a catalog might be of advantage to the buyer, and consequently to the merchant, they are not to be found. The proposition therefore that presented itself to Mr. Hawkins, was how to make this catalog so interesting to the farmer, for whom it was primarily intended, that he would keep it by him from year to year.

Make it a receptacle for information that the farmer wants to keep was the idea that presented itself to him. So throughout the catalog there were spaces left for such items as the date of the planting of certain crops, the date of harvest, and price received for the crop. There were spaces in which to note the amount of butter received from milk delivered and a page for the weekly prices. This and much other useful information was suggested for the farmers benefit, the idea being that for the sake of this information the book would be saved from destruction.

18 R HAWKINS, HARDWARE, SMITHS FALLS, ONT

Price is a Good Salesman, but Quality is better We Furnish Both

Farming Tools and Supplies

Our line of FARMING IMPLEMENTS are finely finished and properly tempered. We also sell handles like best only and do not handle manufacturers seconds or goods that are defective in any way. Quality always guaranteed

Three Prong Hay Forks

3-Prong Hay Fork, straight each, 80c
3-Prong Hay Fork, bent handle, each 80c
3-Prong Hay Fork bent handle, with strap each 85c

Barley Fork

Steel Barley Fork, with adjustable wire ball and brace 4 tines 10 in plain ferrules
Price each — — — — — $1 00

D and Long Handle Manure Forks

4-tines plain ferrule — — — — 90
4-tine strapped ferrule — — — — $1 00
4-tine plain ferrule — — — — 1 25
4-tine strapped ferrule — — — — 1 35
6-tine strapped ferrule — — — — $1 65

Spading Forks

Spading Forks, 4 steel tines, diamond back Weight 4½ lb.
Plain ferrule Each — — — — $1 15
Strapped ferrule Each — — — 1 25

Ensilage Forks

These Forks are unequaled for handling cut straw and ensilage Have sharp steel tine which will pierce cut straw A splendid Fork for handling fine manure.
Price each — — — — — $2.25

Manure Scrapers

Made with strong steel blade, riveted by means of iron straps to good handle Splendid for cleaning cement stable floors
Price each — — — — — — 25c

Manure Drags

4-prong Manure Drags, solid steel iron handle
Price each — — — — — — 75c

Heads for Fork and Shovel Handles

Malleable D Heads for Fork and Shovel handles.
Price, each — — — — — — — 10c

Hay Fork Ferrules

Judging the Results

In the nature of things the actual effect of such undertakings as these must be largely problematical, especially on the start. This is the case with many forms of advertising. It takes a good deal of faith, but fortunately it usually rewards that faith. It is not on the basis of the actual known results that the effect of such methods can always be judged. Yet Mr. Hawkins has enough evidence of the tangible results of this scheme to have encouraged his waning faith had his faith been in need of encouragement. Many people dropped into the store, with the catalog in their hand, to enquire for some article described therein, or in some way referred to the catalog. That his scheme for having the catalog preserved and proved successful was evidenced too by the fact that these requests and references came not only immediately after the catalog had been delivered but all through the year, and sometimes into the second year. But the result of such measures as this cannot be estimated by the results directly known. For every person who mentions a catalog in buying, there are ten persons who may have been influenced to buy by means of that catalog, and may yet make no reference to the fact. Behind these again are those to whom all advertising is directed, the great army who are unconsciously interested in the commodity advertised, and thus influenced towards buying. Therefore the success of failure of such a scheme must depend not on one or two instances, but in the burden of increased business that follows such a move, and judged on this basis, Mr. Hawkins found the scheme a success.

A Good Mailing List

In getting these results Mr. Hawkins was careful to see that no catalogs were dissipated in useless circulation. Every catalog went to a live address. Mr. Hawkins found himself able to do this because he had previously compiled a rural delivery route list which he had issued in booklet form. This list had proved of advantage in many ways, but principally in giving him a live mailing list for such advertising matter as this catalog. It had also served him in other ways, notably in giving him, a list that many manufacturers asked for, for sending out literature to stimulate business in their particular lines.

The ability to provide such a serviceable list, he found, had the effect of encouraging the manufacturers' interest in his territory, which was a very satisfactory form of advertising for any merchant and one that costs him nothing. Moreover this team play between manufacturer and retailer had been of great service to him in increasing the actual extent of his business, as many of the leads received from the manufacturer had resulted in sales, while many prospective customers had been eventu-

ally sold with the assistance of letters and descriptive literature direct from the manufacturer.

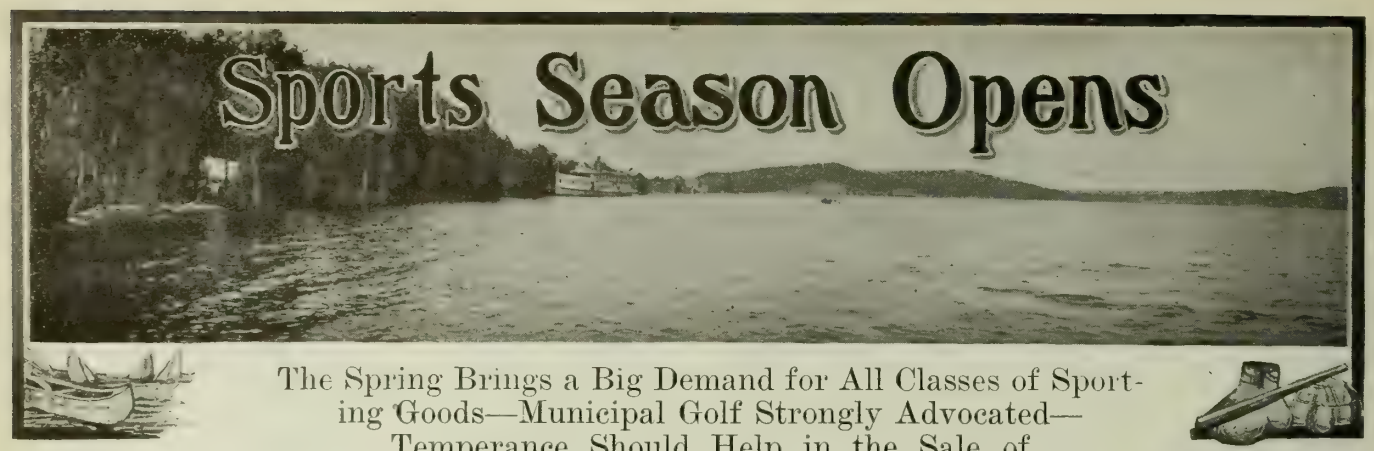
Using a Yard Stick to Advocate Wall Paper.

Another little device that had proved of benefit to this store from an advertising standpoint, was the giving away of yardsticks. This was done to encourage the sale of wall paper, which is a special line featured by the store. These are always given out at an opportune time in the early spring when the householders mind more or less naturally turns to the thought of household improvement. Then is the time he needs some measuring appliance, and as he measures his walls and computes the amount of paper that he will need, he is not likely to overlook the name of the dealer on the stick nor the suggestion accompanying the name that this store sells wall paper.

In such methods is found the very effective form of advertising because it presents the article at the very moment that the prospective customer mind is focused on that subject.

These are a number of suggestions of ideas that have been worked out by one hardware man. They are of a kind that makes them applicable to many situa-

(Continued on page 167).



The Spring Brings a Big Demand for All Classes of Sporting Goods—Municipal Golf Strongly Advocated—Temperance Should Help in the Sale of Angling Supplies—Other Points

IT takes salesmanship to sell almost any kind of goods but at certain seasons it perhaps takes little actual salesmanship to make certain lines move. Let the public know you have the goods, by advertising and by window displays and by any other method you may see fit to adopt. The impetus of desire will do the rest.

For instance, at Christmas time it is not hard to sell goods; although a real salesman, of course, will turn in a fatter sales book than the mere order-taking automaton. It is not hard to sell coal in winter time nor over difficult to dispose of screen doors in early summer.

The same applies to sporting goods in the spring. As soon as the grip of winter is off the land, the sport microbe that is latent in the blood of every man and boy begins to stir and joggle up against the other microcosms. As a result of the state of mind created by this conflict in the veins, the sight of a fishing rod, a lacrosse stick or a set of golfing sticks is enough to set the patient into a very turmoil of desire.

Of all the lines that the hardwareman should feature for spring, there is none more timely than sporting goods. Early spring finds the baseball and lacrosse clubs organizing, the cricket enthusiasts rolling the "crease," the golf clubs cleaning up the greens and the tennis courts being put into shape again. It is not necessary to either create or stimulate demand. The demand is there, literally pulsating for outlet.

All this, of course, is an old story to the hardwareman. He knows that the spring brings along a big demand for sporting goods. The purpose of this article, therefore, is merely to serve as a general reminder and, on top of that, to go into particulars on a few lines where perhaps there is a tendency to overlook the full possibilities.

The Golf Trade

For instance, there is the matter of golfing supplies. Now plenty of hardwaremen who handle sporting goods have never bought a solitary niblick nor handled a brassy; in short, have eschewed golf supplies entirely. This is not hard to understand where the town has lacked a golf club. There are few towns in Canada now, however, which lack a course, and those which do have citizens who belong to clubs elsewhere. And yet there are many hardwaremen who still neglect to take on this line.

Now your golfer is the most hardened inveterate, incurable "nut" to be found. He would play the year around if he could. Only a snowstorm will keep him off the links; a mere rain or a little hail or a light blizzard won't tie him indoors. When the season absolutely prevents play, he makes up for it by sitting around and swapping golf talk with others of the same breed as himself.

And, what is more, he is generally the kind of man who can afford any kind of extravagance. If a club offends him, he discards it. He buys balls by the peck. He does not, as a class, haggle over prices. In short, he is an ideal sort of customer.

Public Golf Coming

It is generally thought that the golfer is always a club man, and aristocrat, and that consequently the number of golfers is strictly limited. This is true at the present time. There is a movement on foot, however, for the establishment of public golf courses which, if successfully carried out, would make the game as popular as lawn bowling. There are public courses in many American cities and the interest they have evoked is enormous. On a Saturday afternoon or a holiday these courses are literally black with people and the criss-cross fire of golf balls is as dangerous as a bombardment at Verdun. If similar courses were laid out in Canadian cities and towns, it would not be long before every hallway would boast a golf bag and the talk around every dining room would run to mashies and putters.

The idea is coming to the front and the trade can put it down as certain that the number of golf devotees in the average Canadian town is going to be largely increased.

This means increased demand for supplies.

The Lawn Bowls Trade

Are you handling lawn bowls?

If this question were put to a company of hardwaremen there would inevitably be a few who would reply in the negative, and yet the craze for bowling has literally enslaved men of all ages and ranks and strung countless bowling greens right across Canada from coast to coast. It is a profitable business for the dealer. Every sale in-

volves a considerable amount and there is a comfortable margin. The war has curtailed the bowling craze to some extent but not appreciably at that as the majority of bowling club members are men of middle age.

If you happen to be one of the few hardwaremen not handling bowls, it would be a good move to leave the minority this spring.

Other Special Lines

The heavy drain on the ranks of the younger men has without doubt placed a heavy curtailment on the playing of the most popular games—baseball, lacrosse and cricket. There will still be plenty of demand for supplies for these games, but the dealer would be wise to pay most attention to less general sports. Mention has been made of golf and lawn bowling. Equal in importance comes fishing. Now the real disciple of Walton is as ardent in his love of the running stream and the flashing fly, as the golf enthusiast is of the green course and the nineteenth hole. He buys everything that is necessary and many things that are not; and some of the items he buys are expensive. It has been urged by someone, now that most

of Canada has gone dry, that the popularity of fishing as a sport will wane. This idea is quite wrong. If the angler cannot always get a bottle to take along, he will pay more attention to the sport. Instead of snoozing on the bank or sitting up, at the hotel with the rest of his party playing poker, he will put in his time actually fishing. In consequence he will need more tackle, more supplies generally.

The burning of John Barleycorn should bring about a boom in real fishing this year.

As to Methods

There is little that can be said with reference to methods that the progressive hardwareman does not know. However, let it be repeated again that there are two essentials to a good business in sporting goods—adequate displaying methods and at least one well informed salesman. In connection with the first essential it is necessary to keep the goods attractively displayed in the store and to have a steady succession of good window trims. Some merchants make a point of having their sporting goods near the front of the store but this is not always possible. The presence on the staff of at least one man who is a sportsman himself and who thoroughly understands all sporting goods and is persona grata with all other sportsmen in town is of great importance, such a man can bring a great amount of trade to a store.

The Advent of Municipal Golf

How Edmonton, Saskatoon, Calgary and Winnipeg Have Furnished Public Courses: the Need in Eastern Cities.

EVEN in these war times the *Canadian Golfer* makes no apology for featuring Municipal Golf as a community asset for Canadian cities and towns, drawing special attention to the fact that the larger and richer centres like Toronto and Montreal have no public golf course, while smaller cities of the West boast successfully-managed links. The writer also emphasizes the commercial side of the question—that a municipal golf course besides being a boon to the citizens is a splendid advertisement for the city itself. Mr. Lehman, of the Chamber of Commerce, Buffalo, advises that the Chamber of Commerce when offering inducements for conventions to come to Buffalo makes a point of the public golf course, and finds that a great many delegates inquire in advance regarding the chances to play golf. In our own Canadian experience, Edmonton not only conducts an up-to-date golf course without costing the ratepayers a cent, but in 1916 made a profit of $800, which is devoted to the up-keep of other portions of the Park system. We quote briefly from *The Golfer's* reports from several Canadian cities as follows:

Mr. A. G. Harrison, City Commissioner of Edmonton, writes: "Our municipal links have proven to be a great success. The property on which the links are situated was originally owned by the Hudson's Bay Company. They permitted the Edmonton Club to use same for golfing purposes, and when the tract of land (156 acres) was purchased by the city for park purposes, the old Edmonton Golf Club practically handed over the links to the city, provided they were kept up and operated. This has been done and visitors to the city have enjoyed the use of the course as well as our citizens. It has proved one of the attractions of the city and a source of enjoyment to all. Each year it has had a surplus, consequently the cost to the citizens is nil, and the surpluses have been applied to the improvement of the park (Victoria Park).

There were 9,543 games played in 1916, the season opening in April, not closing until December 1st. The total receipts were, in round figures, $2,000 and expenses $1,200."

Of the Calgary course Mr. J. M. Miller, City Clerk and Secretary of the Municipal Club, writes:

"The Calgary municipal golf course was formally opened August 7th, 1915. The course comprises an area of 99.8 acres; full 18 holes, total number of players during the year, 7,650.

"We have erected only this year a club house with locker rooms sufficient to care for our membership up to the present time. This building is erected on the principle of its ultimately forming the first section of a very commodious and up-to-date golf house. My own personal opinion is that in establishing a municipal golf course, the city officials have filled a want which it is hard to realize existed prior to the opening of the course, and in time, this departure will prove one of the best paying investments the city has made. Our attendance receipts this year are far in excess of those of last year, and are in keeping with the club's expectations at the commencement of this season's play. Next year we will be bigger and better than ever, as we have in mind the providing of an inner nine holes for the ladies, who have been showing very marked interest in golf this season. The following is our financial report for 1916: Expenditures: Labor, $1,349.92; material, $459.50; total, $1,809.42. Total revenue, $1,775.50; number of players passing over first tee, 7,582."

There is no municipal golf course in Saskatoon, although the Saskatoon Golf Club plays golf in a park owned by the city, the use of which is granted to the club free of charge on the condition that any person be allowed to play golf on the city grounds on payment of a fee of 25c. for each round of eighteen holes, or an annual fee of $12. This arrangement has been carried out for the past three years. Mr. J. S. Mowat, honorary secretary, reports that the club has now a membership of over one hundred men players and about twenty or thirty ladies, and the annual subscription charged to members (which includes the use of club house, lockers, etc.), is $12 for men, $15 for married couples, and $5 for ladies.

The club owns the club house, machinery, etc., used on the course, and keeps up the course of the revenue derived from members' fees, and the fees charged to occasional players who do not join the club, and of course, are not entitled to any of the privileges of membership. The amount derived from fees paid by these occasional players varies considerably each year but will probably be $300 per annum approximately. The club employs a professional who acts as ground-keeper and also makes and repairs clubs; and he has additional assistance as required. Although the subscription is a low one too low in fact to get all the improvements made which are desired) the course is kept in good order and all current expenses met out of revenue with a surplus usually amounting from $300 to $400 a year, which is applied towards capital expenditures on club house, grounds, etc. There is no doubt whatever that the lowness of the fee has made the game more popular here than otherwise it would have been, as many who are induced to try out the game at the small municipal fee of 25c. a round get enamored of the game and ultimately become permanent members of the club.

Adjoining Kildonan Park, in Winnipeg, on the property purchased by the city as an exhibition site, at a cost of over half a million dollars, a municipal golf links has been in course of construction this summer, and by the time the snow has gone it will be ready for play. Mr. L. R. Plunkett writes that the Winnipeg public links will provide quite interesting golf. It will be an eighteen hole course measuring $5.470 yards, which makes it only 633 yards shorter than the St. Charles Country Club green and 479 yards shorter than the Winnipeg Golf Club links at Bird's Hill. Pine Ridge measures 5,938 yards and the Elmhurst links which will also be opened next summer, will measure over 6,000 yards, so that we see the public links will be very little shorter than the others. In the laying out of the course all the natural features have been made use of, including two drives over a railway line, the Bergen cut-off, which runs through the property and there will be other interesting shots from the tees, and through the green, so that golfers will find it, if somewhat flat, of a "sporty" nature and one generally demanding accurate golf. The longest hole is the 15th, which measures 520 yards, quite a good length, and there is a rattling fine hole to finish up with—another par 5—which will give the player who is "one down" coming home a chance to carry the match to the 19th.

(Continued on page 176).

PRACTICAL SHEET-METAL WORK

THREE PIECE ELBOW WITH GUSSET OR GORE PIECE.

BY THOMAS STANFIELD

EDITOR'S NOTE.—Many letters have been received from retailers stating that the series of articles by Thos. Stanfield, on sheet metal work, have been of inestimable value to them. A large number of merchants have clipped the articles as they appeared, and have the complete series. Following is Article No. 44 of the series.

THE following article describes a method of pattern developing not taken up before. It might be termed shop practice, because of the fact that it shows how short methods can be followed, and, instead of developing the pattern on paper, it can be developed right on the sheet of metal from which the elbows are to be made. In plate 44 will be seen a handy article called a mitre plate, which, if prepared and kept on hand, can be used to advantage.

Before taking up the subject, it should be stated that every tinshop should have a good sized protractor, a steel T square. This can be easily made where there is a brake handy.

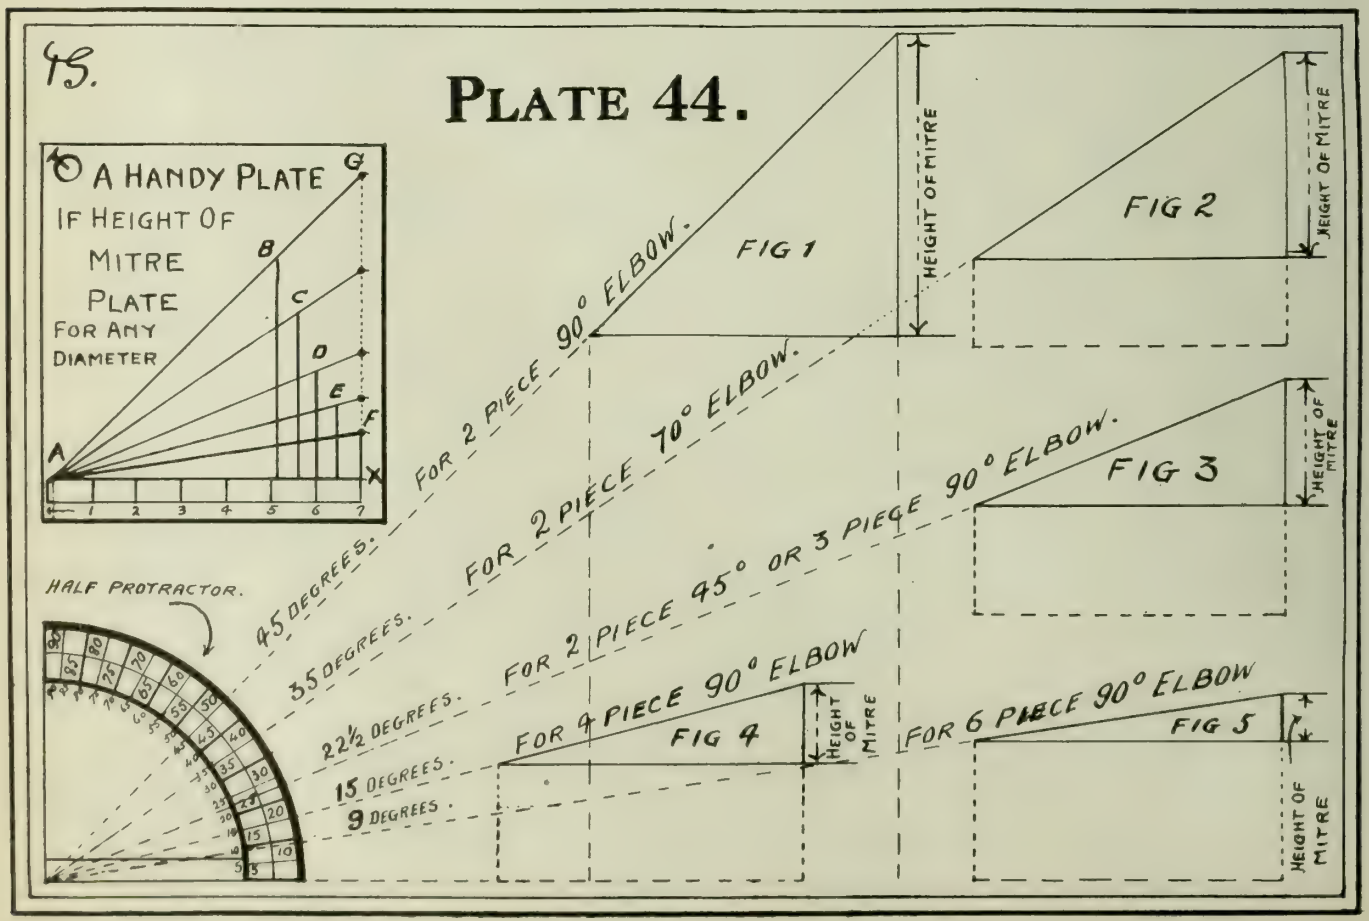
While this article simply treats with standard sized, or rather mitred elbows, the method can be adopted when developing any angle of elbow or offset.

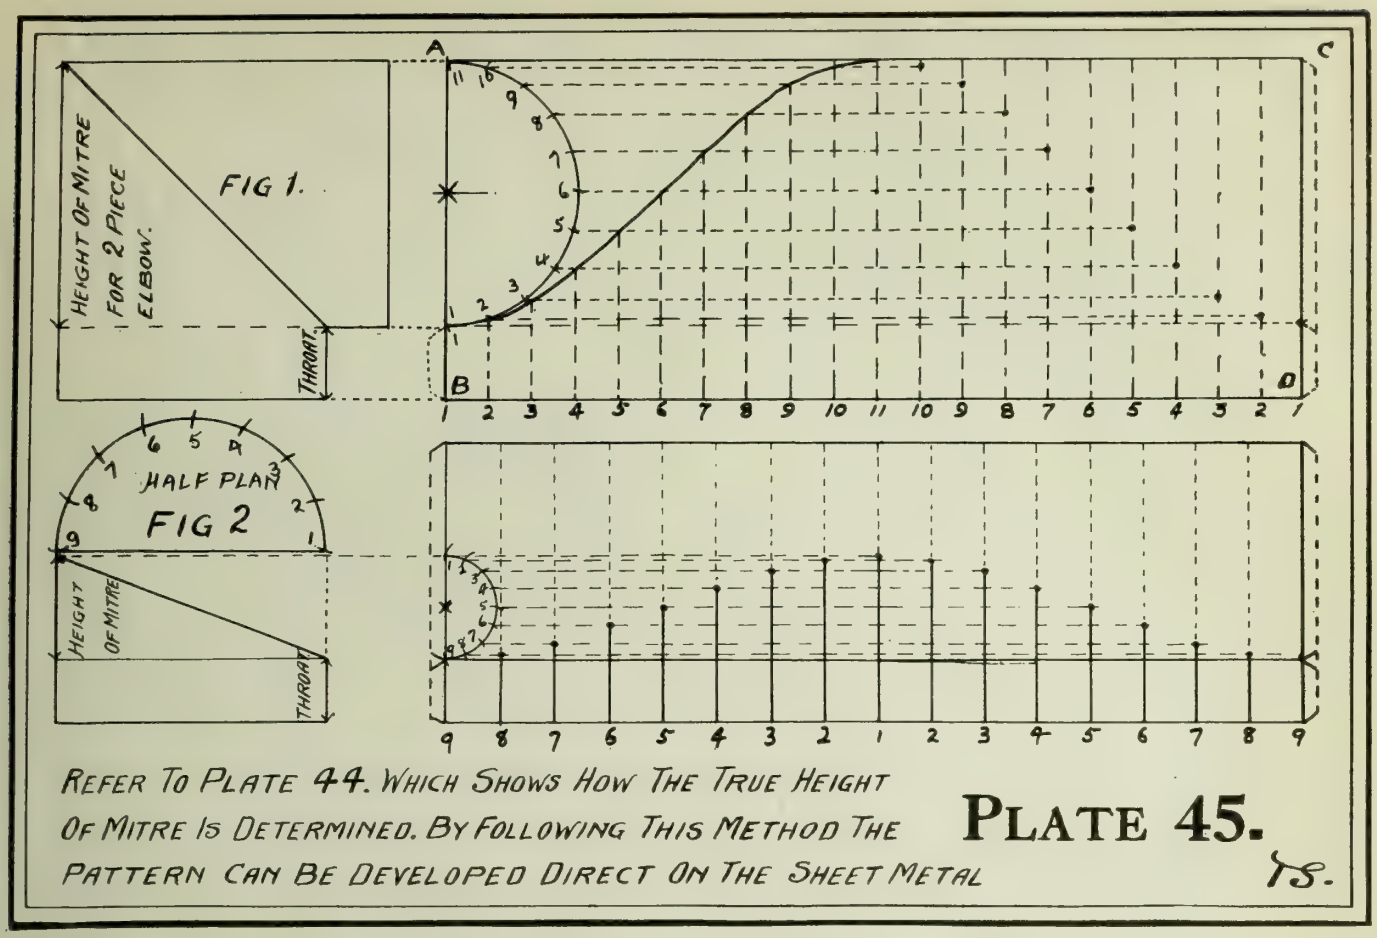
Let us first assume that the pattern for a 2-piece, 90-degree elbow, and the diameter is, say, 3 inches, the mitre line will be 45 degress, and the height of the mitre will be the same height as the diameter.

Now add any length of line required for the depth of the throat, as shown on plate 45, Fig. 1. It will be noted that the curve of the pattern begins at the point where the throat begins.

Now, turn again to plate 44, and note how the protractor is used. Place the straight edge of the protractor against the edge of the T square and, with the 90 degree point in line with a perpendicular line, mark off the angle required. Seeing that a 90 degree, 2-piece elbow pattern, as well as a 2-piece 45 degree, or 3-piece, 90 degree elbow is described, we will develop those mitre lines used, and shown in plate 45.

It will be seen that the height of the mitre lines only is shown in plate 44, but no mention of the diameters is made. Now, turn to the "Handy Plate." The longest mitre is for a 90 degree, 2-piece





elbow, which is shown as being 7 inches in diameter; but suppose an elbow 4 inches diameter is required, the point of the compass is placed at A and opened to 4 and by drawing a line at right angles with line A and line X cutting line AG in the same manner as at B, the correct height of the mitre is procured.

The same course is followed if a 2-piece 45 degree, or 3-piece 90 degree elbow is required, by way of proving the accuracy in heights of the various mitres, measure the different ones, Figs. 1, 2, 3, 4, and 5 in plate 44, with the diameters and heights of mitres shown on the "Handy Plate."

Now turn to plate 45. Fig. 1 represents the diameter and height of mitre for a 3-inch, 2-piece, 90 degree elbow. It will be noted that the mitre is 45 degrees. We will now assume that ABCD is a piece of sheet metal and 1. B. 1. is the length of the throat, while 1. 11. A. is the height of the mitre. With point of compass at X draw a half circle and divided into any even number of equal parts as shown, 1, 2, 3 to 11, viz., 10 parts.

Now, divide the sheet with the measurements procured, beginning at 1.B. to 11, and from 11 to 1. D. and from each of these points draw a vertical line and intersect these lines by drawing horizontal lines from the points 1, 2, 3, 4 to 11 on the half circle ending at each correspondingly numbered vertical line, after cutting through the first of each line bearing the same number. It will be noted that only a part of the pattern outline is drawn, the rest is simply dotted where the vertical and horizontal lines cross. The curve shows how to cut with the snips; the dots are in practice really punch holes, so that in cutting with the snips the various points can more easily be followed.

Fig. 2 is a very similar problem except that it shows how the pattern for a 45 degree, 2-piece, or 90 degree, 3-piece elbow is developed of the same diameter as Fig. 1. On account of the mitre being less slanted, which would require too many lines being drawn horizontally across the piece of sheet metal, the half circle is divided into few parts.

It will be noted that while the height of the mitre for Fig. 1 is the same as the diameter, the half circle also represents a true half plan, but such is not the case in Fig. 2. The true height of the mitre in Fig. 2 is, however, the diameter of the half circle and by dividing the smaller into eight equal parts, the position of the horizontal lines is determined. But to find a true circumference which must represent the length of material required, it is necessary to draw a half plan.

It will be seen in this pattern that vertical solid lines are drawn to meet the horizontal lines and that dots are shown. By cutting from one dotted section to another, the material for two pieces is procured, from which a two-piece, 45 degree elbow can be made.

(Continued in next issue).

TAKING GOODS ON CONSIGNMENT

(Continued from page 145).

have no more moral right to take their goods out of a stock than has any other unpaid vendor of goods who can identify the goods sold by him.

Few merchants would care to have any kind of a lien, charge or agreement registered against their stock. It would hurt their credit and considerably interfere with their business; and, besides, no good reason can be advanced why a firm selling on consignment should stand on any higher plane than a firm selling on credit in the ordinary way.

The subject of consignment goods has many other legal aspects which I might have discussed, but have refrained from so doing because they do not particularly interest the retail merchant. In closing, I wish to state that some lines of goods, especially seeds, could hardly be handled in any other way than by consignment for sale on commission. Such exceptions have no bearing on the general advice here given. And now, finally, I do not wish to be understood as advising merchants not to handle goods on consignment provided they get a square deal.

Accuracy Boosts Tinshop Profits

Forms Used by Smith Hardware Co., to Eliminate Losses — Record Kept of Material and Time on Each Job—Good Rules to Follow

MAKING the tinshop pay is a problem for some merchants. At every hardware convention the tinshop comes in for considerable discussion. Opinions vary on a great many phases of tinshop management. There is one point, however, on which mostly all merchants agree and it is that in order to know where you are at, some definite record must be kept of the workmen's time, work accomplished and material used. In order to have this information available when needed, Fred B. Smith, of the Smith Hardware Co., Belleville, uses a number of forms in connection with the tinshop and plumbing department of his business.

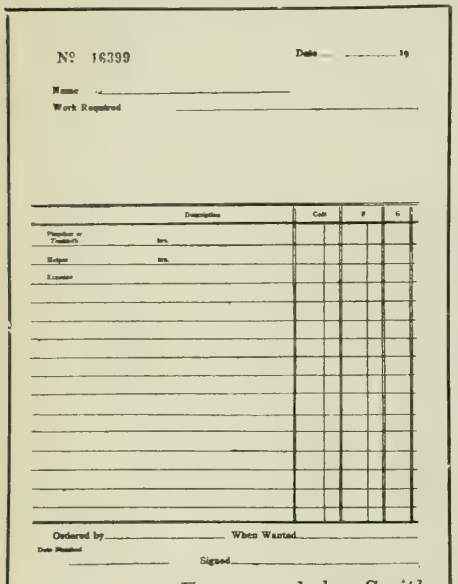


Figure 2. Form used by Smith Hardware Co., Belleville, Ont.

Shop Order Form

In the first place, Mr. Smith uses a shop order form, as shown in Fig. 1. The order from the customer is entered on this form, and the form is passed on to the shop foreman. On the form space is provided for the following information:—

Date.
Name of customer.
Work required.
Plumber or Tinsmith.
Helper.
Expense.
Time of each.
By whom ordered.
When wanted.
Date finished.
Signature of customer.

In addition to the foregoing there are spaces for cost, etc. The forms are numbered consecutively, the one shown is No. 16399, and when the job is completed, the form is used as the original charge—it takes the place of a counter check book.

A Job Ticket

In the shop a job ticket is used as shown in Fig. 2.

This ticket or form measures 7 x 9 inches and is used by the workman on each job. The foreman is able to complete the filling in of his shop order (Fig. 1) from the information supplied on the job ticket (Fig. 2).

On the job ticket space is provided for the following information:—

Name, Street and No.
Material for Job;
Material Used;
Plumber or Tinner's Time;
Time Leaving Shop;
Returned to Shop;
Time in Shop;
Helper's Time;
Materials or Tools;
Left on Job;
Signature of Workman.

This form must be returned when the job is completed.

Space is also provided on the form for the store order number, which in this case would be No. 16399, as shown on Fig. 1. One of the job tickets is used by the workman on each job.

By using these forms the proprietor can tell exactly when the order was placed and when it was completed. He can tell the exact amount of material or time consumed on a job. At the end of the week or month he can tell exactly how his men have been employed during these periods. The records are all kept on file and can be referred to at any time.

One good feature of the job ticket is the space provided for material and tools left at a job." This eliminates danger of loss through goods being forgotten.

A Toronto plumber was recently called in to see a slight defect in some plumbing work done in a new house a year ago. After inspecting the defect the housewife told him that there were two lengths of pipe out in the yard —evidently left by the workmen who did the job. The plumber went out to see them. He found two lengths of ½-in. pipe, and a half dozen couplings, all badly rusted. They had been left there and forgotten. The plumber saw at a glance where there was a serious leak in his business—he should have seen it before—he should have guarded against such losses. The job ticket of the Smith Hardware Co. is designed to prevent losses of this kind.

Good Rules to Follow

A merchant who runs a very successful tinshop gives the following rules which he claims have helped him to make his tinshop pay:—

"I watch the buying end of my business and always try to place my orders in the best markets.

"Preventing waste of material is another important point in connection with running a profitable tinshop.

"Without proper supervision and instructions a large amount of material can be allowed to go to waste, and this means a serious drain on the profits.

"Waste of men's time is also a serious leak if allowed. I always try to have work ahead—that is. I endeavor to get customers to place orders and con-

(Continued on page 167)

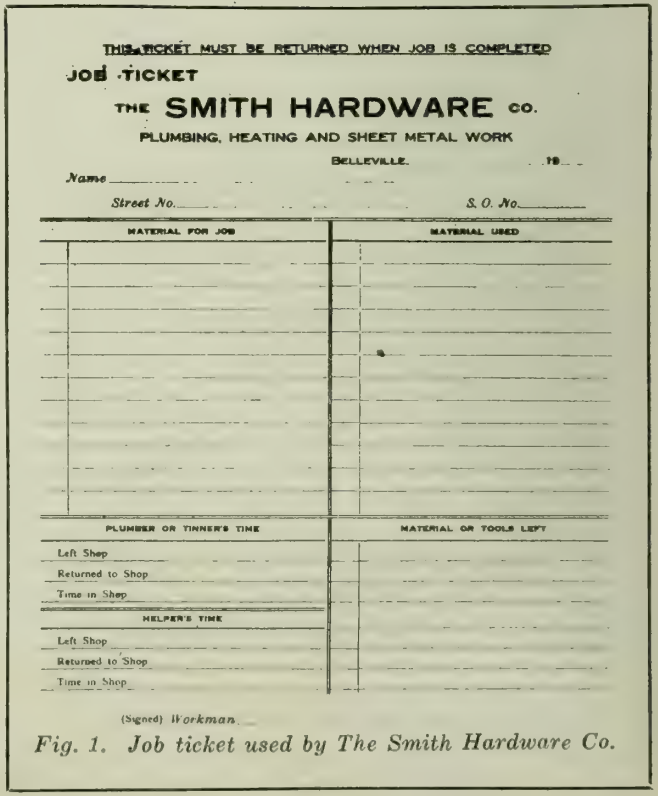

Fig. 1. Job ticket used by The Smith Hardware Co.

Below is the first of a "Service Series" prepared for Hardware and Metal. No. 1 is entitled, "How to Cut Glass Properly." By following the instructions much waste will be eliminated. Retailers should tear out this page and paste it up in a prominent place near the glass cutting board where it can be read by all clerks, more particularly the juniors. In future issues other important matters will be taken up. The series of articles will prove money-makers to retailers who use them.

HOW TO CUT GLASS PROPERLY

First.—Cut the Glass on the Hollow or Concave Side.

Second.—Always Keep the Cutting Tool in Good Shape.

There is much loss in the course of a year through the breakage of glass. It is one of the serious "leaks" in the hardware business. Inexperienced clerks often spoil glass. Many hardwaremen themselves have much breakage in glass because they are not familiar with the right way to cut it.

Sheet glass should always be cut on the hollow or concave side. One can easily tell the concave side by holding the glass up and then glancing down the edge. This slightly hollow or concave nature of the glass is caused through the process of manufacture. In the manufacture of sheet glass it is first blown into a cylindrical form that resembles a huge bottle. This great bottle-like structure of glass, which is from fifteen to twenty feet in length and about three feet in diameter, is cut into sections approximating five feet in length. These sections are split open at one point by drawing a hot iron across. They are then laid on a mold and flattened by means of heat from a coke furnace. It is never possible to make them exactly flat. The sheets are slightly concave.

There is greater resistance on the convex side than on the concave side. This accounts for the cut "running out" and invariably a spoiled sheet if the cut is made along the convex side. It is essential to safeguard against waste that the glass be cut along the hollow or concave side. But it is also very necessary that the cutting tool be kept in good condition. Care should be taken that it does not get dull or that the bearing in which it runs does not become worn. If the cutter becomes dull it will skip in places. These little skips are danger places that often cause the cut to run out. If a wheel cutter is used the little wheel should be kept oiled. When not in use if it is kept covered in coal oil it will always be in good shape. As soon as it begin to show signs of dullness it should be discarded or the wheel should be replaced. Where a diamond is used it is always advisable for only one person to use the diamond. It is seldom that two people hold a glass cutter in the same manner. Every clerk who is allowed to cut glass should have a cutter or a diamond for his own personal use. And he should take good care of it. The breakage of two or three large lights of glass will cause a loss in actual money, equal to the cost of a good many glass cutters.

Hardware and Metal Service Series No. 1

You Can Sell More Paint This Spring

Some Brand New Ideas, and Some Old Ones—Practical Ideas, Mind You—A Competition That Looks Good—Definite Suggestions — What a Little Red-hot, Very Busy Campaign Will Cost.

By John C. Kirkwood

PAINT ought to sell well everywhere in Canada this spring. Indeed, it is certain to sell well for the people have lots of money, and are spending it freely, and nearly everybody wants to brighten up his home — with paint.

But no wise retailer will leave it to his community to find out that they want and need paint; on the contrary, he will make very sure, by efforts of his own, that they want and need paint. The wise retailer will suggest paint—will fling paint into the faces of his customers, figuratively speaking; will make them see red, blue, yellow, green, brown, and other colors too numerous to mention.

When people have paint flung at them, when they run into paint wherever they go, when they are compelled to eat paint, as it were, the chances are that they'll buy paint—by the gallon, by the barrel, by the ton—this in the aggregate. And when they buy paint in tons, they turn the retailer's cash drawer into a music box, giving out golden and silvery strains, to use poet's language.

Helping Retailers to Sell Paint

This article in HARDWARE AND METAL is designed to help retailers to sell paint, to show them practical ways which they can employ to increase the sale of paint in their local and surrounding communities.

The ways to be proposed will cost in some cases real money, but this is as it should be. You must plant if you are to reap. You must spend if you are to get. Remember what the Good Book says: "There is a withholding that tendeth to poverty, and a scattering which enricheth."

But we'll try to make the outlay for you not too heavy. Would $25 strike you as being excessive? Well, we shall see what we shall see.

Have a Good Paint to Sell

Of course, you are supposed to have a good brand of paint to sell—a brand that the makers guarantee to you; and a brand that you yourself know to be good. It is folly to spend energy and time to market a paint that later on will shame you and make bad friends, and advertise you in a very unprofitable way. The public wants good paint—those, at any rate, who own their houses and outbuildings. They know that first cost is least cost. While they may grouch a little when you name for the first time the price of good paint, and tell you what Eaton's sell paint for, and what some nearer dealer sells paint for; yet you can generally convince them that price by itself is no criterion of value; that of greater dependability is the pledged word of a reputable maker, as represented by his brand and signature. Your customers will trust **you**, and you can give them many good and winning arguments as to why they should buy the best paint—the paint of real worth, containing a right amount of pure linseed oil, and a pure white lead, and pigments that can look the sun in the face bravely without paling.

Fortunately, Canada has several paint makers that can be relied on—with a name to keep. Their advertisements appear in HARDWARE AND METAL. Each maker does his level best to win you. Each believes wholly in his brand—this because he knows it. His present fortune and his future fortune are locked up in his brand. It is for you to make your own alliances, and if you have trouble in making a decision, congratulate yourself that your difficulty is not that it is hard to find a really dependable brand, but that there are several good brands offering.

We'll suppose that you have the brand or brands possessing your faith and enthusiasm. This settled, the next thing is to get rid of the stock you buy, and to keep on replenishing and selling your stock — this until your community is saturated with paint, unable to absorb another quart.

Selling Your Paint

When it comes to selling the paint you have bought, you are up against the hard work of your business. Selling—real selling—is rarely easy. **Real** selling is making sales to people who did not know they wanted to buy until they learned of it from you. **Real** selling is changing No's into Yes's. **Real** selling is getting a customer to buy more than he intended to buy. Pretty hard work is **real** selling; but what a joy there is in it!

How One Dealer Got Orders

One country store dealer, of whom I read recently, sold paint before he bought it!

Clever fellow, that! He went about the country—the territory he served—and called in person on every family. He looked up the good woman—the better half; and learned from her what was being contemplated. Adroitly he worked up a desire for paint. He found out what color scheme was favored for the painting of the exterior of the dwelling. And in the end he got a definite order. He had color cards, and color-combination cards, and these helped.

He canvassed all his territory, and made a regular "clean up." Then he ordered the paint his customers wanted. He filled his windows with the great stock—and it **was** a stock! His opposition said to him — "Moon, are you crazy? What are you doing with all that paint? Man, you'll never sell it!" and Moon said to him: "Jack, old chap, that paint's all sold! I've put one over on you." And Jack found it to be all too true.

Now, is there any reason why you, where you are, should not do something of the same sort? **You can do it**, for it can be done. **It has been done**—done by a man who hustled, who didn't like to have a shiny surface on his trouser-seat.

Of course, it would have been better to have done the canvassing in February; but if you have the desire and the will, you can do a whole lot yet.

Have You a Good Mailing List?

Now I am going to touch some of my readers on a sore spot. They will wince when I press upon them this question: **Have you a good mailing list?** There, I knew that some of you would shrink from answering that question. To have to say No to that question makes you feel like a boy caught with his shirt-tail on public view.

And why haven't you a good mailing list? Is it because it has no value? Is it because it can't be made up? Is it because you've just neglected it?

The answers do not matter. The big thing is—**Get the list.** Begin to make it now. Hire a man, a woman, a girl, to make it up for you. Pay out $5 or more to have it prepared. Use the telephone book, the voters' list, church reports, rural free delivery lists. Ask your neighbors. **Do anything; but get the list.** Far better to set someone at this work who can and will give all his or her time to the work, until it is done, than to attempt to do the work yourself—you, a busy man with a thousand things to do; you whose time is worth more than 40c.

Boys and Girls:

Color this House and Win a Prize!

BOYS and girls of .....(Fill in name of your town or city)..... and in the country round about, we want to know how each of you would paint this house—what colors you would use, this supposing that you owned this house and wanted it freshly painted? (Color the rest of the picture if you want to.)

So color the house in this advertisement—with crayons or water colors, as you choose. Then cut out the advertisement and mail or deliver to us on or before ..... (Fill in closing date) ..... Be sure to give answers to the questions asked in this advertisement, in the spaces left for them.

We shall give prizes to three boys and three girls—six prizes in all. These prizes will go to those boys and girls who send in the best work. We have asked the following three persons to do the judging, and their awards must be accepted as final:

Fill in Names of Local Judges

The PRIZES are as follows:

1st Boys' Prize - - - - .....
2nd Boys' Prize - - - - .....
3rd Boys' Prize - - - - .....
1st Girls' Prize - - - - - .....
2nd Girls' Prize - - - - .....
3rd Girls' Prize - - - - .....

Competitors must not have passed their 18th birthday

Pleasing and careful coloring will be test of work. The questions to be answered are:

What is your name and age?.....
And address?.....
What is your parent's name? .....
What building known to you would look better if freshly painted? .....

Now boys and girls, try your best. After the awards have been made, we'll show the colored advertisements in our window.

Matt Horton's Hardware Store

100 MAIN STREET - HURSTON

Illustration No. 1

PAINT IT THIS SPRING!

ALL Winter and Spring you've had in mind painting your house, inside and out, or your out-buildings, or your fence or your garden furniture, or your implements.

Now the time has come to decide.

But have you settled the question of the particular brand of paint to use?

Let us tell you something about

Name of Brand You Sell

It contains pure linseed oil, and lots of it, and without a pure linseed oil, made from well-matured seed, you cannot have a good paint.

It contains the right amount of pure pigments of highest quality, and it is this that makes the paint **wear.**

The coloring pigment is also of highest quality, thoroughly ground—and unless the coloring matter is good, it soon bleaches out.

The whole is thoroughly mixed, making a smooth-flowing paint of even quality—a paint that spreads well, giving you large covering capacity.

Name of Brand You Sell is guaranteed to you by its makers. This is your protection. Have us recommend the right paint for the job you want done. Use our knowledge and experience.

Remember that a poor paint soon looks bad—fades, scales and looks mean and cheap. You simply must have the best pigments, vehicles and colors in the paint you buy, *or you'll have to do the job over again very soon.*

Cut Here

Brushes

WHAT sort of brush do you need? There is one right brush for the job you mean to do—and there's a difference in brushes. Shun the brush whose hairs fall out early and easily. A few cents more will pay for a brush that does good work and lasts for years.

Come in and talk it all over. Get our color card. Ask for an estimate.

Matt Horton's Hardware Store

100 Main Street, Hurston

Illustration No. 2

Display cards prepared by H. W. Parr, add greatly to the attractiveness of the above window display of floor finishes. Note attractive card in middle of window inviting the public to ask for booklets.

or 50c, or 60c an hour. This list, when compiled, will be an asset, worth a hundred times its cost. It will be like a strategic railway, in the language of military men, by which you can always get close up to those to whom you want to sell.

You must know your constituency by individuals and families, if you are to do best selling work. You can't possibly do bullseye work—rifle work—unless you know your community singly—this as contrasted with it viewed as a mass.

With a mailing list, you are in a position to go ahead—straight ahead. You can shoot straight and true, with your eyes open; and you can see the bullets get home.

Again I say: **Have a mailing list, and a good one.** Pay for it, and begin its compilation within the next twenty-four hours. If you refuse or neglect to provide yourself with this mailing list, then I fear you won't sell all the paint this spring that you can and should; and that mailing list, unborn, may cost you ten times the sum it will cost to have it brought into the world.

I pass on.

Selling Begins at Home

Begin right at home to discover your paint market. The chances are that some of my readers will begin to scan the far-off fields—the rural community that stretches from the town's or city's limits miles and miles away.

A mighty good beginning will be your own store. Practice what you're going to preach.

Go straightway to a painter, and arrange with him to paint your store front—whenever the weather permits. Get him to give you a rough sketch of your store front, painted in the colors you have chosen. Put this in your window, on your counter. Display it prominently in your store. Talk about it. Let every customer and every passer-by know that you are going to paint—and that So-and-So's paint, or that Such-and-Such a brand, will be used. Take your own medicine. Get off to a good start. The moral effect will be great. Your sales staff will catch fire and spread the conflagration.

Canvassing Your Neighbors

Start out on a personal canvass—of your brother merchants. Put it up to them. Ask them to let you submit an estimate—and a color suggestion. Say to them that the Old Town must smarten up. Put heart into your canvass. Smile. Say, "By Heck!" and "By George!" or any other ardent expression.

You'll get rebuffed here and there—but what of that? When, as a lad, you fished, did you get a fish every time you made a cast? But when the day was done, your twig or string was adorned with enough of the finny tribe to make a supper or a breakfast.

Go to those homes that your eye tells you would look better if freshly painted. Make a survey of your town—yourself. Get up in the morning—at 5 o'clock or 6 o'clock, and begin your "constitutional" with a note book. Go a-spying in the lengthening evenings. That book of yours will soon lose its blankness. It will swallow up address after address.

Put down the color scheme that suggests itself to you as being good. Calculate the probable cost. You can do this. Then phone the owner, or write, or call. Call, if you can, and put the matter straight up. You'll be welcomed nine times out of ten—for the world loves a lover—a lover of business. We all like the earnest salesman—the newsboy who dashes at us—to beat out a competitor, who shows eagerness to serve us. We like the man or woman behind the counter who has no languor, but is all attention and brightness and heartiness. And you—you, the proprietor—will be more esteemed if you give this evidence of your devotion to your business, if you show that you have something really definite to propose.

Go to your prospects in the name of Clean Up! Paint Up!—**but go!**

Success will attend you. You cannot win every time, but **you cannot wholly fail.** And every success breeds another.

Let your best salesman or salesmen have a whirl at this game. It will do him or them good—and will enrich you.

The Way to Success

I am in deadly earnest in making this suggestion. It is saying what I believe down to the tip of my toe. It is preaching an old sermon. And this saying, this sermon is: **You must carry your business to your public.**

The ordinary man is indolent. He likes to sit down or stay at home. It is the extraordinary man who is venturesome—who has a will that commands his spine, and that makes him put tacks and bent pins on his own chair.

I am talking to extraordinary men—men with wills that are robust, masterful, ardent—that want success and that work for success; men that refuse to take things easy, that are ready to do some sweating to earn an honest dollar. I am talking to hardware dealers who really are in earnest in their desire to sell paint.

I have sketched—merely sketched—a plan by which you can cultivate your home field. I am not filling in the details. You can do this. The seed-thought I have planted in your mind will spring up into branching life—if you will that it shall.

A Competition for Boys and Girls

But let me suggest something that you can do—something more, that is—to put painting into the minds of your community.

I am illustrating this idea, so that you can get it the quicker and the clearer. (See illustration No. 1).

It is a competition—a coloring competition. Boys and girls are to be asked to color the building—shown in the picture—color it with water colors or crayons; and to submit their work on or before a given date. This illustration can be printed in your local newspaper or newspapers. This is the cheapest way of advertising the idea. Or it can be made a hand-bill.

The text of "copy" of this advertisement will give you the idea.

HARDWARE AND METAL will supply electros of this illustration—sizes as shown in advertisement on page 159 at cost price, namely, $1.00. This price includes mailing charges.

The Advantages of This Competition

Let us see what this competition will do.

It will get the idea of paint into many hundreds of homes—through the children. Parents will become interested. The competition will set parents thinking of paint, and planning color schemes for their own homes. All this is just what you want.

The competition will advertise **you,** your store, your brand of paint. It will give you the names of parents, and will supply you with names of buildings that are judged to be in need of painting. Thus you are "tipped off"—given guidance as to where to canvass for orders. Thus will you get valuable information.

Some Suggestions

What prizes shall you give? That is for you to answer; but I'll suggest a few things: Flash-lights, roller skates, pocket knives, tools, silver spoons, scissors, a fishing rod, a tennis racket — and some simpler, cheaper things. You can offer real money, if you like; or can offer confectionery.

I have suggested six prizes. You can offer a dozen prizes—or twenty or fifty. You can divide the prizes into these divisions: One set for those under 10 years of age; the other for those between 10 and 18.

About the judges: Get the principal of the public school, and some teacher of painting, and some minister. Get the best names you can. Let outsiders do the judging, so that there will not be any feeling of resentment which can be visited on you. Put the burden of decision on others' shoulders.

Do not omit some right reward to your judges. Be generous.

Now it is up to you—if you like the idea—to go ahead, and fix it all up to suit yourself.

Get Out a Hand-bill

You will probably want something to put into parcels—something that you can mail to families and individuals; that can be distributed to school children. I suggest a hand-bill. Also, I am suggesting the copy and display for it. (See page —). You can follow this suggestion, or change it, as you like; but what is provided will give you a start.

Why not print the competition proposal on the reverse side—and so make it a double-barrelled gun?

A Newspaper Advertisement

You ought to use the local newspaper or newspapers, and use good-sized spaces in them. When you are trying to arouse people, don't tinkle the bell. Swing it hard, and let it be a big bell—a regular fire- alarm.

This newspaper advertisement can be the same as the hand-bill—same copy, same size. Thus you can reduce composition costs. Also, it won't hurt to give double emphasis to your hand-bill announcement.

Probably you can get "cuts"—electros—from your paint manufacturer to put into this advertisement. I am assuming that you can, and am leaving a blank space in the suggested advertisement. (See page 160 for such an electro.

Right here is a good place to say: Write to your paint house for suggestions; that is, if it has not already written you. It is likely to have a tubful of good suggestions — complete electros, with a space left for the insertion of your name; these it will send you, free gratis and for nothing—tickled to death to do so, These ready-prepared advertisements are likely to be very good, written and designed by high-priced advertisement writers.

Have Paint Windows

Put paint in your windows. No real need to suggest this, because you'll do it anyway. But let me say this: Put life into your windows. By which I mean: Make your windows look really **alive.** There is a tendency sometimes to make a **Pretty Window**—a sort of Sunday-dressed window, all spick and span and tidy, with not a hair out of place. If you could get some gentleman of color to sit in your window, dressed up in smudgy painter's clothes, with a paint brush in his hand, and an open pot of paint; and have him splash paint on sheets of white paper, you would have a big crowd before your window most of the day—this if you live in a city. This would be one way of putting life in your window.

Haven't you someone in your employ who has skill enough to make a good-sized house—out of plain wood, a house to go in the window? Then make this unpainted house the centre of your window scheme. Put a card alongside of the house—such a card, for example, as follows:

> **This House needs Painting.**
>
> * *
>
> **It will be shown in this window on May 1st, all painted.**
>
> * *
>
> **Look out for it then.**

This will arouse interest—and you can make it create talk. You can offer a prize, if you choose, for a recommended color scheme.

Here is an idea you can make much of—if you want to.

The Cost of Painting

One thing that keeps many persons from going ahead with painting is a lack of knowledge of the cost of painting. Many are prone to think that painting costs prohibitively. Perhaps it does; but then, again, perhaps it does not. One thing is certain: definite knowledge concerning the cost of painting helps people to come to decision.

Can't you give a customer a pretty good idea of the amount of paint required for a job? Suppose you were sent for to provide an estimate of the amount of paint required for a dwelling, two coats, etc., etc.; couldn't you make the calculation?

Now help the customer make this calculation for himself or herself. Tell the amount of surface, one coat, that a gallon of your paint will cover. And so on.

You see what I mean: help customers to make calculations themselves.

You do not need to figure on labor. That is something you are not selling, so omit it. Talk paint.

If you want to print a slip or card, postcard size, say, and distribute it (putting it in parcels), this card or slip to give some plain suggestions concerning how to calculate the amount of paint required for a dwelling, go ahead. It will be good advertising, and will get you orders. I do not urge this, however, for I do not want to propose too many things, fearing that some good readers will get the idea that HARDWARE AND METAL is making it a very burdensome business to sell paint.

A Little Campaign And Its Cost

Let us gather together the suggestions

offered, and calculate as to their cost.

There is the competition. Suppose that this measures (type portion) 10 inches deep x 7½ inches wide when set up.

As an advertisement in your local newspaper, this will call for a space 10 inches deep x 4 columns wide—a total of 40 newspaper inches. To insert this advertisement one time will cost:

When the rate is 10c an inch....	$4.00
When the rate is 15c an inch....	6.00
When the rate is 20c an inch....	8.00
When the rate is 25c an inch....	10.00

The proposed handbill-newspaper advertisement (see page 160) can be made the same size, and will cost the figures given in the preceding paragraph.

The handbill (see page 160, No. 2) will, we are assuming, be of the same size (type portion) as the competition advertisement, and will be printed on a sheet measuring 9 x 12 inches.

	Will cost Approximately
1,000 printed on one side and in one color	$6.00
Do. printed both sides (competition advertisement on reverse side)	10.00

(These are Toronto prices. Your local printer may quote you a lower figure).

If you have run the competition announcement in the newspaper, as an advertisement, then you will not have to pay a second time for its composition—when used for the handbill. Similarly in regard to the paint advertisement when used as a handbill.

Now let us add up these items of cost:

The competition advertisement (when run in newspaper), say	$6.00
The paint advertisement (when run in newspaper), say	6.00
The handbill (printed both sides), quantity, 1,000; price, say	10.00
Total	$22.00

So it is not a very heavy sum, after all, to spend to make a local stir, and to put the paint idea into the minds of your constituency of customers.

But to achieve big success, you must work behind, under, on top of, and in front of, printed advertising. Nothing quite equals sweat, remember; and when I say sweat, I mean not only body-sweat, but brain-sweat.

A hammer is a mighty useful tool, but by itself it isn't worth a 5-cent piece. It has value only when it is grasped by a human hand and used for driving nails. **It is the human power energizing the hammer that makes a hammer do its work and valuable.** And it is exactly the same with printed advertising. If success and big business could be won by paying a printer to set up words in type and print them on a piece of paper, and scatter the printed sheets about, we'd all get rich very quickly. It is only when printed matter is the expression of terrific energy and red-hot service that it works magically.

1917 A.D. gives you a great chance to sell a pile of paint—for exterior use on dwellings, out-buildings, fences, and implements and such things; and for interior use, for walls, floors, furniture. The public has the will to buy, the money to exchange; but the public frequently needs prodding up and a little coaxing. And, so far as you are concerned, it is only when people buy paint from you that their appetite and need for paint enriches you.

HARDWARE AND METAL has tried to give you a vision of possibilities, and to suggest practical ways and means for the getting of more paint business. Now it's up to you.

Turpentine Prices Show Small Variation

Only About 10c Per Gallon Higher Than They Were in Days Immediately Preceding Outbreak of War—Prices Now About on Par With Same Time Last Year

TURPENTINE is one of the few commodities that has shown no marked advance in price during the prevalence of war conditions. On August 1, 1914, it was selling at 67c per gallon in this market and at the time of writing it is being quoted at 78c per gallon. On March 15 of last year it was quoted at 77c per gallon in single barrel lots. This was the high point previous to the present season when the highest point reached was 81c per gallon. As an indication of the fairly steady position of turpentine throughout war times the following prices are given as indicative of the quotations at different intervals throughout the war period:

August 1, 1914	$0.67
July 31, 1915	0.61
November 15, 1915	0.75
March 15, 1916	0.77
June 15, 1916	0.64
September 15, 1916	0.68
November 10, 1916	0.70
March 10, 1917	0.78

It will therefore be seen that the variations in the price of turpentine have been within narrow limits. This is in marked contrast with almost every other commodity handled by the hardware trade. An authority on the turpentine situation stated recently that the market in the case of rosin had been manipulated on the basis of a definite bull campaign while the turpentine market was allowed to develop almost solely along the law of supply and demand. In the case of turpentine the absence of such bullish influences allowed only a very slow process of change from very low to higher prices.

The production of rosin and turpentine go hand in hand in the Southern United States. In the case of rosin there was a sustaining influence in the instance of the American International Corporation through affiliation with the Rosin and Turpentine Export Company. This former corporation secured a very important long interest in the rosin stocks and thereby laid the foundation for higher prices in that commodity. There was not so much interest in the turpentine stocks apparently on the part of this concern. In consequence the price of turpentine has not seen rapid changes in price during the year 1916. From the high point reached at Savannah in January and February of last year, prices had declined in the primary market 15c per gallon by May. For several months the price did not show a higher grading up than 5c above the May price. At the highest point during January and February of this year the price ruling in the primary market in Savannah was only within 1c of the highest price reached in January and February of last year.

New Season's Crop

It is anticipated the coming season's crop of turpentine and rosin will not be as heavy as in former years. A severe frost greatly damaged the cups that catch the gum from the long-leafed pine and before these can be replaced it is estimated there will be a considerable loss in the output. Another factor that is counted on in making the new season crop a short one is the shortage of negro labor in the Southern United States. Negroes have been moving northward in large numbers where they could secure better wages in the industrial plants. For these reasons authorities on the turpentine situation anticipate that turpentine will rule on a higher average price during the coming year than it did last year. This statement is partially borne out in the fact that several thousand barrels have been sold for May to August delivery at prices that were only 4c per gallon below the highest point reached in January of this year. May to August is the heaviest producing season in the turpentine

It is pointed out by those closely in touch with the situation that the coming of peace would in all probability influence the price of turpentine in an upward direction. The enemy powers which are cut off entirely from supplies at present, bought in ordinary years close to a third of the entire crop, of which considerable was re-exported to the Scandinavian countries and to Russia. The requirements of the Central Powers is expected to be such that very heavy inroads on existing stocks are anticipated.

Linseed Oil Situation Still Acute

Paint Men Anticipate a Good Painting Season—World's Flaxseed Crop Short—Canadian Crushers Unable to Get Seed From West—Curtailing of Export of Oil Cake Makes for Firm Oil Prices

ALTHOUGH a peculiar situation has developed in the linseed oil market this year and the price has reached a comparatively high level still compared with the price a year ago the situation is not abnormally high. Raw linseed oil at Toronto is quoted at $1.40 per gallon in single barrel lots at the time of writing. In one instance it is quoted as high as $1.45 per gallon. On January 15, 1916, it was quoted at $1.09 per gallon which was near the high point for last year. Flaxseed at that time last year was quoted at $2.26 per bushel while at the time of writing it is quoted at $2.63¼ for the cash article at Winnipeg. The difference in the price of flaxseed amounts to 37¼c per bushel while the difference in the price of oil as between January 15, 1916, and March 10, 1917, is only 31c per gallon. As compared with pre-war prices for linseed oil the price at present is just about double for on August 1, 1914, linseed oil was in the neighborhood of 69c to 70c per gallon.

Beginning with the middle of January of last year when the price was $1.09 there was a steady working toward lower levels in prices until June, 1916, when the price was very little higher than it was at the time war broke out, viz., 77c per gallon. By September of last year it had worked up to 85c per gallon and from that time until the present there has been a steady movement toward higher levels. Following are the prices that have prevailed for linseed oil at different periods since the outbreak of hostilities:

August 1, 1914	$0.69
July 31, 1915	0.67
November 15, 1915	0.79
January 15, 1916	1.09
March 10, 1917	1.40
March 15, 1916	0.97
June 15, 1916	0.77
September 15, 1916	0.85
November 10, 1916	1.10

Embargo Shuts Off Flaxseed

For several weeks past there has been practically no flaxseed come from Western Canada to Eastern crushers. The reason for this is found in the embargo placed on the carrying of the seed by the railways. Munitions and other necessaries of life got the preference in the carrying traffic. This brought about an acute situation in the supply of linseed oil. Most of the crushers were compelled to close their mills because they were unable to get seed. At the time of writing there was very little improvement in the situation. Several cars of flaxseed were received by crushers in Ontario about March 1 but there was no prospect of a steady supply. With the consuming season for paint not far away the prospect looms up that available stocks of linseed oil will probably have to be depended upon for this coming season's painting trade. Even if flaxseed could be secured in sufficient quantities immediately it would take some little time to get it properly prepared for consumption. Paint manufacturers are anticipating a good painting season during 1917 for the reason that property owners have been putting off painting work for the past two or three years. Now it is believed they will do more painting this year as a matter of economy to preserve the buildings. Already paint manufacturers report that the spring paint trade has been exceptionallly good and that not alone are they ahead, can for can, in sales this year as compared with last year but the total volume of trade averages much higher.

Flaxseed Crop Short

Not alone is there a big shortage in the crop of flaxseed in the Argentine Republic but the United States crop is shorter than last year. In the Argentine Republic there have been ravages by drouth and locusts that has greatly cut down the exportable surplus. For the present year the exports will be little better than one-quarter of a normal year. Canadian production of flaxseed is estimated to be below that of last year. Estimates by linseed oil interests place the shortage of flaxseed for requirements on the North American continent during the coming year to be in the neighborhood of 10,000,000 bushel. This will mean that linseed oil on this continent will probably be scarce.

Exports of Oil Cake Stopped

Another factor that will tend to keep prices firm for some time, even if all the seed required were available, is the shutting off of export of oil cake. Considerable quantities of this commodity went to the British Isles and to Holland for feeding purposes but this market is no longer available because ocean tonnage is being conserved for other purposes. This leaves the domestic market the only outlet for oil cake. As oil cake is a considerable factor in determining the price of linseed oil there is small promise of much relief coming through the sale of that commodity this year. With the coming of grass in the spring farmers will have less need for oil cake as a feed. These factors will tend to depress the price of oil cake and make it necessary that a firm price be maintained for the oil itself.

Oil Prices Not Prohibitive

Although linseed oil prices are comparatively high at the present time still they are not at prohibitive figures and it is anticipated the extra cost occasioned in the painting of a building will not militate against painting. It is asserted by paint men that this season is sure to be a painting season and that the amount of linseed oil used will be fairly heavy if supplies can be secured.

ACCURACY BOOSTS TINSHOP PROFITS

(Continued from page 156).

tracts well in advance in order to always have plenty of work on hand for my men. I have an arrangement with a local factory whereby I supply them with a number of articles that they use in connection with a certain line of goods they make. In spare time the men make up these special lines, and no time is lost.

"I have always made it a point to go after quality business. I charge a fair price and add a legitimate profit, and I have been fortunate enough during the past few years to always have plenty of work on hand."

This merchant has made a success of his tinshop. He has made a practice of landing profitable business for this department of his store.

To deal with the problem of future fuel shortages, the Commission of Conservation suggests summer forethought and larger coal bins. Still there is the difficulty of bringing the average mind to think of the coal man when the ice man is at the door.

In the Frenzied Paint Days

Some Anecdotes of a Period When Competition Was Particularly Keen — The Mad Scramble for Accounts—The Story of the Salesman Who Took Things to Heart—Using the Hardware Convention.

THE other day a number of paint salesmen were talking—as a matter of fact, it was at the hardware convention at Hamilton—and the conversation veered round to the question of completion.

"Do you remember how things were jumping five years ago?" asked one man.

There was an immediate chorus of loud assent. Did they remember? Could they ever forget!

You see, five years ago paint circles in eastern Conada had been considerably stirred up by the addition of two new paint firms. One had been established about two years and the second was just breaking into the field. There is no need to mention names; but hardwaremen will all remember that both the new firms were keen after business and put up a grand fight. The result was a regular scramble, a veritable Donnybrook. Accounts were fought for, salesmen hopped around the country like mad, sales managers were bombarded with all manner of requests for special concessions and advertising managers turned out "dealers' helps" by the ton.

So, as soon as the conversation reached this frenzied stage of the paint industry, the stream of reminiscence threatened to overlook its banks.

"Remember the fight for B————'s account?" put in one salesman. "That was a regular pitched battle. B——— had been carrying two lines of paint, one of which was a small one and the other not a nationally advertised line. So he decided to cut them both out and get in one big line. He let it leak out that such was his intention and brought an avalanche down on himself.

"I was in Toronto for the week end. I'd just nicely settled into my beauty sleep Sunday night when I got a telephone message from the salesmanager. "Get out of bed and make that 11.15 train, he bawled at me; You've got to get into——first thing tomorrow morning. B———'s going to switch. I just got a tip on the quiet, and if you get to him first, you can land him." Well, I had fifteen minutes to make that train, but I got it alright—hair uncombed, tie askew and my grip filled with a mess of stuff that I'd snatched up on the run. And when I moseyed up to B———'s hardware store, at 7 o'clock, Monday morning, there were three other paint men ahead of me.

"The 'quiet tip' apparently had passed all along the line. We stood there until the store opened and glared at each other like hungry bobcats. Well, old B——— lived a dog's life after that. So many firms were after him, and so many special propositions were put up that he couldn't make up his mind. I made three special trips in to see him and the other fellows made at least as many. It got so that, when old B——— saw a paint man coming, he'd duck for the barn, and find a lot of things to do out there."

"And who got the order?" asked someone; this, being the psychological point for that question.

"Why," said the salesman modestly, "we landed it, of course. It was this way. On my last trip I got a tip from B———'s office girl—I had kind of made up to her a little—that B——— was not going to decide until after he had made a trip to Toronto. Well, when he got off the train at Toronto, there was yours truly. The old boy looked kind of peeved for a moment, but he brightened up a little when he found I had a car outside. He was going to stay with friends on Howland Ave.. and didn't know where it was, so it didn't need much urging on my part to get him to hop into the little old machine, the firm had hired for me. I took a roundabout route and, accidentally of course, ran past our Toronto office. 'Hello, there's your office,' said B——in an unguarded moment. 'So it is,' said I, very much surprised. 'By theway, now we're here you'll remember there was one point about our proposition I wanted to explain further. If we went in now I could clear it up in a jiffy. He started to protest but I ran the jitney bus into the curb and nearly jolted him out on the pavement. Then the sales manager and I took him over the place, showed him our stock, got him thawed out and friendly, and then led him up to the dotted line."

The Guelph Convention

"The hardware convention at Guelph, came right in the middle of this big paint scramble," said another man. "Our people knew it, of course, and wanted to make a big spread up there. Headquarters kept after us as to what we would want for our booth. Our Ontario Sales Manager put in a modest requisition and a week before the convention about twenty tons of stuff landed in on our Toronto office. There were bales and crates and hogsheads of stuff—banners, backgrounds, frescoes, tons of text matter, oceans of color cards and lakes of lithographs. We didn't know what to do with it. So double space in the exhibition building was arranged for and the whole staff went up ahead of time and built a regular city."

Paint on the Brain

"Just about that time," put in another, "one of our fellows who was covering Western Ontario where the fight was thickest, got so worked up that his brother came to our manager and begged him to do something with Charlie. (That's not his right name,by the way) 'What's wrong with him,' asked the manager. 'Well,' said the brother, 'he'll have a suit for divorce on his hands if he doesn't look out'.

"It seems Charlie was taking the fight seriously. When he came in on Friday nights, he was worrying all the time for fear some of his competitors were staying out after business. His wife couldn't make him go to a show or even engage in normal conversation. He'd just sit around and burst out every now and then, with a string of profanity, about the other people. He babbled of paint at his meals and mumbled quotations in his sleep. All day Sunday he followed his wife around the house, waving his arms and talking paint like a madman. His wife was a sociable body and she got fed up on all this paint stuff."

"What happened?" asked one of the listeners.

"Oh, the fight steadied down after a while and when Charlie found he was hanging on to his accounts anyway, he got kind of normal again."

The Nervous Beginner

"It sure got kind of frenzied at times," put in a veteran of the road. "We had a new man out at the time and there were several accounts on his territory that were being hotly disputed. This new fellow was a nervous sort of chap and I guess he figured his whole career was going to be either made or wrecked right there and then. One week he landed in a town where a big account was pending. About eleven o'clock our manager gets a telegram from the new man. 'Saw C——. He's favorable. Hasn't signed up.' About an hour later in comes another wire, 'Saw

C——— again. He's wobbling. Wants concessions.' Along about 4 o'clock in comes another wire. 'Sherwin-Williams' man here, saw C—— for an hour. What will I do about it?' The manager was getting kind of peeved about it by this time so he used up a little more of the firm's money to wire back. 'Have you tried a mustard plaster?'''

''Those were lively days,'' sighed another man. 'I enjoyed it very much then.''

''Well,'' added another, emphatically, ''I find personally that things haven't changed very much. I have to hustle some right now.''

''Same here,'' came the general chorus.

Re-Equipping for Brush Trade

One Manufacturer States They Have Installed More New and Up-to-date Brush-making Equipment This Year Than Ever Before—Shortage of Right Kind of Labor Largely Responsible.

ONE large brush manufacturer stated they have installed more new machinery during the past year than they have ever installed in a similar length of time. The development has been occasioned largely through their inability to get the right kind of skilled help. This has been one of the big problems with which they have had to contend with in the past year or two. There seems very little help of the right sort offering. Help that is still floating around seems an uncertain commodity. As an instance the superintendent of one plant engaged five young fellows on one particular day with the understanding that they would be at work the following morning. Not one of them turned up at the time appointed. They had presumably looked around and found where they could get a little better wages elsewhere. With enlistments that have taken place and the decrease in the number of skilled workers offering their services one manufacturer stated they have been able to overcome the labor problem only through the installation of new and improved machines for doing the work.

Brush Advances Moderate

While there have been big advances in almost every line of industry since the outbreak of war, and particularly in trades where iron and steel are used, the advance in brushes of various kinds has been comparatively small. While there have been considerable advances in some special brush lines still the general advance has not been over 10 per cent to 15 per cent. on lines taken quite generally. The necessity for an increased cost has partially been absorbed by the installation of new machines. As an instance of the way the cost of manufacture has been kept down during the past winter, a manufacturer stated they had substituted electric power for steam power. Had they been compelled to buy soft coal at the high prices that prevailed during the present winter their operating cost would have advanced some thousands of dollars. In many departments of manufacture it is costing more to do business, as the cost for instance of wrapping paper, paper boxes, twines and clerical help has all been advanced. For the present spring trade there have been no material advances in the price of brushes over those prevailing for the late spring trade of last year. There has been a good demand for household paint brushes this spring and less for the higher-class painters' brush. This to the manufacturers indicates that the painting will be done largely by the householders themselves. There is scarcity of painters for one thing, and with the higher cost of paint people will endeavor to economize in some respects. The logical line will be for them to do away with the professional painter.

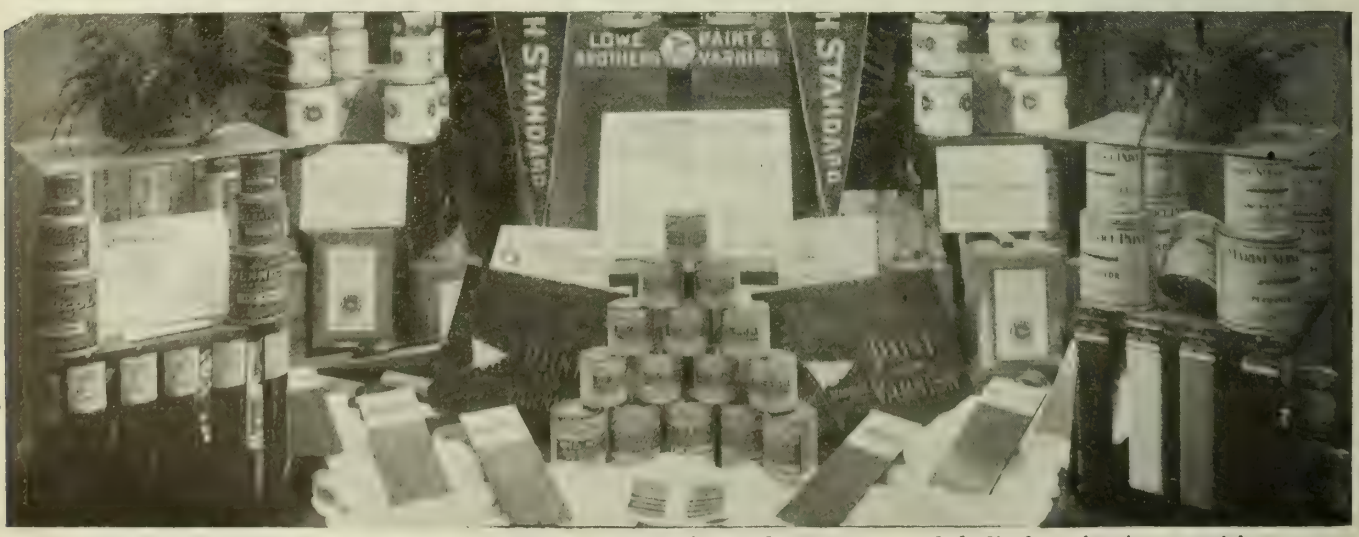
Scarcity of Bristles Continues

There is a continued scarcity of bristles for the manufacture of brushes, and particularly of the French bristles. Chinese bristles have been coming forward in fairly good quantity, one concern recently having received a good shipment that will take care of their needs for some time. Most of these bristles have come by way of London, but with the increased difficulties in shipping it is anticipated that shipments may in future come by way of the Pacific Ocean and Vancouver. Military orders for brushes are about all cleaned up now and manufacturers are busy with the domestic trade.

CONSTRUCIIVE AND DESTRUCTIVE ADVERTISING

There are two kinds of advertising—advertising that brings business and advertising that drives it away. A courteous manner, well groomed appearance advertises the gentleman just as the halting gait, the shifting eye, the sallow complexion and the corner-mouthed words advertise the man who has ''done time.''

One attracts—the other repels, but they are both advertising. One is constructive—the other destructive.



The above window display shows how an attractive, representative and yet not crowded, display of paint, varnishes, etc., can be arranged in a comparatively small space.

Brooms Reach Unprecedented Levels

Broom Corn at Chicago Now Quoted at $340 Per Ton, as Against $200 Per Ton About Three Months Ago, and $60 a Ton in Normal Times—May Turn Manufacturers to Other Materials for Brooms.

WITH a recent advance by dealers in quotations on the price of broom corn the selling price at Chicago is now $340 per ton. With freight and duty paid this would represent a cost of $375 per ton to Canadian broom manufacturers. Three months ago broom corn had reached $200 per ton and this was considered an enormous price, but since then prices have almost doubled. In normal times, or not over a year ago in fact, broom corn sold at $60 per ton. This situation has meant a big change in the price of brooms. The lowest priced broom that some of the manufacturers can now supply is $7 per dozen. In normal times this broom sold at $4 per dozen. During the past month there has been an advance in brooms of approximately 50c per dozen and manufacturers state if prices were governed according to the present price of broom corn the cheapest broom would have to sell to the wholesale trade at $8.50 to $9 per dozen. By the time it reached the consumer the broom would have to sell in the neighborhood of $1 each.

Higher Prices or No Brooms

One large manufacturer stated to HARWARE AND METAL that it was either a question of higher prices or stop the manufacture of corn brooms altogether. With the present high price of corn there was a great uncertainty over the situation. Higher prices might have the tendency to shut off demand for brooms and leave the manufacturers in an unenviable position with stocks of high-priced broom corn on their hands. A shipment of broom corn at present prices involves a small fortune. In normal times when a carload of broom corn was purchased the outlay involved would be in the neighborhood of $500 per car. With broom corn at the present price of $340 per ton a carload would be worth in the neighborhood of $2,500 to $3,000. And there would only be approximately eight tons in the carload. As an instance of the way it is affecting the broom manufacturers in the United States, one report stated that no less than 159 manufacturers have ceased the manufacture. The outlay involved in the financing of the manufacture has been too high for some of the smaller manufacturers and they have closed up in large numbers during the past six months.

Business is Hand to Mouth

Canadian manufacturers have noted a tendency toward curtailment in the use of brooms. There is a falling demand. As a matter of fact the manufacturers are not eager for business on the present basis of costs of raw materials. They are not pressing for orders. If business comes to them they are prepared to accept it, but they are not going after it with a shotgun eagerly intent on bagging it. There have been big advances in almost every class of article that enters into the manufacture of the broom. Twine is scarce and hard to get. Wire has made big advances recently, steadily in fact for the past year or two. Handles have advanced as much as 50 per cent.

Stocks of Brooms Light

Manufacturers are carrying very light stocks of brooms at the present time. One manufacturer who in normal times carried 1,000 dozen to 1,500 dozen brooms in stock is now down to about 50 dozen. Last year there was only about a third of a crop of broom corn in the United States and the new crop will not begin to reach the market until October of the present year. It is therefore a long distance to go before fresh supplies can be had. With the present prices so high there is little prospect of lower prices on brooms. Among the broom corn dealers in the United States there is little hesitancy in stating that broom corn will go even as high as $400 per ton. The dealers or jobbers of broom corn this year found they were completely deceived in the calculations. They figured it out that the price of broom corn was pretty sure to come down and consequently did not buy their usual stocks. Prices kept going higher and they found themselves out of the market. Stocks of brooms in retailers' hands are also light, as they have adopted a hand-to-mouth policy, buying in dozen lots, in many instances.

May Find Substitute

With the uncertainty in the broom corn market the manufacturers have been casting about for possible substitutes for the broom corn. One that is now being tried out is the palmyra fibre which come from India. This fibre comes from a species of palm tree. The fibre is both fine and coarse in texture and it is considered highly probable that this material can be made into brooms to good advantage. It is still in the experimental stage, but the manufacturer anticipates there may be definite developments within the near future and that the new line will be in shape to place before the trade.

DOES IT PAY TO ISSUE CATALOGUES?

(Continued from page 151)

tions, and are consequently ideas that other merchants might find it in their own interest to ponder.

Just in closing, it would not do to neglect mentioning the fact that in describing the goods featured in the catalog, the plan of the large and successful mail order houses was followed out as closely as possible. Neat illustrations were used, and descriptive information was not stinted. There was also a price shown for each article.

On the front cover of the catalog was shown an illustration of the store front of Hawkin's store. The first page of the catalog bore a message from Mr. Hawkins as follows:—

To My Customers

"I take pleasure in presenting to you this catalog, which I trust will serve to bring us closer together in a business way that will be naturally beneficial. This will show a few of the many lines we carry in stock, which we try to keep up-to-date. The prices given are based on present values, which are subject to changes from time to time.

Owing to war conditions and increases in tariffs, many advances will be necessary, but our prices will not be advanced more than is compulsory.

I desire to have every customer satisfied, and while it is impossible to give personal attention in every case, I will consider it a favor to be advised by anyone before leaving the store, if not satisfied.

I hope to have won a measure of confidence during my 27 years business, and by studying the requirements of my patrons, buying to the best advantage and giving my customers the benefit of the best prices, consistent with Sound Business Methods, I hope to merit a further increase of your esteemed patronage.

Yours truly,
R. Hawkins."

In the reorganization of the British consular service, special attention will be given to including business men. A move in the right direction. If business and politics will not mix in administering national affairs then let us cut out politics.

Cardwriting Made Easy

by R.T.D. Edwards

EDITOR'S NOTE.—With this article, Mr. Edwards enters upon another phase of show card writing. The Edwards series started in HARDWARE AND METAL a little over a year ago. To state that it has been a success is putting it mildly. It is quite safe to say that of the many series which have appeared in HARDWARE AND METAL, the Edwards series is undoubtedly the best. It has created a wider degree of interest than any other series ever prepared for a Canadian trade paper. Not a few of the best card writers who have developed during the past year, and who now hold good positions, owe much of their success to the Edwards course in this paper.

SOMETHING NEW FOR THE CARD-WRITER

WHEN starting this new series of show card writing articles, it was decided to endeavor to give a new style of lettering for show card purposes, in each lesson. The alphabets will all be good, practical styles of alphabets and though formed speedily, such as can be used by the most exclusive stores.

In order that the pupil may have an opportunity to practise with both pen and brush, the lessons will alternate in using pen and brush lettering. Last month the style of lettering was an upright brush stroke, this month the lesson is executed with a round-writing pen. The use of the pen has been demonstrated and thoroughly explained in previous lessons, but for the sake of recent beginners of these lessons, a few words as to their description and method of their letter formation is quite in order.

These pens are made of steel and have a very broad point. Eleven different widths are made, but all that a cardwriter needs is about two or three sizes. 1½, 2 and 2½ are the most popular widths. Ink retainers made of brass are sometimes used on these pens to regulate the flow of ink. On account of the war these are not obtainable; however, the pen can be worked successfully without them. These nibs can be obtained for fifteen or twenty cents a dozen.

The pen has a broad point. The heavy stroke of the letter is made by using the pen with its full width and the narrow stroke is obtained by using it sideways with the narrow side of the pen. The principle of the letter formation is more easily understood from practical work.

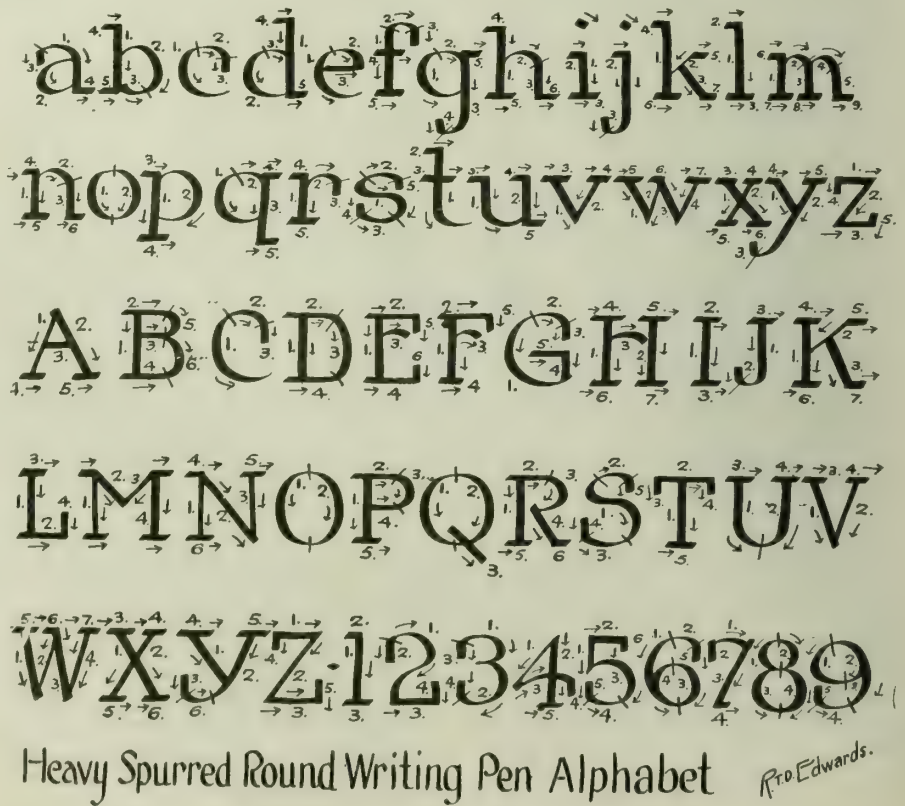
The pen must be cleaned after work is done, or it will become clogged and result in an uneven flow of ink.

Use a good black carbon ink for this pen work, not the kind of show card color used for brush work, but the kind usually used for engrossing. This ink may seem expensive, but it goes a long way and does a great deal more work than the same quantity of brush color.

The alphabet taken up this month cannot be called a Roman letter or an Egyptian style. We will call it a "heavy spurred round-writing pen alphabet." This is an excellent style for all classes of show card work, because it can be formed with a brush, as well as with the pen.

Spatter Work

As has been stated before in these columns it is not necessary to have an elaborate and expensive outfit to become a proficient cardwriter. There are many little devices which, when executed carefully, are most effective and cost next to nothing.



This month we are giving you an insight into one of these which will enable you to make exceptionally attractive showcards with tools you already have at your hand. This work is called "spatter work," and the main tool used is an ordinary tooth-brush. This is not a new idea, by any means, but it is, nevertheless, a good one because the ideas which can be worked out with it are very effective, almost unlimited. The

method is very simple. The idea is to make a stippled or speckled effect on the show card. This is accomplished by dipping a small square-faced stick, about six inches in length, into the ink and rubbing it across the ends of the bristles of the brush, thus causing the ink to be thrown in small drops. Various colored ink can be used in order to work out different color combinations. One point to remember in this respects is to

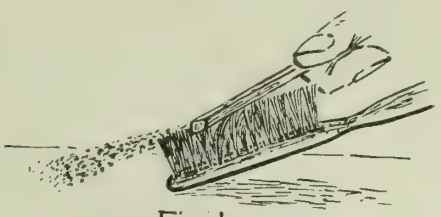


Fig. 1.

use a different brush for each color, as the tooth brush cannot be washed out successfully because the inks used are either waterproof or made from aniline dyes. For black color use the same ink as you used for pen lettering and for colors, get a good waterproof color or colors used for air brush purposes. These can be secured at art supply shops.

The spatter of ink thrown from a tooth brush cannot be guided as easily as an ordinary lettering brush, so a method must be devised to get the spattered effect in the desired place. This is done by means of a mask or stencil cut out of stiff manilla paper or heavy cover paper. After the stencil is cut it is best to give it a thin coating of shellac. This makes the paper much stiffer.

First select the desired pattern, then draw it on the stencil paper and cut out with sharp knife. The knife must be exceedingly sharp to get the bast results. A mat cutter's knife is best and is kept in best condition by the frequent use of an oil or wet stone. When the stencil is cut lay it in the desired place on the card and weight it down with small slugs or by push pins. Make sure that all the edges hug the card closely.

When all is in readiness, dip the stick into the ink and place the end of the brush near the card. Draw the stick gently across ends of the bristles from the front to the back. This will cause a fine spray to be thrown onto the card. Take care to apply the color evenly. The effect thus obtained is of a stippled ap-

pearance. Various colors can be used, according to the color scheme to be worked out—blue for sky, green for trees, etc.

Fig. 2 gives a few of the various ideas which can be worked out for different show card purposes.

No. 1. For corner pieces on the show

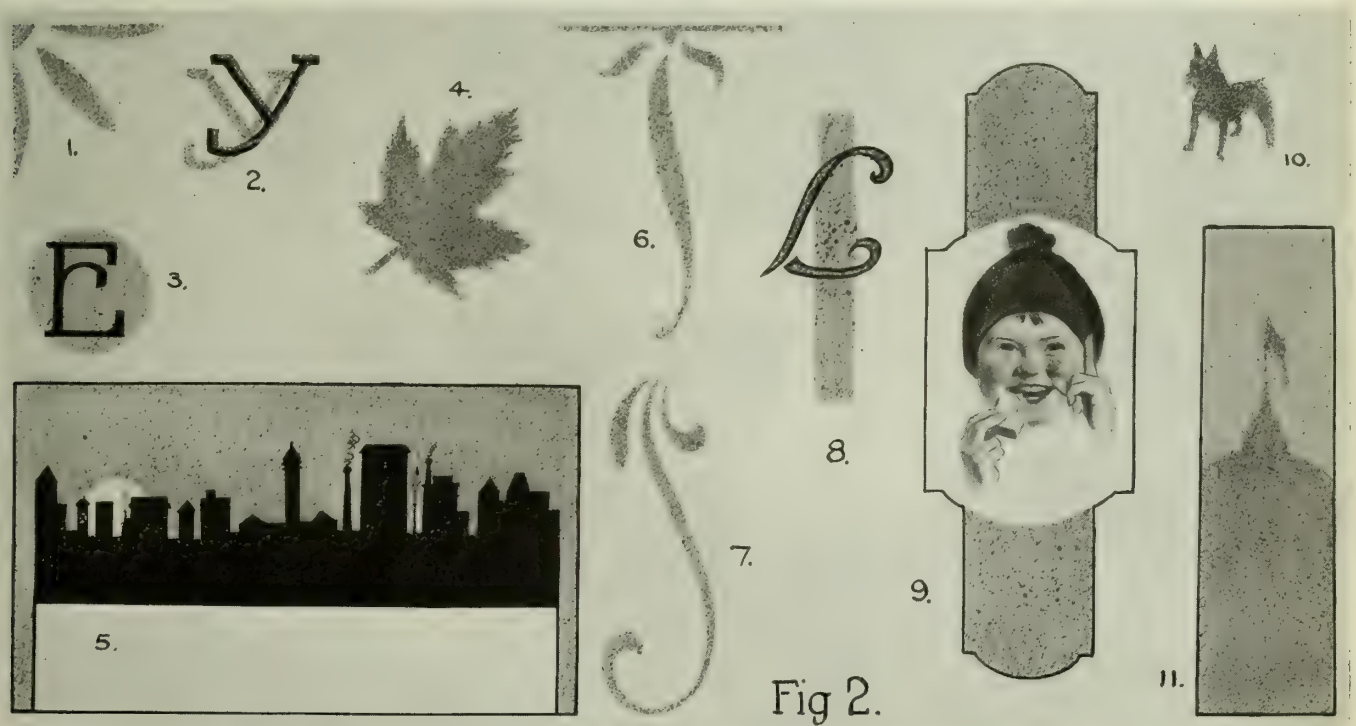

Fig 2.

card, is excellent. Four of these should be used on the same card with a pen ruled border. Many various ideas can be worked out for corner designs that make very attractive cards. Different colors may be used.

The various styles of fancy capitals which can be formed are almost unlimited. No. 2 shows the letter "Y" worked up with a shadow, all from the one stencil. After cutting the stencil, place it in desired position and give it a light spatter, then move the stencil a little higher up and to the right and make a heavier spattered impression. Thus you have the letter with a shadow all with the same stencil. The solid black is put on after the spatter work is dry.

No. 3 also shows a simple style of illustrated capital. This stencil is just a plain round cut out, with the E drawn

Let Us Put Your Lawn Mower in good running order

on with pen or brush, in black. Any desired color may be used for the spatter work.

No. 4 is a spatter drawing of a maple leaf. This is excellent for this time of year, and should be worked up with a leaf green shade. In the fall of the year even better effects can be obtained by combining red and yellow. Care must be taken to see that this stencil lies flat on the card, on account of its various points.

You often make long, narrow, upright cards with little wording on them. These sometimes need an extra touch to finish them properly. In No. 6 and 7 we have what is called end pieces. These should be placed in the centre of the card near the bottom. This gives a finished appearance to the card. Many various designs can be used or color schemes worked out.

No. 8 gives another way in which

Excellent Value in Women's Neckwear for Spring

fancy caps can be made by spatter work with the tooth brush. The long panel is put on first in a light shade. The L is then put on in a darker shade and outlined afterwards.

Spatter work is useful for giving variations in background for mounted cut out illustrations. Any light color can be used as long as it harmonizes with the rest of the card and cut out. No. 9 shows a plain design. Many others can be formed with good effect.

The bull dog illustration is just a sample of effects which can be obtained. If you do not wish to expend the time in making a drawing such as this, obtain an illustration from a magazine and paste it on stiff paper, and when the paste is dry cut out with sharp stencil cutting knife. Many other drawings can be obtained in the same way and in a very short time. There is one point to be remembered in selecting illustrations for spatter work and that is they must have a good outline which shows the features.

Surprisingly Good Values which help to bring down the High Cost of Living

No. 11 shows an effect which can be obtained of different building or sky lines. This one is a dome of a building showing the flag and flag pole. Two stencils are used for this drawing. One for the sky and one for the darker portion of the drawing. The whole is outlined with a pen stroke in black. Use pale blue for the sky and dark blue, brown or black for the remainder.

No. 5 may look quite difficult, but as far as stencil cutting, it is quite simple. First, draw in the entire silhouette with pen and black ink. When this is dry, cover all the card but that portion you wish to spatter. It does not matter if the black drawing is covered up or not, because the spatter will not be noticed on it. Make a small round stencil to get the sun effect as shown.

These few illustrations serve only to give an idea of the many effects which

We feature the Latest Styles from the World's Fashion Centres

can be obtained with the help of a tooth brush. These are only the simpler flat stencil work. More complicated work will be taken up in a later lesson.

The finished cards here shown serve to give the reader an idea of how the spatter work looks when ready for use. They also show this month's new style of lettering put into use.

NEED FOR GOOD ROADS

The relation of good roads to good business is a very direct one. To the average hardwareman, who depends to a very great extent on his farm trade, the question of good roads is an all-important one. When the roads are good the farmer has less reluctance to hitching up and driving into town—less inclination to do his shopping at home with the mail order catalogue spread out on his knee. Bad roads are allies of the catalogue houses.

General Store Beats M.O. Houses

Large Turnover in Town of 900 Population—Business Built Up on a Good Solid Basis —Friendship, Square Dealing and Service for the Foundations

IF you were a farmer and had the option of hitching up Dobbin, and driving some six or eight miles to make your weekly purchases at a down-at-the-heel country store, minus stock, minus equipment, minus, in fact, all the little brightening touches, the little items of service, that go to make a real store, or of sitting with your stockinged feet snugly tucked into the oven of the kitchen stove, your chair poised in a pleasantly perilous position on two legs, with a gorgeously covered catalogue describing for your benefit every imaginable need from toothpicks to plow shares—now being honest with yourself and really for a moment putting yourself in the place of that farmer, which would you choose?

General Stores Recruit for M. O. House

The solemn truth of the matter is that the average general store, whose proprietor never forgets to add a codicil to his evening prayers containing a warm word against the Mail Order House, has really been the best recruiting sergeant these same institutions have yet discovered.

It is a solemn fact, but none the less true for its solemnity. A great many merchants, who are actually depending on the farmer for their daily bread, are going about their business with the same equipment, the same stock, and the same methods of business that they found successful 20 years ago. Good enough methods, no doubt they were in the conditions that then existed. But the systems have grown timeworn, and those conditions have changed, and the failure of the general store to realize this fact has spelled opportunity for the Mail Order Store; the greatest menace that the general store has ever faced, the greatest menace that the small town has ever faced, and among the greatest menaces that business in general has ever faced.

How Can General Store Meet This Danger?

Letters are often received, asking what measures can be adopted to meet this growing evil. Well, what measures can be adopted? It is a big question, and one whose answer is far to seek. You can't beat them in the variety of the goods handled, you can't beat them in the simple matter of price alone. Their unrivalled opportunities of buying forbid the one, their far-reaching organization forbids the other. But you can get the advantage over them in the item that for lack of a better word, can be called service.

Effect of the Personal Element

Now, to begin with, the general store keeper has one overwhelming advantage and that is his personal knowledge of the farmer with whom he deals, and the farmer's knowledge of him.

The farmer has probably known Jim Brown ever since Jim moved into the town twenty-odd years ago, and with proper service that same farmer is more likely to trade with Jim Brown than with any other person. Jim doesn't have to handle the stock of a departmental store, because the actual farmers' needs and the needs of the inhabitants of the average town, are by no means as diversified as the contents of a mail order catalogue. Moreover, Jim Brown knows exactly what those needs are, or may very readily know if he takes the trouble to find out. If he fails to keep track of these needs, or refuses to consider them as needs, why he is simply pounding nails into his own business coffin, which is truly a melancholy performance.

Outstanding Example of This Service

But all this talk of what not to do is a rather unilluminating way of attacking the subject. It is a well known fact that it is easier to teach any subject through the eye than in any other way. That being the case, a concrete example of what we would consider a good method of meeting this dangerous competition would probably be of more value than endless pages of unbacked arguments.

A short time ago a representative of HARDWARE AND METAL visited the store of Sanders, Soule and Casselman, at Chesterville, Ont. Though the representative was in that store for some time and talked with several of the men who are interested in its success, he never heard a word that even remotely suggested any interest in the activities of the Mail Order Store. What was the reason for this? Merely the fact that this store is so soundly on its feet and is giving its customers such good service, and in such cheerful and up-to-date surroundings, that the activities of the mail order stores have not developed into a great element of danger for them.

View in the hardware department of the Sanders, Soule and Casselman store at Chesterville, Ont.

Turning Stock Regularly.

Now, Chesterville is not a place of any great size (only 900 population), and the fact that it is surrounded by some of the

Exterior of the Store Showing Its Unpretentious Appearance.

best dairying country in the whole of Canada, while in itself an asset, is also an added inducement for the outside store; yet this store is able to do a business that is hardly credible in a town of that size.

According to one of the managers the yearly turnover amounts to $150,000, and they carry a stock of $40,000. In other words, that stock on the whole is turned over more than three times every year. Now that in itself is an item to be considered. A constantly moving stock, and that pre-supposes wise buying, is one of the elements in a store's success. Every merchant knows that bright, new, attractive-looking goods are just about twice as saleable as the same goods that have lain on the shelves for a year or more.

Keep Stock Moving.

This is one of the principles of this store. To keep things moving, and to achieve this result they have been kept attractively displayed. How successful they have been will be readily seen by a glimpse at the photos of the different departments of the store illustrated herewith.

A Promising Location.

The store exterior is not a particularly imposing one. A magnificent external display is not always necessary to a successful business, although in the larger towns and cities it is a most important matter. It is centrally located within a stone's throw of the roads that cut the town into sections. It is within two miles of five different cheese factories, and in the radius of seven miles around the store is to be found what the town claims is the district that produces more milk than any similar area in Canada. That gives the store its clientele, a gilt-edged farming community, and the store has gone after this trade with a will.

Attractive Surroundings As a Business System.

To say that the store has gone after this trade may give a wrong impression. As far as could be learned by HARDWARE AND METAL representative, the different members of the firm did not adopt any particularly novel methods of gathering in trade. In place of this they have set to work to make their store attractive, to modernize it sufficiently so that if one of their customers should go to the city, and later come to their store, it would not be with the feeling that he had dropped back suddenly into the 17th century.

The Lay-out.

Entering the store, one goes up to two or three steps, for the store stands some three feet above the street level. There one enters into a large, bright, airy store. Just as one enters, there is the grocery department, attractive lines of goods displayed on attractive fittings. Glass show cases, large cash register, modern scales, attractive biscuit display cases; in fact, everything you expect to find in a city store, are to be found here, but the main point is that the stock is complete and varied, and by careful study, fitted to the needs of all the community that the store is designed to serve.

How does the store get the trade to warrant this fine display? Isn't it easily seen? If the farmer can get everything he requires in an attractive store, he is not likely to seek elsewhere. It is when he goes to a store and asks for an article only to be told that the storekeeper never heard of it, or doesn't think it worth while to stock it, that returning home he digs out the department store catalogue and begins to investigate.

This store can afford to make a good display because it has the trade to support it, and it has this trade because it has catered to by meeting the farmer's needs.

The Hardware Dept.

Across from the grocery department, and separated from it by a wide strip of open floor, is the hardware department, that shares with the grocery department the chief place of importance in the general store.

Here again one is faced by the modern store ideas. Behind the counters attractive show cases of polished wood

Attractively arranged dry goods and clothing department of the Chesterville store

reach to the ceiling. On each drawer is affixed the sample of the goods it contains. Larger hand tools are displayed against a backing of red felt. In a large square pedestal case facing the window various drills, nuts, bolts, and wrenches, the particular tools of the farmer's activities, are displayed.

Glass topped and glass fronted cases display a fine assortment of cutlery and small fancy articles that are peculiar to the hardware trade. Other glass cases display silverware, others still, plumbers' and steamfitters' supplies, babbitt metals and similar lines. Everywhere that such a thing is possible, a glass case is used for display purposes.

At the back of the store in an alcove are large cases for the display of larger hand tools, while to one side of this is a well stocked paint department. Heavy hardware, plow parts, and general, heavy ware, is handled in a department in the rear of the store.

City Dry Goods Store in Small Town

Adjoining this store, and connected by a door so that the customer can pass from one department to the other, while at the same time giving all the advantages of a separate store, is the clothing and dry goods department. It is a large double store, the front part of which is devoted to the dry goods department. Here again glass show cases are everywhere in evidence, and modern equipment for the display of dry goods lines.

In the rear, clothing is displayed in cases similar to those used in the city men's wear stores. Around the central column that supports the roof of the store is built an octagonal case, also used for clothing. The dark woodwork of these cases showing up against the white walls of the store make a very pleasing contrast.

Each Department Run As Separate Store

In the matter of operation, each department is under a special head. Part of the overhead is charged against each department. In each case, the head is responsible for all the buying and the general management, and is also responsible for the general success of its operations.

Beside the store there is a very large coal business carried on by the firm, which is run as an entirely separate department.

Building Up Friendship As a Business System

Generally speaking, as previously stated, there are no unusual methods adopted by this organization. Nothing sensational which one could pick out to make a feature story. The success of the firm has been built up on a method of straight merchandizing. Of course, the wide activities of the store give a clientele which the managers of the different departments are careful to cultivate. Then, too, the fact that each department has its separate head leaves them a little more free than if their energies were more varied. They can get out among their customers from time to time. Not definitely to drum up business, but merely to cultivate friendly relations, for it is on this basis of friendly relations, and strictly first class service, that this store has built up its remarkable success.

USE FIRE TO FEATURE ROOFING

Hardware Firm Seized Opportunity to Advertise

One of the finest residences in an American town was completely destroyed by fire says an American exchange. It was the most sensational happening there for years and excitement at the time naturally ran high.

While the ruins were still smoldering the local paper came out with a big account of the fire, and on the same page was a good-sized advertisement of the Blakely Hardware Company, showing the picture of a house covered with Blank fireproof roofing, with the headline in big bold type, "Lessen the Fire Hazard." The text was in part as follows:

FIRE! FIRE-

"How the cry strikes terror to the hearts of all hearers.

"Perhaps it's my home, is your first thought, accompanied by all the horrors of such a possibility.

"And perhaps it is yours! Thousands and thousands of dwellings are annually destroyed by fire, people turned out homeless and oftentimes seriously injured.

"The fire demon is merciless. He spares nothing which comes within his power.

"Just a little spark from a railroad train, or a tiny blaze from a defective flue may start a most destructive conflagration.

"But did you ever stop to think how many fires could be prevented by high-grade, fireproof roofing material that will withstand the flames and arrest their progress?

"With your home protected by Blank roofing you can retire at night with reasonable assurance against fires of the most common origin."

Following the foregoing introductory copy was a description of Blank fireproof roofing, telling of its construction and how it acted as a fire retardent.

A Minority Report.

A small, meek, country negro, who had always lived on one place near Frankfort, Kentucky, married a big, domineering woman, and very soon afterward moved into town, where the keeper of the local bar met him on the street.

"Hello, Gabe," he said, "what made you move to town? I thought you liked country life."

"Well, Mistah Franklin," explained Gabe, "I uster lak de country. But mah wife she didn't lak it—and I've done got so now dat when she don't lak a thing I jest natchelly hates it."

Waste Paper Brings Good Return

Merchants Can Sell to Advantage Accumulated Stocks of Magazines, Newspapers, and Scrap Paper—Best Prices are Paid in Car Lots—Merchants Can Combine in Making Up Car to Get Highest Return.

THERE is an honest attempt being made in some quarters these days to conserve the stocks of waste paper. There has been a shortage and newspapers are endeavoring to curtail the amount used. Recently the London Times announced that their club system had resulted in the curtailing of no less than 100,000 papers daily. There were 50,000 clubs established that were serving on the avearge three families or readers where formerly each had a copy of the paper. In other words, where it took 150,000 copies of papers formerly, the same work is now being done by 50,000 copies. This conservation of waste paper stocks has recently been taken up the Dominion Department of Trade and Commerce to the end that this economic waste in Canada might be eliminated. Paper has been greatly enhanced in value within the past year, in some cases doubling in price. The Department of Trade and Commerce has appealed to the people for the conservation of these stocks on the ground of a patriotic duty. And to the man who takes the trouble to gather the waste paper together there is an actual monetary return that is worth while.

Big Loss in Waste Paper

The average merchant will perhaps be mildly surprised to know that the economic loss occasioned around each store where these stocks are destroyed has been estimated at approximately $200. One authority in the paper business estimates that the paper wasted by the average merchant has an actual cash value to him of $100. He further estimates that the loss of time occasioned to the merchant in cleaning up and disposing of this paper amounts to an additional $100 per year. With these two items there is a clear loss of $200 per year. The labor that is expended in burning up could just as easily be expended in baling the paper and so bring a financial return to the merchant.

Waste Paper a Fire Menace

Waste paper accumulations are one of the most serious fire menaces to a store. There is danger in leaving the accumulations around loose for even a single night. With baled paper there is a difference. The procuring of a paper baler would be a necessary first step. And there are a number of good makes of balers on the market. The investment in one of these as a matter of fire insurance is a good one. Balers are now being used extensively and are proving their value. It is not always practicable or possible to dispose of this baled paper immediately. But in its baled state it can be easily stored and is not in the least inflammable when tightly packed together. As an illustration of the difficulty with which paper tightly packed together burns it has no doubt been evidenced how long it takes paper tightly rolled together to burn even when placed on a bonfire. With baled paper tightly compressed together it is almost unburnable. Even should the loose edges catch fire it is asserted that the smoke generated would in itself be sufficient to put out the fire almost as soon as it started.

Prices Paid for Waste Paper

There are three classes of old paper and each should be baled separately. First there are the magazines and books for which $1 per hundred pounds is being paid by dealers in Toronto at the present time. This amounts to $20 per ton. Included in the same category with magazines and books are bond papers. These classes of paper are used in making the better grades of papers and consequently command a better price.

In the second class comes newspapers for which 65c per hundred pounds is paid, or $13 per ton. These papers should be baled separately, as they are in the instance of books and magazines and bond papers. In the third class is the scrap paper, or waste paper, for which 55c per hundred pounds is paid or $11 per ton. This class includes everything in the paper line that cannot be classed with the foregoing—torn newspapers, wrapping paper, contents of waste paper baskets, cardboard, paper serviettes, everything, in fact, that has the resemblance of paper.

Waste String Also Valuable

Waste string is also a valuable commodity and should not be burned or destroyed any more than the waste paper. It is worth more in fact than the old magazines and books, the price paid at the time of writing being $1.50 per hundred pounds, or $30 per ton. It should therefore be separated from the paper and baled separately. There is a good demand for waste paper at the present time. The market for waste paper, however, is a variable quantity and is governed by the law of supply and demand. The present prices are not a fixed quantity although they have been fairly stationary for some time past.

Three Classes of Freight Rates

Merchants are often at a loss to know where to ship the paper after they have collected it. There are numerous dealers throughout the Dominion whose names HARDWARE AND METAL will be pleased to supply on application. There are different classes of freight rates and merchants can often make additional money by taking advantage of the best rate. For instance, there is a rate on carloads, which is the cheapest way of shipment. Second, there is a rate for bales in less than car lots, and third for bags in less than car lots. It would be impossible also to give the freight rates from the various points to the collecting centres. But as an instance of the way the different rates work out, the rate from London, Ont., to Toronto in carlots is 8½c per hundred pounds. On bales in less than car lots it is 20c per hundred pounds, while in bags in less than car lots the rate is 28c per 100 lbs. It will therefore be seen that the most advantageous way is to ship it in car lots if that is at all possible. Another instance of the difference in freight rates might be cited in the North Bay-Toronto carrying charges. In car lots from North Bay to Toronto the rate is 12c per hundred. 24c per hundred pounds in less than car lots in bales, and 33c per hundred in less than car lots for bags of paper.

Merchants Can Go "Snooks."

There is an advantage to be gained in merchants going in together to make up a carload, as will be noted in the difference that has to be paid for car lots and less than car lots. "Going snooks," as the small boy would call it, would work out to the advantage of all concerned. In the town of Orillia eleven merchants combined to make up a carload, where the net return for a car amounted to $250, to be divided equally among them. In Sudbury, Ont., an association was formed to handle the supply of waste paper, and is a plan that could well be followed to the advantage of merchants in other places.

Shipping Part Cars at Car Lot Rates

Sometimes it is not practicable to get a carload together, but it will be found

(Continued on page 175.)

THE JUNIOR CLERK'S PAGE

Clerks' Relation to the Store

Are Clerks Paid What They are Worth—The Connecting Link Between Merchant and Customer—Good and Bad Clerks

PROBABLY every shopper who enters a store, at least one at which they usually trade, has some clerk whom he prefers to have serve him. The reasons for this are numerous, and run the whole gamut of human psychology, but a few of the reasons might be noted. It is not that the customer expects to buy cheaper from this particular clerk, but that in some way, that the customer probably does not realize, the clerk has learned to understand the peculiarities of the patron. It may be in not urging the customer to buy goods that experience has taught him he does not want; it may be in coaching him in the goods he actually does want, or it may, on the other hand, be merely a matter of courteous and cheerful treatment and a readiness to understand the customer's side of any question. Be it what it may, it is one of the outstanding items in the store's popularity and as such is a very vital element in the store's success.

Clerk May Double His Value—Should He Then Increase His Wages?

Here is a matter that is not fully understood either by the clerk or the employer, and consequently very often the clerk is not paid according to his value. Good, bad, or indifferent, in some stores, they all get about the same wages, yet a clerk who makes a careful study of his work, may in many instances increase his value to the store 100 per cent. If he does so he is entitled to a fair return for this increased efficiency. If employers realized this, and some of them do, there would be a higher standard of efficiency in clerks. They would then have some inducement to exert themselves in studying their customers, and the methods of business in general.

Careless Clerk a Debit Item

Not only may a good clerk mean money to his employer, but a careless one may mean a considerable monetary loss. Not only in the way of a lessened efficiency, but in the tangible item of waste. For instance, a careless clerk may be careless in weighing. Whichever way he errs, it will be equally disadvantageous to the storekeeper. If he gives short weight, the merchant will be liable to be looked upon with suspicion, for very few people will lay the blame on the carelessness of the clerk, but will assume at once that there is a conspiracy to defraud.

If the clerk gives overweight, it will result in a loss of at least a few dollars weekly, for which the merchant gets no credit. Even should the customer be aware of it, they are prone to look with suspicion on any form of carelessness in weighing.

It is unquestionably the person who knows how to do things right that always obtains the respect of the public. This is no easy task, but is the result of careful and painstaking study.

There are some clerks who have never undergone any apprenticeship in the business, and yet this is so necessary and considered of such vital importance that one merchant known to the writer will not employ clerks who have not served an apprenticeship of three years under careful training.

A good clerk may build your business, a poor one may turn it away. It is all very well to say that by reason of his employment a clerk should be loyal to the store. This is all perfectly true, and a clerk may be perfectly loyal in his service to the store and yet not be the drawing card he is capable of being. It is the little more that counts, a service, plus, and when a clerk is interested enough to give you this extra service he is entitled to some recognition.

The merchant looks with favor upon his available assets, yet no single asset, not even limitless capital, is comparable to the willing super-service that the clerk can give as a means of promoting the success of the store.

This is a thought that has been forcibly drawn to attention by one who has been continually in touch with the retail trade for years, and whose judgment is sound. Ponder it yourself. It is worth the serious consideration of both employers and clerks.

WASTE PAPER BRINGS GOOD RETURN

(Continued from page 174.)

to the advantage of the merchant or merchants to engage a car. The average car will carry twelve tons. For instance, on the North Bay rate of 12c per hundred pounds by the car lot, it would cost $28.80 for the full car. Under the part car rate of 24c per hundred pounds six tons could be shipped at no greater expense than it would take for less than car lots. If the six tons were shipped in bags it would cost $36.60 to ship to Toronto. In this way six tons of baled paper could be shipped in a car and any bags included would cost nothing additional.

Toronto dealers have recently been making it a practice to pay the freight at the prices named where shipments of car lots can be secured. In other words, on baled newspapers, books and magazines, and baled scrap paper where a carload is shipped the Toronto dealers pay the freight. There are prescribed limits, however, being from points south of Gravenhurst and east from Montreal and west as far as Windsor.

PAINT FOR MACHINERY

The use of paint on both the wooden and metal parts of machinery, gives a protecting cover against deterioration by use and weather, apart altogether from the general improvement in appearance. The cost of prepared paint for the purpose is very small, and experience in the work is unnecessary.

The initial cost of farm implements means to the farmers a large outlay. This investment should be protected. Depreciation from rot and rust is rapid, when once these conditions are established. For the actual money saving as well as for the more prosperous appearance it gives to the farm and farmer, the regular overhauling and painting of the farm implements should be a recognized part of the year's work.

Angus Power Co. has been incorporated at Ottawa, with capital of $500,000, to carry on the business of electricians and mechanical engineers, also to construct and operate power plants.

WHAT OTHER PAPERS SAY

MODERNIZING CUTLERY MANUFACTURE MACHINERY

From *English Ironmonger*

"The work of modernizing and reorganizing the cutlery trade in Sheffield appears now to have begun in earnest. The manufacturers realize fully that to make these islands and the British colonies independent of foreign supplies it will be necessary to increase the output, not by two or three, but by ten or twelve times the maximum before the war. Such a result is only attainable by boldly transforming the making of cutlery from a handicraft to a mechanical trade. What the industry needs are machines and organization to turn out a dozen knives in the same time that it now takes to produce one. Since the trade unions concerned withdrew all rules which stood in the way of the unrestricted employment of machinery, women, and boys, leading manufacturers have displayed great activity in extending and equipping their works so as to take the fullest possible advantage of the new situation. Engineering is destined to play a leading part in the making of cutlery in the future. The methods for turning out knives more rapidly and cheaply involve the use of machinery for flying out and grinding blades and for stamping out the various metal parts, all of which must be standardized so as to facilitate their being put together quickly by unskilled labor. The time is not favorable for obtaining delivery of machinery of any kind, but there is much activity in the trade in building additional shops and making all ready for the reception of the plant when it arrives. Already a good deal of progress has been made with table cutlery in supplanting the manual grinder by machines. Progress in the spring knife department is less conspicuous except in the mechanical production of the various parts. A completely satisfactory method of grinding the blades of these knives has yet to be invented. Whether the developments in progress or planned will suffice to meet the wants of Great Britain and her colonies, to say nothing of neutral markets, at the end of the war remains to be seen, but the replenishment of stocks alone will absorb a big share of Sheffield's output, for the shelves of every retailer's shop and every merchant's warehouse in all parts of the world are as bare as Mother Hubbard's cupboard.

"A difficult problem with which Sheffield is faced at present is the production of a sufficient quantity of the best class of hollow-ground razors, but this is to some extent a temporary difficulty caused by inability to obtain grinding machinery. The best German razors are made and ground by machinery, and when normal conditions return Sheffield, should be able to increase her output. Hollow grinding, however, needs skilful men, and, as these are none too plentiful at the moment, no time should be lost in training young men to the work. As far as ordinary and cheap-quality razors are concerned, the output of Sheffield has lately been increased largely."

GERMAN IRON TRADE AFTER WAR
Army Authorities Restricted Scope of Business

From *American Metal Market.*

Some of largest iron interests in Germany have formed an association for the promotion of trade after the war. Their announcement says:—

"It is impossible to forecast the economic conditions of trade which will prevail after the war, but it is a fact that the army authorities have greatly restricted the scope of the iron merchants' business, and in many cases completely excluded middlemen, thus wasting talents and experiences which might have been of the greatest service to the national war organization. This exclusion of the legitimate trade has called into existence a number of untrained middlemen whose existence is not justified and as a result the war administration has suffered considerable losses, for which the legitimate trade has been blamed. Moreover, the merchants are not represented at all, or not sufficiently, on the various war service bodies.

"It is well known that efforts are being made to persuade the authorities to continue the present economic war organization after peace has been declared. If these efforts were successful, the result would be a permanent restriction of free commercial enterprise, and it is therefore the duty of merchants to take steps that with the return to peace the free and unrestricted development of trade shall again be made possible."

HIGH PRICES AND THE DOLLAR'S FUTURE

From New York *Sun.*

In a brief article in the *Financier,* Professor Irving Fisher, the Yale economist, assigns as the two chief causes of the rise in prices the growing scarcity of goods and the growing abundance of money, thus showing how the most learned deductions of the scientific mind may surprisingly corroborate the simple observations and conclusions of the untutored intellect.

Every one has guessed that fewer goods mean higher prices; almost every one knows that the more plentiful money is the less is its purchasing power. Professor Fisher, some years ago, propounded a scheme to stabilize the dollar by virtually increasing its weight from time to time to offset the depreciation of gold. He has had some evidence lately, in the shape of letters from "two prominent bankers," of revived interest in this proposal.

Meanwhile he has constructed a chart which shows that prices parallel closely the increase of money in circulation. Prices in this country are now, he says, about 40 per cent. higher than before the war. In all the belligerent countries and most European neutral nations the increase has been much greater. Sweden has gone so far as to prohibit imports of gold through refusal of the State Bank to accept it in payment for its notes at the former legal rate. Professor Fisher remarks that as yet "there is almost no realization in this country that we are suffering from a gold deluge."

In this respect we think he is wrong. We think American bankers quite fully realize the inconveniences and even certain perils of the present situation and that they are anxious to do what they can to safeguard the future. But it is a difficult task; and one of the principal difficulties is to know what to do. On this head Professor Fisher seems to offer only one suggestion, that bank discount rates be kept up and the credit superstructure restricted as much as possible. Excellent, so far as it goes, but more or less a measure of indirection. On the other hand, a sufficient number of indirect and natural restraints would be likely to prove much more efficacious than direct and artificial checks, such as prohibition of gold imports or even the stabilization of the fluctuating dollar. The trouble with these direct schemes is that, like Dame Partington, they try to sweep back the ocean, instead of taking advantage of turns of the tide to bulkhead the imperilled beach.

THE ADVENT OF MUNICIPAL GOLF

(Continued from page 153.)

That there is need for a municipal golf course in Toronto does not admit of any argument, writes Mr. R. H. Greene. "That this is an appropriate time to bring the question before the 'powers that be' is another question.. However, a discussion pro and con can do no harm and should provide invaluable data for the future consideration of the project both in Toronto and other large centres in Canada.

"Some years ago a delegation of Toronto golfers, representatives of all the clubs, headed by Geo. S. Lyon and Dr. Burns, waited upon the Board of Control of this city and urged that a municipal golf course be laid out in High Park, where there is sufficient room for a good nine hole course without injury in any way to the drives or general layout of the park. I was present and regretted to find that as there were no golfers on the Board the proposal met with no encouragement. The members of the Board seemed to consider golf as a rich man's game, showing conclusively they knew nothing about it. We have any number of Scotchmen and others in the city who, accustomed as they were in the old country to play over public courses, cannot understand why one is not established here, where they are debarred from playing on account of the expense of joining the private clubs.

"I took a trip through the West this fall and was surprised to see that nearly every Western city had its municipal course, and they were all well patronized. The same may be said of many of the cities in the United States.

"If public men would only realize the tremendous benefit, both physically and morally, to be gained by our citizens in a clean, healthy sport like golf, they would consider the establishment of a municipal course of very great importance. Aside from the land required such a course would be self-sustaining.

"Now that the saloons are closed is an added reason for giving our men a chance to spend their evenings and holidays in healthy surroundings, instead of sitting in the bleachers watching other fellows play."

The sadness of the golfers' complaint in the City of Montreal is made all the more sad by the fact that few if any of the municipalities of this country have such opportunities for creating excellent nine-hole munipal courses, says W. M. Stuart, of the *Daily Herald.* There are within fifteen minutes' journey from the centre of the city two municipally-owned tracts of land whereon some of the most sporty holes in Canada could be laid out at an outlay so small as to make the ordinary club professional green with envy.

There are two ideal locations in this city for such a purpose, each of them such as would make a magnificent nine hole course. One is on the slopes of Mount Royal, at the back of the mountain and the other an St. Helen's Island, a much abused and but little used park which should but does not correspond to the island in the civic life of Toronto.

As before stated it is going to be a long, hard fight to put a municipal golf course in Montreal and at this time it is not necessary to discuss the question of whether it will be nine or eighteen holes and if the charge shall be 10 cents a round or twenty-five. The principal thing at this time is to bring home to the city council the fact that the lack of such a course is a great want in the athletic life of the city and that it is keeping many men and women from their legitimate pleasure. When once that has been done it will be an easy matter to attend to the details.

EVENTS IN THE TRADE

New Firms

St. Thomas, Ont.—A. A. Campbell, who for some years has conducted a hardware store on Ross St., has opened a new store at 437 Talbot St. The Ross St. store will still continue, but the main office will be located at the new store.

Business Changes

Briercrest, Sask.—The Miller Hardware Company has been succeeded by Turnbull & Fonger.

Medicine Hat, Alta.—Marshall-Mitchell Hardware Co., Ltd., has been changed to the Mitchell Hardware Co., Ltd.

Kelwood, Man.—Stock and fixtures of the Hearn hardware, estate of A. J. Hearn, have been sold to J. A. Mabley.

Swift Current, Sask.—J. A. Rollefson, hardware and implements, has purchased the fire stock from the Wetmore Hardware.

Swift Current, Sask.—The John Deere Plow Co., will erect a brick block on the site of the Edmanson Building recently destroyed by fire.

Gleichen, Ont.—J. A. Ramsay of the Busy Store has purchased the buildings and stock of A. Boisvert of Cluny, which will soon be operating under his ownership.

Obituary

Chatham, Ont.—James P. Wood, of Wood Brothers' foundry, is dead.

Brantford, Ont.—John A. Sanderson, of Brantford, prominently identified with the Cockshutt Plow Company, Brantford Carriage Company, and many others, died at his home here.

Winnipeg, Man.—J. P. O. Allaire, who until a year ago was senior partner in the hardware firm of Allaire & Bleau, St. Boniface, Man. The deceased was one of the pioneer merchants of St. Boniface.

London, Ont.— G. T. Pitkin, who died suddenly of heart failure at his home, here, was until recently a resident of Petrolea. He was Manager of Vantuyl & Fairbank, hardware merchants, for twenty-five years; was chairman of the Petrolea Water Commission for ten years, and Chairman of the Englehart Hospital Board for five years, and was an ex-Vice-President of the Petrolea Board of Trade.

Fire Losses

Toronto, Ont.—Fire damaged the premises of the Empire Brush Company.

Waterdown, Ont.—The hardware store of Roy Binkley was gutted by fire.

Oyen, Alta.—McPherson & Price hardware, were burned out.

Battleford, Alta.—White & Joliffe, hardware were burned out.

Toronto, Ont.—Max Silverman, tinsmith and hardware, sustained recent fire loss, covered by insurance.

Oyen, Alta.—McPherson & Price sustained recent loss from fire.

Personal

D. A. Crothers, for some time buyer for Parsons Hardware, Orillia, has joined the staff of Ingram & Davey, St. Thomas, Ont.

M. F. Christie, sec-treas, of the G. F. Stephens Co., Ltd., Winnipeg, is now in the East, and will visit New York, Washington, and other centres on a business and pleasure trip. He will be absent several weeks.

To Make Stoves

Canadian Electric & Gas Heater Co., has been incorporated at Ottawa with a capital of $250,000 to manufacture gas and electric stoves and heaters, etc., at Montreal.

Crane Co. of Canada

Niagara Falls, Ont.—The Herbert Morris Crane and Hoist Company of Birmingham, England, has decided to locate its Canadian branch factory in this city. Seven acres of land have been purchased here, and building operations will begin immediately.

Evinrude Co. to Make Engines

The Evinrude Motor Company of Milwaukee, Wis., manufacturers of the Evinrude Rowboat and Canoe Motor, have increased their capital stock from $350,000 to $600,000 to engage in the manufacture of internal combustion, heavy oil engines.

Construction of a large modern plant will be begun at one.

Industrial Notes

Chambly, Que.—The Canadian Leatherboard Co. will build a factory here.

Hamilton, Ont.—The Union Drawn Steel Co. proposes to build a large addition in connection with its present plant.

Dundas, Ont.—It is understood that the Chapman Engine Co. will rebuild their plant, which was recently damaged by fire.

Chatham, Ont.—The sale of the plant of the Chatham Bridge Co. to the Pittsburg and Des Moines Steel Co. has been endorsed by the shareholders, and it is expected that the deal will be closed in the near future.

Belleville, Ont.—The Maple Leaf Tires Co. is erecting a plant here at an estimated cost of $100,000, and will be shortly ready for the installation of equipment. O. W. Dunham is secretary.

Montreal, Que.—The Thomas Davidson Mfg. Co. will install four 6-ton electrical furnaces at their new steel plant at Cote St. Paul.

Midland, Ont.—It is understood that the Port Arthur Copper Co. will install a reverberatory furnace at the reduction plant at Midland for smelting copper ores.

Deseronto, Ont.—Dominion Hardwoods Ltd., have started operations.

F. J. Penberthy, manager of Lowe Bros., Limited, was in Montreal during the week on a business trip.

Montreal Personals

A. B. Hudson of Hamilton, Ont., visited Montreal this week on business.

P. A. Wuterich of Charles Parker Co., Meriden, Conn., was in Montreal this week.

G. U. Angevine of Torrington, Conn., was in Montreal this week and looked up friends in the hardware trade.

William Starks of Starke Seybold & Co., Montreal is welcomed back to the city after a six week's recuperative sojourn at Hot Springs. He is very much benefited in health by his holiday after his recent illness.

Goodell-Pratt Catalogue

Goodell-Pratt Co., Greenfield, Mass., have issued a 432-page tool book No. 13, showing nearly 2,000 tools, many of which are new. The catalogue is attractively and conveniently gotten up. It is splendidly illustrated.

The new book shows all products manufactured by the company and cancels all previous editions. The list prices given in the new catalogue differ widely from those in previous editions. This is due to the fact that the company has changed the entire price system in order to simplify it for the convenience of customers. The new price system, it is said, will save time and trouble for the retailer. The book is probably one of the most complete tool books ever issued. Copies will be mailed on request.

HARDWARE LETTER BOX

Key Filing Machine

L. E. Renault, Campbellton, N.B.—Can you advise where I can purchase a key filing machine for filing keys, such as are used on post office boxes?

Canadian Yale & Towne, Ltd., St. Catharines. Ont.—Ed.

* * *

Express Wagons

J. E. Scriven & Co., Tillbury, Ont.—Please give names of firms making express wagons.

Canadian Buffalo Sled Co., Preston, Ont.; Woodstock Wagon Co., Woodstock, Ont.; Gendron Mfg. Co., Toronto, Ont.—Ed.

* * *

Pearl Champion Range

W. C. Auld, Youngstown, Alta.—Kindly give name of maker of the Pearl Champion cast range. We want repairs.

This stove was made by the D. J. Barker Stove Co., Picton, Ont. Repairs can be secured from McIntyre & Taylor, 501 Queen W., Toronto.—Ed.

* * *

Aladdin Polish

Dakin Bros., Digby, N.S.—Please give name of maker of Aladdin metal polish.

Hearsey-Willis Co., Indianapolis, Ind.—Ed.

* * *

Metal Monuments

Geo. McKinney, hardware, Humboldt, Sask.—Please give names of manufacturers of metal monuments.

Monumental Bronze Co., Bridgeport, Conn.; Rudolph Geissler, 56 W. 8th Street, New York, N.Y.; Philadelphia White Bronze Monument Co., 23 S. 17th Street, Philadelphia, Pa.—Ed.

* * *

Goodell-Hay Brace

D. Mistele, Rodney, Ont.—Please advise where the Goodell-Hay ratchet brace is made.

The Goodell-Hay brace is made by the Goodell-Pratt Co., Greenfield, Mass., and is shown on page 134 of the makers' catalogue.—Ed.

* * *

Electric Sewing Machines

W. H. Jones, Amherstburg, Ont.—Please advise where I can purchase an electric sewing machine.

An electric attachment for sewing machines is made and sold by Canadian General Electric Co., Toronto.—Ed.

Cement Coating

Reid Hardware Co., Outlook, Sask.—Where can we purchase a coating or covering for cement floors?

Practically the large manufacturers of paint manufacture special paints or coverings for cement floors. Several large manufacturers have advertisements in this issue. They would be glad to supply descriptive matter and prices. —Ed.

* * *

Dehorning Shears

Plaunt Hardware Co., Ottawa, Ont.—Please give name of maker of the Keystone dehorning shear.

Dr. McKenna, 219 Robert Street, Toronto.—Ed.

* * *

National Scale Co.

St. G. Penflold, Guelph, Ont.—Is there a firm called National Scale Co. in Toronto?

There is no record of a company called National Scale Co. in Toronto.—Ed.

* * *

Shoes for Moulders

A. Belanger, Montmagney, Que.—Please advise where we can purchase special shoes for moulders.

Canadian Hanson Van Winkle Co., Morrow Avenue, Toronto.—Ed.

* * *

Show Case Lights

Wettlaufer Dept. Store, Waterloo, Ont.—Please advise where we can purchase reflectors for electric lights in show cases.

Canadian General Electric Co., 212 King Street W., Toronto.—Ed.

ASSOCIATION LETTERS NEXT WEEK

Additional letters have been received from retailers regarding the affairs of the Ontario Retail Hardware and Stove Dealers' Association. Among the number is one from Mr. Phillips in reply to the letter from Past President Carter, which appeared in last week's issue. Owing to lack of space in this issue the letters are being held over for next week.

NEW GOODS DEPARTMENT

Readers will probably note that the "New Goods Department" does not appear in this issue. The "New Goods Department" appears in every issue of HARDWARE AND METAL, with the exception of the Annual Spring and Fall Numbers.

WHY MR. SCHWAB WORKS

Why do I work? What do I work for? I have more money than I can begin to spend. I have no children, nobody to leave it to. My wife is rich enough in her own right. She does not need it. I do not need it. I work just for the pleasure I find in work, the satisfaction there is in developing things, in creating. Also, the associations business begets. The man who does not work for the love of work, but only for money, is not likely to make money, nor to find much fun in life.—Charles M. Schwab, in the "Mechanics and Metals Bank Journal."

LETTERS TO THE EDITOR

These columns are open to contributions upon any topic of interest to the trade, it being understood that the views expressed are those of the contributors, and do not necessarily imply editorial indorsement. Names of contributors will be withheld, if desired, but name of writer must accompany correspondence as an evidence of good faith.

ARE WHOLESALERS BUYING RIGHT?

The Editor of Hardware and Metal,
Toronto, Ont.

Dear Sir:—

Re your editorial comments in your March 10th issue, about Mail Order and Wholesaler, you certainly hit the nail right on the head for once, the only fault one might find, is that you did not hit it hard enough. That there is something radically wrong among our wholesalers, no one can deny; you take one end of their organization (but it is the wrong end) seems to work like a clock and accomplish all its desired purposes: take for instance, the price agreed upon to sell, never seem to be deviated from to any extent. In the matter of terms, it is the same thing. Take interest charges, etc., on overdue accounts, seems standarized to perfection from ocean to ocean, among the wholesale hardware jobbers. But, when it comes to do something for the retailer (and one would think that it would be in their interest as well) in the way of securing prices for the retailer that would enable them to meet mail order competition, well they are asleep at the switch.

If they can so well regulate their selling policy, surely they can also buy as advantageously as a single-handed M.O. house; if not, they might as well admit that the M.O. houses have a monopoly on brains and capital.

Let us take stoves for instance, before the war (when prices were normal), the M.O. house (see T. Eaton 1914 catalogue), were underselling the jobbers and stove manufacturers in every instance; well and good. Since then the T. Eaton Co. have increased their prices from 4 to 11 per cent. How much did our Stove Mfrs. and jobbers increase "THEIR" products, from 15 to 30 per cent. Why did they increase? They tell us on account of raw materials and labor going up. Has the M.O. House a corner on labor and on raw materials? If they have, it is the jobbers' own fault. And stove is only one instance, take galvanized ware, enamelware, etc.

Now, this is something that I would like answered by the wholesale factions: If the jobber has rightly increased the prices according to cost of manufacture and this increase is over double the increase of the M.O. House, then his prices must have been too low before the war (although invariably higher than the M.O.H.). Well, here is hoping that you keep the ball rolling and with the co-operation of everybody concerned, we might be able to accomplish something towards the right goal.

Yours truly,
ALBERTA RETAILER.

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

The hardware markets are still the centre of attraction in hardware trade circles. Advancing prices and increasing scarcity of supplies are the most important features at present. There is a very marked shortage of all sizes of files used in munition work. There is also a threatened shortage of some sizes of iron pipe and wire nails. Boiler plates have advanced 50c per 100 lbs., and boiler tubes are almost due for another advance. A new and smaller discount now applies to the miscellaneous wire nail list. Paint products are all decidedly firm, with the exception of turpentine, which has declined 2c per pound. Further advances in ready-mixed paints are imminent. Glass is also firmer in price, with some advances reported. The demand for iron and steel is as insistent as ever, and prices are decidedly firm, with advances taking place on sheets, wire products, etc. Since December, practically no sheets, black or galvanized, have come in from the United States. The decline in production during the first two months of the year has put some of the mills further behind on deliveries. The railway situation is slowly improving, in both Canada and the United States. Many shipments have gone astray, causing great delay and inconvenience.

There is now an increasing demand for gas ranges and summer oil cooking stoves. With the close approach of the opening of navigation, there has been an improvement for cordage lines. Binder twine prices have not yet been announced, but they will likely be considerably higher than last season.

There have been advances during the week on black sheets, boiler plates, miscellaneous wire nails, screw and strap hinges, barn door track, old cast iron, revolvers. Black bristle brushes are also in firm position, with one manufacturer stating their line will probably advance about five per cent. about April 1. Freight shipments for outgoing goods from wholesalers showed some improvement during the week, but there is no improvement in getting goods by wholesalers. Business has been good during the week.

MONTREAL MARKETS

MONTREAL, March 22.—Hardware market indications are towards firmer conditions again, the iron and steel market being particularly strong at present. Predictions of market watchers are rather emphatic as to a probable shortage of iron pipe. In general business is brisk, and many lines of spring goods are being hurried forth from the wholesale warehouses. Lawn rollers, lawn mowers, and garden hose and implements are moving well. Maple sugar industry supplies are moving freely, though there has been a rumor that the industry in Quebec Province might be rather less active this year owing to the very heavy snowfall. Shelf goods show some advances, but are not quite as numerous as in recent weeks, although the pause is not regarded as any sign that the end of advances is in sight. The ingot metal market is a trifle easier except as regards tin, which is threatening to jump sharply even above this week's advance, owing to rumors of a complete shut-off of supplies from Britain and a duty on Straits tin. Tinware is reported in firm market this week.

MANY merchants fail because they are "Too Busy" to manage their business. The man who fails is frequently the man who works, as he thinks like a slave, from early morning until late at night. He does not take time to read, plan, think or manage.

Shelf Goods Lines Still Advancing

SHELF GOODS.—Not many lines of shelf goods have shown alterations in prices upwards in Montreal this week, although the wholesalers are informed that the general advancing tendency of the past few months is by no means at an end. For a time, not more than a few weeks ago, and before matters looked so warlike for the United States, there were hopes that the top notch in price advances had been reached for shelf goods, which entail much care in listing, both by the wholesaler and the retailer. Now it would appear that the watchers of the market are again becoming reconciled to the idea of further advances in sight, for the warning note is steadily present in all communications they have with the sources of supply, and the iron and steel market at present seems to be firming up faster.

Further Advances on Saws

Advances are noted this week over the wide range of the Shurley and Dietrich saws. The advances in effect amount to from 15 per cent. to 20 per cent. upon all the various saws in the lists of this firm. Disston saws are also subject to advance this week, and the range of advance on this line is also 15 per cent. to 20 per cent.

Discounts on Butt Hinges

The following discounts are quoted on butts this week by a large firm of wholesalers:—No. 800, 12½ off; No. 838, 17½ off; No. 840, 17½ off; No. 804, 20 and 10 off; No. 802, 20 and 10; No. 810, 12½ off; No. 814, 12½ off. The same firm quotes light and heavy strap hinges at 25 per cent. off.

The File Shortage

Mentioned incidentally last week as a feature of the market, the file shortage reappears this week with redoubled fury, and is absolutely unprecedented. The munition sizes of files are lacking in all directions, and makers can hardly hope to keep up with the demand for them. Half-round smooth and half-round bastard from four to fourteen-inch sizes are scarce to the verge of famine. Wholesalers believe they could sell hundreds of dozens of these if the supplies were obtainable.

Sash Weights Advance

Sash weights have advanced again, and are quoting at $2.50 for the solid

and $4 for the sectional per 100 pounds.

Screw and Strap Hinges Up

Screw and strap hinges, 6 in. to 12 in., are now quoted at $7.25 per 100 pounds. No. 15 and up are quoted at $6.75 per 100 pounds this week.

Wire and Nails Show Firmer Trend

NAILS, WIRE, ETC.—With the market for iron and steel firming again, wire prices show a tendency to go up farther, and one large wholesale firm in Montreal is quoting advanced prices as follows this week:—For barbed wire, $6 per 100 pounds; and for plain galvanized wire as follows: No. 8, $6.45 per 100 pounds; No. 9, $6; No. 10, $6.50; No. 11, $6.55; No. 12, $6.15; and No. 13, $6.25. The same firm quotes coil spring wire at $6.05 per 100 pounds; for No. 9 and No. 12, $6.20. Quotations for annealed hay wire by another large and representative firm are for No. 13, $5.25; No. 14, $5.30; No. 15, $5.40. Stovepipe wire is quoted by this firm at: No. 19, $7.20 per 100 lbs.; No. 18, $6.70 per 100, the quotations of another firm last week, which have now become general in Montreal. Wire nails have advanced no further this week, and are quoting at the base price $5.25, as then recorded. Further advances are considered quite likely under present market conditions. Miscellaneous wire nails are now quoted at 60 per cent. off, instead of 65 per cent. as formerly.

Bar Iron Now $3.80; *Refined Iron* $4.05

IRON AND STEEL.—The tendency of the iron and steel markets is to very much greater firmness, according to reports in Montreal for the present week. The proximity of the United States to an actual declaration of war upon the Central Powers is exercising a strengthening influence, and various lines of iron and steel goods are beginning to feel this. Common bar iron has in the present week advanced by 20c per hundred pounds to $3.80 base, and there are further advances in the future, according to the voice of everyday market prophecy amongst the merchants. Refined iron, following the usual ratio of advance over common bar iron, is now $4.05 base. Owing to the state of the iron and steel market there is growing apprehensiveness on the score of iron pipe supplies, and a very real shortage of these in many important lines is considered likely, according to present indications.

Common bar iron, per 100 lbs.	$ 3.80
Refined iron, per 100 lbs.	4.05
Horseshoe iron, per 100 lbs.	3.85
Norway iron	11.00
Mild steel	4.50
Band Steel	4.50
Sleigh shoe steel	4.50
Tire steel	4.70
Toe calk steel	5.40
Mining tool steel, per lb.	0.13½
Black Diamond tool steel, per lb.	0.14½
Spring steel	6.25
Single reeled machinery steel	6.25

Chain Shows the Advancing Trend

CHAIN.—There have been advances in chain in Montreal this week, due to the firm condition of the iron and steel market. Following are prices quoted on electric weld B.B. chain:—⅛th per 100 pounds, $14.75; 3/16ths (No. 5), $10.15; ¼-in. (ordinary), $7.75; 5/16ths, $7.15; ⅜ths, $6.25; 7/16ths to ¾-inch, all $6.25 per 100 pounds. For proof coil chain, following quotations are given: 3/16ths, No. 5, $18.40 per 100 pounds; ¼-inch ordinary, $13.60; 5/16ths, $11.50; ⅜ths, $9.50; 7/16ths, $9.35; ½-in. and 9/16ths, $9.10; ⅝ths, $9; ¾-inch to 1-inch, $8.75. For B.B.B. crane chain prices are given as follows: ¼-inch per 100 pounds, $16.75; 5/16ths, $14.40; ⅜ths, $11.75; 7/16ths, $11.60; ½-inch, $11.35; ⅝ths, $11.20, and ¾-inch to 1-inch, $11 per 100 pounds. Further advances are not unlikely to occur.

Iron Sheets and Boiler Plates Up

SHEETS, PLATES, ETC.—The seriously firm condition of the iron and steel market at present finds expression most positively in the matter of boiler plates and iron plates and sheets of lighter gauges. Plates, ¼-inch thick and heavier gauge, advanced 50c a 100 pounds to $6.50 on date of writing (Wednesday 21st). Lighter plates, 3/16ths inch to 18 gauge, also advanced 50c a 100 pounds, and were quoting at $6.60 per 100 pounds; 10-gauge were $6.70; 14-gauge, $6.80; 16-gauge, $6.05; 18-gauge and 20-gauge, $5.90; 22 and 24-gauge, $6.10; 26-gauge, $6.16, and 28-gauge, $6.25. The market for other sheet metal was reported rather dull, but with firm prices, and shortages of stock the rule on every side.

Demand Now is For New Gas Ranges

RANGES, STOVES, ETC.—Manufacturers report having rather ominous news from iron and steel centres to the effect that the prices of iron and steel used in stoves, ranges, etc., are not yet at the top notch in quotation lists. Cost of fuel and of labor combine to keep the markets firm, and there is quite a reasonable likelihood that stoves and ranges may be found higher in price for next winter unless rapid changes take place in market for raw materials. Just at present the principal call of the markets is for gas stoves for summer use, and quite a fair business is reported in these by those makers who handle these goods. Many of the materials used in the finishings of gas stoves are costlier now, even such items as tiles, and the porcelain handles for gas pipes being included in the general firmness of markets.

Enamelled and Tin Ware in Firm Market

ENAMELED WARE, ETC.—Advances in the price of tin have caused a firmness of tendency in articles made from sheet tin. Tinware generally is reported to be in especially firm condition of market now, but actual advances in price are not so far in effect. Enamelled and galvanized wares are all subject to similar conditions, and the manufacturers of such goods report a firm market, with demand normal, and supplies maintained fairly well in spite of slow delivery of raw materials and the hampering of production by the congestion of railway traffic. Discounts are shown in current quotations.

Lead Products Firm; Solder Shaded Up

LEAD, ZINC, ETC.—The market for lead and spelter being rather dull in Montreal at present, and no tendency towards further firmness being noted during the present week, the lead products have maintained their quotations of last week. There is an increasing demand for materials of this nature with the approach of spring, and the market condition is generally active and firm. Commercial "half and half" solder is now quoted at 33½c a pound by one large wholesale firm, and strictly pure solder at 37c. Other quotations were as last week's for the solders which vary over a wide range of qualities. Lead pipe, traps and bends, and lead sheets quote as last week also.

Lead pipe, lb.	$0 16	....
Lead waste pipe, lb.	0 17	....
Lead traps and bends	Plus 10%	....
Lead wool, lb.	0 16	....
Lead sheets, 3 lbs. sq. ft.	0 17	....
Lead sheets, 3½ lbs. sq. ft.	0 17	....
Lead sheets, 4 to 6 lbs. sq. ft.	0 16	....

Cut sheets, ¾c lb. extra and cut sheets to size, 1c lb. extra.

Solder, guaranteed, lb.	0 37	....
Solder, strictly, lb.	0 35	0 37
Solder, commercial, lb.	0 23	0 33½
Solder, wiping, lb.	0 33	....
Solder, wire, lb.	....	0 52
Zinc sheets, per lb.	0 33	....

Rope and Cordage Manufacturers Busy

ROPES, TWINES, ETC.—With the opening of navigation drawing nearer, some predictions from Quebec City being to the effect that this event will occur earlier during the present year than in several former years, the demand for ropes, cordage, and the various twines is improving. So far, though the market for raw materials is exceedingly firm, there have been no changes in the prices for rope and cordage. The last alteration in price took place late in January when pure Manila went to 29½c base, and since then, though the market for raw materials altered a shade or so up-

wards, there have been alterations in hemp and Italian hemp cordage only. Binder twine prices are still to announce and high opening prices are anticipated. Prices on cordage are shown in current quotations.

Gasoline and Coal Oil in Normal Demand

GASOLINE AND COAL OIL.—There is no alteration in price of gasoline in Montreal at date of writing, and the tendency of the market for crude oil was reported as far as possible unaltered from conditions prevailing last week. Gasoline was quoting at 31½c a gallon, Royalite coal oil quoted at 16c a gallon, and Palacine was being quoted at 19c. Demand for gasoline is still mainly industrial, the roads being still bad for automobile traffic, and not likely to open up early this year owing to the very heavy snowfall. Demand for coal oil is normal for the season, showing the gradual reduction due to advent of spring.

Old Light Brass And Rubber Down

OLD METALS.—A slightly easier feeling in the market for old copper was noticed during the present week, but not enough to alter the quotations of the previous week. Copper is in a rather dull market meantime. Light brass showed a reduction in price to 10c a pound. Supply is more plentiful, and demand lighter. The strength of the market for iron and steel maintains the present price of old cast iron, and old stove plate also. There has been a decline in old rubber. The rubber market on a larger scale showed an easier trend, and demand for old rubber slackened accordingly. Prices varied downwards by from half a cent to a cent on the various lines of old rubber materials.

Tea lead	0.07	......

Overshoes, lumbermen's rubber boots	0.06	......
Auto tires	0.05	......
Bicycle tires	0.02½	......

Tin is Firmest Of Ingot Metals

INGOT METALS.—In the market for ingot metals, tin is the feature metal this week, having advanced considerably in price. There have been rumors of restrictive duty upon the export of tin from the Straits. The other metals are in rather sluggish market at present, with some tendencies apparent towards easing off of prices, and most quotations maintaining as last week's.

Tin Goes Higher

TIN.—Owing, it is believed, to rumors to the effect that an export duty may be placed on tin at the Straits with a view to conserving the supplies, this metal took a jump during the week, and the prices prevailing for large quantities last week advanced to $56, with quotations of $58 per 100 pounds for smaller supplies, and market tendency firm.

Lead Steady

LEAD.—The market for lead has been rather quiet during the week since last report, and prices are still quoted at $12.25 to $13.50 and a shade higher for smaller orders.

Copper Also Quieter

COPPER.—An easier tone is reported as regards copper, with a very slight shading of prices downwards to $40 for small orders, and $36 to $38 per 100 pounds for larger quantities. Casting copper would be quoted at the cheaper price. Some grades of electrolytic copper are costlier.

Antimony Unchanged

ANTIMONY.—The same quiet tendency prevails in antimony as pervades the metal market generally (except for tin). Quotations are as last week's, $29 to $32 per 100 pounds, larger quantities securing the easier price, but deliveries subject to delays.

Aluminum is Steady

ALUMINUM.—A steady tone is noted in the market for aluminum, the quotations being $70 to $72, as quoted last week.

TORONTO MARKETS

TORONTO, March 22.—Wholesalers are now looking forward to better conditions so far as the delivery of goods is concerned, as the railroads have announced that they will now take shipments to points east of Toronto. There was much relief manifested when it became known that the railroads of the United States were not to be tied up through a strike. Such an occurrence would have greatly crippled Canadian industries through the shutting off of coal supplies and the delivery of manufactured products from that country. Deliveries are bad enough now, but with a strike to contend with there would have been almost a complete paralyzation of industry. Manufacturers are seriously affected with the labor problem at present, as there is a shortage of help, and that which is available in many cases is a very mobile quantity. If things are not just to their liking they move on. Wholesalers anticipate the recruiting of fifty thousand additional men in Canada may cause a still greater shortage, which will be seriously felt during the summer months. There have been a number of price changes during the week in the upward direction. Business has been exceptionally good with the promise of a continuation throughout the spring months.

Barn Door Hinges and Barn Door Track Up

HINGES, TRACK, WIRE NAILS.—There have been upward movements in a number of staple lines handled by hardware stores, among them miscellaneous wire nails, barn door track, barn door hinges, and crystal borax. There continues a steady increasing list of prices of shelf hardware that have been marked at higher levels, although the week has not witnessed quite as great an array as in some recent weeks.

Crystal Borax Higher

A 20 per cent. advance in the price of crystal borax was made effective during the week by the increase of the price from 10c to 12¼c per pound. There is a reported scarcity in this commodity with a difficulty in getting the goods shipped through.

Miscellaneous Wire Nails Advanced

By the change in discount in miscellaneous wire nails an advance has been recorded in these lines of approximately 5 per cent. The new discount is now 60 per cent., as compared with 65 per cent. formerly. There is a firmness in the market for all wire products.

Barn Door Track Advances

An advance has been registered in the price of barn door track, the new price for the 1¼-inch size is now $8.50 per 100 feet.

Screw and Strap Hinges Up 25c

Following the advance recorded in tee and strap hinges last week, an increase has been made effective on the price of screw and strap hinges, which amounts to 25c per 100 pounds. On sizes under 12 inches the new price is now $7.25 per 100 pounds, the previous price being $7. On sizes 14 inches and upwards the price is $6.75 per 100 pounds, as against the former price of $6.50. For extra hooks there has been no change in price, being 7c per pound for ⅝-inch and 6¾c per pound for ¾-inch.

Loaded Paper Shells—Correction

In last week's issue the price of shells loaded with black powder was inadvertently stated to "remain the same as previously at 10 per cent. off list." This should have read 10 per cent. on list.

Scarcity of Wire Nails is Developing

WIRE NAILS.—Manufacturers state that a decided scarcity of wire nails is developing through their inability to get sufficient supplies of labor. Some makers state that it is scarcely possible to get operators on the various machines to remain more than a week, and with some the average length of sojourn of the operators is four days. This is a condition that is common to many manufacturers, not alone in nail production, but in other lines of manufacture as well. There is also a shortage of rods from which the nails are made. There is a heavy demand for nails at present. Some wholesalers state they are unable to fathom what they are all being used for. Some factories are working overtime, and cannot keep up with the demand. In the face of this condition there are dealers who state they would be glad of a respite in orders to the end that they might be able to get caught up with bookings. There is a continued firmness in the market for all wire products and wire nails, but prices locally have remained unchanged with the exception of miscellaneous wire nails. On these the discount has been changed from 65 per cent. to 60 per cent. Standard steel wire nails are still quoted at $4.95 base per 100 pounds. Cut nails remain $4.75 base.

Short Shipments Usual in Enamelware

STOVES, ENAMELWARE.—Manufacturers state that the demand for enamelware and tinware has been so good that they are compelled to make short shipments on many of the orders. Sales are considerably ahead of last year, but there is difficulty in getting raw materials to manufacture sufficient quantities. The demand for copperware goods of all kinds keeps up exceptionally well, even in view of the fact that prices in some lines are about double what they were prior to the war. There is a revival in the demand for gas ranges following a slight cessation. Manufacturers are now getting in swing for the summer trade. The demand for oil heaters for immediate shipment is also good owing to the fact that people will soon be letting their furnaces go out. Prices for stoves and enamelware have held steady during the week. One manufacturer was forced to withdraw one line of oil heaters because of lack of stock.

Fine Weather Will Cause Demand for Gasoline

GASOLINE, COAL OIL, LUBRICATING OILS. -There was a steadiness in the market for gaoline and coal oil and lubricating oils following the advance all along the line announced last week. With the coming of spring weather oil men anticipate there will be an increased demand for gasoline for motoring purposes. While the price is higher now than it was at any time last year, it is anticipated that it has not yet reached its top limit for the season when the increased demand develops. Indications point to an early spring and a long season of good motoring weather. This was not the case last season, as the winter months extended well into summer almost. There have been further advances in some of the crude oil fields, but the mid-continent field, which is of primary interest to Canadian consumers, because most of the supply comes from that district, has remained stationary in price during the week. Gasoline is quoted wholesale at 30½ and 31c per gallon.

Black Sheets Have Been Moved Higher

SHEETS, PLATES.—An advance of 25c per 100 pounds has been registered in the price of black sheets during the week, which now makes the selling price $6.25 for No. 10 gauge and $6.40 for No 28 gauge. These are the base sizes, and for the other sizes there is the usual differential of 10c increase for No. 12 gauge over No. 10 gauge, 20c less for No. 14 gauge, 10c less than No. 10 gauge for No. 16 gauge, 5c less than No. 10 gauge for gauges Nos. 18 to 20; while gauges No. 22-24 sell for the same as No. 10 gauge. No. 26 gauge is 10c less than No. 28 gauge. There has also been an increase in the price of boiler plates, which have advanced 25c per 100 also, and are now selling at $6.50 per 100 pounds. There is, however, a range in the market, as will be indicated by the range in prices given.

	Per 100 Lbs.	
No. 10 gauge	$6.25	$....
No. 12 gauge	6.35	6.20
No. 14 gauge	6.05	6.10
No. 16 gauge	6.15	6.15
Nos. 18-20 gauge	6.20	5.80
Nos. 22-24 gauge	6.00	5.85
No. 26 gauge	6.30	5.90
No. 28 gauge	6.40	6.00
No. 29 gauge	....	6.10
¼-inch (boiler plates)	6.50	....

Boiler Tubes Are Due For An Advance

BOILER TUBES.—There has been no change in the price of boiler tubes during the week, but a firm condition exists as a result of the recent advance of 10 per cent. that took place in the Chicago and Pittsburg districts. Local dealers have not yet increased their price, but an advance is highly probable in the near future. There is a brisk demand for boiler tubes, and supplies are not heavy at present. Following are the quotations prevailing:

	Per 100 Feet Cold Drawn	Lapweld
1-inch	$22.00	......
1¼-inch	25.00	......
1½-inch	29.00	$24.00
1¾-inch	30.00	22.50
2-inch	33.00	22.00
2¼-inch	33.00	.....
2½-inch	36.00	29.50
3-inch	47.00	34.50
3¼-inch	.....	41.00
3½-inch	53.00	44.00
4-inch	65.00	55.00

Higher Prices On Coaster Wagons

COASTER WAGGONS.—New prices quoted on coaster wagons provide for an increase in the price of these lines. Following are the list prices on the various sizes: No. 00. $32 per dozen; No. 0, $41 per dozen; No. 01, $63 per dozen; No. 1, $76 per dozen; No. 2, $84 per dozen; No. 3, $93 per dozen; No. 4, $106 per dozen. These prices are subject to a discount of 33 1-3 per cent. There is a better demand for these wagons now that spring has arrived and the sidewalks are again clear.

5 Per Cent. Advance In Revolvers and Pistols

REVOLVERS, PISTOLS.—An advance of approximately 5% has been announced in the price of Colt revolvers and automatic pistols. The company states that its settled policy has been one of refraining from advancing prices as long as possible but that conditions in the market for raw materials have made a revision in prices necessary. One of the popular sizes in the .45 calibre Colt revolver is now selling at $28 each. This type has found favor with army officers who have been attached to the expeditionary force.

Bristle Brushes Are In Firm Market

BRUSHES, BROOMS, WOODENWARE.—One of the large Canadian manufacturers of brushes states that there is a firmness in the market for brushes which has resulted through the market conditions in black bristles. It is asserted that there must of necessity be an advance of at least 5 per cent. in their various lines of black bristle brushes by April 1. Brooms are also in strong market, a further advance of $30 per ton having been recorded in the price of broom corn which makes the price $380 per ton in the United States. Woodenware of all kinds is holding in firm market but prices have remained unchanged during the week.

Lawn Swing Prices Change

A change in the price of lawn swings and settees has been made effective this week. Prices that now prevail for these will be found in the current quotations.

Iron and Steel Prices Held in Steady Market

IRON AND STEEL.—There was a steadiness in the iron and steel market during the week so far as prices go. The undertone is one of firmness, however, following the advance recorded last

week. Some of the lines are in very low supply on this market. Swedish and Norway iron are in very small compass and the prices are firmly held. In the United States there is considerable structural steel work going forward which is causing a heavy demand and this all reflects on the condition in the local market. Following are the prevailing prices:

	Per 100 lbs.	
Common bar iron	$	$ 4.25
Common bar steel	....	4.50
Refined iron	....	4.65
Angles, base	....	5.00
Horseshoe iron	....	4.50
Norway iron	7.50	9.00
Mild steel	....	4.50
Tire steel	....	4.70
Toe calk steel	....	5.15
Sleigh shoe steel	....	4.75
Band steel	....	4.75
Spring steel	6.00	6.50
Mining tool steel	17.00	18.00
Sheet cast steel	25.00	35.00

Old Cast Iron Is $2 Per Ton Higher

OLD MATERIALS.—There has been an advance of $2 per ton in the price which dealers are willing to pay for old cast iron, now making the quotation $18 per ton as compared with the former quotation of $16. There has been a good demand for this commodity, as there has also been a good demand for all old materials. Prices for other lines of old material have held steady during the week.

	Per lb.	
Tea lead	$ 0.06½	......
Heavy lead pipe	0.09½	......
Yellow brass	0.17	......
Red brass	0.22	......
Light brass	0.10	......
Heavy zinc	0.09½	......
Heavy copper	0.29½	......
Old cast iron, per ton	18.00	......
Stove plate, per ton	14.50	......
Old rubbers, boots & shoes	0.08½	......
Overshoes, lumbermen's rubber boots	0.06½	......
Bicycle tires	0.02½	......
Auto tires	0.06	......

Active Demand For All Lead Products

LEAD AND ZINC PRODUCTS.—There has been an active demand for lead and zinc products during the week but prices have remained unchanged. In the primary market in New York the lead market took on a somewhat easier tone following the clearing up of the possibility of a railway strike. This had a tendency to cause freer selling of spot lead around 9½c per pound. It is the opinion in that market of some of the buyers that future lead will hold fairly strong. Following are the quotations locally:

Lead pipe, lb.	$0.16	....
Lead waste pipe, lb.	0.17	....
Lead traps and bends	10% on list	
Lead wool, lb.	0.15	....
Lead sheets, 3 lbs. sq. ft.	0.15¾	....
Lead sheets, 3½ lbs. sq. ft.	0.15¾	....
Lead sheets, 4 to 6 lbs. sq. ft.	0.15½	....

Cut sheets, ¾c lb. extra and cut sheets to size, 1c lb. extra.

Solder, guaranteed, lb.	0.34	....
Solder, strictly, lb.	0.32¼	....
Solder, commercial, lb.	0.31¾	....
Solder, wiping, lb.	0.31½	0.32
Solder, wire, lb.	0.35	....
Zinc sheets, per lb	0.25	....

Lead and Spelter Slightly Easier

There is a good demand for practically all ingot metals, although the copper market is affected by the large quantities of scrap available from munition plants. Tin has advanced this week, while lead and spelter are slightly easier.

TIN.—A new development in the market is the possibility of a tax being imposed by the British Government on the export of tin to the U. S. As shipments of tin have in the past been sufficient for requirements in the States, it is doubtful if the proposed tax will be levied with the intention of conserving supplies in England. Prices locally have advanced to 55c-57c lb., according to quantity purchased.

COPPER.—The demand for copper continues good, although the market is affected by the large quantities of scrap on the market. Prices range from 39c-40c lb.

SPELTER.—There is a good demand, with stocks light. Prices locally range from 13c-15c lb.

LEAD.—Lead is slightly easier, and has declined ½c lb., with prices ranging from 12c to 13c lb.

ANTIMONY.—There is still a scarcity of antimony, particularly on large-sized lots, which are practically unobtainable. The market is strong and quotations firm at 35c per pound.

ALUMINUM.—The market is strong but quiet, and quotations are unchanged at 68c per pound.

PIG IRON.—The Steel Company of Canada have recently blown in their No. 2 furnace at Hamilton, and have issued a price of $43 a ton on foundry iron. Supplies of coke are coming forward in better volume, and the situation has consequently improved. The pig iron market is very strong and higher prices are likely at no distant date.

LONDON MARKETS

LONDON, Ont., March 22.—Prices are still on the upward trend as indicated in the report which follows. Business here and in the surrounding districts continues seasonably good. Local hardware merchants have started early to go after spring business, and are advertising quite extensively in local newspapers. Although there is not a great deal of new building going on, there is a very fair demand for builders' hardware lines owing to repair work, additions to buildings, alterations, etc. Collections, according to local wholesalers are very satisfactory.

Miscellaneous Wire Nails Advanced

The discount on the miscellaneous wire nail list has been changed from 65 per cent. to 60 per cent. off list. This discount applies to all nails except standard nails. The net extras on the list remain unchanged.

Standard common steel wire nails remain unchanged at $4.95 base f.o.b. London. Cut nails are unchanged at $4.70 base f.o.b. London.

Tin Singers Advanced

Tin horse singers (Eclipse) have been advanced to a new price of $3.75 dozen.

Stickfast Paste Higher

Stickfast paste in packages has been advanced to the following prices: 1 lb. pkgs., $1.50 doz.; 2 lb. pkgs., $2.35 doz.

Fox Scales Advanced

Fox platform scales have advanced to the following prices: 1200 lb. scale $19.50 each; 2000 lbs., drop lever, $29.50 each. The foregoing prices include stamping, and are net cash.

S & S Hinges And Hooks Advanced

New and hinge prices have gone into effect on screw and strap hinges and hooks. The new prices follow:—S and S hinges 6 in. to 12 in., $7.25 per 100 lbs.; 14 in. and larger, $6.75 per 100 lbs. Hooks, ½ in., 7¾c lb.; ⅝ in., 7¼c lb.; ¾ in., 7c lb.

Net Prices on Tee and Strap Hinges

An advance in the price of heavy tee strap hinges was recorded in HARDWARE AND METAL last week. Figured out at the new discount of 20-10 per cent. off list, the net prices are as follows:—

	Heavy tee.	Heavy strap.
4"	$ 1.84 doz. pr.	$ 2.16 doz. pr.
5"	2.31 "	2.67 "
6"	2.69 "	2.88 "
8"	2.96 "	3.89 "
10"	5.26 "	6.92 "
12"	8.36 "	8.57 "
14"	8.50 "	9.80 "

Wire Products Are Firm In Price

All wire products are decidedly firm in price and there does not appear to be any likelihood of easier prices in the near future. If a change is made it will probably be in an upward direction. Following are the prices quoted here on a number of wire fence products:—

	Per 100 lbs.
Barb	$ 4.65
No. 9 galvanized	4.25
No. 12 galvanized	4.45
No. 13 galvanized	4.55
No. coil spring	4.30
No. 10 O and A	5.66
No. 11 "	5.72
No. 12 "	5.80

Paris Green Up 10c lb.

The 10c per pound advance in Paris green, announced in HARDWARE AND

METAL'S paint market reports last week, have become effective here, with prices for C. P. Co. green now as follows:—

½ lb. pkgs.	59¼c	per lb.
1 lb. pkgs.	57¼c	"
25 lb. drums	55¼c	"
50 lb. drums	55c	"
100 lb. drums	55c	"

Paint Products Are At High Levels

Paint products generally are very firm in price owing to the high price, and in some cases scarcity of raw materials. The ready mixed paint situation is a rather trying one for manufacturers owing to the high costs of raw materials entering into paints now being manufactured. Linseed oil is firm at last week's high levels. Turpentine has declined 2c per gallon, and white lead is unchanged. There has been a slight tendency, however, in some quarters to shade prices on lead and glass, but with continued firmness in the primary markets and no signs of relief, prices are firming up locally. Prices on linseed oil, turpentine and white lead follow:—

Linseed Oil.	Raw. per gallon	Boiled
1 to 2 bbls.	$ 1.40	$ 1.43
3 to 5 bbls.	1.39	1.42
6 to 9	1.37	1.40
Turpentine—		
1 barrel lots	76c Imp. gal.	
2 to 4 barrel lots	75c Imp. gal.	
5 gal. lots	83c Imp. gal.	
White Lead In Oil:—		
Pure, ton lots	15.00 hd. lbs.	
Less than tons	15.30 hd. lbs.	
Glass—Small Lots:—		
Single dia.		15%
Double dia		15%
Cut lights		.50, 5%
Putty per 100 lbs.:—		
Standard 100 lb. drums		$ 3.85
Standard 25 lb. drums		3.95
Pure, 100 lbs.		4.65
Pure, 25 lbs.		4.75
Bladder, bbls.		4.10
Bladder, less		4.50

WINNIPEG MARKETS

WINNIPEG, Man., March 22.—The continued advance in all lines of steel products is having its effect on the manufactured article with the result that during the week revised prices have been issued on practically all lines of hinges, as well as hasps, barrel bolts, storm sash hangers, shelf brackets and trap door rings, new prices have been issued also on halter chains and revised quotations on carriage heaters and coal are now in force.

Prices on Brass Goods Revised

Another revision has been made in brass goods with the result that higher prices now prevail on brass valves, grease cups, oil cups, air cocks, straw gauge cocks, steam gauge cocks and water gauges. New prices now in effect on lines with which the retailer is familiar are as noted below:

Penberthy Regrinding Valves, Globe and Angle, are now selling at net list as follows: ¼ in., $1.10 each; ⅜ in., $1.25 each; ½ in., $1.60 each; ¾ in., $2.20 each; 1 in., $2.80 each; 1¼ in., $4 each; 1½ in., $5.50 each; 2 in., $8.75 each.

Penberthy Compodisk Valves, Globe and Angle now take a discount of 2½%, with net prices as follows:—¼ in., $1.05 each; ⅜ in., $1.20 each; ½ in., $1.55 each; ¾ in., $2.15 each; 1 in., $2.75 each; 1¼ in., $3.90 each; 1½ in., $5.35 each; 2 in., $8.50 each.

Air Cocks, Tee Handle—6, 22c each; 7, 25c each; 8, 28c each; 9, 33c each.

Lever 12, 30c each; 13, 33c each; 14, 36c each.

Grease Cups, Samson 801, 96c each; 802, $1.30 each; 803, $1.45 each; 804, $1.60 each.

Silex 900, 90c each; 901, $1.20 each; 902, $1.50 each; 903, $1.70 each.

Oil Cups, Safety 400, $1.20 each; 401, $1.40 each; 402, $1.60 each; 403, $2 each.

Salute 551, $1.05 each; 552, $1.15 each; 553, $1.20 each; 557, $3 each.

Water Gauges 84A, $1.80 each; North West, $3 each.

Steam Gauge Cocks 38, 38c each; 39, 47c each; 40, 41c each; 41, 44c each.

Prices on Carriage Heaters Are Higher

Prices which are now in effect on carriage heaters and coal are somewhat higher than those prevailing during the past season. They are as follows:—

Carriage heaters, each, 3D, $2.45; 5B, $1.75; 7C, $2.20; 7D, $2.65.

Heater coal, per doz., Clarks, 90c; A. B. C., 70c; Bricklets, 75c.

Hinges and Butts Are All Higher

The latest vision in prices on hinges and butts reveals the general tendency towards higher levels. Just how much the consumer is going to stand is rather difficult to estimate but it would certainly seem that the maximum must be nearly reached. Quotations now in effect read as follows:

Butts, 241 A, D2 and F—2 x 2, 28c pair; 2½ x 2½, 29c pair; 3 x 3, 30c pair; 3½ x 3½, 30c pair; 4 x 4, 37c pair; 4½ x 4½, 57c pair; 5 x 5, 75c pair.

	Dozen Pairs In Bulk	Dozen Pairs In Cartons
Corr Strap Hinges—		
935x4	$1 35	$ 2 00
5	1 90	2 60
6	2 65	3 20
8	4 20	5 00
10	6 35	7 40
12	9 70	10 90
Corr Tee Hinges -		
937x4	$1 70	$ 2 80
5	2 60	3 65
6	3 15	4 75
8	5 50	7 25
10	7 85	10 10

Light Strap Hinges, in bulk—3 in., 85c doz. pairs; 4 in., $1.05 doz. pairs; 5 in., $1.20 doz. pairs; 6 in., $1.45 doz. pairs; 8 in., $2.10 doz. pairs; 10 in, $3 doz. pairs.

Light Tee Hinges, in bulk—3 in., 85c doz. pairs; 4 in., 95c doz. pairs; 5 in., $1.10 doz. pairs; 6 in., $1.25 doz. pairs; 8 in., $1.55 doz. pairs.

Heavy Strap Hinges, in bulk—4 in., $2.55 doz. pairs; 5 in., $3.15 doz. pairs; 6 in., $3.40 doz. pairs; 8 in., $4.65 doz. pairs; 10 in., $8.15 doz pairs; 12 in., $10.10 doz. pairs.

Heavy Strap Hinges, in cartons—SC209x4, $2.20; 5, $2.80; 6, $3.55; 8, $5.10; 10, $8.45.

Heavy Tee Hinges, in bulk - 4 in., $2.15 doz. pairs; 5 in., $2.70 doz. pairs; 6 in., $3.05 doz. pairs; 8 in., $3.50 doz. pairs; 10 in., $7.05 doz. pairs; 12 in, $9.85 doz. pairs.

Heavy Tee Hinges, in cartons — SC609x4, $2.65; 5, $3.20; 6, $4; 8, $4.95; 10, $7.40.

Wrought Steel Butts No. 800, 5% discount; No. 804, 15% discount; No. 840, 10% discount.

Brackets, Staples and Hasps, Etc., Advanced

Other lines which have been affected in this class of goods are: Wrought steel shelf brackets, per doz. prs., No. 151 3 x 4, 75c; 4 x 5, $1.00; 5 x 7, $1.50; 6 x 8, $1.85; 7 x 9, $2.25; 8 x 10, $2.60.

Hasps and staples, per doz., 20 x 6, 43c; 8, 55c; 30 x 6, 60c; 7, 70c; 8, 75c.

Safety hasps, per doz.; 915 x 3, $1.25; 4½, $1.65; 6, $2.65.

Storm sash hangers per doz., 1717, $1.65.

Storm sash fasts, 1719, $1.95 doz.

Barrel bolts, per doz., 406-2-2½, $1.55; 406-3-3, $1.80; 4, $2.00.

Two Lines of Washers Reduced

A reduction in the price of the Dowswell and New Idea washing machines has gone through and quotations are now being made on the following basis: Dowswell $4.00 each; New Idea, $9.00 each.

The discount on wood tackle blocks has been changed and 30 per cent, represents the present basis for quotations. This reveals net prices as follows:—

	Single	Double	Triple
3	.50	.91	each
4	.60	1.10	1.50 each
5	.63	1.20	2.05 each
6	.77	1.40	2.95 each
7	.91	1.70	7.45 each
8	1.13	2.00	
10	1.90	3.15	
12	3.10	5.25	

Revisions and Further Advances Expected

Rumors of another advance in carriage hardware are in the air, and it is expected changes will be recorded in the prices of clevises, plow rings, etc., before long. Two lines have come in for revision during the week, the new prices representing advances in each case:

Whiffletree hooks, per lb., 107, 13c; 207, 12c.

Premium whiffltree hooks per doz. prs., 2, $3.25; 3, $3.75, 4, $4.25.

Linseed Oil.

No further change is noted in the linseed oil market over that which went into effect last week, prices remaining firm at the advanced figure. The prices now ruling are:—Linseed oil, raw, $1.40 per gal., bbl. lots; boiled, $1.43 per gal., bbl. lots.

Turpentine Firm.

Turpentine also remains firm locally at quotations in effect for some time past, as follows:—Per gal., 85c, bbl. lots; 88½c, bbl. lots; 90c, 5 gal. and 1 gal. lots.

Wood Alcohol Up.

Another advance is recorded in the price of wood alcohol, new quotations being made on the following basis:—5 gals., $1.82 gal.; 1 gal., $2. Cans included.

Higher figures are again in evidence on halter chains, the discount now prevailing being 30%.

Ventiplex sweat pads are also selling at an advanced figure, quotations for the No. 310 being $5.75 doz.

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, March 22.—While the general tendencies of the main market features in painters' products are similar to the trend of last week's reports, there is this week a distinctly firmer tone to the market for mixed paints as will be noted from the paragraphs devoted to this branch of the market in particular. Linseed oil is still unhappily situated as to supply. White lead in oil is unchanged, and seems settling down to a determination to hold its high record of price without going higher unless absolutely forced up. Putty shows signs of firmer tendency due to linseed oil and whiting shortages. Spring supplies of paints are being moved out to fill spring orders, and business shows every promise of being good for summer. Opening of navigation is looked for as a market factor of importance as regards distribution much retarded by railway congestion.

Mixed Paints Likely To Advance Shortly

MIXED PAINTS.—Unless all market indications are belied, there will be a change in prices of mixed paints before next week's issue of this paper is published. At the time of writing there was still no change, but the market condition of extreme firmness was maintained, and there was widespread word of something to be expected in the way of an advance. Nothing official had been done or notified to the trade as regards prices to the retailer, but the conditions so very persistent during the past few months have had the inevitable effect, and it is claimed the market can no longer stand the strain of rising prices of raw materials without advancing the product in price also. That there will be "an appreciable advance" in paint prices was the opinion of one firm. That the filling of spring orders being about completed, and the season for sorting orders just on the way, the present time is opportune for the alterations of prices to suit conditions was the view expressed by another manufacturer. For a long time now the market for raw materials has been advancing, and for a long time HARDWARE AND METAL has been pointing out to readers the trend of the markets indicating that an advance in mixed paints was first possible, and later probable under the circumstances. Now it would appear that the manufacturers having seen their customers safely over the bulk of the spring supply business, and having carried a considerable burden of anxiety during the very ominous trend of the markets for raw materials, are about to take the necessary steps to meet conditions that prevail and seem likely to persist for the best part of the present year even if wars end and markets begin to oscillate back to old accustomed standards. Markets will not likely swing back very suddenly to old conditions. Prices have risen gradually though with fairly long strides at times. Prices will decline when peace arrives, no doubt, but not any faster than production of materials can make the pace for them. And for the present the decline is not even in sight.

Linseed Oil Still Very Much Needed

LINSEED OIL.—For the present week the position as regards linseed oil is still unsatisfactory, though distant promises of swifter movement of Canadian flax seed are heard. Promises, however, do not bring the seed to the crushers, and until plentiful quantities arrive there will not be any relief in the way of supplies for the market. During the week some linseed oil supplies changed hands within the city, a distribution of stocks to help out where an absolute scarcity was felt. The price paid for large quantities, and strictly between wholesalers or manufacturers was $1.32 per gallon for the raw oil. Boiled on this basis would be about $1.35, but no retail transactions could possibly take place at prices so low. The only quotation willingly ventured for one barrel lots only, and to recognized regular customers only was $1.41 per gallon for the raw, and $1.42½ for boiled.

Turpentine Being Carefully Conserved

TURPENTINE.—While there is no indication that turpentine is tending higher in price at Savannah, the local condition of markets firm. The reason for this condition, it is claimed is entirely connected with the freight situation. Supplies of turpentine are coming in so very slowly, and with so much uncertainty that holders of stocks in the city are reluctant to distribute more than small lots. Some paint manufacturers have no wish to come into the market to sell turpentine at all. One firm was willing to quote as low as 77 cents per Imperial gallon for turpentine in one barrel lots only, and to regular customers. Another firm's quotation was 87 cents on the same understanding. From 80 to 85 cents per Imp. gallon was mentioned by other firms.

White Lead in Oil Unchanged in Price

WHITE LEAD IN OIL.—Steadiness at the present firm prices has characterised the market for the pig metal of late, and with linseed oil still very scarce, and very powerfully placed as regards probable price standards when supplies begin to offer more plentifully, the market for white lead in oil persists in its condition of strength. Nevertheless there is a feeling amongst the manufacturers that white lead in oil should not perhaps go higher in price than it is at present. Certainly this product now holds its record height in market quotations. Demand is said to be slack at present, and any advances in price would probably still further reduce this, so that unless raw materials go to entirely new levels, and the whole market situation alters, there may not be any advance in white lead in oil. The quotations in Montreal at present are $14.80 per hundred pounds for 1 ton lots, and $15.10 for less than one ton lots. Occasionally reductions below the foregoing prices are made by jobbers who wish to dispose of stocks.

Putty Shows Some Restless Symptoms

PUTTY.—No changes have been made for the time being in the price of putty, but there is a very serious condition of market as regards raw materials for this product, and it would not surprise some men in touch with paint markets and markets for painters' materials to discover putty prices advanced in line with any other advances that may be featuring upon the markets in future. Whiting is one of the very difficult factors of

the putty situation. Linseed oil is short in supply, and high in price. The metal containers for putty are high in cost to those who require them. These factors may contribute to an advance in putty, but so far there is nothing definitely indicated except by the raw material markets.

Window Glass Has Advanced in Price

WINDOW GLASS.—There has long been a very marked advancing tendency in window glass due to the difficulties of manufacture in the United States, and HARDWARE AND METAL has duly pointed out of late that window glass prices were bound to advance shortly. The discount now announced of 5 per cent. instead of the former 10 per cent. for small lots, is substantial proof of the accuracy of the predictions made on the basis of market trend for some time back.

TORONTO

TORONTO, March 22.—Conditions in the paint trade point to a good season so far as consumption goes. Manufacturers assert their belief that all that is needed now to assure a good consumption is favorable spring weather.

Supplies of Flaxseed Still Very Limited

LINSEED OIL.—There was very little improvement in the linseed oil situation during the week so far as deliveries of flaxseed to Eastern crushers goes. This has been the big factor operating to cause a scarcity of oil in the local market for some weeks past. Some crushers have been unable to get practically any seed at all while others have received a few cars during the week. There seems to be considerable seed moving out of the Canadian West as the inspections made at Winnipeg during the week totalled 102 cars. This was an average of 17 cars per day. Eastern crushers assert that the greater part of this seed is moving southward into the United States. Statistics compiled by the Census Department at Ottawa give the final estimate of last year's production of flaxseed as slightly over 7,000,000 bushels as compared with a yield the previous year of slightly over 10,000,000 bushels. This confirms the opinion that there is a shortage of seed in the Canadian West. As stated in these columns previously, there is a very acute shortage in the crop of the Argentine Republic which will probably place the shortage of seed that would under ordinary conditions be used on this continent of approximately 10,000,000 bushels. In the United States there is a firm situation in linseed oil with still higher prices hinted at. There has been but small variation in the price of flaxseed at Winnipeg during the week. On Thursday of last week the cash article closed at $2.61⅛ per bushel and on Wednesday of the present week the close was at $2.62½. The highest point reached during the week was on Tuesday when it was quoted at $2.64⅝. With the flax market keeping up well, the demand for oil cake falling off with the approach of spring, coupled with the difficulty of getting flaxseed to the Eastern crushers in Canada and with the possibility of a good demand for linseed oil in painting this spring and summer there seems small prospect of an easier tone in this market for some little time. Quotations remained unchanged locally during the week.

	Raw. Per gal.	Boiled. Per gal.
1 to 2 bbls.	$1.40-$1.44	$1.43-$1.47
3 to 5 bbls.	1.39- 1.43	1.42- 1.46
6 to 9 bbls.	1.38- 1.42	1.41- 1.45

Turpentine Declined 2c Per Gallon in Week

TURPENTINE.—There were declines of 2c to 6c per gallon in the price of turpentine in the local market. Where the range of prices last week was within narrow limits, being from 75c to 78c in single barrel lots the range this week is from 69c to 76c. There is therefore a wider range. In the southern centre of the naval stores industry at Savannah there was a sagging tendency during the week, prices having declined 3c per gallon in that market. Importers in the local market are having difficulty in getting supplies owing to the transportation situation. One car that was billed from New York two weeks ago had not arrived at the time of writing. Ordinarily it should have taken no more than three or four days for it to reach this market. Three cars of turpentine that were due to reach the border on March 6, 10 and 14, respectively, have not yet been heard from. There is quite a demand for turpentine locally, but the difficulty is to get the commodity for distribution. Stocks now on the way are pretty sure to turn up in the near future. With the approach of the new season's run and the fact that the British market is fairly well provided for until November next there is an easier feeling in turpentine.

	Per Imp. Gallon
1 barrel lots	$0.69-$0.76
2 to 4 barrels	0.68- 0.77
5-gallon lots	0.87- 0.84

Colors in Oil Have Been Advanced

COLORS I NOIL.—Advances have been made in the price of colors in oil of from 2c to 10c per pound in certain instances. Venetian red that formerly sold for 13c is now quoted at 15c. Indian red ranges in price from 20c to 28c. Chrome yellow is quoted at 36c to 45c and golden ochre at 20c. Chrome green is priced at 24c per pound as compared with 15c to 22c formerly. Signwriters' black is now quoted at 27c, the former quotation being 24c. Lampblack is selling at 24c per pound, the former price being 21c.

White Lead in Oil In Very Slow Demand

WHITE LEAD IN OIL.—With the high price prevailing for white lead in oil there is a very limited demand at present. There is no disposition to look for a change in prices and prices have held stationary at $15 per hundred pounds in ton lots and $15.30 per hundred in less than ton lots. So far as the pig lead market goes there is no indication as yet that prices are likely to be lower because of conditions which prevail for that commodity. Quotations in the New York market kept up well around $10 per hundred during the week, although there was not any feverish interest in buying at those quotations. Users seem fairly well stocked for the present at least and consequently did not evince an interest in buying.

Glass Discounts Show Higher Tendency

GLASS AND PUTTY.—One of the wholesalers who previous to the present week had been quoting discounts on window glass of 10 per cent. in some cases and 15 per cent. in other instances leveled up the quotations and is now quoting at 10 per cent. off list all through. As a general thing however 15 per cent. off list is more generally quoted.

Shellac Prices Are Again Slightly Higher

SHELLAC.—Slightly higher levels were reached in the prices being quoted for varnish shellac, the range for pure white now being $3.50 to $3.65 per gallon as compared with $3.50 to $3.60 last week. There has been a corresponding increase in the pure orange varnish shellac, the range being from $3.25 to $3.55 per gallon, representing a 5c increase in the highest quotation. Finest white gum shellac also was quoted at higher levels, the range being from 68c to 74c as compared with 65c to 69c per pound last week. Finest orange gum shellac and TN grades remained unchanged. There has been a continued heavy demand for the varnish shellac, coming largely from industrial concerns.

Current Market Quotations

These prices are for such quantities as are usually ordered by retail dealers. Large buyers can Frequently make purchases at better prices.

Re Gauges and Prices of Sheets.

Prices which follow on black and galvanized sheets are purely nominal. The market has reached a state where prices are quoted only on application and for immediate acceptance.

On account of it being practically impossible to secure galvanized sheets from England, owing to the war, American mills have decided that they will no longer roll the English gauges to meet this competition. However, they will continue to roll at 10¾ oz., which will be known as such or a 30 gauge, and will take the place of the former English 28 gauge.

SHEETS (BLACK)

	Montreal 100 lbs.	Toronto 100 lbs
10 gauge	6 20	6.00-6.25
12 gauge	6 30	6.10-6.35
14 gauge	5 75	5.80-6.05
16 gauge	5 85	5.90-6.15
18-20 gauge	5 75	5.95-6.20
22-24 gauge	5 80	6.00-6.25
26 gauge	5 80	6.05-6.30
28 gauge	5 95	6.15-6.40

Paint and Varnish Makers

WINNIPEG and CALGARY

The Summit of Perfection
IN FLOOR FINISHES

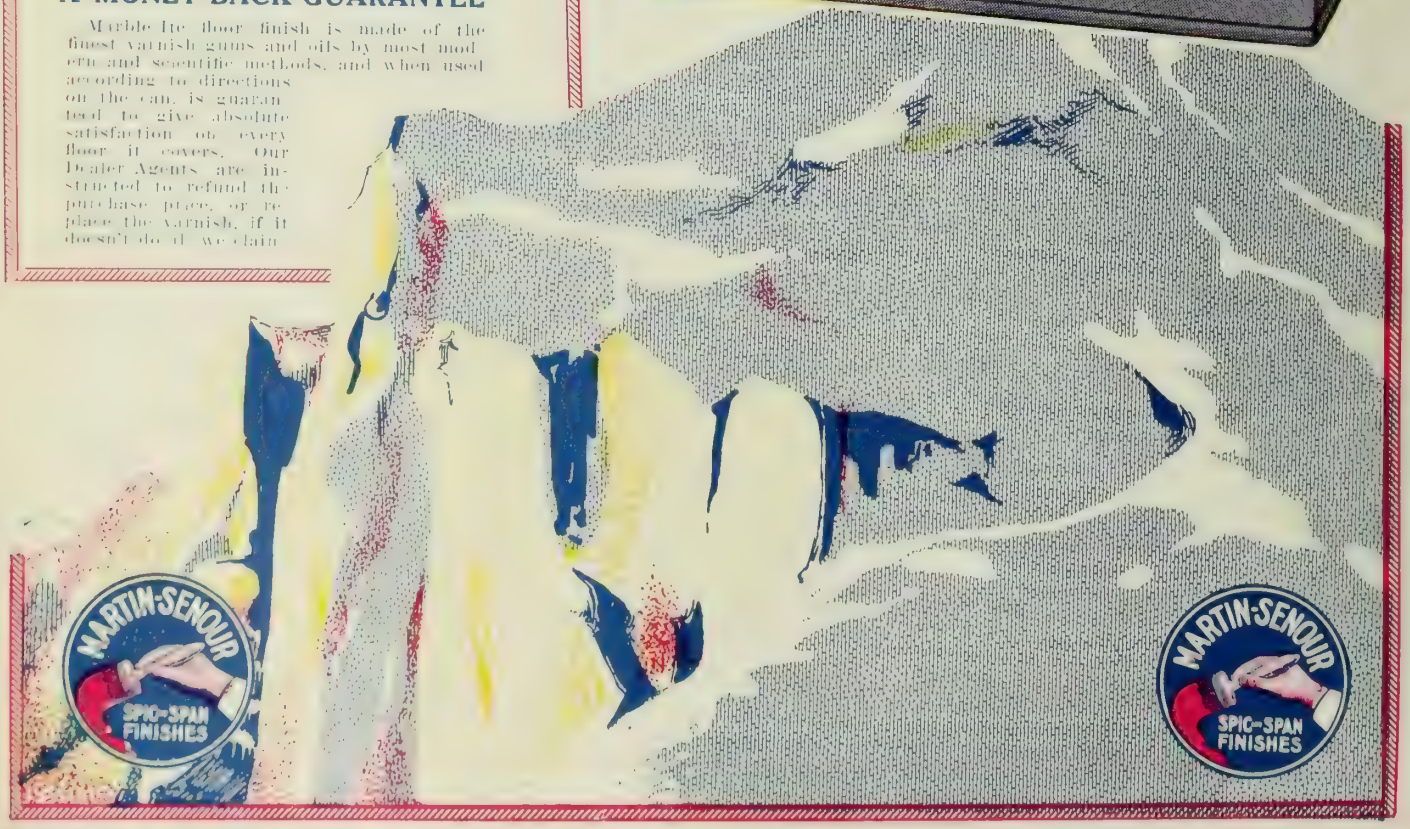
Marble-Ite is the distinctive floor finish with the "money-back guarantee" which, from its reputation, is much in demand by people who wish to make and keep their floors "Spick-and-Span."

The benefit of the exclusive agency plan is fully reaped by the dealer-agent who handles the complete line of Martin-Senour Paints and Varnishes, consisting of a special product for every use, each fully guaranteed to best serve the purpose for which it is made.

The MARTIN-SENOUR Co.
LIMITED
PRODUCERS OF PAINTS AND VARNISHES
MONTREAL
WINNIPEG TORONTO HALIFAX

A MONEY-BACK GUARANTEE

Marble-Ite floor finish is made of the finest varnish gums and oils by most modern and scientific methods, and when used according to directions on the can, is guaranteed to give absolute satisfaction on every floor it covers. Our Dealer Agents are instructed to refund the purchase price, or replace the varnish, if it doesn't do all we claim.



THE HIGH ROAD TO SUCCESS

is safely travelled by those dealers who control the larger share of the paint varnish trade of their community by holding the exclusive agency for

MARTIN-SENOUR

100% PURE PAINT AND VARNISHES

Made in Canada — Sold on Merit

The Martin-Senour exclusive agency plan is a proven success from the satisfactory experience of thousands of dealer-agents who are having pleasure and profit in selling these products of unsurpassed quality and merit.

Martin-Senour advertising and sales promotion campaigns are well planned, extensive sales helpers which, combined with Quality and Service, make Martin-Senour Paints and Varnishes the easiest and most profitable to sell.

The Martin-Senour reputation for highest quality, backed by an absolute guarantee of purity in formulae and satisfaction to the user, is the mainstay of the dealer in these unsettled times of uncertainty of delivery and scarcity of supply in raw material required for the making of best Paint and Varnish products.

MARTIN-SENOUR PAINT & VARNISHES

Better Varnish and Better Business

A VALSPAR customer is a pleased customer—and a pleased customer comes back again to your store. That's the best argument for stocking **Valspar** this year. Better varnish and better business for you.

The tendency leans away from cheap and bulk varnishes toward standard branded goods of known value, with the manufacturer square behind the goods and the dealer who sells it.

This seems to be proven by steady increased demand for Valspar through Canadian retail merchants. Listen to a few town records from dealers' reports for 1915-1916: Huntsville, increase 50%; Perth, 100%; Bracebridge, 85%; Peterboro, 66 2-3%; Toronto, "several hundred per cent.," and so on.

Our big advertising campaign in Canadian magazines will boost **Valspar** sales from New Brunswick to Vancouver. You be the one to benefit by it.

Valspar is the famous **waterproof** varnish, the one that even boiling water or soapy water will not spot. It is used in millions of homes for indoor and outdoor work—floors, woodwork, furniture, bathroom, kitchen, porches and porch furniture, in fact, all varnish work, including motor boats and every kind of woodwork exposed to the weather.

VALENTINE'S VALSPAR
The Varnish That Won't Turn White

The National Advertising of PRATT & LAMBERT VARNISH PRODUCTS is Making a Pathway to YOUR Door

PEOPLE want Pratt & Lambert Varnishes. And they order them from the dealers who stock them. They do this because the super-quality of these goods and the great national advertising makes them want them. The effectiveness of this advertising is shown by the remarkable and consistent gains in the yearly sales of Pratt & Lambert Dealers everywhere.

Your business instinct will tell you that it is good merchandising to stock a line which has *proved its right to be famous* by sixty-eight years of constantly growing popularity — yet whose makers have never for a moment rested in their efforts to make its name even better known and its quality even more worthy. This is the established Pratt & Lambert policy; and it is a policy which can *make money* for you.

THE people who read the magazines are the successful people — the home-owners — the spenders. Pratt & Lambert advertising has been going continuously for many years into more than six million homes of this character. Every day huge purchases of varnish and enamels are made by this vast multitude of buyers —and what is more natural than for them to seek out the paint and hardware stores which sell *the goods best known to them?*

Get Your Share

of the great and growing sales from which P&L Dealers everywhere are getting Big Profits. Write for the Pratt & Lambert Dealer Proposition — and do it today — NOW!

Try It On Your Own Car First

Try Glidden Auto Finish on your own car. Then you'll be ready to more than back up every single statement we've ever made for this remarkable new Glidden product.

You'll tell your customers that they can refinish their cars easily, quickly, conveniently—

—easily, because Glidden Auto Finish makes the car like new with only one coat;

—quickly, because it goes on in short order and dries in less than 48 hours;

—conveniently, because they don't have to lay up the car for a week or two.

You'll tell them these things with absolute assurance that they are true. Better still, you'll sell the goods, too—and every sale will bring repeat business. Then, too, there's nothing better for carriages and buggies.

Remember that thousands of *new* cars throughout the world are finished with Glidden Varnishes,—Auto Manufacturers are our largest customers—Glidden workmen know the requirements of Auto finishing. Can any set of men produce a better line of finishes for the Auto owner?

How to Get a Quick Start After Auto Finishing Profits.

Send to-day—right now—for details of our special Auto Finish offers. A complete line-up of goods, advertising and merchandising plan—everything you'll need to make a quick turnover and get the profits.

These offers must be made subject to change without notice. So act quickly.

Toronto, Ontario

Turn Suggestions Into Dollars

Every possible paint user in Canada is being educated to know the economy of using Canada Paints and Finishes, also what to paint, when to paint and how it should be done. Therefore, the demand is bound to be for Canada Paint products because they insure satisfactory results.

This confidence in C.P. Finishes enables C. P. agents to "cash in" on human nature by suggesting more things to paint.

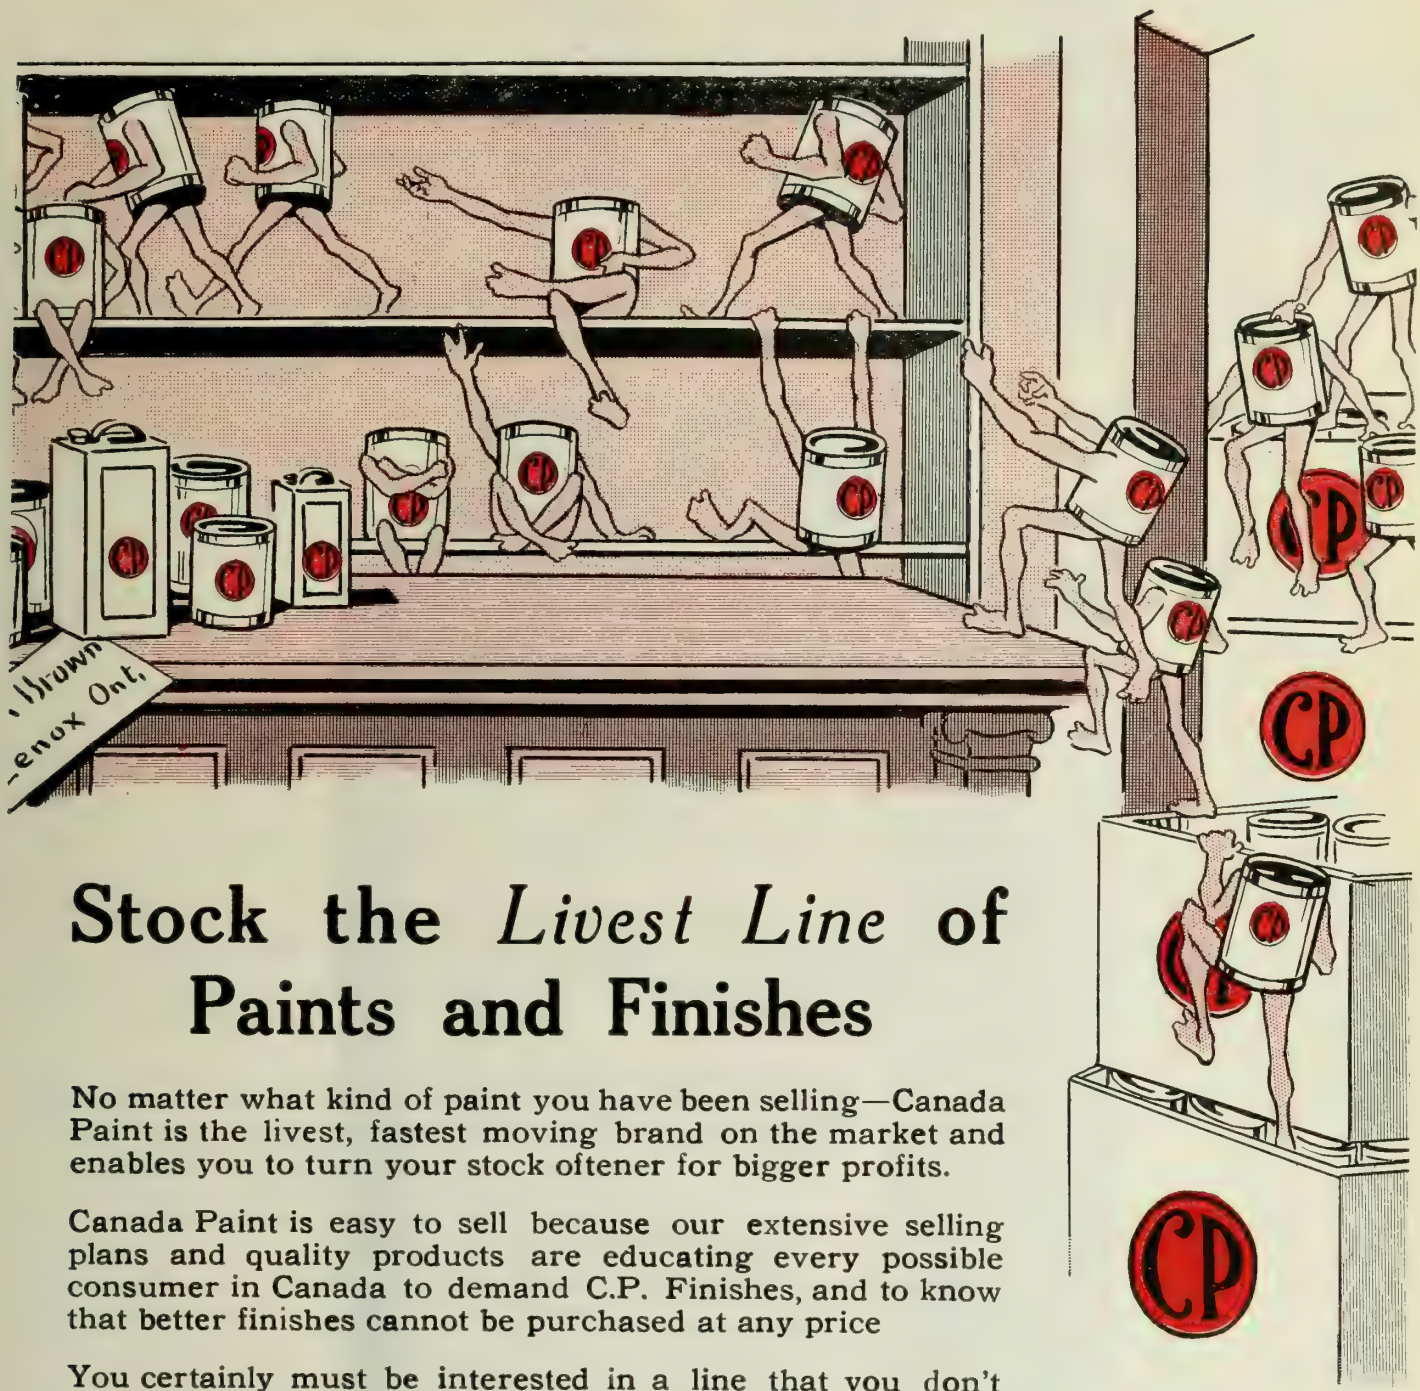
Things fresh and bright appeal to everyone. Suggest that a coat of some C.P. Finish not only improves appearance but enhances value and makes for a satisfied feeling of comfort.

There are scores of opportunities in your town—every customer presents an opportunity to "cash in" on his or her sense of pride and your suggestions will be accepted as the gospel of good living.

Ask us to tell you more about this suggestion idea and how our extensive selling plans for 1917 will help you.

The Canada Paint Company, Limited

572 William Street, Montreal 112 Sutherland Avenue, Winnipeg



Stock the *Livest Line* of Paints and Finishes

No matter what kind of paint you have been selling—Canada Paint is the livest, fastest moving brand on the market and enables you to turn your stock oftener for bigger profits.

Canada Paint is easy to sell because our extensive selling plans and quality products are educating every possible consumer in Canada to demand C.P. Finishes, and to know that better finishes cannot be purchased at any price

You certainly must be interested in a line that you don't have to "talk up." C.P. products fairly jump from your shelves for they are more than half sold when the customer reaches your store.

The day that you tell us to put the magnetic "C.P. Full Line Agency" Sign on your store, is the day that you will begin to get a bigger portion of the paint and varnish trade in your district.

Say the word to-day.

Do you sell to the painter, whose reputation and living are made through the QUALITY of the work he does, a smooth-working, solid top, full-elastic, perfectly balanced NON-COMPRESSED

TRADE SIMMS SET IN RUBBER MARK

oval varnish or paint brush? Or do you think that the quality of the brush you sell is of little importance and hand him over the old-fashioned COMPRESSED ferrule kinds that spread out like a feather duster when used, and were made for years by the brush manufacturers only because they, up to the time of the advent of the "set-in-rubber" process, had no setting composition that would hold the bristles in the ferrule without the compression that distorted the brush into an impractical, ill-working tool?

ALL SIMMS Brushes are made by skilled mechanics using the latest improved machinery and in a modern concrete, well-lighted building. This means ideal working conditions and a QUALITY PRODUCT.

Your trade interests DEMAND that you get acquainted with

Lowe Brothers LIMITED

HIGH STANDARD PAINT AGENCY

will pour big money into your cash drawer

The illustration above shows a store that increased its paint business $2,000 in one year as a result of stocking extensively Lowe Bros. High Standard Paints, coupled with our unequalled co-operative sales-pushing methods.

Dealers who specialize in Lowe Bros. High Standard Paints make big money and make it fast. Top-notch quality and moderate price wins the preference of the consumer and a good margin of profit is assured on every sale.

It is natural for us to think that we make the best paints on the market but we are not alone in that belief—there are thousands of dealers and consumers that think so too, especially the dealer who concentrates upon selling our lines.

We back our dealers with sales-making plans which secure the business. Write for proposition.

Lowe Brothers LIMITED

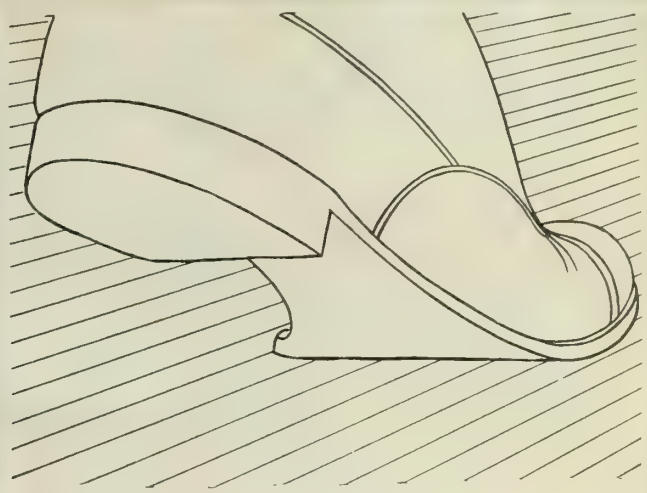
AYLMER ONTARIO



Heel Marks

IF floors are treated with Liquid Granite they will show no heel marks.

Liquid Granite is the ideal finish for floors and all interior work exposed to severe wear. It is one of the most saleable specialties for the dealer to carry.

Other quick sellers are

LUXEBERRY WHITE ENAMEL
Whitest white; Stays white. Makes permanent snow white finish in either gloss or dull effects.

LUXEBERRY WOOD FINISH
For general interior work. Develops and preserves the grain of all woods, and makes a handsome and lasting finish. Rubs perfectly.

LUXEBERRY SPAR
For exterior work. Especially adapted for durability under extreme exposure—front doors, store fronts, marine work, etc. Makes handsome finish and will not turn white under the severest conditions of wear.

Write for price list and interesting dealers' proposition.

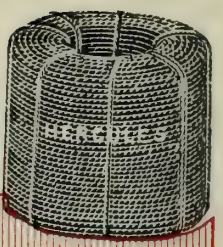
Made in Canada



SASH CORD

Jobbers are always kept well stocked with "Star Spiral" and "HERCULES" sash cord—the two foremost lines of their kind on the market. Rush orders to any Canadian jobber are sure of receiving prompt attention. Scientific tests have established their superiority.

"STAR SPIRAL"

The best quality sash cord is the "Star Spiral" Brand. It is known by the blue spiral strand running through the cord. It has great tensile strength, and is made from a superior grade of cotton. No better sash cord is made anywhere. It is designed especially for extra heavy sash, and will outwear chain.

"HERCULES"

"HERCULES" is the standard Canadian sash cord for general use. It compares in quality with the best imported brands, but is sold at a considerably lower price. It is thoroughly known among architects and contractors everywhere, and is very popular.

What Do YOU Know About APRIL 5th

—EVEREADY Big Drive Climax Day

Millions are looking forward to April 5th, in high anticipation. For on this day **EVEREADY** will announce ***through their dealers exclusively*** the winner of the $3,000 contest for a better name than "Flashlight."

Thousands will flock to **EVEREADY** Dealers' stores to get the returns. They must go ***inside*** — the news won't even be in the window.

April 5th, is the opening day of **EVEREADY** ***"Announcement week."*** From then until April 12th, will be a week of white hot sales promotion, a week when countless thousands will enter **EVEREADY** Dealers' stores ***to inquire —to look—to purchase.*** It will be another "Week of a Million Sales."

Here is a fitting climax to the campaign that has already made millions of dollars in extra profits for **EVEREADY** Dealers. It gives you the same sales opportunity that the "Contest Blanks" gave you last fall.

It's worth a good window display to be known as an **EVEREADY** Dealer from April 5th, to April 12th. Get ready! The ***Award Poster*** will reach you the day before April 5th.

We have opened wide the opportunity. Once more, ***It's up to you!***

Reece's Screw Plates

Great Instruments for Work Well Done

They are adjustable, with all the advantages of a solid die, with none of the disadvantages. It is impossible for the dies to loosen and cut cross threads, because the guide is cast solid with and is part of the collet.

You can cut PERFECT THREADS CLOSE TO THE SHOULDER with a single cut. No "backing and filling" is necessary.

They are the only screw plates where the dies are held in a collet that allows the reversing of the dies in the collet for use in a lathe or other machine.

Sets are neatly put up in wooden boxes and are of a large variety.

Get and display a sample set—it will bring you good business.

Write us about the complete line for your district.

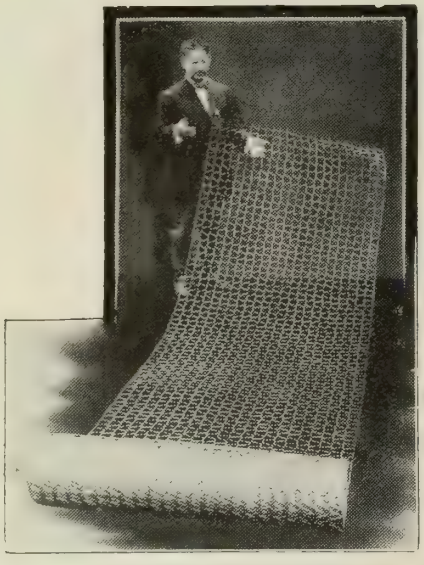
Give Your Customer "Value for His Money"

One line in which you can do this, and at the same time make larger profits for yourself, is



"U.S. Poultry Netting"

Speaking from experience: Isn't it generally a two-man job to cut off a few yards off the ordinary "hexagon" poultry netting? Either two clerks, or one clerk and the customer undertake the job; or if only one clerk, he gets a couple of irons of white lead, or some such heavy articles, to hold down one end. And when the netting *is* cut, he has to keep both feet on it to prevent the material running all over the store. When the customer gets this old-fashioned make of netting home he has *his* troubles getting it placed where he wants it.

You do not have this bother with "U.S. Netting." It is easily handled and therefore more quickly sold; and you also make a larger profit by selling this superior netting, while your customer is also better pleased.

One dealer has declared: "I keep both kinds of netting in stock, but I get 20% more for 'U.S.' on its merits—and sell it nearly every time when I show the difference."

If you have not been handling this money-maker, mail us an order now.

EXCELSIOR PLATE GLASS CO. LIMITED

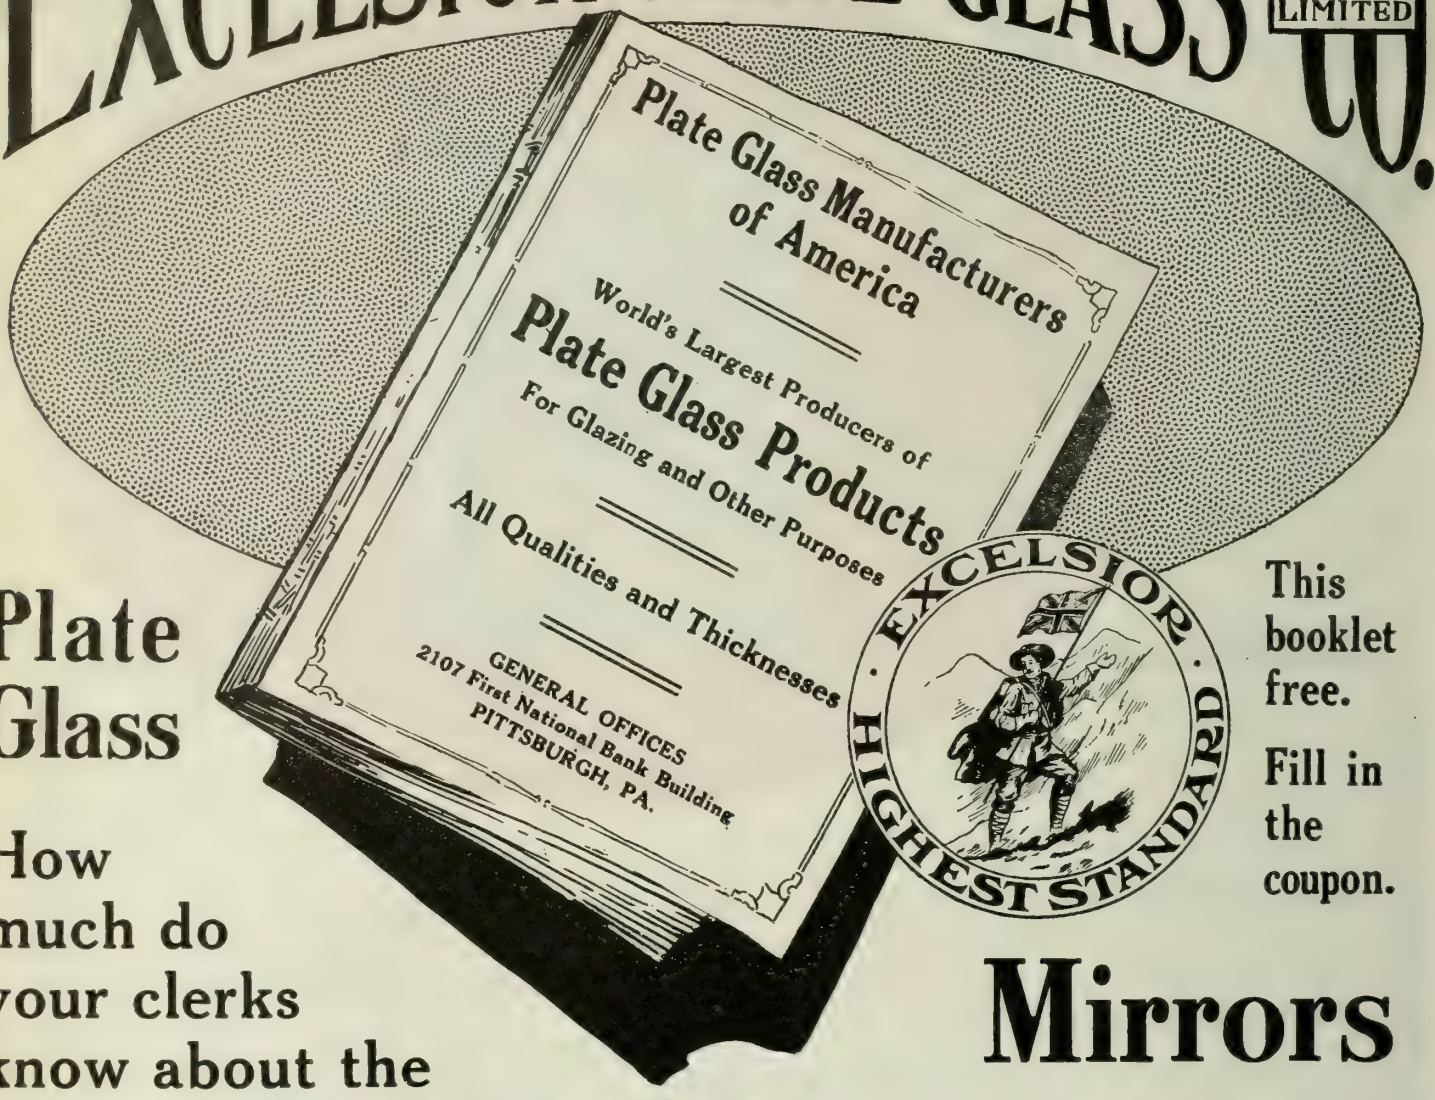

Plate Glass

Mirrors

This booklet free.

Fill in the coupon.

How much do your clerks know about the making of Plate Glass?

It's the man who **Knows**, who can sell.

At the hardware convention held in Hamilton the other week the point was brought out that no two persons should use the same diamond for glass cutting—which is absolutely correct. It was also stated that the "Wheel Cutter" gave excellent satisfaction. This, too, is true; in fact, we use the steel wheel entirely in our factory for cutting plate and find its service cannot be improved on.

This is a point worth knowing, for it enables every hardware dealer to supply each of his clerks with his own glass cutter at little expense.

There's more, too. You should see that each clerk is supplied with—and that is how plate glass is made. Here it is—

Send for a copy of the above illustrated booklet on Plate Glass, published by the Plate Glass Manufacturers of America. It is absolutely **free of all charge**, and it places you under no obligation whatever.

The information this booklet contains will prove a great benefit to you, as it enables your salesmen to talk with authority on plate glass and its manufacture.

It enables them to overcome the feeling that plate glass is too high in price when compared with ordinary window glass. It will help you get the plate glass sales of your town.

We have secured a supply of these booklets and will be pleased to pass them along on request.

Fill in the coupon below and mail to-day.

Note—We specialize on resilvering of mirrors of all kinds and carry a full line of glass (plain and ornamental), and manufacture mirrors and art glass.

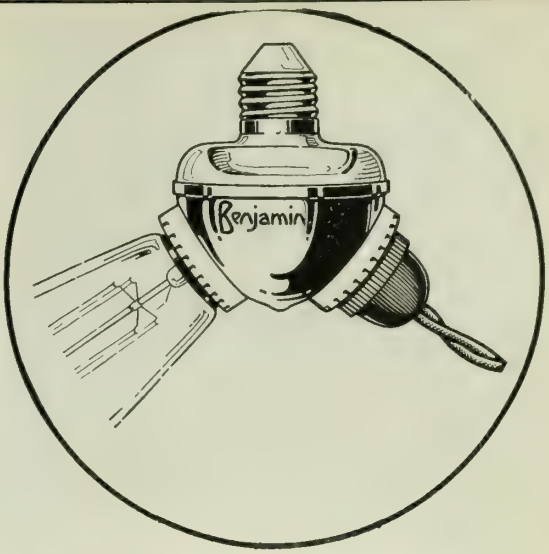
Benjamin



A Well Advertised Leader for Your Electrical Department

In practically all the newspapers of Canada—at least in those reaching four-fifths of the Canadian homes—you will now find convincing, attractive advertisements of the Benjamin Two-Way Plug and many other electrical devices and accessories bearing the name of Benjamin.

This is good, you will agree, so far as it goes—but—.We are anxious to have those who read these advertisements know that BENJAMIN products are on sale in your store.

So we are preparing folders, window trims, hangers, electros for your local advertising, silent salesmen, etc., which we will send you free of cost, if you think it good policy to use them. Do you?

Benjamin is a famous name in the electrical world. We are going to make it a household name as well.

In recent years the expansion of the market for electrical goods has been very large. In future it will be still greater, because electricity for lighting, heating, cooking and power is increasing every day.

Let us get together and secure a good, generous share of this trade.

Are you interested? Then write us and say so.

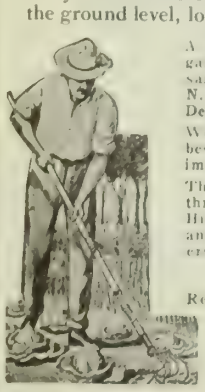
NORCROSS GARDEN CULTIVATOR-HOES

Have Revolutionized Gardening

They fill practically every need in cultivating and weeding, will work closer to plants without injuring the roots than any other tool, are suited to both men and women, and cost but a trifle more than the old style hoe.

The sharp tapering shovels enter the soil easily, tearing up every bit of earth from 1 to 5 inches deep as required, leaving the ground level, loose and untrampled.



A "Norcross" tool will prove profitable in any garden, large or small, at home or abroad. Thousands are being exported to Canada, Australia, N.Z., S. America, S. Africa, Great Britain and Denmark.

We solicit export trade and give same our very best attention. Agency connection desired with important Importers, "who carry stocks."

The "Norcross" is a Quality Line through and through. Detachable Steel Prongs, Malleable Head, Highest Grade Handles; made in 3 sizes, 5-prong and 3-prong with 4-foot handles, Midget (for flowers) with 9-inch handle.

English or Spanish literature on request.

References: Any Bank in America. Manufactured by

C.S. Norcross & Sons

Bushnell, Ill., U.S.A.

Hardware Specialties

Some of the best hardware stores in Canada are working with us to this end. Read what H. H. OTTON & SON, of Barrie, have to say:

The W. A. Jenkins Mfg. Co., Barrie, Ont., March 5th, 1917.
London, Ont.

Dear Sirs:

With reference to your inquiry, re sale of Royal Purple Products, beg to advise that we believe the reason we have had such success in selling your line is attributed to the way you send out your advertising literature to the farmers in our neighborhood so regular, as well as the good results we have been told of from the use of them. The fact that farmers and poultry men speak so well of it, gives a stimulus to all our salespeople and encourages them to push the line.

During the selling season we always keep a quantity at the front of the store. We find it a profitable line to push the sale of.

Respectfully Yours,

FWO/MH. H. H. OTTON & SON.

Do you want to take an agency in your town? If so, write us and we will send you prices, showing handsome profits and our system of advertising which keeps your name and our goods constantly before the farmers in your district.

We offer you bars made of High Carbon Steel at the same price as you are buying the Mild Steel Bar elsewhere. Send us a trial order.

B. J. COGHLIN CO., LIMITED, Office and Factory: Ontario St. East, MONTREAL

THE PROGRESSIVE MANUFACTURING CO.
Torrington, Conn., U.S.A.

FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTRE. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability.
Made for Brace—made for machine. Packed singly—packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Order through your jobber to-day.

Seven Reasons

Why you should stock and push Beardmore's Star Brand Soles and Lifts this Spring

You can render a distinct service to your customers by selling them Star Brand half soles and heel lifts, for in doing so you are helping them to reduce the extremely high cost of living. Star Brand soles and lifts give absolute satisfaction.
Read the seven reasons why you should sell the Star Brand line and write your jobber for prices.

1. Star Brand soles and lifts are made from our own leather.
2. We do our own tanning—have 72 years' experience.
3. Every pair sold brings new customers—holds the old.
4. Guaranteed to outwear all others.
5. They solve the shoe problems for large families in these critical times.
6. Every man can mend his own shoes with Star Brand Soles and Heels.
7. They bring new trade to your store for other lines.

"DELTA" FILES

Put a Merry Jingle in Your Cash Register

Make your store a happy remembrance with the customer.

That's why it pays to sell "**DELTA**" FILES.

The good work they do and the long service they give are constant suggestions to the customer to purchase other needed articles **at that store,** where they serve those DELTA files.

Thus does the dealer create permanent good-will. Delta Quality does it.

Dealers find Delta Files a worthwhile line to handle. We co-operate with dealers to bring new customers to their stores.

Let us send you full particulars of our attractive agency proposition.

The White Mop Wringers

Because of their wonderfully quick turnover the White Mop Wringers are one of the most profitable commodities any dealer can sell. Their ease of operation and general desirability make a quick and strong appeal to the consumer.

They are virtually self-sellers. They are made of hard Maple or Birch wood and the best malleable iron. They fit on any pail and wring the Mop perfectly.

They are often used as Fruit and Vegetable presses with good results.

PEERLESS PERFECTION

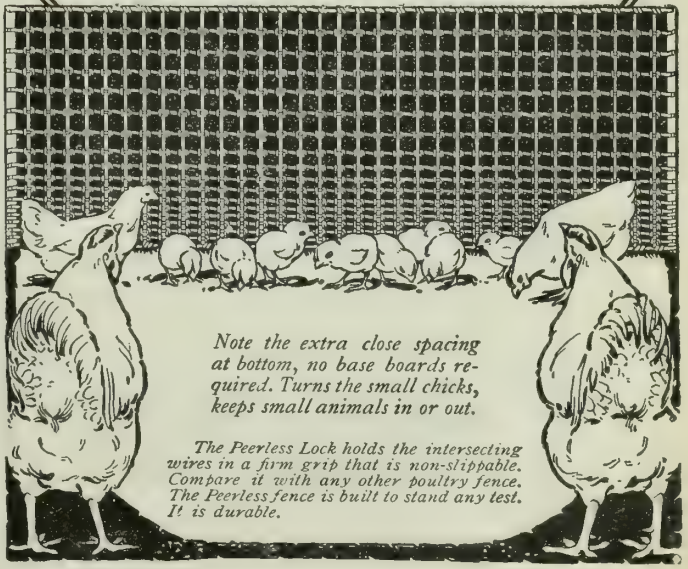
The fencing upon which you can **build a reputation** and hold the fence trade of your territory. You can put up the strongest kind of a guarantee—we back you up.

We build this fence of open hearth steel wire with all the impurities burned out and all its strength and lasting qualities retained. Peerless poultry fencing is extra strong, heavily galvanized, can't sag, won't rust, never gets out of shape, keeps in and keeps out—both great and small.

Write for Dealer's Proposition

We show you where the big trade is for parks, lawns, cemeteries, fences plain and ornamental for farms, ranches, all purposes.

THE BANWELL-HOXIE WIRE FENCE CO., Ltd.
Winnipeg, Manitoba **Hamilton, Ontario**



Note the extra close spacing at bottom, no base boards required. Turns the small chicks, keeps small animals in or out.

The Peerless Lock holds the intersecting wires in a firm grip that is non-slippable. Compare it with any other poultry fence. The Peerless fence is built to stand any test. It is durable.

If interested, tear out this page and keep with letters to be answered.

Order Yours Now
Be Prepared

Each of the three Freezers, LIGHTNING, GEM or BLIZZARD, has served the housewives of America for thirty years, and, like the cream they create, are in demand in all seasons.

They are built of the very best material and workmanship possible—their ingenious construction makes them easy to operate, quick freezing, and economical to both dealer and user.

The Blizzard, being simpler in construction and cheaper in price, makes it a good running mate with either the Lightning or Gem. They sell themselves and stay sold! No comebacks or complaints.

This means easy, net profits for you. Your jobber will supply you.

Include the Lightning Ice Chipper. It helps the sale of Freezers.

This is our offer to your customer

Even without its stropping feature, the AutoStrop Razor has every merit that other safety razors possess, but in addition it does what no other razor in the world does—it strops its own blades, **and saves your face.**

Therefore, decide upon purchase of the AutoStrop Safety Razor after you have compared its wonderful blade service and its smooth-shaving quality with other razors you have used, or are still using. Take it home and shave with it as freely as if you had purchased it outright. Then come to a decision whether you will return it to your dealer, or pay him $5.00 for it. We authorize dealers to loan the AutoStrop Safety Razor on 30 days' trial, and we stand back of the offer.

This is our offer to you

Offer the AutoStrop Razor on trial to every man who shaves himself, and you will find that the majority will complete the purchase after a fair trial. Customers who buy blades from you for other razors will be glad to try out the AutoStrop, and every storekeeper has hundreds of such prospects which only await such a fair proposition. This plan of distribution has been advertised to the public for over a year—to every dealer's customers—to yours. We are continuing to advertise it, and dealers everywhere are selling Razors under this plan.

If you will arrange to **loan** the AutoStrop Safety Razor under this offer, we will assume all the risk. We will replace all goods that are not returned, or are not paid for, and we will replace all razors that are returned in bad condition. Should this plan of distribution result in overstocking you, we will relieve you of your overstock by arranging credit for the invoiced value.

Such a fair, clean-cut plan *must appeal to you as a dealer.* Write to us for the details, and we will send you a legal agreement that we will fulfill our part of the undertaking.

CARBORUNDUM

The Great, Quick Cutting Abrasive

Carborundum is very much harder than any other known abrasive, which gives it great durability. It is made up of small, sharp crystals that are just brittle enough to break slightly in use. The sharp edges of the crystals cut clean and fast, while the brittleness, by constantly presenting fresh cutting edges, prevents glazing.

In Carborundum Stones you get durability, rapidity and uniform efficiency.

For sharpening edge tools a carpenter only has to try a Carborundum Stone to be a constant user of it.

Carborundum Sharpening Stones

Unequalled for rapid cutting qualities. Fine or medium grit.

Sizes 4, 5, 6, 7 and 8 inches long

Carborundum Combination Stones

One face smooth or fine grit, the other face coarse grit.

Sponges and Chamois

Sponges

We have several hundred bales of Sheepswool, Velvet and Grass packed in sizes and weights to suit Canadian buyers.

No. 1 Sheepswool, 6/8, 8/10, 10/12 and 12/14 (pcs. to lb.), packed in bales of 12 lbs. and upwards.

No. 1 Velvet, 6/8, 8/10, 10/12 and 12/14, packed in bales of 15 lbs. and upwards.

No. 1 Grass, 6/8, 8/10, 10/12 and 12/14, in bales of 25 lbs. and upwards.

We also carry in stock practically every other kind and variety of Sponge that is produced. We are direct buyers at all the producing markets, having our own packers at Nassau, Bahamas; Batabano, Cuba, Tarpon Springs and Key West, Florida.

We supply only original bales and cases—at the lowest market prices, and give better value in Canada than do any of our American competitors.

Write for our booklet on Sponges—it is interesting and instructive.

Chamois

Chamois Leather has doubled in price in the past twelve months, and is still advancing. It is also very difficult to obtain shipments.

We have on hand a large stock of all sizes from 10 x 11 to 26 x 28 in both first and second qualities.

We supply Chamois Leather in original kips of 30 skins, to the best advantage and at the lowest market prices.

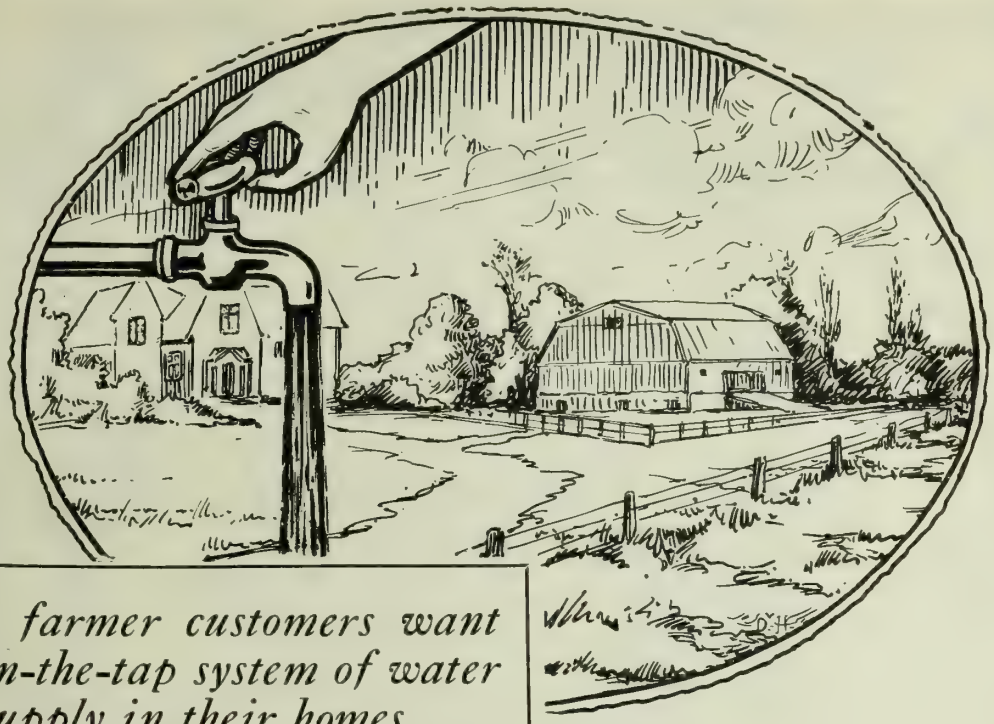
425 CORISTINE BLDG. - MONTREAL

If interested, tear out this page and keep with letters to be answered.



Your farmer customers want a turn-the-tap system of water supply in their homes

They have learned that they can have this city convenience right on their own farms—and at a very moderate cost.

But perhaps they don't know that there is no need to instal that old-fashioned, dangerous and insanitary device—the overhead tank. It is for you to tell them about the

Peerless Water Service Systems

which supply pure water *at high pressure* to every floor in the house or barn.

With a Peerless Water Service System the tank may be in the cellar, in the barn, or in any other frost-proof place. The pressure will be sufficient to throw a stream right over the house. This means efficient fire protection—something that cannot be secured with an overhead tank.

With a Peerless Water Service System, there is no danger of water leaking and destroying furnishings and decorations on the floor below. It is absolutely safe.

With a Peerless Water Service System there is no possibility of impurities getting into the tank, as in the overhead system. If the water in the well is pure, the water in the tank and at the tap must also be pure. The operation of a Peerless Water Service System is very simple, and no technical knowledge is required to understand it.

You can make big money on Peerless Water Service Systems.

Get our catalog. Talk water service systems with all the farmers who come into your store, and bring the matter up when visiting them in their homes.

Installations are easily made.

Price is reasonable—from less than $100 *up, and there is a liberal trade discount.*

There is bound to be a big development in the sale of private water systems. Get in on this profitable business now, by securing the agency for

Peerless Water Service Systems
Made in Canada

National Equipment Co., Limited

1 Wabash Ave.
TORONTO

Above cut shows a residence outside the limits of Toronto—away from city water conveniences. But the convenience of city water supply is there just the same—due to the installation of a Peerless Water Service System.

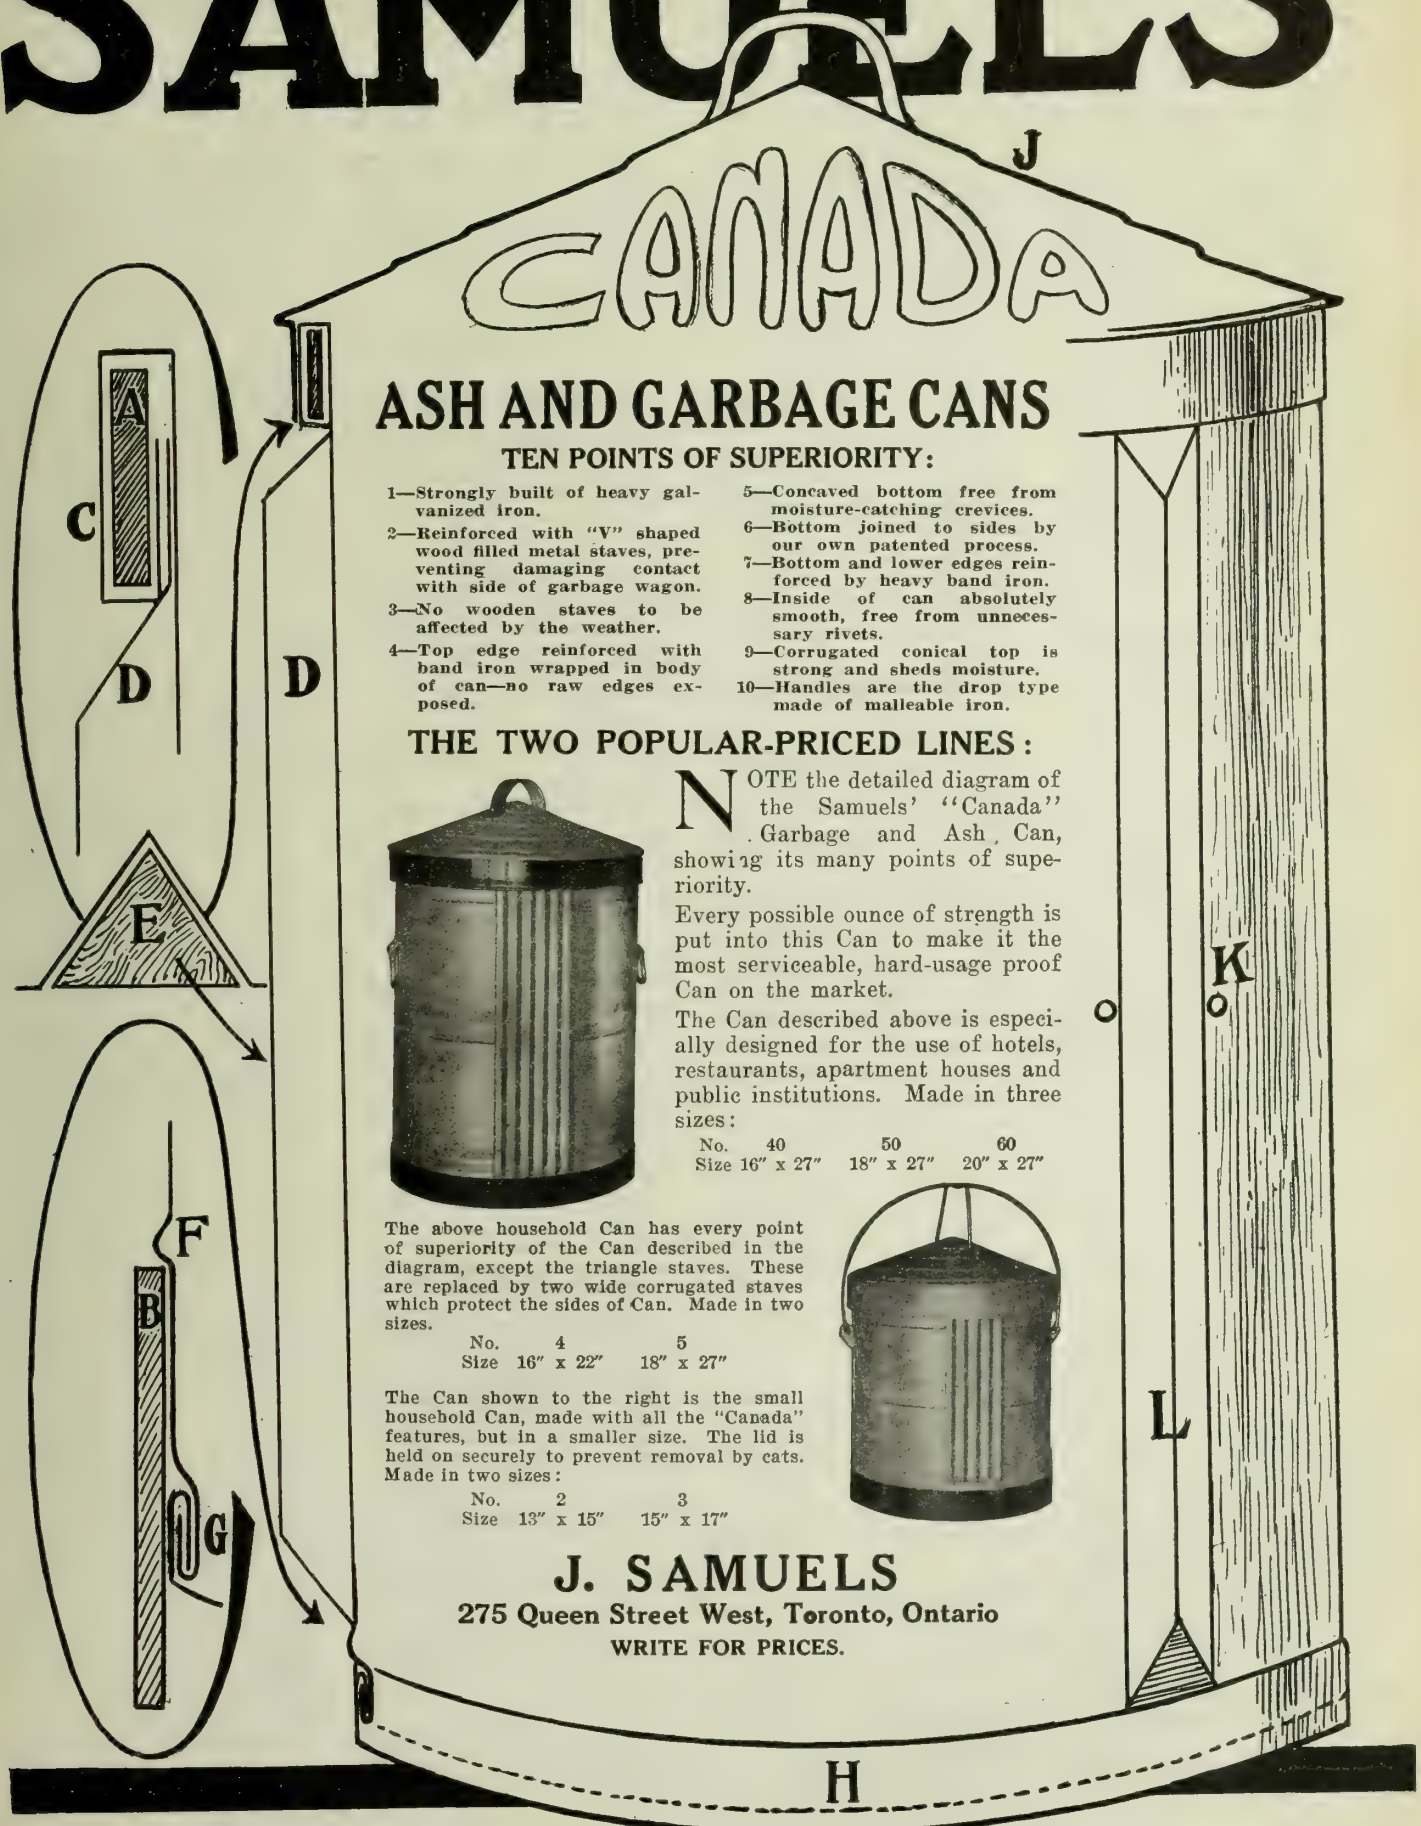
SAMUELS



ASH AND GARBAGE CANS

TEN POINTS OF SUPERIORITY:

1—Strongly built of heavy galvanized iron.
2—Reinforced with "V" shaped wood filled metal staves, preventing damaging contact with side of garbage wagon.
3—No wooden staves to be affected by the weather.
4—Top edge reinforced with band iron wrapped in body of can—no raw edges exposed.
5—Concaved bottom free from moisture-catching crevices.
6—Bottom joined to sides by our own patented process.
7—Bottom and lower edges reinforced by heavy band iron.
8—Inside of can absolutely smooth, free from unnecessary rivets.
9—Corrugated conical top is strong and sheds moisture.
10—Handles are the drop type made of malleable iron.

THE TWO POPULAR-PRICED LINES:

NOTE the detailed diagram of the Samuels' "Canada" Garbage and Ash Can, showing its many points of superiority.

Every possible ounce of strength is put into this Can to make it the most serviceable, hard-usage proof Can on the market.

The Can described above is especially designed for the use of hotels, restaurants, apartment houses and public institutions. Made in three sizes:

No.	40	50	60
Size	16" x 27"	18" x 27"	20" x 27"

The above household Can has every point of superiority of the Can described in the diagram, except the triangle staves. These are replaced by two wide corrugated staves which protect the sides of Can. Made in two sizes.

No.	4	5
Size	16" x 22"	18" x 27"

The Can shown to the right is the small household Can, made with all the "Canada" features, but in a smaller size. The lid is held on securely to prevent removal by cats. Made in two sizes:

No.	2	3
Size	13" x 15"	15" x 17"

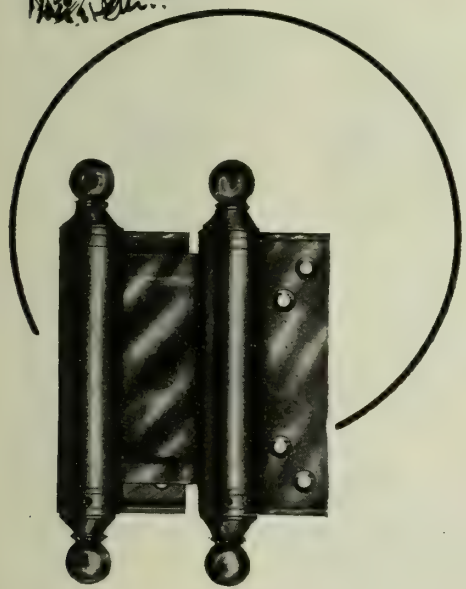
With the troops at Camp Borden

Triplex Spring Hinges



Write for catalogue K-32. It contains interesting information. Yours upon request. Better drop us a line right away. The quicker you put the Chicago Triplex Hinge into stock, the quicker will you enhance your volume of business.

Chicago Spring Hinges have won themselves into another praiseworthy field of use. The doors of the buildings at Canada's biggest Military Camp — Camp Borden—are swinging on these famous spring hinges—hinges with an international reputation.

These hinges are known and used everywhere. They find their place in the specifications of the leading architects of the two hemispheres. The doors of the new Toronto General Hospital and Toronto's new schools are equipped with Chicago Triplex Spring Hinges, as are the doors of the Selfridge Building, London, England, also Grand Central Terminal, Woolworth and Equitable Buildings of New York.

These hinges are used in scores of buildings of the old and the new world because of their undoubted superiority, quality, merit and efficiency.

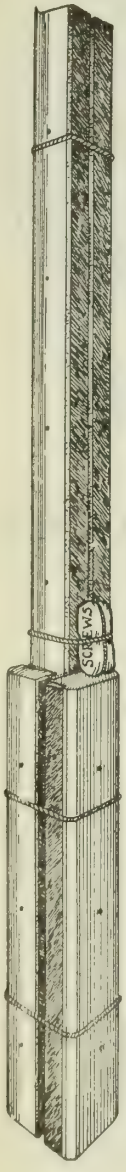
A SET OF

The SWAN Weather Strip



for a door is composed of two pieces 7 feet long for the two sides, one piece 3 feet long for the bottom and one piece 3 feet long for the top; one packet of nails. For shipping it is put up in bundles of ten sets.

It is made of Wood and Felt. No rubber that dries out. No metal that buckles. The wood is selected oak, nicely finished. The felt is manufactured specially of lasting quality. Color green.

REMEMBER—

The Swan Weather Strip

is conveniently put up — no unwieldy lengths and no waste — just what you have been looking for.

—

Order now and avoid disappointment later in the year.

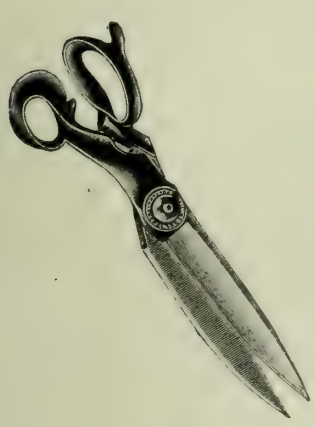
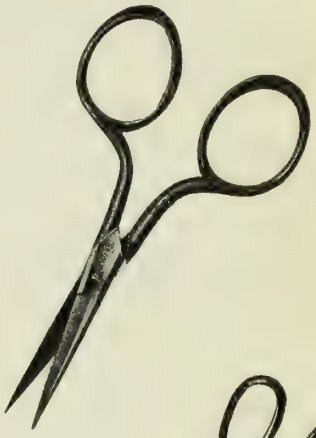
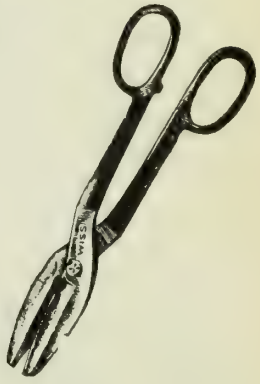
WISS







WISS

Be sure that this name is on the lines of

SHEARS, SCISSORS, TINNER SNIPS, RAZORS, RAZOR STROPS

that you sell

Sometimes you can catch a customer by a bargain, but you've got to have quality to *Hold* him.

Then again—Most of your customers earn their money. Therefore, every dollar they spend over your counter represents the most precious of all things—life itself—for they have given a portion of their lives in exchange for it. Isn't it your bounden duty to give them a fair equivalent for it—the very best value you possibly can?

Those who consider value by service, and this is the only logical way to do it, consider Wiss products a standard beyond approach

J. WISS & SONS COMPANY

Condensed or "Want" Advertisements

There is always someone, somewhere, who is looking for just such a proposition as you have to offer—and it is more than likely that he is a hardwareman and a subscriber to HARDWARE AND METAL. Let an advertisement on this page bring you together.

RATES (payable in advance): 2 cents per word first insertion, 1c per word subsequent insertion. An additional charge of 5 cents for each insertion is made when Box Number is required. Each figure counts as one word.

SITUATIONS VACANT

WANTED — HARDWARE CLERK, GOOD salesman. State experience and salary wanted. Apply Box 51, Meyronne, Sask.

A FIRST-CLASS TINSMITH — STEADY work; also a man of two or three years' experience; references required; state wages wanted. Box 424, Hardware and Metal, Toronto.

AGENCIES WANTED

WELL KNOWN FIRM IN MONTREAL, with 25 years' standing, would like to represent either a foreign or domestic concern, selling to the wholesale and manufacturing trade in general. Address Hardware and Metal, Montreal.

WANTED—FOR WINNIPEG AND DISTRICT, several good lines on commission. Excellent connection with architects, contractors and builders. Box No. 448, Hardware and Metal.

THE SUREST WAY FOR THE MANUFACturers' agent to connect with good live firms, is to tell the manufacturers who read Hardware and Metal, all about his ability to sell their goods. Try an advertisement on the Condensed Ad. Page of Hardware and Metal, under this heading.

STORE EQUIPMENT FOR SALE

YOU MUST HAVE A LOT OF OLD FIXtures around the store which are no longer of any value to you, but would prove very useful to someone else in the hardware business. Find a purchaser for this equipment through an advertisement on Hardware and Metal's Condensed Ad. Page.

FIFTY DOLLARS TIED UP IN OLD FIXtures that you are no longer using would make a lot of money for you if invested in stock and turned over three or four times a year. Get your money out, by selling the fixtures to one of Hardware and Metal's readers who may be looking for exactly what you have to offer.

PAPER BALERS

THERE IS MONEY IN USING AND SELLing the Jewell Paper Baler. It is the only low-priced, efficient baler on the market. Every hardware store should use one. Splendid side line for one line traveller in each territory. General Sales Co., Stair Bldg., Toronto.

SITUATIONS WANTED

EXPERIENCED HARDWARE MAN OPEN for position—one able of taking charge or representing any hardware, paint or steel company on the road. Box 442, Hardware and Metal.

WANTED—HAVING DISPOSED OF MY Hardware stock, I desire a position with some reliable firm calling on the hardware trade. Will make application in person. Apply Box 447.

BY CAPABLE YOUNG MAN AS MANAGER of retail hardware store, with option of buying. First-class references, good salesman, and one who guarantees results. Box 445, Hardware and Metal, Toronto.

THE "CHANGING TIME" IS GETTING near. There are many firms who have vacancies on their sales or office staffs to fill during the next few months. If you want to qualify for some of these vacancies, tell your story briefly in a Condensed Advertisement, and try it out in Hardware and Metal. A twenty-five word advertisement may land you a permanent position with splendid prospects.

FOR SALE

FOR SALE—A GOOD HARDWARE BUSIness in one of the best farming districts in Ontario. Stock about $7,000.00. Box 446.

FOR SALE—GOOD HARDWARE AND HARness business in one of the best farming districts in Saskatchewan. No opposition. Stock about $10,000. Apply to Chas. H. Mitchell, Osage, Sask.

BUSINESS WANTED

HARDWARE BUSINESS—IN GOOD ONtario town or city. Stock not over ten thousand. Replies treated strictly confidential. Box 444, Hardware and Metal, Toronto.

MISCELLANEOUS

GOOD STENOGRAPHERS ARE WHAT every employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

ADDING TYPEWRITERS WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited. Room 314, Stair Building, Toronto.

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Ltd. Supplied by the trade throughout Canada. (tf)

DOUBLE YOUR FLOOR SPACE — BY INstalling an Otis-Fenson hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B." Otis-Fenson Elevator Co., Toronto.

IF YOUR HARDWARE BUSINESS IS FOR sale, who is more likely to buy it than a hardware man, be he merchant, clerk, or traveller? It is only hardware men who read Hardware and Metal, and a condensed advertisement in this paper offering your business for sale, will put you in touch only with the people who will be most interested.

SIGNS AND SHOW CARDS

GLASS, WOODEN AND BRASS SIGNS. W. H. Stevenson, Stevenson Bldg., Toronto.

Want Ads.

If you want a buyer for your business, or have a situation to fill or want a situation, send us a Condensed Advertisement. There is someone who is looking for a proposition such as yours. For two cents a word you can speak across the continent with a condensed advertisement in this paper.

Try it out.

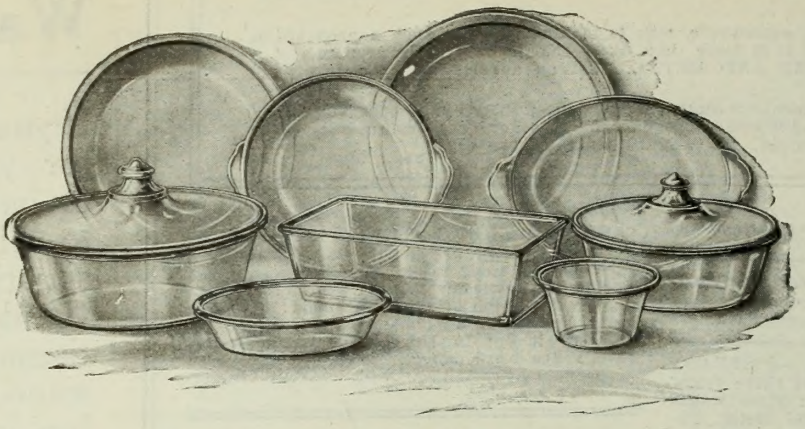
FORGETTING

One of the things we all do well is to **forget.**

Names that were household words yesterday are gone to-day.

Because people knew your Name and your Line a year ago it is no sign they do to-day. They forget easily.

Keep yourself in the public mind by advertising. It is just as important to make old friends remember as it is to win new friends. Advertising does both.



Make PYREX a LEADER

Pyrex ware interests the household buyers of your community—the women who want this original transparent oven-ware,

Sell a woman a Pyrex pie plate or baking dish and you've made a repeat customer—for when a woman starts to Pyrex her kitchen she is never content until she has a full equipment.

PYREX TRADE MARK REG. **Transparent OVEN-WARE** Has the name on every piece

Will not break in oven use.

It is a stock you turn many times a year, with increasing sales each turnover.

Pyrex is nationally advertised in the leading women's magazines.

Special service to aid dealers in making sales.

Stocked and distributed by leading Canadian jobbers.

Made in the largest factory in the world devoted to the manufacture of technical glassware.

PYREX SALES DIVISION

CORNING GLASS WORKS

124 Tioga Avenue **CORNING, N.Y., U.S.A.**

If interested, tear out this page and keep with letters to be answered.

BADEN *and* LINSEED OIL

Ask some of the older hardware men of Canada what the name "Baden" represents to them and the reply will be "Linseed Oil"—Baden Linseed Oil.

The same little Ontario town is still the home of the original Baden oil which has long since been called the Livingston brand in honor of its originator, Mr. James Livingston.

In the early days of the country, Baden oil was the standard by which all linseed oil was judged. It still holds its envied position—still the linseed oil standard.

Whether you are the dealer, the manufacturer or the middleman, your best interests will be served if you make your linseed oil standard the Livingston Brand.

The Blue Barrels

"FAST WORK"

A quick bead, a flying target, a lightning-quick bullet, a yelp and---the pelt's yours! Men who use

Remington UMC

are accustomed to the "finer" kind of shooting. They take close shots and "fast work" as a matter of course.

Incidentally, the above picture illustrates the type of realistic, high-quality, pulling advertising this Company will campaign Canada with in 1917.

This "Sportsmen's Headquarters" sign has come to be recognized as marking the best place to buy arms and ammunition. Our continent-wide advertising and the high quality of our goods are responsible. Shall we send you an outfit?
